SEC. 404. (a) The Congress hereby finds and declares that representations to members of the public, made in connection with the promotion of the business of a carrier or broker, or as a part of any policy or subscriber contract issued under a health service prepayment plan, that such plan or policies or subscriber contracts are reinsured under this act or that such reinsurance has been applied for, even if such representation is in accordance with fact, (1) may mislead potential policyholders or subscribers into believing that such reinsurance is a guaranty of the standing and solvency of the carrier and of its faithful compliance with the policy or subscriber contract or that such policy or subscriber contract is superior to those issued under plans not so reinsured, and (2) may cause unfair competition with carriers which make no such representation or whose plans are not reinsured under this act. The Congress, therefore, finds and declares that, in order to protect the public interest, safeguard the integrity of the purposes of this act, and prevent the use of such representations for improper purposes, it is necessary to prohibit such representations except as authorized by and in conformity with regulations prescribed pursuant to this section.

(b) (1) The Secretary shall by regulation prescribe the substance, forms, manner of display, manner of making, and manner of use of any sign, advertisement, or other representation, if any, which shall be authorized concerning reinsurance granted or applied for under this act.

(2) Any carrier or broker, and any person acting or purporting to act for or on behalf of a carrier or broker, who, in or as a part of any policy or subscriber contract issued or offered by such carrier, or in connection with the promotion of such carrier's or broker's business, represents by any means or device whatever, except as specifically authorized by regulations prescribed pursuant to paragraph (1) of this subsection, that such carrier, or any of its subscriber contracts or policies, or the carrier's health service prepayment plan or plans under which such contracts or policies are issued or offered by it, are reinsured under this act or that application for such reinsurance has been made, shall, for each such offense, be punished as follows: A corporation, partnership, association, or other business entity, by a fine of not more than $1,000; an officer or member thereof participating or knowingly acquiescing in such violation or any individual violating this subsection by a fine of not more than $1,000 or imprisonment for not more than 1 year, or both.

(c) A violation of subsection (b) of this section may be enjoined at the suit of the United States attorney, upon complaint by the Secretary or any person duly authorized by the Secretary.

(d) Section 709 of title 18 of the United States Code (relating to false advertising and misuse of names to indicate Federal agency) is amended by inserting after the third paragraph thereof the following new paragraph:

"Whoever falsely advertises or otherwise falsely represents by any means or device whatsoever, expressly or impliedly, that any insurance policies, subscriber contracts, or undertakings for the furnishing of, or payment for, personal health services, or the health service prepayment plan or plans under which such policies, contracts, or undertakings, are issued, offered, or assumed, are reinsured under the Health Service Prepayment Plan Reinsurance Act or that application for such reinsurance has been made; or".

Appointments above grade GS–15

SEC. 405. The Secretary, to the extent he deems it necessary and appropriate in order to carry out the provisions of this act, is

authorized to place not to exceed 10 positions in grade above GS–15 without regard to the numerical limitations contained in section 505 of the Classification Act of 1949, as amended, but otherwise subject to the requirements of such section.

Effective date

SEC. 406. This act shall become effective on the 30th day after the date of its enactment, but nothing in this act shall require the Secretary to receive or consider applications under title III before such date as the Secretary may determine.

Mr. WOLVERTON (interrupting the reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read and open for amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. PRIEST. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PRIEST: on page 54, line 14, strike out the word "may" and insert the word "shall."

Mr. PRIEST. Mr. Chairman, this is the amendment that I discussed during the general debate. You may notice that following the first paragraph, paragraph (a), in section 303, there are listed 8 different subjects which the Secretary is required to discuss with the Advisory Council. These subjects generally would apply to the question of minimum standards that shall be issued by regulation. But the Secretary will not be required to issue those regulations under the provisions of the bill unless the word "may" is changed to the word "shall."

It is my feeling that certainly the Secretary will issue such regulations involving such minimum standards. The Secretary would certainly be expected to do so. But since I have had a strong feeling on the question of standards, and at one time felt that they should be written into the bill itself, I felt that we should be certain about it and that we should change the word "may" to the word "shall" so that there will be no question concerning regulations dealing with minimum standards.

Mr. WOLVERTON. Mr. Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the chairman of our committee.

Mr. WOLVERTON. Mr. Chairman, in reference to the amendment which has just been offered by the gentleman from Tennessee [Mr. PRIEST] I would say that I think he and I see this subject alike. I know what has been in his mind with respect to the necessity of minimum standards. I have had similar feelings myself. In fact, in legislation that I previously introduced I incorporated that thought in the bill. However, in this instance my judgment was changed because of the opinion rendered by those who were, I thought, in a better position than I to know about what should be done, based on their experience. They advised the committee that it would not be advisable in this bill, pioneering as it is, to have fixed and inflexible standards written into the bill, but that it would be better to give the Secretary more flexibility to write in whatever might be necessary in the way of standards, by regulation. So that with the tendency of the gentleman from Tennessee [Mr. PRIEST] to recognize that there is some substance to that opinion that was rendered but who does feel that the language we have in the bill would be strengthened by the use of the word "shall" instead of "may", I would like to say that I am in accord with the amendment that the gentleman has offered.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. Do I understand that there is no basic requirement set up in the bill?

Mr. PRIEST. There are some basic requirements set out in the bill, but not as to standards that a policy shall have if it is to be eligible for reinsurance. The provision in the bill provides for those standards to be issued in the form of regulations and covers about eight subjects which shall be considered. This amendment would require that regulations on those eight subjects be issued; that is correct.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee [Mr. PRIEST].

The amendment was agreed to.

Mr. HESELTON. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I shall not take the 5 minutes, I only take the floor because I find I overlooked some testimony which I think is of some importance, and I am afraid in the colloquy I had with the gentleman from California [Mr. SHEPPARD] whom I do not see on the floor at the present moment, I misinformed him. At least, I want to quote to you from the testimony of Mr. James Stuart, the chairman of the Blue Cross Commission. My colleague the gentleman from Texas [Mr. THORNBERRY] asked him this question:

Is it contemplated that under the reinsurance program of this bill, or under this bill, that there will be coverage for which the premiums would be less and would encourage folks in the blue section—you referred to the blue section on the chart—who did not carry hospitalization insurance to carry hospitalization?

Mr. STUART. It might have that effect, Mr. THORNBERRY. Actually, we should be taking care of those now regardless of any Federal reinsurance program that might be coming up. But we have not been quite flexible enough in our programs. Without too much expense. We have not found a method of getting to them unless they were employed in groups.

That is the great big area where millions of people are not covered by these insurance plans. He said further:

I think this will encourage us to find ways of covering these people and——

This is very significant, and I will ask my colleague, the gentleman from New York [Mr. KLEIN], who has made the point that this bill cannot help people in the relatively low income groups—this is Mr. Stuart's testimony who is chairman of the Blue Cross Commission. He says:

Actually of people earning less than $3,000 per year, 41 percent have some kind of health insurance.

So that I do want to correct what I said to that extent—I will leave my original remarks in the RECORD with this explanation, but I do think when you have that great area of people earning less than $3,000 a year who are not insured, this bill offers an opportunity to reach millions of people who cannot now qualify under any existing plan.

Mr. KLEIN. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield.

Mr. KLEIN. The gentleman testified there were 41 percent of people under $3,000 who had this Blue Cross insurance. We do not disagree on that. I think what I said, and I believe you will agree with me, certainly Mr. Beers of the Aetna Life Insurance Co. did, was that as to the over 51 percent of people who are not insured—the people under $3,000—this would not help them get insurance.

Mr. HESELTON. I am sure my colleague does not want to leave the impression that that is true because it is not true in my mind, as I understood the testimony. There are farmers, for instance, who cannot qualify. There are employees of small business concerns—barbers, professional people, gas station operators, mechanics, carpenters, and any number of people who simply cannot qualify because the approach is through the group insurance prepayment plan. If we can extend this coverage to those people, and as has been suggested by virtue of the experience that the companies accumulate as voluntary agents, we can find ways of covering those people, or we can find ways of insuring those people in the upper age groups who cannot be insured now, then truly while I do not want to put words into my friend's mouth, I think I know him well enough to know that if his good friend, the gentleman from Tennessee [Mr. PRIEST] who has been following this field says that it is an experiment and admits that we will not know the results unless we do experiment. I beg him to go along and vote for this bill.

Mr. KLEIN. The gentleman and I very rarely disagree and I know we do not disagree on this general principle. The only point I make to my dear friend is this. You are interested in the same objective as I am. It has been admitted by the people who testified that this bill will not have that effect. If the gentleman can rewrite this bill, and I think it ought to go back to the committee and get more thought, if the gentleman can rewrite this bill in such a way as to accomplish those objectives, he may be assured, I will be one of his most ardent supporters.

Mr. HESELTON. May I say to my dear friend and colleague that if we can this afternoon take the initial step toward providing better health protection for the American people, then I would hope to see the gentlemen walking shoulder to shoulder with us in an attempt to make that better health protection available.

Mr. STAGGERS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, first I would like to say that I have great admiration for the chairman of our committee, Mr. WOLVERTON. I think he is very sincere in working for what he believes are the best interests of the people of the whole country.

There are always two sides to every question. I disagreed with this legislation when it was before the committee, and after listening to most of the debate I still disagree with it. In committee I asked the assistant secretary, Mr. Perkins, whether this would make insurance available to the 63 million people in America who do not have insurance now. He said he hoped so. I asked him again whether it would reduce the rates of that insurance, and he said, "I hope so."

If you will go through the testimony that has been recorded, every person that did seem to be halfway lukewarm for the legislation said, "I hope," or "I think," or "it could," or "it should." I did not hear one single person say to the committee that it is going to do this or that or something else, with an emphatic reply.

I did not hear all of the testimony but I did hear most of it. Those people who came before the committee waxed so eloquently—I cannot find it in the testimony and I did not hear them. I believe this Congress should do something to help these 63 million people today who do not have insurance, but I do not believe this is the way to do it.

Do you know what I believe this bill does, and I said it in committee to one of the men in the Department? It reinsures the insurance companies of America that they will not take any losses. If this were going to help the aged, those who are indigent and those who cannot afford to pay for insurance, it would be a fine proposition. But who are you helping? You are helping the people who can afford to pay for insurance today, and you are helping the big insurance companies and saying to them, "If you make a mistake we will help you pay it back."

I believe the sentiment here is that some health program has to come out of this session of Congress to tell the American people that they are going to help them in their health and welfare program. I want to tell the Congress that the people of the United States can read and reason and think. I believe when this whole furor is over they are going to say that this Congress passed a bill to help the insurance companies of America and all the testimony says it may help those 63 million, or it could help them, or we think it should. Now, what is the result? I believe when this bill is passed the people of the country are going to say it was a great camouflage in the guise of health and welfare insurance for the people of the country. That is my final analysis of it. I do not impugn the motives of any man who has spoken for the bill because I believe the members of this committee are wholeheartedly concerned with the interest of the people of the country, more so than any other committee in Congress. I think they have more to do with the things that affect the people directly probably than any other committee in Congress, and when they speak in behalf of this legislation they are sincere in their expression. I am opposed to this legislation because I believe it is more or less class legislation designed to help those who already can help themselves and does nothing for those who need it.

Mr. BEAMER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BEAMER: On page 45, line 19, after the word "laws" and after the comma, insert "None of whom shall be persons presently employed by the Federal Government in any capacity."

Mr. BEAMER. Mr. Chairman, frankly, this bill provides what we might consider as a bare framework of a program and was reported out of the committee with the reservation and the understanding that all amendments that otherwise might have been offered in the committee could be offered on the floor of the House. That is the only fair way in which any legislation can be given consideration, and this worthy legislation is entitled to that consideration. The fact of the matter is I am not going to speak in behalf of the legislation; I am not going to speak against it, but since we have the bill on the floor of the House it should be perfected and the Members given an opportunity to offer amendments.

In this Congress I feel confident every Member is against socialistic encroachment, and that is one point on which many people will object to this bill.

Although this is a simple little amendment I think it will help overcome that objection. In other words, we have many people on this floor accusing us of socialistic tendencies of some type, and for that reason if this advisory committee is supposed to assist in the formulation of rules and regulations for the operation of this program it becomes all the more important that it should be composed of people who do not bring a lot of preconceived notions with them, perhaps socialistically inclined, and who are presently in the Government.

Mr. Chairman, I have some other amendments to offer and would like to reserve the balance of my time to speak on them.

Mr. WOLVERTON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the amendment which has been offered by the gentleman from Indiana seems to me would go much further than he intends that it should. From a reading of the section it will be seen that the council is to be appointed by the President of the United States. I would not like to think that the gentleman from Indiana has lost confidence in the judgment of the President of the United States.

As to who would be qualified to serve to the advantage of the country in a matter as important as this, for instance, I think you would term Herbert Hoover such a person, yet under the wording of the gentleman's amendment he being in some indirect capacity employed in work for the Government, would be precluded from consideration by the President if the President had a desire to appoint him.

With respect to the council that has been provided for in the bill, I might say that I look on the council as a very important part of this bill. The purpose of it is that the Secretary may have the advice and counsel of those who had knowledege of this particular subject, it being a new subject. It certainly was one that lent itself very readily to the thought that there should be experienced help in the drafting of the rules and regulations and the making of decisions, and so forth. We therefore provided that the members of the council should be appointed by the President of the United States. But if the President is given the power then it raises the council to the highest possible echelon and gives the best possible assurance that the right type, kind, and character of people would be appointed.

In speaking of this council, it is my personal opinion that there are many groups that should be represented on this council. I would expect that the President, in the exercise of his judgment and discretion and in view of the knowledge of his responsibility for this legislation, will be very anxious to appoint those who can be depended on to render the best possible service. Personally, I think that the insurance commissioners of the States should have representation on this council. I am of the opinion that even the AMA should have some representation on this group. I think experienced insurance leaders should be recognized in a group such as this. I think those who have knowledge of health insurance plans, and particularly prepayment plans, should be given recognition. So I might go on and mention the different ones that, in my judgment, could help very effectively as members of an advisory council. Though the amendment offered by the gentleman is well intentioned, I do not think that it is necessary under the circumstances, particularly in view of the fact that the council is to be appointed by the President of the United States.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana [Mr. BEAMER].

The amendment was rejected.

Mr. WILLIAMS of Mississippi. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time in order to inform the House that a motion to recommit this bill will be presented either by myself or by the gentleman from Texas [Mr. THORNBERRY]. It is my honest and conscientious belief that this legislation should be recommitted to the Committee on Interstate and Foreign Commerce.

I, personally, follow certain rules in my consideration of any legislation. Perhaps I am wrong, but I believe it a safe and sound approach. I feel that the burden of proof should rest on the proponents of the legislation to convince me that it meets certain conditions. First, I think they should convince me that there is a need for the legislation;

second, I think they should convince me that the bill being considered is the best vehicle for meeting that need; and, third, I think it should be shown affirmatively that the legislation does no violence to the Constitution. Until the proponents of the legislation can convince me that those three conditions have been met, I believe I should resolve my position in opposition to the legislation.

Now, what have we here? The third point, as to the constitutionality of this legislation, of course, is not involved. There is no question but that it would be constitutional. So far as need is concerned, obviously there is need for some kind of a workable public-health program. There is need for a public-health program because of the present high cost of medicine which makes it almost prohibitive to the public and because medical care is not readily available to the public to the extent it should be available.

Now, as to meeting that need, which this bill seeks to do. How are we going to make doctors available to the public? There is but one way to make more medical care available to the public, and that is to increase the number of doctors that we have in the country. The problem in this, as in the high cost of nearly everything else, stems from the old law of supply and demand. At present the demand for medical care and treatment exceeds the supply. I believe it was testified before our committee that there is in this country one practicing physician for every thousand people, or somewhere in that vicinity. And of those, more than half, I believe, are specialists. Now, the only way that we are going to make available more medical care for the public is to increase the facilities for medical care, which, of course, is to educate more doctors and build more hospitals. This bill admittedly does not do either.

Medical costs can be reduced only by making medicine competitive. If we had enough doctors to make medical practice competitive, they would be compelled to adjust fees to meet the competition. But this bill certainly does not do that. As long as a doctor, merely by hanging his shingle out, can get all of the practice that he can personally handle, who can blame him for that? This bill does not increase the supply of doctors and it cannot reduce the cost of medical care.

The real health problem as it exists in this country today does not rest primarily with the people who are able to pay for their medical care either in cash, on credit, or by insurance. The real problem is in the people who are unable to pay for it, and do not have the money to insure themselves against it.

Now, the gentleman from Massachusetts, who is perhaps the most vocal proponent of this legislation, admits readily that this does not make insurance available to any more people than are now covered. He admits that a man who cannot afford to buy health insurance now will not be able to afford to take it out even under this bill. Does anyone know exactly what this bill seeks to accomplish? Surely, it has not been made clear to me and a number of my fellow members of the Interstate and Foreign Commerce Committee.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. WILLIAMS of Mississippi. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. RAYBURN. Mr. Chairman, will the gentleman yield?

Mr. WILLIAMS of Mississippi. I yield to my distinguished leader.

Mr. RAYBURN. I have seen a great many bills come before the House of Representatives and especially from the great committee of which I was chairman for quite a while, and of which I was a member for 24 years. In listening to the remarks of members of the committee and others here today, it seems to me that I have discovered or felt more indefiniteness among them as to what this bill means and what it may accomplish. I have heard pious hopes expressed, of course, that it would do something, but from what I gather from both sides of this aisle in the discussion of this bill it would appear to me that many, even members of the committee, and especially others in the House of Representatives, would like very much to see this bill further studied before the House finally passes on it. So far as I am concerned, I am for legislation of this kind if I think it is in proper form. So far as I am concerned, under the present circumstances, I shall support the motion of the gentleman from Mississippi to send this bill back to the Committee on Interstate and Foreign Commerce for further study.

Mr. WILLIAMS of Mississippi. I thank the gentleman.

Mr. Chairman, the gentleman from Texas [Mr. THORNBERRY] pointed out previously the manner in which this bill, in its final form, was railroaded through our committee. It was handed to us at 10:30 in the morning, a 56- or 57-page bill, and was voted to the floor about an hour later. Nobody on the committee, I am sure, had an opportunity even to read the language in this specific bill. Those who voted for it must have done so on faith and faith alone, as they obviously had not had time to see what was in it.

I believe that one of the preceding speakers, a Member of the other party, either intentionally or unintentionally, let the cat out of the bag when he told the House truthfully that this bill was approved by the committee reluctantly and with reservations; but also with the understanding that the amendments which otherwise might have been offered in the committee could be offered from the floor. That argument, in itself, should be sufficient grounds for recommitting the bill.

Mr. HALLECK. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I think we might as well understand the situation as it has developed. If this bill is recommitted it will be killed. Let us make no mistake about that; let us have no misunderstanding. We all know that we are driving to adjourn this session of the Congress within the time fixed by the Reorganization Act, which is July 31. So it is obvious that if this bill is recommitted, it will kill the bill. And those who vote to recommit it will have to take that responsibility. Personally, I am not going to take it. I do not think this bill should be recommitted.

It is very easy many times to say of a bill that it has not had sufficient consideration. I have said that a few times myself, when I came here in 1935 and voted on measures that were not even printed. And I must say, in retrospect, that some of them turned out pretty well. Of course, there were many of them that did not turn out so well.

There has been no rash of amendments offered here. My colleague from Indiana [Mr. BEAMER] has some; the gentleman from Tennessee [Mr. PRIEST] had one that was adopted. I have not heard concern expressed about the drafting of this bill. There has been some question as to how much it is going to do. Perhaps in the minds of some it will not do anything and in the minds of others it will do too much. Those who want a far-reaching, broad, compulsory, comprehensive plan say this bill is nothing. The gentleman from Mississippi [Mr. WILLIAMS] says that it is as the fluff of candy that he bought for his youngster at the zoo. Then there are others who say that we should not do any of these things. But let me say to the gentlemen on my side of the aisle at least and certainly to my friends on the right who are here acting on this, not as a partisan measure, because it is not that, but who want to recognize that improvements in national health are desirable, that here is a good, effective way to get them.

No one claims that this is a panacea for all of the problems that beset us in respect to national health. No one would claim that. But I think a good case has been made to support the contention that this program of reinsurance, within our fundamental concepts as we operate in this country, may well make it possible for the established, prepaid, voluntary plans so to expand their coverages and expand their operations so as to bring adequate medical prepaid voluntary care within the reach of millions and millions of our people. Is not that a desirable end? I say that it is.

As was suggested a moment ago by some of my colleagues in debate, and it cannot be said too often, some want to go much further and some do not want to go at all; but if this great committee that I say has done a good job here brings in a bill that marks a definite step in the direction of providing better medical attention, then we ought to support it and we ought not to recommit the bill because, may I say again, that will kill the bill.

This is a very definite, integral part of the program for better health for the American people, which the administration has been trying to work out. I am sure we all understand that. But, if there is any question in anybody's mind about it, let me set that question at rest because it is definitely a part of that program. I think it is a good part. I think it will be effective. If it is not

effective, then little harm is done, if any. But, let us give it a chance. Let us back up this committee which reported the bill to us. There is nothing the matter with the draftsmanship of the bill. The able gentlemen who have spoken here, and who have tried to raise questions about it, are of such great capacity that they could, I am confident, read this bill and in an hour's time find out what is the matter with it—if there is really anything the matter with it. Its provisions have been under study by people in the country who are interested in matters of this sort. No objections to the drafting or the form of the bill have been transmitted to me. As a matter of fact, if I had the time, I would read to you the letter I have here from a New England insurance company, the Union Mutual Life Insurance Co., that recites the fact that they have done a great deal of business in the field of accident and health, including group, commercial accident and health and hospital insurance, saying that this sort of measure should be enacted into law. It is suggested that we give it a try and that it will help to expand the coverage and that it can do much to help these people. So, I say to you again, do not be misled by this motion to recommit because, if you vote for it and sustain the motion you will kill the bill. Let us go on and pass this bill. Then, the legislative process will begin to operate. It will go over to the other body where another look can be taken at the bill. Then, if there is anything seriously the matter with it, it can be straightened out either in the other body or in conference.

Mr. RAYBURN. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, I regret very much to say that the impassioned and eloquent appeal of the gentleman from Indiana has not convinced me that this bill has had the proper amount of study. Therefore, he has not changed my mind on the proposition that it should be sent back to the committee for further study. If the gentleman from Indiana had had more time, I would have liked to interrupt him and ask him to discuss the specific provisions of the bill and explain those hazy parts of it that some of us are too obtuse to understand. But I simply rise to say, Mr. Chairman, that the gentleman from Indiana has not changed my mind, and I assure him there is nothing partisan in what I am saying, and there would not be even if this bill had come before us on the recommendation of another President. I do think, however, that if it had come up at another time under such circumstances, in all probability we would have heard the cry of socialized medicine and we would have heard cries of the expenditure of Government funds for the benefit of some of the richest corporations in the country, and all that sort of thing. I am as much in favor of having a health program for the people of this country as anybody, but I think, Mr. Chairman, that this is a blundering, stupid way to start in trying to get such a program.

Mr. BEAMER. Mr. Chairman, I offer an amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BEAMER: Page 45, lines 20 and 21, strike out words "health service prepayment plans" and substitute therefor the words "private insurance."

Mr. BEAMER. Mr. Chairman, I do not propose to take very much time on these several amendments. I want to assure the chairman of my committee, for whom I have a very high regard, because this understanding has always been in our committee, that every bill is to be studied and given an opportunity to be perfected and improved. It is from that point of view that I am today offering several amendments.

I hope that my colleagues on the committee will offer what they also consider perfecting amendments.

This is a very simple amendment. I think you will discover that as the bill is written, "Health service prepayment plans," it would restrict the choice of the four individuals who are already suggested to be on the Advisory Council. You will discover they are specifically named, from the type of company. I suggest the President should have the opportunity of naming them from any private insurance company, instead of restricting them to one class of insurance companies.

In that connection, I should like to call attention to the fact that the President shall appoint 4 people out of 12. I propose to offer another amendment later that would name 4 more from another group. I will not discuss any of these amendments very long, but I assure you that all of this is done in the hope that we can get good legislation that will not be recommitted.

I yield back the remainder of my time, Mr. Chairman.

Mr. WOLVERTON. Mr. Chairman, I regret exceedingly that it is not possible for me to concur in the judgment of my colleague the gentleman from Indiana [Mr. BEAMER]. I do wish he had spoken to the chairman or some other member of the committee with respect to the amendments, in order that we could have conferred with respect to them. I think he could have been convinced that it was not the proper thing to do. However, it comes before the House now.

Again I make reference, as I have made before, to the power that is given to the President in making his selections for membership on the Council. In this particular instance I think the committee was justified in doing what it did in providing that not less than four should be experienced in health service prepayment plans. I think we all recognize that the health service prepayment plans are a very integral part of this bill. We felt that it gave assurance to those who undoubtedly were most interested in this bill, that they would have representation upon the Council, and therefore be able to bring their experience to the benefit of the Secretary of Health. Therefore, it seems to me that the committee was justified in making that provision in order that those who are most interested in this legislation, and upon whom such a measure of dependence must be placed in order that it can be successful, should have representation on that Council. It was done to give assurance to them that this language was written into the bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana [Mr. BEAMER].

The amendment was rejected.

Mr. BEAMER. Mr. Chairman, I offer an amendment, which is on the desk.

The Clerk read as follows:

Amendment offered by Mr. BEAMER: Page 45, line 19, after word "laws" and after comma, insert "not less than four of whom shall be licensed physicians."

Mr. BEAMER. Mr. Chairman, again I shall not take the time to which I am entitled.

This amendment I think is self-explanatory. After all, who is better qualified in a health program than a physician—and this is a health program.

I am sorry that it is necessary to present these amendments. I know there are other members of the committee who likewise have amendments. Let me tell you that I worked long hours on these amendments. I think this is an important measure.

I hope the chairman and other members will support me in this amendment. If it is desired, Mr. Chairman, I shall be glad later on to submit the amendments en bloc. Perhaps I should have done so originally.

Mr. Chairman, I yield back the balance of my time.

Mr. WOLVERTON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the amendment, as I understand, would substitute licensed physicians for individuals; in other words, it provides that not less than four of them shall be licensed physicians.

I want it to be perfectly understood that I have no objection—in fact I have already stated, before I knew this amendment was to be offered, that in my opinion there should be physicians in the group that the President is to appoint, but I have not yet gotten to the point where I would agree to take from the President the exercise of discretion that he would have under this bill in appointing 1, 2, 3, or any other number of the 12 individuals who would serve upon the Council; nor would I want to assume that the President of the United States would not be conscious of the fact that the physicians of this country who have rendered such outstanding service to our citizenship should be represented upon this Council. But I do not think it is in accord with the dignity of the Presidential office that we should indicate by a vote of this kind that we do not have confidence that the President would give recognition to physicians on this particular Council. Personally, I would be surprised and I would be disappointed if he did not do so. While it was not necessary for me to make any statement whatsoever, yet I did express my personal opinion that even the AMA, notwithstanding some of the things that have been said here today, should be members of that Council. I think it would be a mistake if they were not.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. WOLVERTON. I yield.

Mr. HOFFMAN of Michigan. Would a vote against this amendment be construed as an expression of confidence in the President and his administration?

Mr. WOLVERTON. I think it would—if the gentleman thinks it is necessary for him to give assurance of that confidence.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana.

The amendment was rejected.

Mr. BEAMER. Mr. Chairman, I offer a further amendment.

The Clerk read as follows:

Amendment offered by Mr. BEAMER: Page 46, line 2, after the period at the end of the sentence add a new sentence as follows: "The Council shall report to the Congress annually on all recommendations and proposals made to the Secretary, and on all such recommendations and proposals that are adopted relating to health service prepayment plans."

Mr. BEAMER. Mr. Chairman, I think that the old adage: "If at first you don't succeed, try, try again," might be true today.

I reiterate to the Members of the House that it is necessary for some of us to try very desperately if this bill is to be saved to put in some perfecting amendments, and I have done so. I hope you will agree with me. I have made a deep study of this bill. I am not an attorney, but I have studied the bill and I do not think it is necessary to be an attorney to recognize that there are some improvements necessary in the bill. We did not do it in the committee, but I am attempting to do it on the floor and I hope some of the amendments will be recognized. I have not asked for a division vote on these amendments, but I believe they would pass if we asked for it. I hope that someone will recognize that, after all, this is the Congress that is providing for this new program and this new plan; it does not come from any other agency of the Government, it comes from the Congress; and all this amendment does is to ask that the council at the end of the year report to the Congress.

Mr. HALE. Mr. Chairman, will the gentleman yield?

Mr. BEAMER. I yield to the gentleman from Maine.

Mr. HALE. Will the gentleman refer to the provisions of section 403 on pages 79 and 80 and tell the committee why they do not adequately cover what the gentleman has in mind?

Mr. BEAMER. That is only a report of the finances, if the gentleman will read it. I ask here that they shall report all recommendations and proposals that are adopted with reference to the prepayment plan.

Mr. HALE. I call the gentleman's attention to the fact the language is a complete statement with respect to operations under this act.

Mr. PRIEST. If the gentleman will yield further, I concur in what the gentleman has in mind, but I believe it is already taken care of in the bill wherein a report is required annually from the National Advisory Council, including any minority views. This question came up, and I think it was a very important one, that when the Advisory Council report was sent to the Congress through the Secretary it should contain the minority views, if any, on the part of any member of the council.

Mr. BEAMER. This may be duplication, but I think if you will read on pages 79 and 80 it is a report from the Secretary to the Congress, not from the council to the Congress.

Mr. PRIEST. The council is required to report to the Secretary, this to be transmitted to the Congress, including minority views. That was not in the bill until the new committee draft. That may be why the gentleman is not certain on that point.

Mr. BEAMER. I thank the gentleman from Tennessee. I recognize now this was not in the bill originally and that is the reason it was offered. That being the case, Mr. Chairman, I ask unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Indiana?

There was no objection.

The CHAIRMAN. The question is on the committee amendment to the bill as amended.

The committee amendment, as amended, was agreed to.

Mr. DINGELL. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, as coauthor in several sessions of Congress of a bill—currently H. R. 1817—to meet the vast and pressing health needs of the American people through a comprehensive national health program, I cannot remain silent in the face of a bill being presented to the American people under fraudulent pretensions. I refer to the so-called reinsurance bill, H. R. 8356, which, it is contended, will stimulate existing voluntary insurance plans to extend their coverages, to improve their benefits, and to lower their costs.

These are most worthy objectives, and although I do not feel they fully state the urgent needs of the American people for an improved and more economical method of obtaining high quality of medical care at costs which are within their means, I would be prepared to applaud any proposal honestly and realistically designed to accomplish these objectives.

In the place of a bill well planned and drafted to meet these problems on the scale of their great magnitude, we find a proposal which can only be characterized as a puny and totally inadequate "gimmick" which all expert testimony at the hearings has demonstrated can accomplish virtually nothing.

That is why this is a fraud on the American people. The administration pretends it is a solution to some of our most pressing problems of obtaining adequate medical care for our people—in the face of every bit of expert testimony. One can only conclude that the administration hopes to be able to deceive the people who do not generally have the benefit of the expert analyses in this highly complicated field. The blunt fact here is that we do not have a health bill worthy of the name.

Nothing shows the administration's hand better on this issue than the rude treatment it has given to a proposal sponsored by several of my worthy colleagues in the majority party both in the House and Senate—H. R. 3582, 3586, 4128 and S. 1153, known as the National Health Act of 1953. I do not feel that this bill approaches our national problem in the manner I feel will be most effective. Nor do I feel that the sponsors appreciate the administrative complexities that would be involved in their approach. But I do say that they have boldly proposed a measure that honestly attempts to meet the problems confronting us. Passage of such a bill could indeed have constituted a major step—even many steps—in the right direction.

This bill the administration has studiously slandered as socialized medicine and in a thousand other ways have misrepresented the facts. Moreover, the administration ignored and pushed ignominiously the Murray-Dingell bill into the back closet and came out in favor of the bill now under consideration. The comprehensive bill sponsored over the years by Members who have joined me heretofore is the genuine article. This proposal is bogus and cannot hold a candle to the proposal which has been sponsored by a large number of Members of this House.

I would like now at this point to submit a fact sheet on the administration's reinsurance bill which I have had prepared for the purpose of outlining my position on this piece of proposed legislation.

FACT SHEET ON THE ADMINISTRATION'S REINSURANCE BILL (HEALTH SERVICE PREPAYMENT PLAN REINSURANCE ACT, H. R. 8356)

First. This is the administration's only proposal to meet what it concedes is a key problem—the cost of medical care. It purports to make it possible for voluntary plans (a) to extend coverage to groups not covered and to new geographic areas, and (b) to provide new benefits and services.

Second. There is no evidence that any insurance plans would be motivated to cover the groups and areas that now pose the principal difficulties—the low income, the rural population, the self-employed, and the retired. At the most, the bill might provide a motivation for some indemnity plans to extend their present benefits for longer periods and costlier—catastrophic—illnesses, but at correspondingly higher premium costs which only the higher income groups among present subscribers could afford.

Third. Testimony brought out—

(a) Insurance companies do not want reinsurance and see no way it would be useful. Their expert testimony has been completely damaging to the pretentions of this bill.

(b) The doctor's Blue Shield plans say they could not use it.

(c) It is particularly ill-adapted to help the best health plans we have today—the comprehensive medical care plans such as Kaiser, HIP in New York, and the labor and co-op plans—to meet

their problems in extending coverage. None of these has indicated any way it could use reinsurance. Even Dr. Baehr, of HIP, who is one of few experts who did not oppose this bill, said it would not significantly help HIP or similar plans and that the legislation would be ineffectual unless H. R. 7700—the mortgage loan insurance bill—was passed at the same time.

(d) Blue Cross, almost alone, is on record favoring the bill—but at no point in Blue Cross testimony were spokesmen able to indicate exactly how they would use it. Off the record, these spokesmen are reported to have admitted the bill probably would not be useful even to Blue Cross.

Fourth. In short, the reinsurance bill holds no promise of fulfilling even a small part of its ambitious, high-sounding objectives. It is an attempt to make what is essentially a limited device or gimmick — reinsurance — accomplish tasks for which it is entirely unsuited. Its professed purpose is to encourage voluntary plans to make various types of improvements in benefits and coverages. These are improvements which cannot be made, on the whole, without some sort of direct or indirect subsidy.

Fifth. The bill has a basic internal contradiction. It is trying to extend coverage, improve benefits, and so forth—all of which cost money—without expending any money. Note: The reinsurance scheme is supposed to be self-liquidating. It tries to do these things by a device—reinsurance—which is unrelated to the basic problem—like trying to use a hammer to saw a piece of wood.

Sixth. The administration, quite correctly, notes the following shortcomings of current voluntary plans:

1. They are too costly for low-income groups.

2. They do not pay the full medical and hospital bills.

3. They do not cover all needed medical care.

4. They do not cover the unemployed, the retired, the rural areas, or chronic illness.

Why do voluntary plans not meet these problems?

The incorrect and unsubstantiated assumption behind the reinsurance proposal is that voluntary plans do not venture in these directions because the costs are unknown and they are afraid to take the risks.

The facts are:

(a) The costs either are known or could readily be estimated.

(b) But the costs are such as to discourage purchase of such coverage by groups that need it most.

(c) Each of the above problems is different and requires specialized measures—and involve either expenditure of money or a more economical organization in the provision and financing of medical care.

At a later date and separately, Mr. Chairman, I propose to treat the question of socialism in medicine and tell you exactly where you will find it. For the time being let it be sufficient to say that there is no socialism in the Murray-Dingell bill, and that such socialism as there is in the health problem you will find in the administration bill sponsored by the distinguished chairman of the great Committee on Interstate and Foreign Commerce as it originated in the Department of Health, Education, and Welfare, and blessed as it is by President Eisenhower.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. CANFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 8356) to improve the public health by encouraging more extensive use of the voluntary prepayment method in the provision of personal health services, pursuant to House Resolution 623, he reported the bill back to the House and sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. WILLIAMS of Mississippi. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. WILLIAM of Mississippi. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. WILLIAMS of Mississippi moves to recommit the bill to the Committee on Interstate and Foreign Commerce.

Mr. WOLVERTON. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

Mr. WILLIAMS of Mississippi. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 238, nays 134, answered "present" 1, not voting 61, as follows:

[Roll No. 103]

Mr. Heller for, with Mr. Miller of New York against.
Mr. Willis for, with Mr. Nelson against.
Mr. Morrison for, with Mr. Taylor against.
Mr. O'Neill for, with Mr. Bender against.
Mr. Friedel for, with Mr. Weichel against.
Mr. Sikes for, with Mr. Bramblett against.
Mr. Fogarty for, with Mr. McGregor against.

Until further notice:

Mr. Cotton with Mr. Byrne of Pennsylvania.
Mr. Curtis of Nebraska with Mr. Chudoff.
Mr. Norblad with Mr. Holtzman.
Mr. Harrison of Wyoming with Mr. Fallon.
Mr. Gwinn with Mr. Moulder.
Mr. Merrow with Mr. Morgan.
Mr. Mailliard with Mr. Long.
Mr. Kersten of Wisconsin with Mr. Lucas.

Messrs. REES of Kansas and JOHNSON of California changed their votes from "yea" to "nay."

Messrs. SCUDDER, HRUSKA, JONAS of Illinois, AUGUST H. ANDRESEN, and ASPINALL changed their votes from "nay" to "yea."

The result of the vote was announced as above recorded.

RESIGNATION FROM CONFERENCE COMMITTEE

The SPEAKER laid before the House the following communication, which was read:

JULY 13, 1954.

Hon. JOSEPH MARTIN,
House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a conferee on H. R. 7434, H. R. 7601, H. R. 9040, and S. 2759.

Very truly yours,

GRAHAM A. BARDEN.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

The SPEAKER. The Chair appoints the gentleman from Pennsylvania, Mr. KELLEY, to serve on the conference committee on the bill H. R. 7434, on the bill H. R. 7601, and on the bill H. R. 9040, and the Senate will be notified accordingly.

The Chair appoints the gentleman from West Virginia, Mr. BAILEY, to serve on the conference committee on the bill S. 2759, and the Senate will be notified accordingly.

SPECIAL ORDER GRANTED

Mr. MILLER of California asked and was given permission to address the House for 30 minutes on Thursday next, following any special orders heretofore entered.

SANTA MARGARITA RIVER, CALIF.

Mr. MILLER of Nebraska submitted a conference report and statement on the bill (H. R. 5731) to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from the Santa Margarita River, Calif., and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, and for other purposes.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. BENTLEY. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce may have until midnight tonight to file a report.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

AEC—DIXON-YATES CONTRACT TO SUPPLY POWER FOR TVA

The SPEAKER. Under previous order of the House, the gentleman from Mississippi [Mr. ABERNETHY] is recognized for 45 minutes.

Mr. ABERNETHY. Mr. Speaker, in May of 1933 TVA was created by an act of Congress. In November of that year the first municipality signed a contract to purchase power from TVA for distribution to its consumers. That first signer was Tupelo, in Lee County, in the First Congressional District in Mississippi. In the months that followed referenda were held in villages and towns throughout the area. In north Mississippi, for example, Corinth voted 792 to 2 to take power from TVA; Amory voted 613 to 12; Columbus, 1,060 to 145; Aberdeen, 610 to 42; Okolona, 228 to 7; Starkville, 424 to 51; Holly Springs, 325 to 61; Water Valley, 526 to 45; Macon, 346 to 9; Charleston, 251 to 46; Louisville, 299 to 7; Philadelphia, 349 to 27. Most of these towns voted in favor of taking power from TVA some time in 1934. Now, 20 years later, in 1954, these citizens, like the people of Memphis, who voted for TVA in November of 1934, are told that the President of the United States has decided that a private utility combine, not TVA, is to generate the power for use in their homes and on their farms. They are told that the Federal agency to be entrusted with responsibility for negotiation of the contract designed to achieve this result is not to be the TVA, with whom these distributors have contracts, but the Atomic Energy Commission. This is the astonishing state of affairs presented on the floor of this House in recent days.

This creeping invasion of TVA territory by the private power companies means, and it is intended to mean, I believe, the end of the greatest partnership between local and Federal agencies this Nation has ever seen. The Memphis and west Tennessee customers of TVA are simply marked as the first victims. North Mississippi, north Alabama, east Tennessee will be devoured in their turn. The Presidential fiat revealed a few weeks ago marks the inauguration of this administration's formula to end TVA, to terminate the only demonstration in this country of what can happen when a power system is conceived as an instrument to promote the development of the economy as a whole and to raise the standard of living of the people rather than simply as a vehicle to make money for absentee owners and investment houses in New York.

For 20 years the Old Guard in the Republican Party has been trying to destroy TVA. Only now have they found a formula, and a tool. The tool, an unwitting one, is the AEC. The formula is for the President of the United States to use his Executive powers to force an agency having nothing whatsoever to do with the development of the region to take over the responsibility Congress gave to TVA and negotiate a contract with the bitterest enemies of TVA. This delicious formula will not only permit the private power companies to destroy the TVA under impressive auspices, but to make money in the process.

On behalf of my constituents I denounce this proposal. I want to expose its purposes and frustrate its consummation. The Atomic Energy Commission has no business whatsoever acting as a power broker for private power companies. The Atomic Energy Commission has authority in a most sensitive area of public responsibility. The people of the United States must respect it, the world must respect it, if it is to continue to serve effectively. But how can the people of the United States respect an agency when 3 of the 5 members testify openly that they are against a proposal they are proceeding to accept and when it is obviously outside their field of statutory responsibility. The AEC was given authority to make long-term contracts for power for its own use. It was not given authority to make long-term contracts for power supply for the city of Memphis or for any other city within or without the TVA belt. The General Accounting Office is on record against the proposed contract, the people of the Tennessee Valley are opposed to it; nevertheless, the President says to the Atomic Energy Commission, to the Tennessee Valley Authority, to the 150 rural cooperatives and municipal distribution systems that rely upon TVA for power that the AEC is commanded to enter into a contract to purchase power from Mr. Dixon and Mr. Yates for TVA to distribute to its customers.

In establishing the Tennessee Valley Authority Congress provided for its administration through a three member Board. The strange arrangement ordered by the President modifies without an act of Congress the administrative powers of this Board. The arrangement presents the rather anomalous situation of divesting the Board of certain administrative authority and vesting same in the Atomic Energy Commission. The Commission, not TVA, is to sign the contract with Dixon-Yates. On the other hand, the power to be delivered as a result of the contract is to be used and distributed by TVA. Just who is running what? From the beginning to the end of this strange proceeding the administrative body of TVA, the Board, is compelled by Executive mandate to sit with folded hands on the sideline and play the part of an idle spectator while one of its customers, the Atomic Energy Commission, makes for it the TVA an important administrative determination, one of the most important in the history of the Tennessee Valley Authority. All of this is in direct circumvention of the law and the intent of Congress.

This peculiar arrangement was developed in the months after the President's budget message was delivered to the Congress. We all remember that the message stated that no money was being requested to add to generating capacity to the TVA system. As an alternative to provide new capacity to meet the load growth certain to occur in TVA's service area the administration proposed to relieve TVA of a portion of its contractual commitment to AEC. It was generally understood that the administration's suggestion was that TVA, then under contract to provide 1,205,000 kilowatts of capacity at its Shawnee plant for the Paducah installations of the AEC, would be relieved of from 500,000 to 600,000 of that total; and that the Atomic Energy Commission would proceed to find another supplier. TVA would then be free to bring power from its Shawnee plant back into its system, as an alternative to building a new steam plant to aid in meeting the heavy load growth in its west Tennessee area. So far as I know, the first time anyone knew that a specific offer was being considered was when the appropriation for the AEC was under consideration by the House committee. The records now disclose that an offer had been made by the Dixon-Yates combine in February. On March 8, Gen. Kenneth Nichols, the general manager of AEC, testified that AEC would enter into such an arrangement only if ordered to do so by higher executive authority. Everyone interested in the matter assumed that General Nichols meant that the private power companies were proposing to charge more for the energy than AEC was under contract to pay TVA and that AEC, therefore, would not voluntarily release TVA from its contract. Those of us who were most concerned assumed that AEC would reject such a proposal and that a supplemental budget estimate to permit TVA to begin construction of the plant at Fulton would be submitted shortly.

But that is not what happened. We were right in assuming that at some point a determination was made that Mr. Dixon and Mr. Yates could not be expected to provide power as cheaply for AEC as TVA and that, therefore, AEC would not relieve TVA of any portion of its contract. At that point negotiations should have been dropped, the exploration referred to in the President's message should have been considered terminated, and the supplemental appropriation for TVA should have been forwarded to the Congress. That would have been the honest, forthright way to keep faith with the President's budget message. Instead, after months of delay, in the final weeks of this session, we are advised that the AEC has been ordered to enter into a contract not to purchase power for its own requirements, but on behalf of TVA, which power the TVA is to resell to the consumers whose growing load the Fulton plant had been proposed to meet.

Mr. Yates and Mr. Dixon propose to build a plant across the Mississippi River from Memphis. On the security of a long-term contract with AEC, which has no facilities anywhere near the plant, and which will not use a kilowatt of the capacity, the combine proposes to borrow 95 percent of the capital required.

No one suggests that this is a bargain for the Government. The Dixon-Yates proposals have been analyzed and reanalyzed. The Joint Committee on Atomic Energy was advised that the AEC and the Bureau of the Budget estimate that it will cost the Federal Government at least $3,685,000 more every year to support this Rube Goldberg arrangement for power supply to meet TVA's obligations in the Memphis area than it would cost if TVA went ahead and built the Fulton plant to supply the same area of load growth. AEC and the Budget say it will cost the Government a minimum of $3,685,000 in excess of TVA production cost; TVA says it will cost the Government a minimum of $5,567,000 extra every year for 25 years. Under the lower estimate the total of excess, unnecessary costs, a subsidy to a private power combine, is approximately $90 million over the life of the contract. Under TVA's estimates the total bonanza will be about $139 million.

According to the testimony of the Chairman of the Atomic Energy Commission before the Joint Committee recently TVA will be expected to pick up a check every year for a couple of million dollars, as their share of the excess costs. AEC will pay whatever amount the new plant is assessed by State- and local-taxing authorities and in addition will pay the Dixon-Yates income taxes. In the case of AEC the excess payments will come direct from the Federal Treasury. TVA's share of the excess costs will be paid out of earnings and therefore reduce the amount of money otherwise payable by TVA into the Treasury. So the Federal Treasury is proposing to make a direct subsidy to the favored power companies of every penny of excess costs, and at the end of the contract period the company, having been guaranteed a profit of 9 percent of their 5-percent equity all along, will own a plant paid for, every penny, by the taxpayers. This would be the shocking end to this executive adventure.

The President was reported to have given his reason for this amazing action at a recent press conference. As I understood it, he said he wanted to study TVA, and apparently thought this arrangement would give him an opportunity. I agree that the President could benefit by such a study, but I suggest a less costly method. And I would urge a different set of teachers. I do not think it fair for the power consumers of TVA and the taxpayers of the Nation to join in providing a total of between $90 million and $150 million so that the President of the United States can have a further period of study under the tutelage of the private power companies. Some of my colleagues from the Tennessee Valley region would join me, I think, in offering to serve as tutors and for modest fees, in fact, for free.

I could tell the President what has happened in Mississippi since TVA was established. In 1933 only 1.5 percent of all the farms in the State had electric service from the companies represented by Mr. Dixon and Mr. Yates. At the end of June 1953, 76.1 percent of the farms in the area served by TVA had electric service.

I could tell the President that but for TVA there would be no REA. The Alcorn County REA Cooperative, organized in my district in 1934, was the pattern for the rural cooperatives developed throughout the country since 1935. The President ought to study just exactly what this has meant to the human beings living on those farms and in the towns and villages of north Mississippi; what it has meant to their prosperity—to the stability of the whole Nation.

The facts are the President and his advisers could, if they are so disposed, study TVA's record without destroying TVA, and the President can get answers to the two other comments he made about TVA in an effort to explain this peculiar transaction to the press. The inauguration of a study program was, I think, the first reason he gave for his Dixon-Yates order; second, there were a few ambiguous remarks about the TVA power service area attracting industries away from New England or other States. This is not the first time that statement has been made from the White House. It is just as wrong now as ever. The truth is that not one single industry can be discovered which has moved to the TVA area from New England. Not one large power-consuming industry has moved from anywhere, and the most searching exploration has turned up less than a dozen relatively small businesses which have moved to the TVA area from other areas, and they located in the valley not because of TVA but for a variety of reasons. A little study might reveal to the White House that there is nothing in that argument at all. A very little study would demonstrate that the industrial growth of the TVA's power service area is net growth to the strength of the Nation. A very little study would reveal that TVA has added to the industrial

prosperity of other areas and has subtracted nothing. Only a moment's investigation is required to discover that TVA, itself, from 1934 through fiscal year 1953, spent a total of over $200 million for material purchased outside the Tennessee Valley, and that its promotional power rates have made the area the world's best market for electrical appliances. Jobs and payrolls have been created all over the Nation because of TVA.

The third reason given by the President for his action seemed to rest on some anxiety he suffers because the plant proposed for construction at Fulton, Tenn., by the TVA was on the periphery of its power service area. He seemed to fear that TVA was proposing to expand the area of its operations.

This odd notion has been echoed on the floor. The gentleman from California [Mr. PHILLIPS] said the other day:

> The problem is, first of all, the basic problem, how far can we permit the TVA to expand itself? (RECORD of July 6, 1954, p. 9872, col. 3.)

Now, with all respect, I should like to point out that that is not the basic problem at all. The proposed Fulton plant was not recommended by TVA to permit TVA to expand its area. It was recommended to permit TVA to keep up with the expanding load of its present area.

A little study would relieve the President of his anxieties on this point. I do not know whether the gentleman from California [Mr. PHILLIPS] has conveyed his contagious misapprehensions to the President. But they both appear to believe that TVA was limited by law to the sale of energy in the Tennessee River Basin. That is not the case. That is not the law. It is true that TVA is authorized to build its multipurpose dams on the Tennessee and its tributaries. It could not build a dam on the Cumberland, the Ohio, or the Mississippi under its present statute. But the law required the power to be made available to the preference customers, municipalities, and rural cooperatives, who desired it within transmission distance from one of those hydroelectric structures. So far as the law is concerned the location of a steam plant cannot expand the area of TVA's operation by a foot or by a consumer. Whether they get their power from steam or hydro generation does not matter. The customer must be within transmission distance of a TVA dam. A very little study of the law would have revealed that fact.

A very little study of the record would show that the city of Tupelo, TVA's proud first contractor, is located out of the Tennessee Valley, but within transmission distance. So is Memphis; so is Nashville. It was never intended that the distribution of power would be limited to the exact borders of the drainage basin.

A very little study would disclose that there has been no substantial addition to the TVA power service area for almost 10 years. Seven giant steam plants have been begun since 1949, and there has been no territorial expansion at all. The steam plants have been located at whatever points the load growth of the existing service area demanded. Of the 7, only 5 are in the Tennessee Valley proper. Shawnee is in the Ohio River Valley, its location controlled by the load at AEC's Paducah facilities. Gallatin is in the Cumberland Valley, north of Nashville. They have not changed the service area at all. The area served by TVA was determined by the initiative of the rural cooperatives and the municipalities which qualified under the statute. It was determined by the shape of the Tennessee River and its tributaries, and the location of dams. It was not and is not determined by steam plants. The increased capacity recommended by TVA at the Fulton plant is no threat to surrounding utilities. No responsible utility operator would contend that TVA could fulfill its contractual obligations to existing customers without capacity expansion. So long as the private utilities on the boundaries of the TVA system do a good job for their customers there will be no pressure for TVA expansion. The private companies know that. Their claims of terror are a fraud.

What is really fascinating about the President's anxiety about the motives behind the location of the TVA steam plant at Fulton is the fact that it seems to be a one-way interpretation of the reasons for steam-plant location. The Fulton plant is proposed to be located in the service area for the requirements of customers already under contract, but because it is on the "periphery"—to quote the President—of the TVA power system, the President regards it is threatening a projected raid on neighboring territory. Yet we of the TVA area are expected to view the Dixon-Yates plant as a helpful gesture. Certainly that plant would be on the periphery of the area of the Arkansas Power & Light Co. and within the very shadow of TVA territory. It would practically tumble into the Mississippi in a frantic effort to reach TVA-served territory.

I should like to know what explanation the President would offer for the motives of the Georgia Power Co. in proposing to locate a steam plant on the Tennessee River, outside of and far beyond its own service area and right in the heart of the TVA power service area. That is precisely what the Georgia Power Co. is proposing to do—to build a plant in the Eighth District of Alabama, represented here by Mr. JONES. The Eighth District of Alabama is the birthplace of TVA. Muscle Shoals Dam is there, Wheeler Dam is in the District, two modern steam plants built by TVA and one inherited by TVA from the Army are all in this area. Every consumer there is served by TVA. All the distributors have long-term contracts with TVA. Yet the Georgia Power Co. comes across the mountains and proposes to build a steam plant on the Tennessee River. Now it is my understanding that the management of TVA and the consumers of the area accepted the company's explanation in good faith. It appears that because the TVA made the Tennessee River navigable—over the violent opposition of the Georgia Power Co. and its allies—the company now sees an opportunity to buy delivered coal at cheaper prices. They believe that they can provide power more cheaply to their consumers if they build a plant in the heart of the TVA area on the Tennessee River—out of their service area—and carry the power over transmission lines for delivery to their customers, than if they were to construct one in their own territory.

If the location of a steam plant by TVA in the western part of its area is an evidence of territorial aspirations, as the President implied, then I say his order to the AEC, foreshadowing the construction by Dixon-Yates of a plant on the Mississippi, and the plan for construction by the Georgia Power Co. are examples of shameless and calculated aggression. This is a pincer movement which, in view of the significance placed by the President on steam plant location, seems nothing less than preparation for invasion.

Mr. Speaker, it is one thing to voluntarily enter into a contract after the minds of the parties have met and all parties have a conviction that performance of the contract will benefit each. But, Mr. Speaker, it is another thing to become a party to a contract by duress, especially to a contract which benefits only one side to the agreement. In this instance no benefits whatever will inure to the Atomic Energy Commission but only to Dixon-Yates. AEC is simply being made the tool of an assault upon TVA. The truth is that AEC's part in this transaction is nothing more than that of an unwilling witness to a shotgun wedding between the Dixon-Yates private power combine as the groom and the public power TVA as the bride. AEC has been forced to put in an appearance as a witness to the ceremony just to make the marriage bear the resemblance of legality. But even then, Mr. Speaker, this is the strangest of all shotgun weddings. In this instance a most reluctant bride is being forced to accept a most willing groom—rather unorthodox I must say, as shotgun weddings go.

This whole deal smacks of something shady. It was planned behind closed doors, without a full free airing and competitive bidding. Certainly it does not sustain the principles of free enterprise or the competitive system about which the enemies of TVA talk so much. It is a closed-door deal, to the exclusion of everyone except the favored Dixon-Yates combine. They tell you that it is yet open to any who would be interested in making a proposal. Be not deceived. No matter who makes a proposal and irrespective of how good it may be, it is a safe bet that the name of Dixon-Yates and only that of Dixon-Yates or its subsidiary will appear on the paychecks. The combine is getting extraordinary preferential treatment. Why? I would like to know. One of these days I predict we will and when we do I also predict it will be like the mackerel on the moonlit beach, it will both shine and stink.

Mr. Speaker, may I go back and repeat—the people of the Tennessee Valley and particularly of my congressional district have made their choice. They

know now they will have to fight to maintain the freedom they won by ballot 20 years ago from these same power combines who are attempting now to come in through the back door. Even though their cause passed about 18 months ago into the hands of an unfriendly administration—and may I add that it is surprisingly unfriendly after considering the promises made to them in the campaign of 1952—it is their plan and the plan of all who represent them to expose this unholy deal and frustrate its consummation.

Mr. DAVIS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Tennessee.

Mr. DAVIS of Tennessee. Some have doubted the wisdom of TVA serving the city of Memphis. Much has been discussed about the Memphis area. I am going to have something to say about it in detail in the next day or two. But I should like to remind the gentleman that Memphis was one of the early first customers, because that city came within the limits of transmission and the very first dam acquired by TVA was at Muscle Shoals. Memphis, of course, is not on the periphery by any means and is obtaining its power under the terms of the organic act passed in 1933.

Mr. ABERNETHY. Certainly it is within the transmission area. Your great city, I believe, has been served by TVA since about 1934. It has had service from the hydroelectric dams all this time. Certainly it is within the transmission distance.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Alabama.

Mr. JONES of Alabama. Does the gentleman from Mississippi understand that all of the common stock of the Georgia Power Co. is owned by the Southern Co., of which Mr. Yates is president?

Mr. ABERNETHY. I do not know that but if the gentleman so says then I accept his statement as being correct. I understand most of the southern companies, including Georgia Power Co., are owned by the same holding company.

Mr. JONES of Alabama. I believe Mr. Yates and Mr. Barry have both testified before the House and Senate committees that the Southern Co. owns all of the voting stock or common stock in the Georgia Power Co., the Alabama Power Co., and, I believe, the Gulf Power Co.

Mr. ABERNETHY. That is my understanding.

Mr. JONES of Alabama. And Mr. Yates is president of the Southern Co.

Mr. ABERNETHY. As I understand.

Mr. JONES of Alabama. And a party to this proposed agreement between the Atomic Energy Commission and the Southern and Mid-South utility groups.

Mr. ABERNETHY. May I say to the gentleman that I cannot understand the concern of this administration about the possible invasion of other territory by TVA through the location of its plant at Fulton. It expresses no concern or alarm about Dixon-Yates or Georgia Power or anyone else invading territory served by TVA, and which territory, incidentally, divorced itself from those very companies 20 years ago.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield further?

Mr. ABERNETHY. I certainly will.

Mr. JONES of Alabama. Does the gentleman from Mississippi understand further that Mr. Yates, in testifying before the Independent Offices Appropriations Subcommittee, agreed to make available all the energy to be produced by the Georgia Power Co. at the Madison County site?

Mr. ABERNETHY. I understand that is correct; yes.

Mr. JONES of Alabama. And the Madison County site, where the Georgia Power Co. expected to build this new steam plant, was an invasion or trespass on the area recognized to be that of the Tennessee Valley Authority distribution area?

Mr. ABERNETHY. Why, certainly.

Mr. MURRAY. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Tennessee.

Mr. MURRAY. I wish to commend the gentleman for his timely, effective, and interesting statement, and I concur heartily in his remarks. I would like to ask the gentleman this question: Does not the gentleman think that the proposals and specifications as sent by the AEC to the Dixon-Yates group were tailormade for this particular holding group, and that they were cut and dried for this one utility-holding company?

Mr. ABERNETHY. I think this whole thing was cut and dried for the benefit of one utility company; yes. I so indicated on the floor of the House yesterday. This entire deal has taken place under a heavy cloud. As yet it has not been completely lifted. But we are making the effort, and, I hope, with some success.

Mr. MURRAY. The more this situation is discussed and explored, the more amazing, the more astounding, the more astonishing is this directive of the President. I would like to know who gave him this advice. Certainly somebody gave him bad advice, and I have been hoping all along that he would see the true picture and rescind this directive.

Mr. Speaker, I ask unanimous consent to insert at this point as part of my remarks an editorial appearing in the Commercial Appeal, Memphis, Sunday, July 11, 1954, entitled "Why We Oppose Power Plant Deal," in which appears editorials from the Milwaukee Journal, the Washington Post and Times-Herald, and the Louisville Courier-Journal.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The editorial reads as follows:

WHY WE OPPOSE POWER PLANT DEAL

President Eisenhower has undertaken to give a private power combine a $107 million powerplant.

By Executive order he has directed the Atomic Energy Commission to underwrite it with taxpayers money.

He has ordered acceptance of a proposal from this combine, the Middle South Utilities, Inc., and the Southern Co., which includes a guarantee of 9 percent on earnings.

At the end of 25 years the plant would belong to this combine.

This has been done without any effort at competitive bidding.

The plant would be situated in West Memphis, a part of our community.

Three years of a big construction payroll would ring cash registers—for 3 years.

This 3-year gain will be lost many times in future years by higher prices for electricity because of undermining the Tennessee Valley Authority.

The principal purpose of this plant would be to keep TVA from building a plant.

TVA is being prevented from starting new plants necessary to serve its customers.

This policy has created a power shortage, principally because the Nation's defense is diverting so much TVA power.

The shortage is most severe in Memphis and the tightening shortage ahead will be worse here.

For the Government to give private power a plant at Memphis, sets the stage for reducing the TVA power shortage by taking Memphis out of TVA.

We are on the extreme edge of TVA territory.

We see this proposed private power plant at Memphis as the second step of a policy of which the third step would be forcing TVA out of Memphis.

We see it followed by another step in which northeast Mississippi would have to give up TVA, and another step taking TVA from the westward-sloping portions of west Tennessee.

Private power prices, or a crippled TVA forced to raise its prices, or small locally owned plants—any of these would take from this community a purchasing power far higher and much longer than the 3-year construction payroll.

While power prices quiver under the assault of this plant, Memphis would be showered with fly ash and sulphur dioxide from boiler stacks.

We know modern combustion engineering can, if it is used, end the visible smoke and reduce fly ash and fumes, but it is only a reduction.

Ash and sulphur continue to come from the stacks, in particles reduced in size by the best engineering and therefore traveling greater distances.

This harmful waste from the boilers would be spread alike over Red Acres, Glenview, Fort Pickering, West Memphis, and all other Memphis communities.

This is a proposal to hand a powerplant, to be paid for from the Nation's taxes, to a specific company.

This is a proposal for a powerplant that would be 100 percent subsidy, while even TVA's most bitter critics can claim only a fractional subsidy in TVA powerplants, principally in the matter of freedom from Federal taxes on Federal property.

We consider this proposal would result in years of net harm to this community which would be so apparent in the future that we could be held responsible unless we raised the alarm now. We consider it to be a wasteful, unsound attempt at favoritism with the Nation's funds.

As citizens of Memphis and of the United States we protest because we must.

WHY OTHERS OPPOSE IT

The proposed Memphis private powerplant is much more than a regional problem. Newspapers far from the Tennessee Valley or mid-South have taken strong stands against this plan. This is what some of them are saying:

THE MILWAUKEE JOURNAL

"A Senate judiciary subcommittee request that the Atomic Energy Commission halt negotiations with a private power combine for electric power for its Paducah, Ky., plant, ought to be heeded. Anything that will give

opportunity to study the scrambled mess created by the negotiations is all to the good.

"The story is this: AEC gets about 600,000 kilowatt hours of electricity from the Tennessee Valley Authority. TVA power commitments require it to obtain more power. President Eisenhower, by executive order, has directed AEC to negotiate a firm contract with two private power concerns for construction of a plant to produce 600,000 kilowatts of electricity.

"The plant would be built at West Memphis, Ark., 200 miles from Paducah. The power would be sold to TVA for use in the Memphis area to replace power now being sold to AEC by TVA.

"There are a number of questions that need answers:

"The AEC, by a 3 to 2 vote, opposed the plan ordered by the President. Is it proper for the President to overrule an independent agency in operating matters?

"The President's order specifies the private combine with which AEC shall negotiate. Other private firms, as well as TVA, have offered plans for providing the needed power. Shouldn't matters of this kind—if TVA is ruled out—be handled by competitive bid?

"AEC is unhappy because the President's plan will cost it more money than its present method of obtaining power. AEC estimates that power obtained under the President's plan would cost it at least $97 million more in the next 25 years than its present TVA power costs. Others estimate the added cost at $139 million.

"Of this sum (the lower $97 million), TVA would have to pay about $1,360,000 a year and the AEC about $2,320,000 a year. That means that TVA customers would be charged for providing power for AEC. It means that AEC would not be allowed to operate as economically as it might. It means that both would be paying what amounts to subsidies to a private firm.

"The private company, meanwhile, would be in a most happy position. It would get its contract without competition. It would get a guaranteed customer for 25 years. It would end up not only with an annual profit but owning a 107-million-dollar plant. If TVA built the plant, the Government would own it and save at least $97 million as well. If other private firms were allowed to bid, there is every indication that costs would be cheaper. For instance, one offer by private interests which was turned down would have provided the power for 25 years and turned the plant over to the Government. Is the President's order good economy?

"Much is made by proponents of the plan that it will help stop 'creeping socialism' and aid private enterprise. What kind of private enterprise is it that is given direct subsidy to the extent that all risk is removed from its venture?

"AEC has always been notable for its lack of politics. It is now being shoved into the middle of a hot political fight. It is being used as a tool to curb TVA. It may be that TVA should not expand. But, should AEC, which has the great job of handling our vital atomic and hydrogen developments, be pushed into a fight which does not concern it?

"TVA does not have authority to enter into long-term contracts to buy private power under the law. AEC does have that authority. The law says that it may make 25-year contracts for power in connection with its installations at Paducah, Oak Ridge, and Portsmouth, Ohio. Is it proper to stretch that language to cover a plant 200 miles away which would not provide power to AEC but to TVA?

"The President said in Memphis in 1952 that he would not 'impair the effective working out of TVA.' Not too long ago he called TVA an example of 'creeping socialism.' He said at a press conference the other day that TVA's future would be studied. Well and good. Even TVA's most rabid supporters cannot object to a fair study of TVA's place in the future.

"But isn't the strange order telling AEC to negotiate with the private combine prejudging TVA's place in the future? And, even if one accepted the idea of TVA critics that the project is 'creeping socialism' and a monstrosity, isn't the new proposal merely creating another monstrosity supported by the 'creeping socialism' of full subsidy?"

THE WASHINGTON POST

"President Eisenhower's letter instructing the Atomic Energy Commission, in effect, to purchase power from certain private utility companies is unfortunate from every point of view.

"As a matter of administration, this kind of interference with the independent judgment of a commission is mischievous.

"In terms of business practice, it is an uneconomic arrangement, certain to prove costly to American taxpayers.

"Considered as policy, it seems to reflect a doctrinaire preference for private power instead of public power, regardless of the needs and problems of a specific situation.

"Through the Bureau of the Budget, the President has virtually ordered the AEC to do what 3 of its 5 Commissioners actively oppose and what the other 2 regard if not with misgivings at least without fervor. The new private power plant will serve as a justification for denying TVA the funds it has requested for the purchase of steam plants to meet the power needs of the AEC and of area residents.

"It is really a fight for TVA's life.

"There have been few American achievements of the 20th century which have contributed more to the public welfare than TVA's achievement in harnessing the Tennessee River and its tributaries for the welfare of the valley's residents.

"That magnificent American development must not now be stifled out of a mere doctrinaire opposition to public power and a nightmare fear of 'creeping socialism.'"

THE LOUISVILLE COURIER-JOURNAL

"President Eisenhower and the Republican Congress teamed up in an attack on the Tennessee Valley Authority that threatens to destroy not only TVA but the entire public power structure.

"The attack was launched to the trumpet calls of economy and 'protection of free enterprise.' But behind this smokescreen loomed the unmistakable outline of the spoilers.

"We seriously doubt that the President, who has appeared in the past to use the phrases of the private-power people without fully understanding their meaning, now understands fully the implications of the plan he proposes.

"The situation has the makings of a sellout to dwarf the tidelands oil giveaway."

Mr. COOPER. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Tennessee.

Mr. COOPER. I am sure the gentleman has read the excuses given by the Bureau of the Budget for the directive to enter into this contract.

Mr. ABERNETHY. Yes, I have. I read them this morning in the CONGRESSIONAL RECORD. I regret to say that I have not as yet had the opportunity to read them very closely, but I intend to do so tonight.

Mr. COOPER. I shall ask the gentleman if he does not agree that one of the weakest of all those excuses offered was the one that the Congress had not provided funds for the Fulton plant.

Mr. ABERNETHY. Why, surely.

Mr. COOPER. When the administration has opposed that all the way through. Although the prevous administration included a request for funds for the Fulton plant, the Eisenhower administration, when it submitted its revised budget, left out any recommendation for the Fulton plant. And when I offered an amendment on the floor, the spokesman for the administration in charge of the bill opposed my amendment.

Mr. ABERNETHY. That is correct. Incidentally, it was that same Bureau of the Budget whose report the gentleman just referred to, that recommended against the inclusion of funds for the Fulton plant.

Mr. COOPER. Certainly. And now they list that as one of the so-called reasons for ordering this contract negotiated; that is, that funds were not included, when they not only never did request any funds but always fought and opposed the inclusion of funds.

Mr. ABERNETHY. I thank the gentleman for his observation. It is most pertinent. The gentleman has always displayed great knowledge of this subject, and always makes a very valuable contribution whenever it is the subject of debate. He has been a forthright and outstanding leader in our fight to maintain the TVA as a utility capable of serving a great and growing section of this country, the Tennessee Valley.

Mr. JOHNSON of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to my distinguished friend from Wisconsin, and who, let me say, has made a very favorable impression on this body in the short time he has been here.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I want to commend the gentleman from Mississippi [Mr. ABERNETHY] on the fine talk he has given on the subject of what the administration is trying to do to wreck the TVA program. I want to state that while my district, the Ninth District in Wisconsin, is not affected directly, as it does not receive power from the TVA, it is one of the most completely covered rural electrification districts in all the United States. I feel that if I am properly to represent my district I should support the public power programs in the whole Nation as well as those that affect my district. For that reason, in my short time here in the House of Representatives, I have supported the TVA program, especially when its budget was up for consideration. I believe I voted in favor of all the items for steam plants that were suggested by way of amendment; the one offered by the gentleman from Tennessee [Mr. COOPER]; and also the amendment offered by the gentleman from Alabama [Mr. RAINS].

I want to commend the gentleman from Mississippi [Mr. ABERNETHY] for the very fine fight that he is making and I want him to know that although TVA legislation does not affect us in Wisconsin directly, I am going to do what I can to help the TVA.

Mr. ABERNETHY. May I express my thanks to the gentleman from Wisconsin for his remarks. They are deeply appreciated. I am sure the people of the

Tennessee Valley appreciate the valuable assistance which the gentleman has given us. I congratulate the gentleman for the splendid service he has rendered during his short period with us, and I wish for him a much longer stay. He certainly deserves it and his people will undoubtedly profit by his service.

Mr. EBERHARTER. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield to my colleague and friend from Pennsylvania.

Mr. EBERHARTER. I consider myself fortunate, Mr. Speaker, that I was here this afternoon and on other afternoons when the gentleman from Mississippi [Mr. ABERNETHY] and other gentlemen of the Congress, who come from sections where the TVA is very important to the development of their sections, have discussed this subject. I want to say for the record I think the statements made by Mr. ABERNETHY and others in seeking to set aside this proposed contract certainly should carry the day. Since I have been in Congress, I have always supported all proposals to enlarge the TVA and to make it more effective, in spite of the fact that some of the interests in Pennsylvania have been against the TVA. I think it is one of the greatest accomplishments in the last half century. I hope for the success of the arguments which were presented by the Members of Congress representing those areas affected by TVA. I may say further that it will remain a blot on the history of the Eisenhower administration if this proposed contract with the Dixon-Yates combine is permitted to go through.

Mr. ABERNETHY. The gentleman's remarks are deeply appreciated by the gentleman who is now addressing the House, and I am sure all Members who come from the Tennessee Valley. We are very grateful to the gentleman from Pennsylvania for the effort he has put forth in behalf of our cause and also for the assistance he is giving us in this fight. I say again, we are very grateful to you.

Mr. FRAZIER. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield.

Mr. FRAZIER. Mr. Speaker, I ask unanimous consent to insert at this point in the RECORD an editorial from the Chattanooga Times entitled "Valley People Speak."

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The editorial referred to is as follows:

VALLEY PEOPLE SPEAK

Congressional developments are expected soon in the efforts of Tennessee Valley Senators to prevent the blow to TVA involved in the proposed wasteful building of a private powerplant in Arkansas to supply power to the TVA system. Meanwhile, we suggest that readers consider the protest sent to President Eisenhower by the Tennessee Valley Public Power Association, representing 148 municipal and rural electric distributing systems in the seven-State TVA area. The letter was signed by R. V. Taylor, of Houston, Miss., president of the association.

In the early phases of President Eisenhower's consideration of TVA, he often advocated a partnership between Federal and local interests. He seemed to believe that no such link already existed. Mr. Taylor writes him: "We became partners with the Federal Government a good many years ago. The Federal Government now has an investment of roughly $800 million in the power end of TVA and we, the people of the Tennessee Valley, have an investment of about $400 million in distributing systems. We believe this will explain to you our very keen interest in this subject."

The distributors say the contract which the President ordered the Atomic Energy Commission to carry out is "an effort to sell this area back to the power trust," and they urge that increase in TVA's power potential be made.

As for partnership between the local and Federal communities which Mr. Eisenhower was favoring a year or so ago, the distributors rightly say that the contract offered by the President would be "by Federal dictation, without the sort of local initiative and responsibility which we understand that you and the other leaders of your administration are anxious to encourage."

The West Memphis plant, in Arkansas, would cost the Government upward of $100 million more in a 25-year period than a similar plant under TVA control would cost. At the end of 25 years, the private power companies would own the West Memphis plant. The Government, which means the people of this country, would own the TVA plant.

Whether the unfortunate West Memphis plan can be stopped is uncertain. But again, we show the President how solid the Tennessee Valley is on the TVA question and how determined our people are to save it from destruction.

Mr. JOHNSON of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. ABERNETHY. I yield.

Mr. JOHNSON of Wisconsin. If the steam plant proposed by way of amendment to the appropriation bill had been granted—I think those amendments were turned down by a small margin in the House—would it have been necessary for the President to do what he is doing now?

Mr. ABERNETHY. Of course not. If the appropriation had been made for the Fulton steam plant, we would not be here today in an attempt to prevent this shotgun wedding between public and private power. Had the appropriation been made this or last year for the Fulton steam plant, this issue would not be before the House. The gentleman is correct. It is not necessary for the President to perform this shotgun wedding. It can all be solved by his recommendation of funds for the Fulton plant.

Mr. Speaker, in closing may I say that I hope the President will reconsider this matter. It means the beginning of the end for TVA. If he and his associates do not wish to destroy TVA, then, by all means, this Dixon-Yates deal should be turned down—cold.

COMMITTEE ON THE JUDICIARY

Mr. OAKMAN. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary have until midnight tonight to file a committee report on the bill, H. R. 5796.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

TENNESSEE VALLEY AUTHORITY

The SPEAKER pro tempore (Mr. O'KONSKI). Under previous order of the House, the gentleman from North Carolina [Mr. JONAS] is recognized for 1 hour.

Mr. JONAS of North Carolina. Mr. Speaker, I do not intend to use an hour unless I am asked some questions or we get into a debate that will consume more time than I expect to take. I stated yesterday when I asked for this time that I would be glad to yield, because I do have a point of view about this TVA situation which I am anxious and willing to discuss with those who are the proponents of steam plants and who are in favor of the Federal Government, with tax money extracted from the people from all of the United States, investing more and more money in the Tennessee Valley area.

On yesterday, one of the distinguished Representatives from Tennessee made a remark which indicated that he did not think those of us who contend we are not actual enemies of TVA are sincere in those protestations. That causes me to take a moment or two to explain my own personal attitude.

NORTH CAROLINA AND TVA

When I came here in January of 1953 as a freshman Congressman, I knew very little about TVA. I had, of course, heard of TVA but had only the vaguest idea of how it operated and had absolutely no comprehension of the magnitude of that operation. I did not know, for example, that TVA was producing most of its electric power from steam plants. I thought, and I am satisfied that most people, who have not given any study to the facts, understood that the power TVA was selling was a byproduct of the original program of flood control and navigation. I certainly had no idea that between one and one-half and two billion dollars of the taxpayers' money had been appropriated by Congress for TVA.

It was more or less by accident that I became interested in TVA. It came about by reason of my being assigned to serve on the Appropriations Committee and by the chairman of that committee assigned for service on the Independent Offices Subcommittee under the chairmanship of the able gentleman from California [Mr. PHILLIPS].

One of the first agencies to come before our subcommittee for appropriations in 1953 was the TVA. In my study of the TVA request last year for funds in the amount of $254 million, I began to realize that the TVA's major emphasis no longer is on navigation and flood control but on the sale of power produced principally from steam plants. In reading the basic act which created TVA, it seems clear to me that it was contemplated that the only power that TVA would sell is the surplus power created from hydroelectric developments produced from impounded waters behind dams built to promote navigation and flood control on the Tennessee River and its tributaries.

But somewhere along the line, since the adoption of this basic act, the concept that TVA would build dams to promote navigation and flood control and sell surplus power produced thereby, went by the board and TVA moved into the power business on a broad scale. It was surprising to me to learn that when the present construction program

now underway has been completed, TVA will be producing approximately 70 percent of the power it sells from steam plants and only 30 percent from hydro developments.

It was also surprising to learn that this year TVA will produce 50 billion kilowatt-hours of electricity and will receive from the sale of that electricity more than $200 million. So here we have a power operation—the biggest power system in the world—that cost more than $1 billion to build, and with an income running into hundreds of millions a year, yet unable to stand on its own feet and coming back to Congress year after year seeking hundreds of millions of dollars for expansion.

My position with respect to TVA can be stated simply. It is my view that TVA is no longer a babe in the woods. It is a full grown giant and ought to be able to stand on its own feet. I do not say this in any spirit of animosity toward TVA but rather in the spirit of an indulgent parent that asks himself when his son reaches voting age, has a family, a booming business and a heavy bank account, but still comes home to ask for a handout: "Won't that boy ever make his way by himself?"

I think there are many ways in which TVA could, with a little study and planning, be able to finance its future operation without additional funds from the public treasurer. If the friends of TVA would be willing to consider this possibility, I am reasonably sure something could be worked out that would enable TVA to operate and finance its power program as a power system should be operated and thus eliminate this fight every year over additional appropriations for further expansions.

But aside from this general feeling that TVA ought to be able to stand on its own feet—now that it is a billion-dollar corporation with a gross annual income in excess of $200 million from the sale of power—I for one object to the taxpayers of North Carolina putting up any more money to finance the future expansion of this gigantic power system. North Carolina has been penalized heavily as a result of TVA's expansion program in recent years.

Two of TVA's hydro projects are in North Carolina. These are known as the Fontana and Hiwassee projects. A third one is known as the Appalachia project, the dam for which is actually in Tennessee but most of the energy produced by it comes from North Carolina resources just as North Carolina resources are used to produce the energy developed at Fontana and Hiwassee.

Now here is the interesting fact from which I say North Carolina has been penalized. In 1953 TVA produced 892,000,000 kilowatt-hours of electricity from the Fontana and Hiwassee projects in North Carolina. If you add the kilowatt-hours produced at Appalachia, the total goes up to 1,345,000,000 kilowatt-hours. Of this 1,345,000,000 kilowatt-hours of electricity produced from the natural resources of North Carolina, only 35 million were used in our State; the rest was exported out of the State to benefit the people of the Tennessee Valley. Our land has been flooded and our natural resources are being exploited and the power produced thereby is being used for the benefit of other sections of the country.

The people of North Carolina are not happy to see their great natural resources being exploited for the benefit of areas outside our State. When we are told that the TVA dams built in North Carolina would provide recreational facilities for the western part of our State, the answer is that expectations in this respect have not been fulfilled. You cannot build a satisfactory recreational program based on lakes which vary in level from day to day by the rise and fall of the waterline, leaving mud banks where water stood the day before.

Moreover, many of our large industrial establishments in western North Carolina, which employ thousands of people, were located there because of an abundance of soft water ideal for chemical operations. A year or two ago, when an approach was made to the TVA Water Control Board for a guaranty of a minor flow of water from one of North Carolina's streams in order to interest a desirable new plant, our people were advised that such an arrangement could not be made due to the possible effect on the main stream. This causes the question to be raised as to whether all of the area in which TVA operates will receive helpful attention or whether attention is to be concentrated on one section of the area to the possible detriment of other sections.

After having been treated in this way, we in North Carolina are expected to continue to put our money, interest free, to enable TVA to continue to expand its activities in the Tennessee Valley.

But this is not the whole story. Last year TVA paid the State of North Carolina and the counties in which its properties are located, $93,781, in lieu of taxes. Recently Mr. Ben E. Douglas, director of conservation and development for the State of North Carolina, testified before a Hoover Commission Task Force in Chattanooga and brought out some significant and disturbing facts which I think are pertinent to this discussion and should be known by the Members of the House.

The testimony of Mr. Douglas indicated that the total value of the TVA property in North Carolina is more than $97 million. Using the standard method of tax valuation in effect in North Carolina, and based upon our average tax rate, ad valorem taxes on this property alone would have amounted to three-quarters of a million dollars per year. Instead of receiving three-quarters of a million dollars in lieu of taxes from TVA, North Carolina received only $93,781.

But even this is not the entire story. The statement of Mr. Douglas further indicated that if these 3 plants located in North Carolina had been privately owned utilities, and if total taxes were computed on the average basis of the privately owned utilities in North Carolina, the tax revenues would have been from $3 to $4 million instead of $93,781. The exact amount, based upon 1,345,000,000 of kilowatt hours generated, which is the total of the 3 plants I have mentioned above, private utilities would have paid the Federal Government $1,935,455; would have paid the State of North Carolina $1,127,864; and would have paid the local government units $404,602—or a total of $3,467,921 instead of the $93,781 actually paid by TVA.

Now aside from the fact that this seems to me, in all candor, to be rank discrimination against the people of North Carolina and the exploitation of natural resources of our State for the benefit of other States, the figures I have cited are significant from another standpoint.

It has been argued on this floor by many of the proponents of the expansion of the TVA, that TVA serves a vital need as a yardstick so that privately owned utilities will not be permitted to gouge the public with exhorbitant rates. That argument it seems to me is fallacious for two reasons:

I do not think it is possible for private utilities to gouge the public today because they are strictly regulated. There may have been a time when they were not but that is no longer true. The utilities are under strict regulations—by the States as to intrastate operations and by the Federal Power Commission as to interstate operations. They are also regulated by the States in their financial operations and by the Securities Exchange Commission. Earnings of privately owned utilities are today strictly regulated.

I do not know what the situation is in the State of Tennessee and in the other States in the Tennessee Valley, but we have in North Carolina a public utilities commission which is looking out for the interests of the public and controlling the rates charged by private utilities. I am quite sure a similar State agency exists in the State of Tennessee because there are a number of privately owned utilities operating in that State today.

I would be the last one to object to a yardstick. I agree that TVA is an efficiently operated and well-managed organization. I am convinced, in my own mind at least and I think testimony before our subcommittee confirms this, that TVA can build dams and steam plants as well as private concerns. I am also convinced that TVA can undersell any private utility operating in the United States. This is true because two items of cost that go into the establishment of a rate for the sale of power are absent in the TVA operation. These two items are the cost of money and taxes. TVA does not have to borrow its money or pay dividends to investors. It gets its money, interest free, from the Federal Government. Moreover, as I have just shown, TVA pays far less in lieu of taxes than privately owned utilities pay.

If we are to have a yardstick, and I again repeat I have no objections to a yardstick, I submit that it ought to be a fair yardstick and it ought to be subjected to the same tests and to the same requirements under which privately owned utilities are required to operate.

Pursuing this aspect of the problem one step further, let us look at the situation with respect to TVA for the entire system. The same situation applies to

the overall operation as exists in the North Carolina situation which I have just discussed.

It should be remembered that TVA pays no Federal or State income taxes. TVA does pay States and local governments amounts of money in lieu of taxes. In 1953 TVA paid, in lieu of State and local taxes, $3,418,110.

TVA does not distribute its power at retail. It sells the power at wholesale to municipalities and cooperatives and they in turn distribute it to retail customers. Private power companies do not operate that way. They sell it both wholesale and retail. So, in order to make a fair comparison of TVA and private companies, the amounts paid by TVA and its distributors in lieu of taxes should be combined. Last year TVA distributors paid, in lieu of taxes, $5,139,830.

Combining the amounts TVA paid with the amounts the distributors paid gives a total paid last year of $8,557,940.

This amount, in lieu of taxes, was paid by TVA and its distributors from power sales which, excluding sales to the United States Government, amounted to $139 million. The total payments by TVA plus the distributors therefore amount to approximately 6 percent of gross income.

The average tax paid by private utilities is 22.3 percent of gross operating revenue. So that private utilities would have paid on gross sales of $139,150,000, a tax bill of $30 million as contrasted to the total of $8,557,940 paid by TVA and its distributors.

There is still another aspect of this problem that has received little attention. The Federal Government today is engaged in a multitude of activities. We will have to extract from the taxpayers enormous amounts of money each year to provide for our national defense and to run our domestic programs. This year we will have to appropriate in excess of $40 billion to run the Federal establishment alone, and each of the States is having to appropriate vast sums of money for operations within their borders.

One of the principal sources of tax revenue for the Federal Government as well as the States comes from the sale of power. Now it is a well known fact that private utilities do not actually pay these taxes. They collect the taxes from the ultimate consumers in increased costs for the power they supply and in turn pass the taxes along to Government. Since the money paid by TVA and its distributors in lieu of taxes does not even begin to approach the amount of taxes the private utilities would pay on the same amount of power, this means that the consumers of TVA power are not contributing their fair share, in comparison with the rest of us, of the expenses of Government in the United States.

Does the proposed contract between AEC, TVA, and the private utility group known as Dixon-Yates constitute any threat to TVA?

I have been surprised at the reaction of the friends of TVA to this proposed contract. Charges have been made that the purpose of the contract is to attack TVA. I say I am surprised because I am sure such a charge is not justified and I had expected the friends of TVA to rejoice over the prospect that this contract might be executed. This is because I believe the proposed contract offers a real opportunity for TVA to acquire additional power capacity.

TVA officials have been contending that it will need additional power capacity in 1957. To meet this need TVA chose to propose the construction of a new steam plant entirely outside the Tennessee Valley area. I have read the basic TVA Act carefully, and I am unable to find any authorization in that act for the construction by TVA of a steam powerplant on the Mississippi River. There is some language in the act which, by a wide stretch of the imagination, might be construed to authorize TVA to build a dam on the Mississippi River if that was found necessary or desirable for flood control, but not a steam plant.

I have in my hand the basic TVA Act and would like to read those portions of this act which I believe are pertinent on this point.

The preamble of the act is as follows:

To improve the navigability and to provide for the flood control of the Tennessee River; to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals, in the State of Alabama, and for other purposes.

The section which limits and defines the powers of TVA contains two subsections which I feel are pertinent. I quote from subsection (i) of section 4:

Shall have power—

Speaking of TVA—

to acquire real estate for the construction of dams, reservoirs, transmission lines, powerhouses, and other structures, and navigation projects at any point along the Tennessee River, or any of its tributaries.

And I quote the following from subsection (j) of section 4, which speaks again of the authority conferred upon TVA:

Shall have power to construct such dams and reservoirs in the Tennessee River and its tributaries as in conjunction with Wilson Dam and Norris, Wheeler, and Pickwick Landing Dams, now under construction, will provide a 9-foot channel in the said river and maintain a water supply for the same, from Knoxville to its mouth, and will best serve to promote navigation on the Tennessee River and its tributaries and control destructive flood waters in the Tennessee and Mississippi River drainage basins; and shall have power to acquire or construct powerhouses, power structures, transmission lines, navigation projects, and incidental works in the Tennessee River and its tributaries.

I do not find any other authority in the basic act which would justify the building of a steam plant by TVA at the Fulton site or at any other point along the Mississippi River. If there is such authority, I would like to have it pointed out.

The reasons I do not believe this basic act authorizes an appropriation of money for TVA to build a steam plant at Fulton are two:

First. I do not think it is at all clear from this act that TVA has any authority to build a steam plant anywhere. There are several references to steam plants in the act but those references are restricted. The first one applies to steam plants at Muscle Shoals and the second was in connection with the authorization for TVA to issue bonds and was not a general authorization. Now, I will admit that insofar as the steam plants that have already been built are concerned, and so far as those now under construction are concerned, this is an academic question. The Congress has heretofore provided the money to begin these projects and I, myself, voted for funds last year, as well as this year, to continue the construction of some steam plants. But the question is certainly pertinent in considering funds to build a steam plant entirely outside the area defined in the basic act.

Second. It should be remembered that I am not talking now about building a steam plant in connection with a navigation or flood-control project or a steam plant on the Tennessee River or any of its tributaries. I am talking about building a steam plant which has no relationship whatsoever to flood control or navigation, not on the Tennessee River or any of its tributaries but on the Mississippi River at a point 115 miles west of the nearest point on the Tennessee River.

It is my view that if TVA has the right to build this steam plant at Fulton, it would have the right to continue to expand its activity and ultimately could build steam plants all over the United States.

Before TVA should be permitted to embark on such a venture I, for one, believe that the basic act will have to be amended and authorizing legislation will have to be passed before Congress can appropriate money for such a project.

This House has agreed with this point of view. It did so twice this year when funds were expressly denied to build the Fulton plant.

This action on the part of the House should be sufficient notice to the proponents of TVA expansion that the Members of the House are not convinced that TVA has the right to or should expand outside of its original area as defined in the act.

Assuming, therefore, that this House remains consistent and continues to deny funds for TVA's expansion outside its area, it seems to me that the people who are concerned about the possibility of power shortage in the Tennessee Valley in 1957 would have welcomed the opportunity to increase the power supply in that area by 600,000 kilowatts.

I think we must all admit that the AEC has first call on all of the power produced by TVA. The need of AEC must and will be met. If there is to be any shortage of power in 1957, AEC will not be the one to suffer but it will be the people of the Tennessee Valley.

So, if your concern is to prevent a power shortage, my humble judgment is that you should be happy over the

prospect that this additional supply of power is to be made available.

Mr. GATHINGS. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Arkansas.

Mr. GATHINGS. As a matter of fact, 70 percent of the total power supply in the TVA area is steam power and 30 percent hydroelectric?

Mr. JONAS of North Carolina. That will be true when the present construction program has been completed, and we are appropriating money each year to complete the present program.

Mr. GATHINGS. If I am in error about that, I would like to be corrected.

Mr. JONAS of North Carolina. No, you are not. The figure 70 percent will be reached when the present program is completed and we appropriated $120 million this year to continue that current program. But I do not think it is true to say that today 70 percent comes from steam; 70 percent will come from steam when the present steam plants now under construction are completed.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. JONES of Alabama. What percent of the total generating capacity of TVA in 1956 will be consumed by defense plants?

Mr. JONAS of North Carolina. My recollection is approximately 50 percent.

Mr. JONES of Alabama. In other words, 50 percent of the total generating capacity of the Tennessee Valley Authority in 1956 will be utilized by defense plants?

Mr. JONAS of North Carolina. I think that is true.

Mr. GATHINGS. That is the same argument that has been used all the time in support of steam plants. They are always bringing out the amount that will be used for defense, just as the argument has been made that they need more money all the time because they want to pump power in there for defense purposes.

Mr. JONAS of North Carolina. That is true. This is the basis on which some of the steam plants were authorized.

Mr. DAVIS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. DAVIS of Tennessee. Is not the gentleman very happy that we had this system in existence during World War II, in order that we could have this power? Is not the gentleman, however, cognizant of the fact that in any hydrosystem, wherever located, you have to supplement that hydropower with steam plants? Is not the gentleman very, very happy way down deep in his heart that we had this enormous amount of electricity very close to your own district to serve this country at the time when we were threatened in our very security?

Mr. JONAS of North Carolina. I do not have to go very deeply into my heart to be thankful for it. I am thankful for the fact that we had power at Pittsburgh; I am thankful for the fact that we had power in California; I am thankful for the fact that we had power at Detroit; but I do not agree with the gentleman's argument that we would not have won the war if it had not been for TVA.

Mr. DAVIS of Tennessee. Mr. Speaker, will the gentleman yield to me briefly?

Mr. JONAS of North Carolina. I yield to the gentleman.

Mr. DAVIS of Tennessee. I have held this in my heart for a very long, long time. It will take but a minute or two and the gentleman said he had an abundance of time so that he could yield to others.

Mr. JONAS of North Carolina. I yield to the gentleman.

Mr. DAVIS of Tennessee. Back in the early days of World War II, I was on the then Committee on Military Affairs. My distinguished friend, Judge Jennings, who occupied a place on that side of the aisle, was very much concerned when they established Oak Ridge because in the acquisition of the property a great many people down there complained that they were not being paid ample sums for it. A great deal of property was involved in about three counties.

My distinguished friend and your friend, the gentleman from Tennessee, HOWARD BAKER, represents that district today.

I was appointed by the chairman of the committee as chairman of the subcommittee to go to Oak Ridge along with other colleagues and, as I recall, DEWEY SHORT and JOHN SPARKMAN were my associates in that investigation.

I went over to the War Department and a very highly placed general officer in going over this situation from the standpoint of security said to me: "I hope that in this investigation—and, of course, we know it will be fair, we know that you are going to explore it thoroughly here in this investigation, but I hope that in this investigation you will not let the record show that this hush-hush plant was located at Oak Ridge because there was an abundance of electricity. This highly secret plant is a very, very definite military gamble. If it is successful, it will win the war; if it is not successful, the very, very few of us who know about it will have to go to Siberia or somewhere else."

I emphasize the fact that the Oak Ridge plant, the very atomic plant of first origin, was located there because, fortunately, in the wisdom of Congress in 1933 the TVA had been established and we had an ample amount of electricity to do this job which contributed so much to the saving of this country in World War II.

Mr. JONAS of North Carolina. I thank the gentleman but I will have to disagree, in part, with him because we did not have ample power at Oak Ridge; TVA did not have ample power to do that job. It had to call upon private power companies to furnish quite a bit of its power. Moreover, I call the gentleman's attention to the fact that, as I understand it, we did not begin to expand TVA into steam plant power production on a large scale until 1949, long after the close of World War II. I would not take anything away from TVA. Of course, it has had power available, but I merely point out to the gentleman that you cannot give TVA all of the credit for the development of the A-bomb or for winning the war; it shares a part of the credit with all of us. I also would repeat that we produced a great part of the materiel that went into the war in Detroit, in Pittsburgh, and in Los Angeles, and in other places of this country, and we did not have to confine ourselves to the TVA area and did not require TVA in order to acquire the power necessary to produce that materiel.

Mr. EVINS. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. EVINS. Since the gentleman apparently does not share any pride in the TVA or in that regional section of the country, I want to ask the gentleman this question: Will he take a national point of view regarding this Dixon-Yates deal and state it is excessive in its cost and that he would be protecting the taxpayers of the Nation if he opposed it because of the excessive cost from the national point of view, from the national angle?

Mr. JONAS of North Carolina. I have clearly tried to make it plain that I am not an enemy of TVA; I have not denied that I have any pride in its accomplishments; as a matter of fact, I have paid many tributes and compliments to TVA. The gentleman cannot truthfully charge me with any hostility to the people of the great State of Tennessee or of the Tennessee Valley.

Mr. EVINS. Would he protect the taxpayers of the Nation because of the costs involved in the Dixon-Yates deal?

Mr. JONAS of North Carolina. I am thinking of the taxpayers of the entire Nation.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Alabama.

Mr. JONES of Alabama. As I understand the gentleman's position, he commented on the fact that TVA had just recently gotten into the steam-generation business.

Mr. JONAS of North Carolina. I said that TVA started its steam-power program in 1949.

Mr. JONES of Alabama. As a matter of fact, the TVA had steam plants since the act was created.

Mr. PHILLIPS. May I say that these gentlemen are consuming the time of the gentleman from North Carolina with questions to which they already know the answers. In fairness to the gentleman from North Carolina I suggest we permit him to conclude his statement, then ask questions.

Mr. JONES of Alabama. I do not want to impose on the gentleman's time.

Mr. PHILLIPS. Steam plants were acquired from the Commonwealth Southern. The substitution of steam for hydroelectric to the extent of over 2 to 1 did not begin until 1949, exactly as the gentleman from North Carolina has stated.

Mr. JONES of Alabama. May I say to the gentleman from California that we are looking forward to hearing him. I do not want to impose on the gentleman's time unduly.

Mr. JONAS of North Carolina. I was saying when I was asked to yield the first time that when I came here I had been under the impression that a great part of the TVA program was a river-development program based upon the need for navigation and flood control. But I was surprised when I found out, as I have stated, that its major activity now is the production of power.

Last year the TVA came before the subcommittee and asked us to appropriate $254 million for the expansion of its program. We did not give them that much, but we did recommend an appropriation of about $188 million, as I recall the bill. I voted for it. This year I voted to give TVA, in the subcommittee, in the full committee, on the floor here, and in conference, another $120 million. In all candor, I must say I do not know what it takes to satisfy our friends from the Tennessee Valley area. When we appropriate $188 million in 1 year and the next year $120 million, they accuse us of trying to destroy the TVA.

Mr. ABERNETHY. I will answer the gentleman. All it will take to satisfy us is exactly what we were promised in 1952; that is all.

Mr. JONAS of North Carolina. May I answer by saying you were not promised anything in 1952 so far as I am concerned.

Mr. ABERNETHY. I know the gentleman made no commitments. I have no quarrel with the gentleman personally. The gentleman is a very fine Member of this House, he is a very able Member, and he takes care of himself and his position very well. But I do say and I do not think anyone would deny but what the man who is now President of the United States came down into the Tennessee Valley area and promised them the world with a fence around it.

Mr. JONAS of North Carolina. I do not agree with that. I think what he said was that he would be in favor of continuing to provide for the normal growth of TVA, or something to that effect. If I am wrong, please correct me. I do not understand that he said he would advocate extending TVA outside of the Tennessee Valley area, and I want to come to that in just a little bit in the course of my remarks.

Mr. ABERNETHY. There is no one here proposing to extend it outside of the Tennessee Valley area.

Mr. JONAS of North Carolina. I question that. We have an honest difference of opinion on that. The gentleman has consumed some time this afternoon exposing his position, so now let me move along with mine, please.

I contend that an appropriation of $120 million during 1 fiscal year, in view of the condition of the Federal Treasury, is a pretty healthy encouragement for TVA, and I deny that you can read any attack upon TVA in that sort of an appropriation. As a matter of fact, the President recommended $141 million, and it was the House of Representatives and the Senate that cut it back to $120 million. And, I go back to what I said a minute ago. It seems impossible to satisfy some of the advocates of TVA's expansion. We are trying our best, as I see it, to be fair and reasonable to TVA and give it all the money it reasonably requires or has any right to expect, yet the proponents of further expansion of TVA are not satisfied with the development of the Tennessee River and its tributaries. They now seek to extend the development of TVA 115 air miles west of the Tennessee River and to build a steam powerplant on the Mississippi River, which by no stretch of the imagination was contemplated as I read and understand the basic act.

Mr. ABERNETHY. I hesitate to interrupt the gentleman, but I do want to ask him one question: Is that not in the TVA territory, and also is there not a shortage of power there, and is that not the reason that the President has directed the Atomic Energy Commission to enter into a contract with Dixon and Yates to supply power to that very area?

Mr. JONAS of North Carolina. Will the gentleman permit me to defer answering that?

Mr. ABERNETHY. Yes.

Mr. JONAS of North Carolina. I am coming to that a little bit later.

It was also surprising to me, Mr. Speaker, when I discovered soon after my entering upon service on the Committee on Appropriations that we were not dealing with a little river development in Tennessee. I was amazed to learn that TVA during this fiscal year we are now in expects to produce 50 billion kilowatt hours of electricity, more electricity than any power system in the world, I am told. I was also surprised to learn that TVA will itself, from the sale of power in this fiscal year, have an income in excess of $200 million. Now, down in my part of the United States a concern that has over a billion dollars in capital given to it, interest free, by the Government, would be in a very advantageous position, and that is how much has been invested in the power program of TVA. You count up all of the other programs, and the total amount that the TVA has received from the American taxpayers will approach $2 billion. It is in excess of 1¾ billions.

Mr. GATHINGS. Mr. Speaker, if the gentleman will yield, I will give the complete figure. One billion sixty-one million seven hundred and sixty-three thousand three hundred and nineteen dollars through June 30, 1953, has been poured in.

Mr. JONAS of North Carolina. For the power program.

Mr. GATHINGS. Yes.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Alabama.

Mr. JONES of Alabama. Will the gentleman give us some estimate of the value of that power system at the present time?

Mr. JONAS of North Carolina. I think it has been depreciated down to about $800 million.

Mr. JONES of Alabama. As to the reproduction value of the facilities, does the gentleman have any idea what they are worth?

Mr. JONAS of North Carolina. That is in the record, but I cannot quote the figure now.

Mr. JONES of Alabama. Has it not been a pretty good investment?

Mr. JONAS of North Carolina. I will come to that, if the gentleman will permit.

So here we have a power system. We are not dealing with navigation, flood-control or resource development now. We are not talking about natural resources. We are talking about the production and distribution of power. And I say to you that I understand this is the biggest power system in the world.

Now, in view of all those facts when, if ever, do the gentlemen from the Tennessee Valley area feel that TVA will be big enough to stand on its own feet? Do not you gentlemen think we have contributed enough of the taxpayers' money to build this system and permit them to operate it interest-free, paying no Federal taxes and no State income taxes on it? It has an income of $200 million a year and yet the advocates, the proponents of TVA's expansion, are not satisfied with that.

My position with respect to TVA is simply that I believe it has come of age. It is a mature giant in the power world. I think there is enough intelligence in the officials of TVA, and amongst its friends, to figure out some way by which it can stand on its own feet hereafter, and finance its own programs; and if it will just do that, so far as I am concerned, I do not care how far TVA expands. The only objection I have to TVA expansion is that I do not think the rest of us ought to provide the money for it, because I do not think we derive the benefits.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. JONES of Alabama. With all the complaints that the gentleman from North Carolina has found in the TVA, how is he going to resolve the question of this contract with the Dixon-Yates group?

Mr. JONAS of North Carolina. Let me get to that. This is background material. The TVA situation came into this debate yesterday and it has come into it today. I should like to explain to you why I, as a taxpayer, and a Representative of taxpayers, friendly to TVA and neighbor to them, with only an imaginary line between the two States separating us——

Mr. JONES of Alabama. I want to assure the gentleman from North Carolina that I have the same feeling for the taxpayers.

Mr. JONAS of North Carolina. I explained what was happening to North Carolina taxwise—we are losing more than a million dollars annually.

Mr. JONES of Alabama. That is the reason I am concerned about this contract; it is my apprehension of the taxpayers' position.

Mr. JONAS of North Carolina. Our land has been flooded. Our natural resources are being exploited and the power produced is being used for the benefit of people outside of North Carolina.

Mr. COOPER. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. COOPER. Have any of the municipalities or REA cooperatives of North Carolina made application for power from TVA and been denied?

Mr. JONAS of North Carolina. Ninety-four percent of all the farms of North Carolina have REA electricity and we did it without much help from TVA.

Mr. COOPER. I am simply asking the gentleman the question: Have any of your applications from North Carolina to TVA been denied?

Mr. JONAS of North Carolina. I cited one case before.

Mr. COOPER. The gentleman has complained about not getting enough power in his great State from the TVA system. I am trying to ask the simple question: Have you made application for power and has any application been denied?

Mr. JONAS of North Carolina. I do not know about that, but I cited the case where we tried to get some cooperation from the water-control board and did not receive it.

Mr. PRIEST. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. PRIEST. Will the gentleman state on what basis this tax settlement of $93,000 was made? Was that by mutual agreement?

Mr. JONAS of North Carolina. No. I assume it was made on the formula that TVA uses, as is provided in the act.

Mr. PRIEST. The reason I asked the gentleman the question, in most of the counties in Tennessee where TVA pays sums in lieu of taxes, all of the reports show that the sums are equal to or greater than would be the same situation if it were a private utility. I cannot understand why there was such a discrepancy in the figures reported for this area of North Carolina.

Mr. JONAS of North Carolina. I am quoting the authority for the figures which I gave. The director of the Conservation and Development Commission of North Carolina gave the figures at Chattanooga. I think the figures for taxes paid by TVA, $93,781, was based on an AP story that came out of Knoxville just a short time before the hearing in Chattanooga. The same story shows that the State of Tennessee received from TVA over a million dollars—$1,310,124—and that the counties in Tennessee received almost the same amount, $943,442; our natural resources are being exploited, they are producing about 5 percent of the power in our State, and we should be getting two or three million dollars instead of $93,000.

Mr. PRIEST. Will the gentleman attempt to get from the State of North Carolina or its counties or the TVA or any other source the basis of that settlement? I am interested because there does seem to be some sort of discrepancy in regard to the difference in lieu of taxes.

Mr. JONAS of North Carolina. I doubt if there is any discrepancy. The same AP story shows that Georgia received only $10,000 and the counties in Georgia $54,000. Kentucky received $366,000 and the counties $31,000. Mississippi received $70,631 and the counties in that State $35,590. I am basing my comments on the AP story out of Knoxville, plus the testimony given to the Hoover task force in Chattanooga by Mr. Ben Douglas.

Mr. PRIEST. May I say to the gentleman I shall personally look into that matter and see if I can get information as to the basis for that sort of settlement.

Mr. JONAS of North Carolina. I would appreciate it if the gentleman would advise me when he receives it.

Mr. ELLIOTT. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Alabama.

Mr. ELLIOTT. What resources of the State of North Carolina does the gentleman contend are being depleted by the construction and use of this facility in his State?

Mr. JONAS of North Carolina. A lot of land flooded, and our water resources used.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Mississippi.

Mr. ABERNETHY. The gentleman first complained about not getting any power, but as I understand the gentleman he does not complain about North Carolina getting none of the power. His complaint is about taxes.

Mr. JONAS of North Carolina. I have stated what my complaint is. The gentleman can read anything into it he cares to.

Mr. ABERNETHY. I am not trying to read anything into it.

Mr. JONAS of North Carolina. I am pointing out that I do not think it is fair, and I am pointing out that under this system North Carolina is a great loser because our natural resources have been exploited and we have not received a commensurate return tax-wise.

Mr. ABERNETHY. Does the gentleman complain about losing taxes and power or just taxes?

Mr. JONAS of North Carolina. I am complaining about the facts as I have related them. I think that has a direct relationship to this argument that TVA is a yardstick. I say it is not a fair yardstick because of the fact that the element of taxes does not enter into the rate base.

Mr. ABERNETHY. The gentleman started his speech by saying that TVA was attempting to expand its area; then a little later the gentleman made reference to the fact that not enough of this power is being assigned to the people of North Carolina, that you are not getting any of it. Does the gentleman complain about not getting any of the power?

Mr. JONAS of North Carolina. I complain about the fact that TVA has $97 million of property in my State and pays only $93,000 in taxes.

Mr. ABERNETHY. Then the gentleman does not compain about not getting any power.

Mr. JONAS of North Carolina. I am complaining about the situation as I am relating it, and I do not think the gentleman from Mississippi believes it is fair at all.

Mr. ABERNETHY. I am not going to answer the gentleman's question until he answers my question.

Mr. JONAS of North Carolina. I am not going to answer the gentleman's question unless he will answer mine.

Mr. ABERNETHY. Does the gentleman complain about not getting power? Does he want some TVA power or does he not? If he does not I think he ought to go back and revise his remarks.

Mr. JONAS of North Carolina. I am complaining about the facts as I have related them. I do not think it is fair to exploit the resources of my State and not pay a fair tax return commensurate with its property holdings.

I also pointed out that the private power companies in my State, based upon the rate of taxation they pay, if they owned that property and if they were operating these three power developments would pay over $3,500,000 in taxes.

Mr. ABERNETHY. The gentleman has made that complaint very clear, I am certain of that.

Mr. JONAS of North Carolina. But you must take the whole program.

Mr. ABERNETHY. Now I wish the gentleman would tell the House whether or not he is complaining about not getting this power.

Mr. JONAS of North Carolina. I think the gentleman understands what I am complaining about.

Mr. ABERNETHY. No; I really do not.

Mr. JONAS of North Carolina. I am afraid I am unable to clarify it in the gentleman's mind.

Is the gentleman trying to get me to indicate that I have any objection to saying that we are satisfied with the private power in North Carolina?

Mr. ABERNETHY. No; I assure the gentleman that I did not try to entrap him.

Mr. JONAS of North Carolina. No, the gentleman is not trying to trap me, and I am not worried about that. I do not have any hesitancy in saying that the private power companies in North Carolina do not gouge our people because we control them. I believe the Tennessee Public Service Commission or Utilities Commission can control the private utilities in Tennessee, too.

A lot of argument has been advanced on this floor to the effect that we are trying to turn back the Tennessee Valley area to private-power interests that will exploit that State and that area and do something bad to the people down there. I say that the private-power interests of this country are more and better regulated than any other industry I know, and we do not have any trouble regulating them in my State.

Mr. ABERNETHY. How much tax will the States of Tennessee and North Carolina get out of Dixon-Yates?

Mr. JONAS of North Carolina. I would like now, if the gentleman will permit me, to proceed to one or two other points that I wish to make.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield for one question?

Mr. JONAS of North Carolina. I yield to the gentleman from Alabama.

Mr. JONES of Alabama. Does the gentleman from North Carolina intend to enumerate some of the benefits that accrued to the State of North Carolina

by virtue of the construction of this plant?

Mr. JONAS of North Carolina. Why does not the gentleman, if he is sincerely interested in an answer, wait until I get to that and I will yield further?

Mr. JONES of Alabama. That is the reason I asked the question.

Mr. JONAS of North Carolina. I am sure the gentleman intends to stay here anyway, and I would ask him to postpone his question.

Mr. JONES of Alabama. I did not want to cause the gentleman to have to repeat.

Mr. JONAS of North Carolina. I have already referred to the use of TVA as a yardstick to determine what is a fair rate for power, whether it is publicly owned or privately owned. If we are going to have a yardstick, I think it ought to be a fair yardstick. I am trying to be just as generous in yielding as I can be.

I am saying that I do not believe your yardstick that you take such pride in is a fair yardstick because of two things. First, it does not reflect any cost of money, which is one of the principal items that goes into the making of a power rate, nor does it reflect a fair amount of taxes based upon what private utilities pay.

Mr. ELLIOTT. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Alabama.

Mr. ELLIOTT. Does the gentleman contend that the Tennessee Valley Authority, a creature of and a part of the Government of the United States, ought to be assessed Federal income taxes?

Mr. JONAS of North Carolina. If we expect to use TVA as a yardstick, we ought to make some allowance for Federal income taxes. I expect it should pay a Federal income tax. The truth is that neither TVA nor any power company actually pays the tax. They just collect the taxes from the people who consume the power. The end result is that the people who consume the 50 billion kilowatt-hours of electricity produced by TVA do not pay their fair share of the taxes because the tax item is not reflected in what they pay for power.

Mr. MURRAY. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield to the gentleman from Tennessee.

Mr. MURRAY. I have listened for about 40 minutes to the gentleman from North Carolina indicting the Tennessee Valley Authority. He has been engaged in a most vicious attack and assault upon the TVA. I was delighted in the beginning of his remarks to hear that he was a friend of TVA. I must say frankly that I regard the gentleman from North Carolina as one of the most unfriendly Members of this House to TVA.

Mr. JONAS of North Carolina. I do not intend to yield for that kind of a characterization.

Mr. MURRAY. I want to ask a question. Have you ever heard of any attempt made by the officials of TVA to enlarge or expand this area or territory?

Mr. JONAS of North Carolina. They came into our committee, and they came in last year, and asked for money to build the Fulton steam plant 115 miles outside of the TVA area. This House turned it down. The Senate turned it down.

Mr. MURRAY. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I decline at this time. The Senate turned it down last year. The House turned it down last year, and the House turned it down this year, and the Senate turned it down this year again.

Mr. GATHINGS. Mr. Speaker, if the gentleman will yield, and the gentlemen are complaining of their own acts.

Mr. MURRAY. Mr. Speaker, if the gentleman will yield, I say that actions speak louder than words sometimes. Now I want to ask this question: The Oak Ridge atomic energy plant is needing more power. It has been estimated that they will need 135,000 more kilowatts. Now it is believed that they will need more than that. Are you in favor of TVA furnishing this plant at Oak Ridge with this additional power, or do you want the Duke Power Co. to build a steam plant at Charlotte, in your district, and furnish the power to Oak Ridge?

Mr. JONAS of North Carolina. Well, the Duke Power Co. is not in competition, so far as I know, anywhere with TVA.

Mr. MURRAY. Answer the question.

Mr. JONAS of North Carolina. I am surprised at the gentleman trying to contend that my interest in this situation arises by reason of the fact that there is a private-power utility company operating in my district. So far as I know, there is no competition between them.

Mr. MURRAY. The gentleman has not answered my question.

Mr. PHILLIPS. Mr. Speaker, if the gentleman will yield, the gentleman is not required to answer extraneous questions, and I merely call his attention to the fact that he has 12 minutes left.

Mr. JONAS of North Carolina. I thank the gentleman. I want to answer the question. I am in favor of Oak Ridge having all the power it needs. I am in favor of Paducah having all the power it needs. And that leads me to this point. I am surprised that the strong proponents of TVA here in this House have taken such a violent objection to this contract, because I think this contract, if it is consummated, would be the answer to your hopes of having more power in the Tennessee Valley. Let me go one step further. I not only want AEC to have all the power they can use and need at Oak Ridge and Paducah, but I, for one, believe that they are going to get all they need, and if there is any shortage of power in 1957, I do not think it will be the Atomic Energy Commission that will suffer. I think it will be the people of the Tennessee Valley who refuse to admit that anybody is in a position to furnish them power except TVA. The fact is that TVA today gets from 10 to 12 percent of all the power it sells from power companies around the entire periphery of the TVA area. Testimony is on record before the committee that private power companies in Virginia, Georgia, Alabama, Mississippi, and Arkansas have made proposals to make power available to the Tennessee Valley area, but the TVA will not accept those proposals, not because the power is not available but because the price is not right. I, for one, am willing to admit that TVA can sell power cheaper than any private utility. I have never contended to the contrary, and I admit it here. Why, it would be ridiculous if it could not do it, because I have already pointed out they get their money interest free, and they do not pay any taxes.

I contend—and I shall ask you to correct me if I am wrong—that there is no authorizing legislation that will permit the appropriation of money to build the Fulton plant. I say that because I have studied the basic act. It is my view that TVA is restricted to the Tennessee River and its tributaries. Fulton, as I have said several times, is 115 miles west of the Tennessee River. All of the tributary rivers between the Tennessee and the Mississippi flow into the Mississippi and not into the Tennessee. By no stretch of the imagination can it be argued that the Mississippi is a tributary of the Tennessee. All of the language that I find in this act, in defining the territory of the Tennessee Valley Authority, restricts it to the Tennessee River and its tributaries.

Going one step further, the House evidently agrees with that view because the House turned down an appropriation for the Fulton plant this year. You may say that one reason for that was because it did not have Budget Bureau approval. But it had Budget Bureau approval last year, and the House turned it down then.

Mr. COOPER. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. Is not that true?

Mr. COOPER. Oh, no.

Mr. JONAS of North Carolina. Was not that in the Truman budget? That is the budget I am talking about.

Mr. COOPER. That was not the budget that the gentleman's party brought in here. They brought in the Eisenhower revised budget.

Mr. JONAS of North Carolina. There was $254 million provided, and was not $30 million of that for the Fulton plant?

Mr. COOPER. No; there was not a dime included in the Eisenhower budget last year or this year for the Fulton plant. And the distinguished gentleman from North Carolina [Mr. JONAS] led the fight on the floor against my amendment to provide for the Fulton plant.

Mr. JONAS of North Carolina. That is correct. I do not think there is any authority in the law for the building of the Fulton plant. I think you have to have authorizing legislation.

Mr. COOPER. Will the gentleman yield further at that point?

Mr. JONAS of North Carolina. I yield to the gentleman from Tennessee.

Mr. COOPER. Then, under the rules of the House of Representatives, why did not the gentleman make a point of order against my amendment and knock it out instead of opposing the amendment merely without making the point of order?

Mr. JONAS of North Carolina. I thought that the way to do it was to debate the issue and let the House decide

it, not on a point of order; but to permit the House to decide whether we should put up the money to build this steam plant at Fulton.

Mr. EVINS. Mr. Speaker, will the gentleman yield, on another point?

Mr. JONAS of North Carolina. I yield to the gentleman from Tennessee.

Mr. EVINS. The gentleman has complained that the people of the Tennessee Valley area do not recognize the feasibility of the use of private power. But the gentleman fails to recognize Electric Energy, Inc.—EEI, and the Joppa plant. Everyone, including the Federal Power Commission and the Atomic Energy Commission, recognizes that the TVA has proved itself most efficient in the building of steam plants to provide the power at cheaper cost. The gentleman will admit that, I am sure.

Mr. JONAS of North Carolina. I have never contended that the TVA is incompetent or inefficient or that it cannot build a steam plant as cheaply or as efficiently as a private company. I do not see why it should not be able to do so more efficiently because, as I have explained time and time again, it does not have to worry about where it gets its money. It does not have to pay any interest. It does not have to take care of any investors, and pay them any dividends, and it does not have to worry about taxes. I am not arguing that TVA is not able to build a steam plant as efficiently or as economically as private industry.

On yesterday in the course of the debate some editorials were inserted in the RECORD; also again today.

Mr. Speaker, I ask unanimous consent that at the conclusion of my remarks I may include as a part thereof an editorial from last night's Evening Star.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. JONAS of North Carolina. Having consumed nearly an hour, Mr. Speaker, I find that I have not had an opportunity to discuss the situation at Paducah. I think that is a part of this TVA story. I would discuss that aspect of this problem now if it had not been for a charge made here this afternoon that I have delivered a vicious attack on TVA. I recognize that everyone has a right to his own opinion about it. I recognize that the partisans of TVA will never be convinced that anyone who dares to criticize anything that happens in the TVA or dares to raise a constructive suggestion that TVA would be well advised to try to figure out some way by which that organization could stand on its own feet, is anything but an enemy of TVA. I realize that there are those who contend that I am an enemy of TVA. I have disclaimed that. Someone said that actions speak louder than words. I have already explained that last year on my subcommittee, I voted to give TVA $188 million—and that is not chicken feed in my part of the country. This year I voted TVA another $120 million. If you call that undertaking to destroy or damage TVA, I do not understand it that way. I am happy to admit I believe that TVA ought to stand on its own feet. I believe it is able to do that, and I think it would be in its own best interest to do that as well as in the interest of the people of the Tennessee Valley.

Mr. PHILLIPS. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. PHILLIPS. Is it not a fact that during the discussions last year on this very point, both in committee on the outside and in full committee, we found that many people who are known friends of TVA were very much of the opinion that the TVA had reached a point where it could stand on its own feet, and if nothing else, should begin to pay interest on the money which it has received from the Government?

Mr. JONAS of North Carolina. That is correct. But, whenever any of us who have that view stand up and express it, we are attacked by the partisans of TVA and accused of seeking to destroy it for some ulterior motive. I just do not understand the reason for that sort of reaction.

Mr. PHILLIPS. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. PHILLIPS. This is a rather personal matter, but the gentleman has just about consumed his time. He said he wanted to talk about the Paducah situation, and I, for one, should like to hear him. I call the gentleman's attention to the fact that I have a special order for tomorrow, and if the gentleman cares to take some of that time to discuss the Paducah situation, I shall gladly yield to him then.

Mr. JONAS of North Carolina. I thank the gentleman.

Mr. GATHINGS. Mr. Speaker, I commend the gentleman for his forthright and courageous speech.

Mr. PHILLIPS. I also commend the gentleman and congratulate him for bringing many of these facts to the attention of the House.

Mr. PRIEST. Mr. Speaker, will the gentleman yield?

Mr. JONAS of North Carolina. I yield.

Mr. PRIEST. The gentleman used the phrase "Tennessee had reached the point where it could stand on its own feet."

Mr. JONAS of North Carolina. The Tennessee Valley Authority.

Mr. PRIEST. Yes.

Mr. JONAS of North Carolina. The great State of Tennessee can stand on its own feet and has been doing so for many years. I have never said anything unkind about the gentleman or his State.

Mr. PRIEST. The question of standing on its own feet and doing the job which Congress directed it should do was emphasized again in 1939 when it approved the sale of Commonwealth Southern, and to do that job it must supply the power needs of that area. The gentleman must agree to that.

Mr. JONAS of North Carolina. Basically. But it is not doing that now exclusively.

Mr. PRIEST. That is the point I wanted to make.

[From the Washington Evening Star of July 12, 1954]

MR. FULBRIGHT VERSUS HUMBUG

Senator FULBRIGHT belongs to what is described as the liberal wing of the Democratic Party. He also has always been, and still is, a strong supporter of the Tennessee Valley Authority. So it is a particularly impressive fact that he has come out with a vigorous full-dress defense of the President's directive to the Atomic Energy Commission to negotiate a 25-year contract with two private companies for construction of a powerplant at West Memphis, Ark.

Arkansas, of course, is Mr. FULBRIGHT's home State, and certain benefits would naturally accrue to it from the building and operation of such a plant. But that is not the real reason why he has spoken out as he has in the Senate. The real reason, as he has put it, is that the proposed contract has been so viciously attacked, and I think so unfairly and so erroneously attacked, and figures have been so freely used without justification, that some one simply had to say something about the actual facts.

Broadly speaking, the proposal's critics (mostly the Democratic liberals) have made the following major charges, among others: (1) That the AEC has no legal authority to negotiate the contract in question; (2) that the President has exceeded his powers in issuing his directive; (3) that the directive constitutes a sort of sly, underhanded move that would misuse one of the Nation's most vital and sensitive agencies to initiate a policy that could ultimately destroy TVA for the benefit of the private utilities; and (4) that power from the projected plant would cost the Government between $3.5 million and $5.5 million more a year than equivalent power from facilities that TVA could build at Fulton, Tenn.

These and similar charges, however, have been effectively rebutted by Mr. FULBRIGHT. True enough, his Friday speech does not constitute the last or most authoritative word on the subject, but it certainly presents a persuasive case in favor of the proposed contract—an arrangement under which the private companies, at a cost of about $107 million, would build a 600,000-kilowatt plant whose output (which would be for nongovernmental consumers in the Memphis area) would be fed into the TVA system to make up for a comparable amount of TVA power now being delivered to the atomic installations at Paducah, Ky. Clearly, judging from Mr. FULBRIGHT's argument, the AEC's legal right to negotiate such a contract and the propriety and validity of the President's directive seem to be wholly beyond question.

Further, from the standpoint of the economics involved, Mr. FULBRIGHT has powerfully challenged the figures of the opposition. Using the present AEC-TVA Paducah contract as a yardstick, he has presented a table showing that power from the West Memphis project, far from imposing an additional annual cost of up to $5.5 million, would cost only $282,000 more a year than power from the TVA. And above all, in addition to citing other advantages inherent in the proposed arrangement, the Senator has stressed the important fiscal fact that it would obviate the need for a Government outlay of about $100 million that would otherwise have to be spent on new TVA facilities during the next 3 years.

A summary of this sort cannot do justice to all the points raised by Mr. FULBRIGHT. Suffice to say, however, that his speech—taken together with the statement just issued by the Budget Bureau—makes much of the criticism of the directive look like the sheerest sort of humbug. As he sees the proposed contract, there is "nothing immoral, illegal, or wrong about it in any way." On the contrary, he welcomes it for what it plainly seems to be—an honest and aboveboard effort to cut down on Federal outlays

and encourage free enterprise in a manner that will serve the national interest without hurting TVA.

The SPEAKER pro tempore. The time of the gentleman from North Carolina [Mr. JONAS] has expired.

EXTENSION OF REMARKS

Mr. PHILLIPS. Mr. Speaker, I have two requests to make on behalf of my colleague, the gentleman from New Jersey [Mr. WOLVERTON].

First, that all Members of the House who desire may extend their remarks in general debate on H. R. 8356.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. PHILLIPS. And on behalf of the gentleman from New Jersey [Mr. WOLVERTON], I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the bill H. R. 8356.

The SPEAKER pro tempore. Is there objection?

There was no objection.

TENNESSEE VALLEY AUTHORITY

The SPEAKER pro tempore (Mr. O'KONSKI). Under previous order of the House, the gentleman from Alabama [Mr. JONES] is recognized for 15 minutes.

Mr. JONES of Alabama. Since the President sent a communication down to the Atomic Energy Commission to undertake negotiations with the Dixon-Yates group to construct a generating facility to supply the needs of AEC, in a rather circuitous fashion, by furnishing the power to AEC and in turn to TVA, the question came to my mind upon what legal authority the AEC would conduct this procurement policy and how it would make contracts on and in behalf of the Tennessee Valley Authority. I have made diligent inquiry from the AEC, and all committees in connection with this problem, to determine the legal authority under which AEC was to make this contract for TVA. So far I have not been satisfied from any source that I have contacted. I felt that it would be necessary for us to make an appeal to the highest authority, the highest legal authority in the executive department, and let him examine this whole proposal and see whether or not the legal requirements are being met by the Atomic Energy Commission, as far as the contractual relationship for TVA is concerned.

Today I directed the following letter to Mr. Brownell, Attorney General of the United States:

WASHINGTON, D. C., *July 13, 1954.*

The Honorable HERBERT BROWNELL, Jr.,
Attorney General of the United States,
Washington, D. C.

DEAR MR. BROWNELL: Because of the current controversy with respect to the directive of the President to the AEC to contract with the Dixon-Yates syndicate for 600,000 kilowatts of power to be delivered to TVA at a point near Memphis, I have made a search of the AEC Act to attempt to discover under what authority AEC could enter into such a contract. From my review of this legal problem, it seems to me that the existence of such authority is extremely doubtful. I believe it would be helpful in clarifying public discussion if you would look into this problem and give the Congress your opinion as to the legality of the proposed contract.

The act of July 17, 1953, which added a new section 12 (d) to the Atomic Energy Act of 1946, authorizes the Atomic Energy Commission in connection with the construction or operation of its Oak Ridge, Paducah, and Portsmouth installations "to enter into new contracts or modify or confirm existing contracts to provide for electric utility services for periods not exceeding 25 years." If the President's directives contemplated a source of additional power for AEC's own needs, the foregoing provision would seem to provide adequate statutory authority. However, the letters of June 16, which were sent by the Bureau of the Budget at the direction of the President to Chairman Lewis L. Strauss, of the Atomic Energy Commission, Vice Chairman Harry A. Curtis, of the Tennesse Valley Authority; and Chairman Leverett Saltonstall, of the Independent Offices Subcommittee of the Senate Committee on Appropriations, make clear this is is not the case. Although the President's budget message of January 21, 1954 stated that AEC would undertake negotiations with private utilities for the purpose of replacing 500,000 to 600,000 kilowatts of the power which TVA is committed to supply AEC at Paducah, and would result in releasing TVA from its power-supply obligations to AEC in the same amount, the letter to Dr. Curtis expressly states that "AEC will maintain in force its full contract with TVA at Paducah." The net effect of the transaction, therefore, would be to add 600,000 kilowatts on the TVA system for loads other than the AEC load at Paducah. Although AEC would receive none of the additional power made available by the Dixon-Yates syndicate, the directives require AEC to reimburse Dixon-Yates in the amount of State and local taxes on the new powerplant to be built in Arkansas, such taxes being estimated at $1,499,000. This expenditure is in addition to extra costs which would be imposed on TVA in amounts variously estimated at from $2,200,000 to almost twice that amount.

The specific questions which I wish to raise in the light of the foregoing facts are as follows:

1. Can the proposed contract between the Atomic Energy Commission and the Dixon-Yates syndicate reasonably be considered as being entered into "in connection with the construction or operation" or the Paducah facility inasmuch as it would add nothing whatever to the power now available at Paducah for construction and operation of said facility?

2. Does a contract, the purpose of which is to add 600,000 kilowatts to the amount of power available to TVA for general area loads, come within the authorization to AEC in the act of July 17, 1953, to contract for electric-utility services, or does such authorization in the context of the act relate to the Commission's own requirements for electric-utility service rather than to electric-utility service for other organizations and agencies?

3. Does the act of July 17, 1953, or any other provision of the Atomic Energy Act authorize AEC to spend $1½ million a year for the purpose of subsidizing the Dixon-Yates syndicate for power supply which is in no way required for or used by the Atomic Energy Commission?

The provisions of the Independent Offices Appropriation Act, 1955, which would presumably be the source of the funds to be expended by AEC, are also involved in the question of AEC's legal authority to commit the Treasury to payments of $1½ million a year for 25 years, in return for which it will receive nothing. The appropriation is made available for "necessary operating expenses of the Commission in carrying out the purposes of the Atomic Energy Act of 1946." In your opinion can the proposed expenditures be considered as necessary operating expenses for carrying out AEC's functions when it will receive none of the power and benefit in any way from the expenditures?

A prompt expression of your views on the foregoing questions would, I am sure, contribute to a general public understanding of the issues involved in this important matter.

Sincerely,

ROBERT E. JONES,
Member of Congress.

Mr. WHITTEN. Mr. Speaker, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from Mississippi.

Mr. WHITTEN. I wish to commend the gentleman for having requested that opinion; however it strikes me that before the Government would enter into such a contract in advance there should have been such a legal opinion. I trust that opinion will be forthcoming.

Mr. JONES of Alabama. I am quite satisfied that the Attorney General will direct his attention to such a problem because on yesterday we were given assurances by the gentleman from California [Mr. PHILLIPS], as I recall, that the contract had not been completed and was still the subject of negotiation between Mr. Yates, Mr. Dixon, and the AEC; so I am quite sure that the request comes in time.

Mr. WHITTEN. I did not mean it that way. I rather think the gentleman is going to find out there is no such legal opinion. I am merely stating there should have been preceding the directive to enter into a contract a legal finding as to authority for it. I doubt the gentleman will find such is the fact, but certainly there should have been.

Mr. JONES of Alabama. I am sure that the Attorney General who has expressed on numerous occasions his desire to look in and see that all laws are upheld will direct his attention to it.

Mr. WHITTEN. If the gentleman will permit me, I would like to say that I certainly have appreciated the statements that have been made on this side of the aisle in support of the TVA activity. I have always tried to believe and have believed that the TVA in its operations had a real national interest. Many statements are made about the TVA not paying taxes to the Government. Why, TVA is the Government. It is run by the Government, it belongs to the Government.

It has been pointed out that the TVA is not a fair yardstick. I know the gentleman and I have never tried to insist that it was what we might term a fair measuring stick in that it has some natural advantages in deepness of the river valleys and things of that sort; but is a measurement by which we can tell the cost of doing certain things in connection with power generation and sales. It is a challenge to the private utilities. It has a value to the whole Nation therefore.

I was surprised to learn not long ago that beginning with the TVA era, the closer the private utility was to TVA the greater the increase in its power sales, the greater reduction in its rates and the greater its earnings. As you get away from TVA those things go down and up

directly in proportion to the distances you get away.

Mr. JONES of Alabama. What is true of the TVA in that respect is also true in connection with the distribution of public power in the Columbia River country.

Mr. WHITTEN. Some years ago I served on a committee. The attacks against the TVA are just the same today as they were years ago when I served on that committee. You can see through all of it an effort to get rid of a comparison of rates by the TVA with the private utilities; inferentially so they can raise their rates.

I want to show the gentleman, if I may have another moment of his time, that in the House appropriation bill our friends listened to the advocates of the private power companies who would like to get rid of this comparison and not only recommended that we take out the cash operating funds to cripple its operations but after all of that they take off all the restrictions on what the retailer charges for the electricity, at the retail level; in other words, an invitation to cities and distributors to let the sky be the limit on retail sales prices and they do not care who gets the money. I point out that as showing you what they are trying to reach is to raise the rates at retail. Now, under this Dixon-Yates contract we find they have gone one step further. They come in here, and through the instrumentality of the Atomic Energy Commission, by a strained construction, an agency that is supposed to be independent, tell that Commission which had authority to buy power for its own use for many years "You buy it here and resell it over there. Generate it through the TVA and let them pick up the check" and reflect the entire rates to the retailers, that is, this added cost. In this case it is even worse than the House committee did, because here they did not point out who was going to get the money in the increased rates in the area. And, I think by going through the Atomic Energy channel that they have pointed up nationally the need for us to write into the Atomic Energy Act further restrictions to see that the benefits of atomic energy in the future, as many have advocated dealing with the subject, protection to see that the benefits go to all of us, because in this instance under the guise of saving money, we really are paying out through the Atomic Energy Commission more and more money to a small group who we set up in business, who we contract with to take its output, who we guarantee tremendous profits, whose taxes we pay, all to the benefit of the few stockholders in a few companies of Dixon-Yates. If it is smart business for the Federal Government, whose Atomic Energy Commission is working for all of us, to pay higher rates for what they get than we can supply it for, I cannot see that that is sound business.

Mr. JONES of Alabama. Not only what the gentleman from Mississippi said is true, but the fact is he is a member of the Committee on Appropriations, and when the appropriation bill was pending in that committee, why no information was given to the Committee on Appropriations that this problem as it is presented today was involved.

The SPEAKER pro tempore. The time of the gentleman from Alabama has expired.

FEDERAL-STATE UNEMPLOYMENT INSURANCE SYSTEM

Mr. EBERHARTER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. EBERHARTER. Mr. Speaker, last week the House voted 241 to 110 against amendments offered by the gentleman from Rhode Island [Mr. FORAND] to H. R. 9709, a bill extending the coverage of the Federal-State unemployment insurance system. The bill, as passed, would do absolutely nothing for the presently insured unemployed millions who are receiving inadequate benefits for inadequate periods of time. More than 600,000 of these insured workers have already exhausted their benefits.

The Forand amendments would have increased the amount of unemployment insurance payments to a minimum of 50 percent of the insured worker's regular wages, up to a maximum of 66⅔ percent of the average wage in the State, and would have increased the duration of benefit payments for a period up to 26 weeks.

I have been given an interesting analysis of the vote on the Forand amendments, showing the labor market areas in group 4—that is, having 6 percent or more of unemployment—broken down into the congressional districts from which came those Members who voted directly against the increase and extension of unemployment insurance benefits. This analysis might be very embarrassing to these particular Members of Congress, and for this reason I will not insert the analysis in the RECORD.

Mr. Speaker, on the same subject, an article in the July 16 issue of the U. S. News & World Report, page 24, states that there are right now areas suffering severe unemployment conditions from which 95 Members of the 84th Congress will be elected. I need not argue that in those 95 congressional districts the matter of unemployment will be an issue of considerable importance, and the record covering the proceedings on the Forand amendments shows that 47 Republicans from these districts voted against the proposal to increase the amount of the benefits and lengthen the duration of the payments.

Mr. Speaker, I have also been furnished with a copy of the bimonthly summary of labor market developments in major areas, issued by the Bureau of Employment Security of the Department of Labor for May 1954—the latest obtainable data. Among other things, this explains the classification of 44 major labor market areas into group IV–A, having 6 percent or more unemployment, along with 42 smaller areas, making a total of 86 areas having 6 percent or more unemployment; also, 7 major areas into group IV–B, having 12 percent or more unemployment, along with 31 smaller areas, making a total of 38 areas having 12 percent or more unemployment. This amounts to a total of 124 labor market areas—more than half of the 222 labor market areas—having 6 percent or more unemployment.

The analysis—which I am not inserting in the RECORD—shows that in 52 congressional districts containing 89 cities in 72 group IV labor market areas, of which 42 have 12 percent or more unemployment and 30 have 6 percent or more unemployment, 47 Republicans voted against increasing the amount of unemployment insurance payments and extension of the number of weeks duration of such payments. In the words of the minority report on the bill, they voted to give the unemployed not bread, but a stone.

I insert at this point excerpts from the Bimonthly Summary of Labor Market Developments issued by the Bureau of Employment Security of the Department of Labor:

EXCERPTS FROM BIMONTHLY SUMMARY

Recent downtrends in national unemployment totals have not yet significantly reduced the excess of labor supply as related to employment opportunities in most of the country's major production and employment centers. This was indicated by the latest survey of area manpower conditions in 149 of the Nation's largest labor markets conducted by the Bureau of Employment Security in cooperation with affiliated State employment security agencies.

The survey showed some increases in labor surpluses in a number of important areas even though the usual spring employment pickup in selected activities was getting underway. In 21 of the 149 major labor market areas, the rise in joblessness was sufficiently large to result in a change in the area's' labor supply classification between March and May. Classification changes for the current period were thus less far-reaching than those in the previous (January to March) period. Between January and March, 45 of the 149 major areas had been reclassified according to relative adequacy of labor supply. All of these were shifted to looser labor supply categories. None of the recently surveyed areas reported sufficient unemployment decreases to warrant a shift to a classification reflecting tighter labor supply.

With the issuance of the May area classification listing, the former group IV—substantial labor surplus—category is being split into two separate groupings (IV–A and IV–B) in order to identify and isolate those areas with the most serious unemployment problems. The group IV–B category will be used to designate areas with very substantial labor surpluses—where unemployment (apart from seasonal and temporary factors) affects about 12 percent, or more of the area's work force. Seven major areas—Lawrence, Mass.; Providence, R. I.; Ponce, P. R.; Kenosha, Wis.; and Altoona, Johnstown, and Wilkes-Barre-Hazelton, Pa.—have been placed in the group IV–B category at this time.

A summary of May classifications for the 149 major areas is shown below, together with comparable figures from the previous summary released in March and from that of May 1953. The number of smaller areas classified because of the existence of substantial unemployment during each period is also indicated in the tabulation.

Classification	Major areas			Description of classification
	May 1954	Mar. 1954	May 1953	
Group I	0	0	5	Areas of labor shortage.
Group II	16	20	68	Areas of balanced labor supply.
Group III	82	95	60	Areas of moderate labor surplus.
Group IV	51	34	16	
IV-A	44	------	------	Areas of substantial labor surplus.
IV-B	7	------	------	Areas of very substantial labor surplus.
Total	149	149	149	
	Smaller areas			
Group IV	73	46	18	
IV-A	42	------	------	Areas of substantial labor surplus.
IV-B	31	------	------	Areas of very substantial labor surplus.

Seventeen of the twenty-one major areas shifting to new classification ratings between March and May were transferred from group III (moderate labor surplus) classifications to the new group IV-A (substantial surplus) category. Among this group—in addition to the Canton, Ohio, area (previously assigned a group IV rating in April)—were such key centers as Philadelphia, Pittsburgh, St. Louis, and Buffalo. The Chicago area—which covers three counties in Illinois and Indiana—was among the four areas transferred from group II (balanced labor supply category) to group III. * * *

PENNSYLVANIA

Lancaster: Increased labor surplus due to general moderate employment decline in most industries since last summer peak; manufacturing reduction heaviest in textiles, machinery. Unemployment half again higher than year ago. Small job gains are in prospect to summer but will be more than offset by students and summer workers entering labor force.

Erie: Nonelectrical machinery leads general manufacturing decline as factory jobs drop one-eighth since March 1953. Durable goods losses, ebbing trade and transport payroll boost jobless rolls to substantial level. Further layoffs in railroad equipment indicated to July.

Philadelphia: Over-the-year declines in manufacturing primarily responsible for substantial labor surplus. Transportation equipment, machinery, primary metals, textiles most affected. Another fractional employment decline foreseen to July as ebb in factory activity continues, cancelling out seasonal nonmanufacturing advance.

Pittsburgh: Factory jobs drop to 10 percent below year-ago levels; steel cutbacks responsible for half of recent decline. Scheduled small seasonal gains to July not expected to cut unemployment to below substantial levels.

Reading: Increased labor surplus traceable to 10 percent factory drop over past year. Primary metals, apparel, food, transportation equipment show sharpest recent losses. Continued decline in primary metals appears in prospect.

Berwick-Bloomsburg: Sharp drop in dominant transportation (railroad) equipment attributed to termination of Government, civilian contracts. Jobless rolls 50 percent above last November, nearly triple year ago.

New Castle (added to group IV list in April): Durable goods decline (steel, machinery, auto parts) results from drop in civilian, defense orders. Unemployed—mostly unskilled, semiskilled male industrial workers—three times as numerous as last year.

Mr. Speaker, I have not included in the foregoing excerpts information covering many other areas of the country because Pennsylvania can be considered as fairly indicative of conditions prevailing in other industrial States.

It is my conclusion, both from personal observation and from official statistical reports from the Department of Labor, that we should not look forward with any optimism insofar as increased employment is concerned.

VETERANS' LEGISLATION

The SPEAKER pro tempore. Under previous order of the House, the gentlewoman from Massachusetts [Mrs. ROGERS] is recognized for 2 hours.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I rise at this time to remind the Members of the House that a petition will soon be placed on the desk to discharge the Rules Committee from further consideration of H. R. 9020, a bill providing for an increase in compensation for service-connected and other cases. I know the gentleman from New York [Mr. RADWAN] did not want to introduce this discharge petition, but it was necessary because in spite of repeated requests we have had no rule. The gentleman from New York is on the floor and will address himself to his bill.

I know the Members need not be reminded that the flower of our country went to war, fought, and died, and many were disabled in order to keep this country safe and free. In future wars it will be our young men, the flower of the country, who will fight for us. They are expendables in war. The veterans seem to be expendable in peace, and an effort to take away their benefits and compensation, and care and help, by cuts in appropriations, cutting training and compensation, is being made.

I appeal to the House to help the Veterans' Committee in their efforts to stop this unfair treatment of the veterans, and to secure the passage of their legislation.

Mr. Speaker, the Committee on Veterans' Affairs has been very busy during the entire 83d Congress. This applies both to the first, as well as the second session. By far the vast majority of the bills which have been introduced have received hearings or other attention by the subcommittees or the full committee so that the questions presented by this legislation have been disposed of in one way or another.

In all, 111 sessions of the committee or its subcommittees have thus far been held during the Congress. This has resulted in the printing of 5,289 pages of printed testimony taken by the full committee or one of its subcommittees.

During the first session the Subcommittee on Hospitals conducted a thorough and careful study of the questions raised by opponents of hospitalization and medical care for veterans and came to the unanimous conclusion that the present system was working well and that the extension of hospital care and medical services should be continued on its present basis without curtailment. The full findings and recommendations of the subcommittee which were later approved by the full committee are outlined in a committee resolution adopted on March 24, 1954, which I insert at this point in the RECORD:

HOSPITALIZATION RESOLUTION ADOPTED BY COMMITTEE, MARCH 24, 1954

Whereas the Subcommittee on Hospitals of the Committee on Veterans' Affairs did circulate a questionnaire among all Veterans' Administration hospitals and other medical facilities during 1953, in an effort to determine the efficiency and adequacy of their operation; and

Whereas said subcommittee held hearings of 3 weeks' duration, providing 1,265 pages of printed testimony on the subject of entitlement and eligibility of veterans for hospital care; and

Whereas all interested organizations, including veterans' groups, medical societies, and appropriate officials of the Government, were heard on this subject; and

Whereas the Veterans' Administration has issued an addendum to the admission application form for hospital care requiring the listing of assets and liabilities for non-service-connected cases; and

Whereas information on said addendum is not to be divulged to other than appropriate Veterans' Administration officials; and

Whereas said addendum does not preclude hospitalization for needy cases: Therefore be it

Resolved, That the Committee on Veterans' Affairs approves the present unlimited hospitalization of service-connected veterans; and be it further

Resolved, That the committee urges the cooperation of all veterans' groups and all other parties interested in medical care for veterans that the new admission policy be given a fair trial and period of operation before any final conclusion is reached on its workability or feasibility; and be it further

Resolved, That no legislation be considered on this subject until the effect of the new policy has been determined; and be it further

Resolved, That the committee approves the continued hospitalization of non-service-connected neuropsychiatric and tubercular veterans; and be it further

Resolved, That the committee approves the continued hospitalization of other groups of non-service-connected veterans where beds are available and the veteran does not have the ability to pay for private hospitalization.

The Subcommittee on Housing has held several hearings both in Washington and in the field in an effort to eliminate abuses which have arisen in the providing of housing for veterans and to further improve the administration of those laws by the Veterans' Administration. The bill H. R. 8152, which authorizes the continuance of the direct loan program for another year, or until June 30, 1955, was passed by the House earlier this session and is now pending before the Banking and Currency Committee in the Senate. This bill, which would also authorize $100 million additional in funds, has been temporarily laid aside in order for the conferees on the general housing bill, H. R. 7839, to reach an agreement on section 902, which provides for the same extension of time, but with double the money—$200 million.

All of these investigations have been helpful to the cause of veterans and to the general field of veterans' legislation. However, it is legislation, Mr. Speaker, upon which a record is built. Eleven bills have been enacted into law which

were reported by the Committee on Veterans' Affairs during the current Congress, and one is now pending before the President. There are numerous other bills which should be enacted into law and which are either pending on the Consent Calendar or before the Rules Committee.

As Members know, I have been concentrating recently, together with other members of my committee, to obtain passage of H. R. 9020, which seeks to increase the rates of compensation and pension for veterans and their dependents. This bill, reported unanimously by the Committee on Veterans' Affairs on May 28, 1954, has been since that time before the Rules Committee, despite the fact that a majority of the members of that committee have signified a willingness to vote for a rule, if given the opportunity to do so. I deeply believe, Mr. Speaker, that this bill should be passed and enacted into law prior to the adjournment of this Congress, and that other legislation which I shall mention in a few moments should also reach the House floor for discussion and debate. I believe that even a casual investigation will show the merits of the proposals which the Committee on Veterans' Affairs has reported and which certainly warrant approval of the Congress prior to adjournment.

The bill, H. R. 5380, seeks to extend pensions for veterans serving in the Moro Province, Mindanao, or in the islands of Samar and Leyte after July 4, 1902, and prior to January 1, 1914. This measure, reported after careful consideration by the Subcommittee on Spanish War, headed by the gentleman from Washington [Mr. MACK], would provide pensions for a group of veterans and their dependents who saw real service after the close of the Spanish-American War. It was reported in June of 1953 and despite all of our efforts, we have not been successful in getting the bill considered either on the Consent Calendar or by the Rules Committee, even though we have made repeated requests for consideration. It seems very unlikely that this legislation would cost more than $800,000. I insert at this point an explanation of this measure:

PENSIONS FOR MORO PROVINCE SERVICE, 1902–14, H. R. 5380

Title: To extend pension benefits under the laws reenacted by Public Law 269, 74th Congress, August 13, 1935, as now or hereafter amended to certain persons who served with the United States military or naval forces engaged in hostilities in the Moro Province, including Mindanao, or in the islands of Samar and Leyte, after July 4, 1902, and prior to January 1, 1914, and to their unmarried widows, child, or children.

Mr. MACK of Washington. Introduced and referred May 25, 1953.

Analysis: Gives Spanish-American War pension rates to those who served in the Moro Province, including Mindanao, or in the islands of Samar and Leyte, after July 4, 1902, and prior to January 1, 1914; also includes surviving unremarried widows, child, or children.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"The general purpose of these bills is to provide a service pension under the conditions and at the rates prescribed by the laws reenacted by Public Law 269, 74th Congress, August 13, 1935, as now or hereafter amended, for any person who served in any unit of the United States military or naval forces while such unit was engaged in hostilities in the Moro Province, including Mindanao, or in the islands of Samar and Leyte, after July 4, 1902, and prior to January 1, 1914, who was honorably discharged from the enlistment in which such service occurred, and for the surviving unremarried widow, child, or children of such person. For the ready reference of the committee there is furnished herewith a table showing the pension rates currently payable to veterans and their dependents under the mentioned laws. * * *

"Persons comprehended by the bills are presently entitled to all benefits prescribed by law for former members of the Regular Establishment, or as they are sometimes called, peacetime veterans. It is felt that a brief reference to benefits now available to such veterans and their dependents would be helpful to the committee in its consideration of these bills.

"Present benefits include compensation at peacetime rates for disabilities resulting from personal injury or disease contracted in line of duty or for an aggravation of a preexisting injury or disease contracted or suffered in line of duty and not the result of the person's own misconduct. Compensation at peacetime rates is also payable to dependents on account of the death of such veterans from service-connected causes. Compensation is payable at wartime rates for disabilities incurred in line of duty as a result of armed conflict or extrahazardous service, including such service under conditions simulating war, and for death from such disabilities, pursuant to paragraph 1 (c), part II, Veterans Regulations No. 1 (a), as amended. Veterans entitled to compensation at wartime or peacetime rates are entitled to additional compensation for dependents if their service-connected disability is rated at not less than 50 percent. * * *

"From time to time bills have been introduced in the Congress which have had as their purpose the conferring of wartime benefits on the group who served in the Philippines for periods subsequent to the termination of the Philippine Insurrection on July 4, 1902 (July 15, 1903, as regards service in the Moro Province). During the 78th Congress, one such bill, H. R. 4099, was introduced, designed to confer a wartime status on the same group set forth in the subject bills through the extension of the official ending date of the Philippine Insurrection, to include service with the United States military or naval forces engaged in hostilities in the Moro Province, including Mindanao, or in the islands of Samar and Leyte, between July 5, 1902, and December 31, 1913. H. R. 4099 likewise was primarily designed to provide service pensions for this group. The bill passed the House of Representatives on March 27, 1944, and the Senate on November 27, 1944, but was returned by the President to the House of Representatives without his approval on December 8, 1944. In his veto message (H. Doc. 804, 78th Cong.), the President stated:

" 'This measure would grant special benefits to a particular group and exclude other members of the Regular Military and Naval Establishments who similarly have been called upon, on numerous occasions, to engage in similar military operations in times of peace. I believe that it is sound in principle to abide by the official beginning and ending dates of wars in providing benefits, heretofore described, and feel that extension of the period of the Philippine Insurrection, beyond that established in conformity with recognized legal precedents, would constitute sufficient deviation from that principle to invite further exceptions for additional groups with service in military occupations, expeditions, or campaigns other than during a period of war'."

"Attention is invited to the fact that by applying Spanish-American War pension criteria, these bills, if enacted, would grant to eligible peacetime veterans and their widows and children generally more liberal pension benefits, both as to rates and eligibility criteria, than are provided for veterans of World War I, World War II, or service on or after June 27, 1950, and their widows and children.

"Enactment of the proposed legislation might serve as a precedent for requests for similar legislation on behalf of veterans of our Armed Forces who served in other campaigns, expeditions, or occupations, including members of the occupation forces after World War I and World War II whose only service was rendered in other than a war period. There is also for consideration what precedential effect the enactment of these bills might have with respect to requests for additional wartime benefits, such as hospital and domiciliary care and burial benefits, for the group within the purview of the bills, and other comparable groups.

"In any event, the matter of authorizing service pension for additional groups of beneficiaries involves a question of broad public policy, and it is the view of the Veterans' Administration that any revision of that policy is primarily for the consideration of, and determination by, the Congress.

"There are no records in the Veterans' Administration on which to base a worthwhile estimate of the cost of the proposed legislation.

"Advice has been received from the Bureau of the Budget that enactment of the proposed legislation would not be in accord with the program of the President."

Reported: June 10, 1953; House Report 534.

Pending on the Consent Calendar is H. R. 7712 which I introduced at the request of the Disabled American Veterans, which provides for a statutory rate of compensation of $266 a month for veterans who have lost an eye, in combination with the loss of a limb. Needless to say, the cases concerned here are only those with service-connected disabilities. It is a meritorious measure and one which would cost very little, if enacted, I am sure, despite the fact that the Veterans' Administration has been unable to furnish a estimate of cost. I insert at this point an explanation of this measure:

STATUTORY RATE FOR CERTAIN LOSSES, H. R. 7712

Title: To amend the veterans regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb.

Mrs. ROGERS of Massachusetts. Introduced and referred February 3, 1954.

Analysis: Provides a statutory rate of compensation of $266 a month for veterans who have lost an eye in combination with the loss of a limb. The rate today varies depending on the severity of the disability, and this bill would put this class of veterans on a parity with those who have lost both legs or both hands or are blind.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"The World War Veterans Act, 1924, as amended, provided a rate of $100 monthly for total permanent disability and an additional sum of $50 monthly if the disabled person was so helpless as to be in need of a nurse or attendant. The act provided a statutory total permanent disability rating for the loss or loss of use of 1 hand or 1 foot with blindness of 1 eye. However, these conditions of themselves have generally not been considered as requiring regular aid and attendance and have not been paid the additional allowance for a nurse or attendant. The $50 allowance was, however, generally

paid to persons having lost, or lost the use of both hands, or both feet, or of both eyes, or of 1 foot and 1 hand. Under Public Law 2, 73d Congress, and Veterans' Regulation No. 1 (a), as amended, the rates for permanent total disability and for disability causing need for regular aid and attendance were combined into 1 rate of $150 (now $266), and this rate was made applicable to the 4 combinations presently included in subparagraph (1), supra, namely, the anatomical loss or loss of use of both hands, or both feet, or of 1 hand and 1 foot, or blindness in both eyes, with 5/200 visual acuity or less. This rate was not provided for the loss or loss of use of 1 hand and 1 eye or 1 foot and 1 eye because, as indicated, such losses generally do not require the regular aid and attendance of another person.

"The bill, if enacted, would provide the same rate of compensation for veterans who generally do not require regular aid and attendance as is now provided for those who do require regular aid and attendance.

"The basic rates of compensation for service-connected disability under the act of March 20, 1933, and the veterans' regulations issued pursuant thereto, are based generally on the theory that the amount of compensation payable should be proportionate to the degree of disability resulting from injury or disease. The authorizing of special rates of compensation in excess of those prescribed according to the degree of disability involves a policy which is primarily for determination by the Congress. But it must be recognized that in the absence of a medical or other sound basis for such special awards they create inequities and are difficult to justify.

"The Veterans' Administration does not have available data on which to base an estimate of the cost of the bill, if enacted.

"It is believed that the basic principle that the amount of compensation payable should be proportionate to the extent of disability is sound and that legislative proposals to make additional exceptions, if favorably acted upon, may contribute to adverse criticism and possible impairment of the compensation program. Accordingly, the Veteran's Administration is unable to recommend favorable consideration of H. R. 7712 by your committee."

Reported: May 12, 1954; House Report 1591.

The Congress has historically provided for specific losses, such as the loss of an eye, a limb, and so forth, and the bill, H. R. 7851, which is pending on the Consent Calendar and which has been objected to each time it was considered, simply provides for the additional rate of $47 a month for those service-connected veterans who have suffered the loss of both buttocks. Sponsored by the gentleman from Louisiana [Mr. HÉBERT], it is a very inexpensive bill, and undoubtedly the cases concerned are few. I base this statement on the view of the Veterans' Administration that the "cost would be negligible." I insert at this point an explanation of this measure.

STATUTORY AWARD FOR LOSS OF BUTTOCKS, H. R. 7851

Title: To amend the veterans regulations to provide additional compensation for veterans having the service-incurred disability of loss or loss of use of both buttocks.

Mr. HÉBERT. Introduced and referred February 12, 1954.

Analysis: Provides for a stautory award of $47 per month in addition to other compensation for those service-connected veterans who have suffered the loss of both buttocks.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"The basic rates of compensation for service-connected disability under the act of March 20, 1933, and the veterans regulations issued pursuant thereto, are based generally on the theory that the amount of compensation payable should be proportionate to the degree of disability resulting from injury or disease. In making exceptions to this principle the Congress for many years restricted its special consideration in the form of additional allowances to cases of loss or loss of use of one or more of the extremities, blindness, and for helplessness or a bedridden condition requiring aid and attendance. The loss or loss of use of a creative organ was placed in this category in 1924 for World War I veterans and included in the law applicable to veterans of World War II and the Korean conflict by Public Law 427, 82d Congress, June 30, 1952.

"The authorizing of special rates of compensation in excess of those prescribed according to the degree of disability involves a policy which is primarily for determination by the Congress. But it must be recognized that in the absence of a medical or other sound basis for such special awards they create inequities and are difficult to justify. Singling out the loss or loss of use of both buttocks for a special allowance, as proposed by the bill, would be discriminatory and no doubt lead to requests for special consideration and additional allowances in cases of numerous serious disabilities in other categories, many of which may have equal, if not greater merit.

"It is believed that the basic principle that the amount of compensation payable should be proportionate to the degree of disability is sound, and that legislative proposals to make additional exceptions, if favorably acted upon, may contribute to adverse criticism and possible impairment of the compensation program.

"Statistics are not available to show the number of veterans who might qualify for the additional compensation as provided in the bill since it is not possible to identify those on the rolls whose disability meets the condition specified. Therefore, no estimate of cost is submitted, but it is believed the cost would be negligible."

Reported: May 12, 1954; House Report 1592.

There is pending before the Rules Committee H. R. 7918, sponsored by the gentleman from Arkansas [Mr. TRIMBLE], which was reported by the Committee on Veterans' Affairs on May 12, 1954. This measure seeks to increase the bed capacity of the Veterans' Administration hospital at Fayetteville, Ark., by 150 beds to assist in caring for the tubercular load. The cost of this measure, too, is small, being less than $4½ million, and, as the hearings disclosed, there is a real need for the construction of additional facilities. I insert at this point an explanation of the bill:

INCREASING BEDS AT VA HOSPITAL IN FAYETTEVILLE, ARK., H. R. 7918

Title: To provide for the enlargement of the Veterans' Administration facility at Fayetteville, Ark.

Mr. TRIMBLE. Introduced and referred February 16, 1954.

Analysis: Increases the bed capacity by 150 beds (total of 400) at the VA hospital in Fayetteville, Ark., to assist in meeting the tuberculosis load.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"The Veterans' Administration is operating a general medical and surgical hospital at Fayetteville, Ark., with a constructed bed capacity of 254. This is also the authorized capacity of the hospital which is predominantly general medical and surgical (228 beds) with the remainder consisting of 26 neuropsychiatric beds. No tuberculosis beds have been included in the bed complement. H. R. 7918, if enacted, would require the construction of an addition of 146 beds to the existing hospital for the purpose, as expressed by the bill of providing 'more adequate care and treatment for patients having tuberculosis and other serious disease.'

"Analysis of the statistical reports received from the station disclose that the number of eligible applicant veterans in an awaiting admission schedule status has averaged approximately 50 for the past 6 months. While this number is, of course, not a constant, it bears out the belief that the demand for beds at Fayetteville is not sufficient to justify the proposed construction of additional beds. As stated, there are no tuberculosis beds available at the hospital. However, the waiting list for the nearest tuberculosis hospital, which is located at Memphis, Tenn., has averaged only 16 for the past 6 months. In addition to the fact that the demand for beds appears too small to justify expansion, recruitment of sufficient professional personnel to staff additional beds at Fayetteville would be exceedingly difficult.

"The Veterans' Administration has an authorized program for 174 hospitals with a total constructed bed capacity of approximately 128,000 beds. This authorized construction program does not provide for additional beds at Fayetteville. Under present administrative procedures, should an expansion of facilities at Fayetteville become necessary, the Veterans' Administration would submit its recommendations to the Bureau of the Budget for review and coordination and recommendation to the President.

"On the assumption that it is the principal intent of the bill to provide facilities for the care of tuberculosis, it is estimated that the cost of providing 150 tuberculosis beds and additional necessary facilities at the Fayetteville, Ark., hospital based on present medical criteria would be $4,440,300. This figure includes construction costs, technical services, and initial portable supplies and equipment.

"In view of the present budgetary situation, and the desirability of handling such projects in accordance with systematic administrative planning, together with the circumstance that there does not appear to be any pressing necessity for the proposed expansion, I am unable to recommend favorable consideration of the bill by the committee."

Reported: May 12, 1954; House Report 1593.

Some few years after the close of the Civil War, the Federal Government adopted the policy of extending Federal aid to State or Territorial homes for the support of disabled soldiers and sailors of the United States. This occurred, of course, at a time when the veterans' hospitalization program had not been thought of and the care of veterans was largely a matter for the States. It has been shown that over the years, up to and including the present time, many State homes care for our needy and disabled veterans at a lower cost per capita cost than is possible for the Veterans' Administration. The present rate of contribution is $700 a year, not to exceed one-half of the cost incurred by the State home; thus in many instances the contribution will be less than $700. H. R. 8180, which was reported by the Committee on Veterans' Affairs on March 24, 1954, and which has been since that time pending before the Rules Committee despite repeated requests for consideration, simply makes permanent the statutory

authority for continuing the $700 contribution to State homes. This legislation is necessary to prevent the reduction of the rate to $500 on June 30, 1956. I insert at this point an analysis of this proposal:

FEDERAL AID TO STATE HOMES, H. R. 8180

Title: To increase the amount of Federal aid to State or Territorial homes for the support of disabled soldiers, sailors, and airmen of the United States.

Mrs. ROGERS of Massachusetts (by request). Introduced and referred March 2, 1954.

Analysis: Increases from $500 to $700 per year the Federal aid to States for the support of veterans domiciled or hospitalized in State homes who are eligible for such care in Veterans' Administration hospitals or domiciliaries. At the present time the payment of the $500 rate is restricted to June 30, 1956. This bill, in addition to raising the rate from $500 to $700, would remove this restrictive date of June 30, 1956, thus establishing $700 as a permanent rate for Federal aid.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"There are 31 State homes located in 27 different States to which the Veterans' Administration is currently making contributions for maintenance of veterans who have been determined to be eligible for care in a Veterans' Administration hospital or home. The basic law limits the amount that any State may be paid to a sum not exceeding one-half the cost of maintenance of each veteran, and under this limitation 14 of the State homes concerned would not be able to receive the full $700 contribution since the cost of maintenance in these homes, based on fiscal year 1953 reported costs, is less than $1,400 per person. All the other State homes reported maintenance costs in excess of $1,400 per person for fiscal year 1953. * * *

"During the fiscal year 1953, payments of Federal aid were made to the States for a daily average of approximately 8,090 members present in State homes. Based on the reported per capita cost, the total cost for maintaining this daily average present was $13,365,961. The total amount of Federal aid paid by the Veterans' Administration for this number of members was $4,068,170, or 30 percent of the total cost. Based on the average number present during the fiscal year 1953, payments at the rate of $700 per annum would result in a total cost to the Veterans' Administration of approximately $5,225,630, an increase of $1,157,460, or 28 percent. This would result in the Veterans' Administration assuming 39 percent of the total cost of maintaining eligible veterans in State homes and the States paying 61 percent of the cost.

"Since fiscal year 1945, the average member load has shown a sustained upward swing, influenced in part by replacement programs at State homes undertaken to improve and enlarge existing bed capacities; general economic conditions which impose greater financial burdens on those in the lower income groups and advancing age of World War I beneficiaries who have developed disabling infirmities. In the Veterans' Administration estimates for appropriations for fiscal year 1955 the average patient load in State homes was established at 8,700 members. This projection was based upon current bed occupancy ratios, and anticipated increases in the member load. Therefore, should the rate of Federal aid be increased to $700, the cost to the Veterans' Administration might well be substantially higher than the estimated cost based on the 1953 experience. Should all homes be eligible for payments at the $700 rate, the cost to the Veterans' Administration would be approximately $6,090,000 for fiscal year 1955. As stated above, however, based on the 1953 experience, 14 of the homes would not be able to receive aid at the full $700 rate because their annual reported per capita costs were less than $1,400. It is not known how many of the homes because of increasing per capita costs would be eligible for the full amount of assistance at the $700 rate in fiscal year 1955.

"For the fiscal year 1948 (the year in which the rate was raised to $500 per annum), the per diem cost of providing domiciliary care for a veteran in a Veterans' Administration center was $2.64. For the fiscal year 1953, the cost was $3.61, an increase of approximately 37 percent. It appears that the increase proposed by the subject bill compares with the increased cost experienced by the Veterans' Administration."

Reported: March 24, 1954; House Report 1415.

As Members of the House know, the law providing automobiles for amputees is one which has always been very close to my heart. I think that the operations under this act and the results obtained in the rehabilitation field fully justify the efforts, which those of us interested in this field, exerted to have this provision written into law. It has done untold good for the veterans of World War II and Korea by restoring their morale and making them able to earn a living, and getting them to and from work in a much more comfortable fashion than would otherwise have been possible because of their physical disabilities. It has also brought an added revenue to the State and Federal Governments in taxes on higher numbers of automobiles. The bill, H. R. 8330, which was reported on May 12, 1954, and which has been pending in the Rules Committee since that time, simply extends for 2 years the time for filing applications under this act and gives veterans who have decided to remain in the service the right to obtain the payment of $1,600 toward the purchase of a specially equipped automobile. In addition, it would include World War I veterans. At this point I insert in the RECORD an explanation of the measure:

AUTOMOBILES FOR AMPUTEES, H. R. 8330

Title: To extend the time for filing application by certain disabled veterans for payment on the purchase price of an automobile or other conveyance and to authorize assistance in acquiring automobiles or other conveyances to certain disabled persons who have not been separated from the active service.

Mrs. ROGERS of Massachusetts. Introduced and referred March 10, 1954.

Analysis: Provides automobiles for World War I veterans on a par with World War II and Korea where they have lost or lost the use of one or both hands, or who are blind. It also extends by 2 years the time applicable for application for this benefit and makes the authority to apply to veterans who have decided to remain in the service.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"The 3-year period for filing application which was provided by Public Law 187 had the effect of granting, as to previously discharged veterans of World War II who could qualify on the basis of loss or loss of use of one or both legs at or above the ankle, as required by the prior laws, a period of 3 years in addition to such periods after discharge as had been available under the earlier laws. This covered a relatively small number, since the great majority of the World War II group qualifying on the basis of leg disability had already applied for and received this assistance and could not receive it a second time under the new law. As to all others, including World War II veterans claiming on the basis of disability of an upper extremity, the liberalized definition of loss or loss of use of a lower extremity, or impairment of vision, as well as veterans of the Korean conflict period claiming on the basis of any of the three classes of disabilities, the 3-year period prescribed by Public Law 187 represented the total time made available for this purpose.

"Since this program of rehabilitative assistance had been geared to providing aid to severely disabled veterans in adapting themselves to their special problems in civilian life early after discharge from the service period in which the disability was incurred, it was apparently the determination of the Congress in enacting Public Law 187 that 3 years provided a liberal period within which the veteran could and should avail himself of this assistance. It would appear that in any typical case this would afford ample time. There will arise a few unusual situations in which the service-incurred disability will not have progressed to the point of amputation or loss of use or the required impairment of vision within 3 years from the date of enactment of Public Law 187 or 3 years from the date of separation from service, as the case may be. This type of situation can also occur even though the period is extended as proposed. The question of policy as to whether the existing time limit should be extended for any period is, of course, one for determination by the Congress in the light of the basic purposes of this program.

"The proposed section 6 would represent a sharp departure from the underlying objective of the existing and prior legislative enactments in this field. One reason for the several extensions of the original 1-year program for the World War II group was to keep it open until a few who had remained in military hospitals could be discharged and thus acquire eligibility as veterans. The subject proposal would enable the group affected, however limited in number, to obtain for themselves a type of gratuity which was established to meet the rehabilitative and readjustment needs of those who have left the service. Some of the small number involved might be members of the Regular Establishment, following military service as a career, and might not be retired or separated until after the lapse of several years. All beneficiaries under this section would be accorded the proposed payment of $1,600 on the purchase price of a conveyance in addition to the full military pay and allowances which they receive while in the active service.

"These same persons are not in a position of being deprived under the present law of their ultimate right to receive this benefit. Likewise those who may have been separated shortly after the occurrence of the required disability, persons who are retained on active duty notwithstanding the disability still have 3 years after their discharge or separation date within which to apply as veterans under the law as it now stands.

"It may be added that enactment of this amendment could be invoked as a precedent for extending some other types of benefits administered by the Veterans' Administration in behalf of veterans to persons who have remained continuously in the service, including members of the Regular Establishment. This proposal could therefore be costly as a precedent, as well as being directly inconsistent with the traditional policy of the Congress.

"The Veterans' Administration is not possessed of data from which to determine the additional number of persons who could and would avail themselves of the right to apply for this benefit during the proposed extended period, or the number who might be covered by the proposed inclusion of certain persons in the active service. Accordingly, no

estimate of the cost of the proposal, if enacted, can be presented. * * *

* * * * * *

"* * * It is estimated that approximately 5,900 veterans of World War I might be entitled to receive benefits under this proposal during the first year following its enactment by reason of receiving compensation benefits from the Veterans' Administration for the specified disabilities. The benefit cost for this estimated group at $1,600 per vehicle, would approximate $9,440,000. This estimate is somewhat incomplete in that it does not include such additional eligible World War I veterans who are not drawing benefits from the Veterans' Administration because they are on the retirement rolls of the service departments. Further, the requirements concerning the impairment of vision are such that a comprehensive estimate on that disability class cannot be made without an extensive study of individual records but it is believed that the foregoing estimate includes most of those who would qualify by reason of visual disability."

Reported: May 12, 1954; House Report 1600.

The veterans' laws today provide for a rebuttable presumption of 1 year for most diseases which the veteran may incur after his discharge from the service. This means, for example, that if the veteran developed a cancer within 1 year after discharge, it is presumed to have been incurred in the service unless clear and convincing evidence exists to the contrary. Medical science has, of course, made great strides in recent years, but there are many diseases the incidence of which we know little or nothing, and thus the Congress has for many years resolved any doubt in favor of the veteran. The present law provides for a 3-year presumptive period for tuberculosis, a restricted 2-year presumptive period for phychoses, and a 2-year presumption for multiple sclerosis. The bill, H. R. 8789, would provide greater uniformity in a number of diseases by providing a flat 3-year presumption for arthritis, the psychoses, and multiple sclerosis. No estimate of cost can be furnished on this bill by the Veterans' Administration, and it, too, is pending before the Committee on Rules. H. R. 9169, which provides for the same type of presumption, but which is limited to psychoses and multiple sclerosis, is also pending before the Rules Committee, and I insert at this point an explanation of these two proposals:

THREE-YEAR PRESUMPTION FOR ARTHRITIS, PSYCHOSES, AND MULTIPLE SCLEROSIS—H. R. 8789

Title: To amend the veterans regulations to provide that arthritis, psychoses, or multiple sclerosis developing a 10 percent or more degree of disability within 3 years after separation from active service shall be presumed to be service connected.

Mr. RADWAN; introduced and referred April 12, 1954.

Analysis: Grants a 3-year rebuttable presumption of service connection for veterans who developed arthritis (now 1 year), psychosis (now 1 year for compensation and pension and 1 additional year for priority admission to hospitals), and multiple sclerosis (now 2 years).

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"Insofar as H. R. 8789 relates to the disease of psychosis, it is similar to H. R. 320, 82d Congress, as passed by the House of Representatives, May 1, 1951. As you are aware, H. R. 320 was amended in the Senate by the Committee on Finance to provide a conclusive presumption of service connection for an active psychosis developing within 2 years from the date of separation from active service in World War II, but only for the purposes of hospital and medical treatment, including outpatient treatment, authorized under laws administered by the Veterans' Administration. The bill was passed by the Congress in this form and approved as Public Law 239, 82d Congress, October 30, 1951. Under this law, it is not necessary that the veteran have 90 days' service for the presumption to attach, and willful misconduct is not a bar.

"There is definite medical substantiation that the time of onset of a psychiatric disorder, whether a psychosis or a psychoneurosis, is not the only criterion of the cause or causes. Determination of causation, or etiology, of a psychosis in an individual is to be gained by an overall psychiatric evaluation of that particular person. Psychosis may result from any one of a number of factors, such as an inherent or hereditary defect. H. R. 8789, however, would establish a statutory presumption, which grants a presumption of fact, of uniform application, that manifestation of a psychosis at any time up to 3 years after separation is necessarily related to the facts or circumstances of wartime military service, or service on or after June 27, 1950.

"With respect to active pulmonary tuberculosis, the presumptive period was increased from 1 to 3 years by Public Law 573, 81st Congress, June 23, 1950, and for all other types of active tuberculosis it was similarly extended by Public Law 241, 83d Congress, August 8, 1953. The presumptive period provided for the disease of multiple sclerosis was increased from 1 to 2 years by Public Law 174, 82d Congress, October 12, 1951.

"H. R. 3205, 82d Congress, as passed by the House of Representatives, June 20, 1951, proposed to establish a 3-year presumptive period for the disease of multiple sclerosis. This was amended in the Senate by the Committee on Finance, reducing such presumptive period to 2 years. The House of Representatives accepted the amendment and the bill was enacted as Public Law 174, 82d Congress.

"Because of the onset and course of the various types of the disease of arthritis, it is believed that an extension of the 1-year presumptive period would result in the granting of service connection in many cases that may well have their origin in some other intercurrent injury or disease, but which fact is not capable of being established by the required evidence.

"The present regulatory presumptive period does not preclude the granting of direct service connection for arthritis or psychoses when diagnosed more than 1 year after separation from service or for multiple sclerosis more than 2 years thereafter when the evidence of record is deemed adequate to warrant a finding of service connection.

"The 1-year presumptive period for the service connection of a chronic disease, previously covered by regulation based upon sound medical judgment, was in 1933 incorporated in veterans regulations promulgated under Public No. 2, 73d Congress. In 1948 Congress specified certain diseases which, among others, should be deemed chronic, but did not extend the uniform 1-year presumptive period (Public Law 748, 80th Cong.). It was not until 1950 that an exception to the general rule was made in the case of active pulmonary tuberculosis (Public Law 573, 81st Cong.), and in 1951 a further presumption was authorized in the case of multiple sclerosis (Public Law 174, 82d Cong.). As previously indicated, in 1951 the Congress also extended the presumptive period for an active psychosis for the limited purposes of hospital and medical treatment, and in 1953 extended the presumptive period for all other types of active tuberculosis to 3 years. The committee will, no doubt, wish to give careful consideration to the problem of whether the proposed extensions of the presumptive periods for certain diseases will be urged as a precedent for extending the presumptive period for many other chronic diseases.

"In addition to granting service connection for disability and death compensation purposes in a substantial number of cases, the bill, if enacted, would confer the same priority right in such cases to hospitalization by the Veterans' Administration which is now afforded by law to veterans having directly service-connected conditions. Under existing law, the Veterans' Administration is required to furnish hospital care to eligible veterans needing such care for service-connected conditions, and this may be provided in hospitals under the direct control of the Veterans' Administration, through bed allocations in other Government hospitals, or in appropriate cases by contract with State, municipal, or private institutions. By contrast, veterans suffering from non-service-connected disabilities may be furnished hospital care by the Veterans' Administration only if beds are available in Veterans' Administration or other Federal Government hospitals. Further, admission of non-service-connected cases is generally conditioned on the inability of the applicant to defray the cost of hospitalization as established by an affidavit procedure. The bill would also have the effect of providing outpatient treatment for the group affected because of the service-connected status which would be granted to them under the bill. Existing law and regulations generally limit outpatient treatment to those requiring such treatment for service-connected disabilities.

"It is not possible to furnish an estimate of the cost of the bill, if enacted, in view of the many unknown and variable factors. However, it is apparent that the cost would be very substantial. * * *"

Advice has been received from the Bureau of the Budget that the enactment of the proposed legislation would not be in accord with the program of the President.

Reported May 12, 1954—House Report 1596.

THREE-YEAR PRESUMPTION FOR PSYCHOSES, AND MULTIPLE SCLEROSIS, H. R. 9169

Title: To amend the Veterans Regulations to provide that psychoses, or multiple sclerosis developing a 10 percent or more degree of disability within 3 years after separation from active service shall be presumed to be service connected.

Mr. RADWAN. Introduced and referred May 17, 1954.

Analysis: Grants a 3-year rebuttable presumption of service connection for veterans who develop a psychosis (now 1 year for compensation and pension and 1 additional year for priority admission to hospitals), and multiple sclerosis (now 2 years).

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"Insofar as * * * relates to the disease of psychosis, it is similar to H. R. 320, 82d Congress, as passed by the House of Representatives, May 1, 1951. As you are aware, H. R. 320 was amended in the Senate by the Committee on Finance to provide a conclusive presumption of service connection for an active psychosis developing within 2 years from the date of separation from active service in World War II, but only for the purposes of hospital and medical treatment, including outpatient treatment, authorized under laws administered by the Veterans' Administration. The bill was passed by the Congress in this form and approved as Public Law 239, 82d Congress, October 30, 1951. Under this law it is not necessary that the veteran have 90 days' service for the presumption to attach and willful misconduct is not a bar.

"There is definite medical substantiation that the time of onset of a psychiatric disorder, whether a psychosis or a psychoneurosis, is not the only criterion of the cause

or causes. Determination of causation, or etiology, of a psychosis in an individual is to be gained by an overall psychiatric evaluation of that particular person. Psychosis may result from any one of a number of factors, such as an inherent or hereditary defect. H. R. 8789, however, would establish a statutory presumption, which grants a presumption of fact, of uniform application, that manifestation of a psychosis at any time up to 3 years after separation is necessarily related to the facts or circumstances of wartime military service, or service on or after June 27, 1950.

"With respect to active pulmonary tuberculosis, the presumptive period was increased from 1 to 3 years by Public Law 573, 81st Congress, June 23, 1950, and for all other types of active tuberculosis it was similarly extended by Public Law 241, 83d Congress, August 8, 1953. The presumptive period provided for the disease of multiple sclerosis was increased from 1 to 2 years by Public Law 174, 82d Congress, October 12, 1951.

"H. R. 3205, 82d Congress, as passed by the House of Representatives, June 20, 1951, proposed to establish a 3-year presumptive period for the disease of multiple sclerosis. This was amended in the Senate by the Committee on Finance, reducing such presumptive period to 2 years. The House of Representatives accepted the amendment and the bill was enacted as Public Law 174, 82d Congress.

"The 1-year presumptive period for the service connection of a chronic disease, previously covered by regulation based upon sound medical judgment, was in 1933 incorporated in Veterans Regulations promulgated under Public No. 2, 73d Congress. In 1948 Congress specified certain diseases which, among others, should be deemed chronic, but did not extend the uniform 1-year presumptive period (Public Law 748, 80th Cong.). It was not until 1950 that an exception to the general rule was made in the case of active pulmonary tuberculosis (Public Law 573, 81st Cong.), and in 1951 a further presumption was authorized in the case of multiple sclerosis (Public Law 174, 82d Cong.). As previously indicated, in 1951 the Congress also extended the presumptive period for an active psychosis for the limited purposes of hospital and medical treatment, and in 1953 extended the presumptive period for all other types of active tuberculosis to 3 years. The committee will, no doubt, wish to give careful consideration to the problem of whether the proposed extensions of the presumptive periods for certain diseases will be urged as a precedent for extending the presumptive period for many other chronic diseases.

"In addition to granting service connection for disability and death compensation purposes in a substantial number of cases, the bill, if enacted, would confer the same priority right in such cases to hospitalization by the Veterans' Administration which is now afforded by law to veterans having directly service-connected conditions. Under existing law, the Veterans' Administration is required to furnish hospital care to eligible veterans needing such care for service-connected conditions and this may be provided in hospitals under the direct control of the Veterans' Administration, through bed allocations in other Government hospitals, or in appropriate cases by contract with State, municipal, or private institutions. By contrast, veterans suffering from non-service-connected disabilities may be furnished hospital care by the Veterans' Administration only if beds are available in Veterans' Administration or other Federal Government hospitals. Further, admission of non-service-connected cases is generally conditioned on the inability of the applicant to defray the cost of hospitalization as established by an affidavit procedure. The bill would also have the effect of providing outpatient treatment for the group affected because of the service-connected status which would be granted to them under the bill. Existing law and regulations generally limit outpatient treatment to those requiring such treatment for service-connected disabilities.

"It is not possible to furnish an estimate of the cost of the bill, if enacted, in view of the many unknown and variable factors. However, it is apparent that the cost would be very substantial."

Advice has been received from the Bureau of the Budget that the enactment of the proposed legislation would not be in accord with the program of the President.

Reported: May 20, 1954; House Report 1664.

H. R. 8900 increases the pension for the holders of the Congressional Medal of Honor from $10 to $100 per month. Today a veteran who has won the Congressional Medal of Honor by outstanding or unusual act of heroism is entitled upon reaching age 65 to a $10-per-month pension in addition to any other benefit to which he may be entitled. The Committee on Veterans' Affairs believes that the holder of one of these medals has performed such outstanding service that it would be well to consider increasing the amount of pension to the figure provided in the bill. At the present time there are only 395 living holders of the Congressional Medal of Honor. The cost of the bill therefore would be slight. I am hopeful that this measure may be passed when the Consent Calendar is called on next Monday. At this point I insert an explanation of the bill:

INCREASED PENSION FOR HOLDERS OF MEDAL OF HONOR, H. R. 8900

Title: To increase the rate of special pension payable to certain persons awarded the Medal of Honor.

Mr. RADWAN. Introduced and referred April 27, 1954.

Analysis: Today a holder of the Congressional Medal of Honor who reaches the age of 65 years is entitled to a special pension of $10 a month in addition to any other compensation or pension to which he may be entitled. This bill increases the rate to $100. At the present time there are 395 living holders of the Congressional Medal of Honor.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"H. R. 8900, if enacted, would increase from $10 to $100 monthly the rate of such special pension for any person whose name has been entered on the Army and Navy Medal of Honor roll. The increase would be effective from the 1st day of the 2d calendar month after enactment of the bill.

"According to Senate Report No. 240 on H. R. 4701, 64th Congress, which bill became the act of April 27, 1916, the provision for an award of $10 monthly to holders of a Medal of Honor who had attained the age of 65 years, 'recognizes and rewards in a modest way startling deeds of individual daring and audacious heroism in the face of mortal danger when war is on, deeds that give soul to an army and character to a country.' The policy of the measure as stated in the Senate report is 'to signalize appreciation of that gallant, intrepid, indomitable spirit in war that becomes the best bond to long-continued future peace.' In debates on the floor of the House on H. R. 4701, an amendment to increase the rate of $18 monthly was rejected after a statement was made that any increased amount would appear to be a matter of paying pension instead of a matter of honor (53 CONGRESSIONAL RECORD, pt. III, p. 2349). In this connection it is significant to note that H. R. 8900 would increase tenfold the special pension incident to the award of the Medal of Honor.

"As previously noted, the sole responsibility of the Veterans' Administration in connection with the special pension currently authorized is to arrange for its payment to persons certified as entitled thereto by the military departments. H. R. 8900 would not alter this function."

(DEPARTMENT OF DEFENSE)

"The Department of the Army considers the special pension now authorized for holders of the Medal of Honor as being an additional recognition and not as a means of ascribing a monetary value to an act of heroism, and for that reason feels that the special pension must be of such modest amount that there can be no other interpretation.

"The Department of the Army on behalf of the Department of Defense, therefore, recommends that H. R. 8900 not be enacted.

"It would be impossible to determine the total cost of this bill if enacted, although it is known that at present there are approximately 395 holders of the Medal of Honor still living.

"This report has been coordinated within the Department of Defense in accordance with procedures prescribed by the Secretary of Defense."

Reported: May 12, 1954; House Report 1598.

The Korean GI bill of rights gives veterans of that war until August 20, 1954, or 2 years after discharge, whichever is the later, to initiate a course of education or training authorized by that act. This is in contrast to the World War II provision which granted a 4-year period in which to start a course of education. The bill, H. R. 9395, sponsored by the gentleman from Illinois [Mr. SPRINGER], chairman of our Subcommittee on Education and Training, would place the Korean veteran on the same basis as the World War II man by giving him 4 years after discharge to start his course of education or training. In addition, it grants trainees under Public Law 16—the service-connected group—4 additional years to complete their courses if they have been prevented from doing so by reason of disability or by the necessity of correcting a type of discharge. I insert at this point an explanation of this bill, and I am hopeful that when the Consent Calendar is called next Monday, this bill or a similar one will be passed at that time, either on the Consent Calendar or by suspension of the rules.

EXTENDING TIME FOR INITIATING COURSES UNDER PUBLIC LAW 550, H. R. 9395

Title: To amend the laws granting education and training benefits to certain veterans to extend the period during which such benefits may be offered.

Mr. SPRINGER. Introduced and referred June 1, 1954.

Analysis: Extends time for starting courses of education and training under Public Law 550 (Korean GI bill of rights) by making initiation date 4 (now 2) years after discharge and 9 (now 7) years after discharge for completion of course. Grants trainees under Public Law 16 (service connected) who have been prevented from initiating or completing training by reason of disability or by correction of type of discharge, 4 additional years to complete course.

DIGEST OF REPORT (VETERANS' ADMINISTRATION)

"As will be recalled, the Veterans' Readjustment Assistance Act of 1952, which pro-

vided benefits for veterans of the Korean service period in the same general fields in which comparable benefits had previously been granted to veterans of World War II by the Servicemen's Readjustment Act of 1944, received extensive consideration prior to its enactment. Some of the provisions included were novel and were designed to avoid certain difficulties which had become manifest under the Servicemen's Readjustment Act. Other provisions were adopted which were substantially identical with the comparable provisions of the earlier act and confirmatory of the same underlying principles. * * *

"The temporary character of this type of benefit is obviously a recognition of the fact that readjustment to civilian life should be accomplished by the veterans within a reasonably short time following service, and that the time element is an essential ingredient of the readjustment principle.

"Sections 212 and 213 of the Veterans' Readjustment Assistance Act, however, are more than a reaffirmation of the temporary nature of the readjustment benefit. They designedly adopted the supplementary concept of the 1944 enactment that the foregoing readjustment principle needs to be implemented by a statutory requirement that the veteran must make his educational plans, complete all necessary arrangements, and actually commence the pursuit of his program within a fixed period of time. All of this is implicit in the term "initiate," as interpreted by the Veterans' Administration in connection with Servicemen's Readjustment Act, and of which the Congress was fully apprised when it selected such term for incorporation in the delimiting date requirements of the Veterans' Readjustment Assistance Act.

"To be consistent with this concept, and with the basic readjustment purpose, the delimiting period for initiating a program cannot be so short as to leave the veteran insufficient time for the deliberation needed for a wise choice of his objective and to make the necessary arrangements for enrolling in the selected educational institution or training establishment. On the other hand, if the prescribed period is unduly lengthened, the readjustment purpose will tend to become obscured, and procrastination encouraged, most probably to the veteran's own detriment.

"The instant bill does not appear to be designed to change the aforementioned principle, but would allow a more extensive period than that allowed by existing law during which the veteran could commence his program. It, therefore, poses the question of whether the 2-year delimiting initiation period of existing law is reasonable and adequate or whether a 4-year period (somewhat comparable to the requirement applicable to the World War II education and training program) should be allowed. * * *

"* * * Section 2 of the bill is identical except for technical changes not here pertinent to H. R. 7210, 83d Congress, 'a bill to extend the time during which vocational rehabilitation training may be afforded under Public Law 16, 78th Congress, as amended and extended, to certain disabled veterans who have been unable to pursue such training because of long illnesses or because of other reasons beyond their control.'

"Attention is invited, however, to the fact that in the mentioned report on H. R. 7210 question was raised whether the language of the proposed exceptions might possibly be open to an argument that even though the disabling condition ceases to exist at a date when adequate time remained for the pursuit and completion of a suitable course of vocational rehabilitation training, an extension of the existing time limitation should be granted. It was suggested that to guard against such a contention appropriate language be included to bar any extension of the present time limitations in the case of a person having the last 5 years of the basic 9-year period available to commence and pursue training.

"Further, it was also pointed out that since a terminal date for pursuing vocational rehabilitation training under the Public Law 894 extension has not been set, and since it is impossible at this time to predict when such a termination date will be set, persons whose eligibility is based upon service subsequent to June 27, 1950, will have staggered amounts of time in which to pursue and complete vocational rehabilitation training. The actual amount of time in an individual case would, of course, depend upon date of discharge. * * *

"No reliable estimate can be made of the cost which would be attributable to the enactment of this bill. Undoubtedly there would be additional cost for direct benefits in an extension of either the Public Law 550 education and training program or the Public Law 16 vocational rehabilitation training program, since persons who would not otherwise take advantage of these benefit programs could be expected to do so during the extended period. Moreover, there would be some ultimate additional expense in administrative costs resulting from the longer period in which both programs would be operative.

"The Veterans' Administration has been advised by the Bureau of the Budget that it recommends against any extension of either the time limitations of title II of the Veterans' Readjustment Assistance Act or of the vocational rehabilitation training program."

Reported: June 2, 1954; House Report 1704.

I submit, Mr. Speaker, that the program which I have outlined to the House at this time shows conclusively that the Committee on Veterans' Affairs has been ably and conscientiously performing its functions, and that any failure to enact legislation must be assumed by other committees or individuals in the House. Time yet remains for the enactment of many, if not all, of the measures which I have referred to above, but time is of the essence, and it is running out. I feel that, unless we take prompt action, the country will be justified in the conclusion that we have not treated the veterans of our wars in the fashion and manner which they deserve.

I see the gentleman from New York [Mr. RADWAN], the author of the bill, is here, and I yield to him such time as he may desire. Mr. Speaker, I say with all the strength in my being that it is an outrage to the veterans that they have had no practical consideration of their legislation this year.

Mr. RADWAN. Mr. Speaker, I thank the gentlewoman from Massachusetts for this opportunity and I want to say, Mr. Speaker, that I am happy to be a Member of the House Committee on Veterans' Affairs of which the gentlewoman from Massachusetts is chairman.

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. RADWAN. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. I would like to say that we have no finer, no more conscientious, no more cooperative Member than the gentleman from New York. He is extremely kind, extremely able, and always has the interest of the veterans at heart.

Mr. RADWAN. I thank the gentlewoman from Massachusetts.

For me, Mr. Speaker, it has been an honor to serve as chairman of the Subcommittee on Compensation and Pensions, and in that capacity I have tried to discharge my obligations to the veterans of this country as well as to the public at large. Our subcommittee worked for a considerable period of time, spent many days holding hearings on various bills which were referred to our subcommittee, all dealing with veterans' compensation and veterans' pensions. As the result of the hearings and to carry out a mandate of that testimony, testimony wherein the various representatives of all the organizations appeared before us and testified on various bills, we produced through our subcommittee an omnibus bill known as H. R. 9020. I think, Mr. Speaker, it is a very good bill. It was unanimously recommended by our subcommittee. It was unanimously recommended by the full Committee on Veterans' Affairs, but unfortunately it has been tied up for some time now in the Committee on Rules.

Some time ago I introduced a resolution in order to precede a discharge petition. I understand that Thursday will be the first opportunity I will have to file a discharge petition on H. R. 9020. I want to announce at this time that on Thursday of this week I shall file such a petition and I invite the membership of this House to sign that petition in order that H. R. 9020 may have its day in this House.

Mrs. ROGERS of Massachusetts. May I remind the gentleman that the petition will have to be signed extremely quickly. Really the signatures ought to go on in one day if we are going to be able to get the petition up for action in time before adjournment when that apparently is to take place. I know that the gentleman hopes that a rule will be granted actually before the petition is ready; is that not true?

Mr. RADWAN. Yes. I thank the gentlewoman from Massachusetts for her observation. Time is of the essence. I want to say that we have been very patient. I think in all fairness to the entire membership of this House a rule ought to be granted on H. R. 9020. It is really an unfortunate circumstance that I myself as a member of the committee and as chairman of the subcommittee am put in the position of having to file a discharge petition. It is an unfair and an unfortunate circumstance that confronts all of the membership of this House, although I still have hopes that a rule will be granted on H. R. 9020 before the membership of this House is subjected to the discharge petition which I shall file on Thursday of this week.

Mr. RADWAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the RECORD, or to revise and extend remarks, was granted to:

Mr. CARLYLE and to include extraneous matter.

Mr. THORNBERRY to revise and extend the remarks he made in the Committee of the Whole today and include extraneous matter.

Mr. SMITH of Virginia, the remarks he made on the rule and to include a telegram from the American Medical Association.

Mr. PATTEN.

Mr. LANE and to include extraneous matter.

Mr. HAGEN of Minnesota and to include extraneous matter.

Mr. DINGELL and to include extraneous matter.

Mr. CELLER in two instances and to include extraneous matter.

Mr. SIEMINSKI.

Mr. RABAUT and to include extraneous matter.

Miss THOMPSON of Michigan.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 190. An act to establish a basic administrative workweek and pay periods of two administrative workweeks for postmasters, officers, and employees of the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

S. 3028. An act to require the Postmaster General to reimburse postmasters of discontinued post offices for equipment owned by the postmaster; to the Committee on Post Office and Civil Service.

S. 3655. An act to provide that the Metropolitan Police force shall keep arrest books which are open to public inspection; to the Committee on the District of Columbia.

ENROLLED BILLS SIGNED

Mr. LECOMPTE, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H. R. 5158. An act for the relief of Sgt. Welch Sanders; and

H. R. 5433. An act for the relief of the estates of Opal Perkins, and Kenneth Ross, deceased.

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3378. An act to revise the Organic Act of the Virgin Islands of the United States.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. LECOMPTE, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills and a joint resolution of the House of the following titles:

H. R. 733. An act for the relief of Hildegard H. Nelson;

H. R. 734. An act for the relief of Mihai Handrabura;

H. R. 944. An act for the the relief of Mr. and Mrs. Zygmunt Sowinski;

H. R. 1115. An act for the relief of Mrs. Suhula Adata;

H. R. 1762. An act for the relief of Sugako Nakai;

H. R. 2899. An act for the relief of Igor Shwabe;

H. R. 3333. An act for the relief of Julia N. Emmanuel;

H. R. 3624. An act for the relief of Peter M. Leaming;

H. R. 4496. An act to authorize and direct the conveyance of certain lands to the Board of Education of Prince Georges County, Upper Marlboro, Md., so as to permit the construction of public educational facilities urgently required as a result of increased defense and other essential Federal activities in the District of Columbia and it environs;

H. R. 6342. An act to amend the Public Buildings Act of 1949 to authorize the Administrator of General Services to acquire title to real property and to provide for the construction of certain public buildings thereon by executing purchase contracts; to extend the authority of the Postmaster General to lease quarters for post-office purposes; and for other purposes;

H. R. 6422. An act to authorize the Secretary of the Army to convey to the Government's grantors certain lands erroneously conveyed by them to the United States;

H. R. 6650. An act for the relief of Joseph Gerny;

H. R. 6998. An act for the relief of Erna White;

H. R. 7125. An act to amend the Federal Food, Drug, and Cosmetic Act with respect to residues of pesticide chemicals in or on raw agricultural commodities;

H. R. 7132. An act to exempt from taxation certain property of the Veterans of Foreign Wars of the United States in the District of Columbia;

H. R. 7158. An act authorizing the United States Government to reconvey certain lands to S. J. Carver;

H. R. 7468. An act to amend certain provisions of part II of the Interstate Commerce Act so as to authorize regulation, for purposes of safety and protection of the public, of certain motor-carrier transportation between points in foreign countries, insofar as such transportation takes place within the United States;

H. R. 7500. An act for the relief of Kurt Forsell;

H. R. 7802. An act for the relief of Hanna Werner and her child, Hanna Elizabeth Werner;

H. R. 8247. An act to provide for the restoration and maintenance of the U. S. S. *Constitution* and to authorize the disposition of the U. S. S. *Constellation*, U. S. S. *Hartford*, U. S. S. *Olympia*, and U. S. S. *Oregon*, and for other purposes;

H. R. 8692. An act to permit the payment of certain trust accounts to the beneficiary on the death of the trustee by savings and loan, and similar associations in the District of Columbia;

H. R. 8973. An act to amend paragraph 31 of section 7 of the act entitled "An act making appropriations to provide for the government of the District of Columbia for the fiscal year ending June 30, 1903, and for other purposes," approved July 1, 1902, as amended;

H. R. 8974. An act to permit investment of funds of insurance companies organized within the District of Columbia in obligations of the International Bank for Reconstruction and Development;

H. R. 9143. An act to repeal the provisions of section 16 of the Federal Reserve Act which prohibits a Federal Reserve bank from paying out notes of another Federal Reserve bank;

H. R. 9561. An act to correct typographical errors in Public Law 368, 83d Congress; and

H. J. Res. 459. Joint resolution to designate the lake to be formed by the completion of the Texarkana Dam and Reservoir on Sulphur River, about 9 miles southwest from Texarkana, Tex., as Lake Texarkana.

ADJOURNMENT

Mr. HALLECK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 3 minutes p. m.) the House adjourned until tomorrow, Wednesday, July 14, 1954, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1727. A communication from the President of the United States, transmitting estimates of appropriation for the fiscal year 1955, in the amount of $3,438,549,805 to carry out the purposes of the Mutual Security Act of 1954 (H. Doc. No. 474); to the Committee on Appropriations and ordered to be printed.

1728. A letter from the Assistant Secretary of the Interior, relative to an adequate soil survey and land classification of the lands to be benefited by Avondale project, Idaho, having been completed as part of the investigation required in the formation of a definite plan for project development, pursuant to Public Law 172, 83d Congress; to the Committee on Appropriations.

1729. A letter from the Assistant Secretary of the Interior, transmitting a proposed award of a concession contract to Signal Mountain Lodge, a partnership, which will, when executed by the Director of the National Park Service on behalf of the Government, authorize the furnishing of overnight cabin accommodations and related facilities within the Grand Teton National Park, Wyo., for a period of 10 years from January 1, 1954, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1730. A letter from the Assistant Secretary of the Interior, transmitting a proposed amendment to concession permit No. I–42np–191, issued to the Mount Rushmore National Memorial Society of Black Hills, a nonprofit organization, organized and using its funds for the development of Mount Rushmore National Memorial; to the Committee on Interior and Insular Affairs.

1731. A letter from the Assistant Secretary of the Interior, transmitting a proposed award of a concession contract to Jack Woods Cottages, Inc., which will, when finally executed by the regional director, region No. 2, National Park Service, on behalf of the Government, authorize the company to provide cabin accommodations and related services in Rocky Mountain National Park, Colo., for a period of 5 years from January 1, 1954, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1732. A letter from the Assistant Secretary of the Interior, transmitting a proposed award of a concession contract to Messrs. Arthur M. Burch and Raymond L. Simpson, a partnership doing business as the Lake McDonald Boat Co., which will, when executed by the regional director, region No. 2, National Park Service, on behalf of the Government, authorize them to provide launch and motorboat service on Lake McDonald within Glacier National Park, Mont., for a period of 5 years from January 1, 1954, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1733. A letter from the President, Board of Commissioners, District of Columbia, transmitting two proposed joint resolutions as follows: joint resolution to provide additional municipal services for the District of Columbia, in connection with the Ameri-

can Legion National Convention of 1954, to authorize the granting of permits to the American Legion 1954 Convention Corp. on the occasion of the American Legion National Convention of 1954, and for other purposes"; also "Joint resolution to authorize the quartering in public buildings in the District of Columbia of troops participating in activities related to the American Legion National Convention of 1954"; to the Committee on the District of Columbia.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar as follows:

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. S. 3385. An act to provide for more effective extension work among Indian tribes and members thereof, and for other purposes; without amendment (Rept. No. 2188). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 5832. A bill to amend section 73 of the Hawaiian Organic Act; with amendment (Rept. No. 2189). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 6814. A bill to facilitate the acquisition of non-Federal land within areas of the National Park System, and for other purposes; with amendment (Rept. No. 2190). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 7912. A bill to abolish the Old Kasaan National Monument, Alaska, and for other purposes; without amendment (Rept. No. 2191). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 8205. A bill to authorize the conveyance by the Secretary of the Interior to Virginia Electric & Power Co. of a perpetual easement of right-of-way for electric transmission line purposes across lands of the Richmond National Battlefield Park, Va., such easement to be granted in exchange for, and in consideration of, the donation for park purposes of approximately 6 acres of land adjoining the park; with amendment (Rept. No. 2192). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 7568. A bill to authorize and direct the Farm Loan Board of Hawaii to convey certain land and to ratify and confirm certain acts of said Farm Loan Board; with amendment (Rept. No. 2193). Referred to the Committee of the Whole House on the State of the Union.

Mr. VELDE: Committee on Un-American Activities. H. R. 9690. A bill to amend section 7 (d) of the Internal Security Act of 1950, as amended; without amendment (Rept. No. 2194). Referred to the Committee of the Whole House on the State of the Union.

Mr. HINSHAW: Committee on Interstate and Foreign Commerce. H. R. 8898. A bill to amend section 401 (e) of the Civil Aeronautics Act, as amended; without amendment (Rept. No. 2195). Referred to the Committee of the Whole House on the State of the Union.

Mr. REED of New York: Committee on Ways and Means. H. R. 8628. A bill to amend the Tariff Act of 1930 to insure that crude silicon carbide imported into the United States will continue to be exempt from duty; without amendment (Rept. No. 2209). Referred to the Committee of the Whole House on the State of the Union.

Mr. REED of New York: Committee on Ways and Means. H. R. 9248. A bill to amend section 308 (5) of the Tariff Act of 1930, as amended; with amendment (Rept. No. 2210). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee of Conference. H. R. 5731. A bill to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from the Santa Margarita River, Calif., and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, and for other purposes (Rept. No. 2211). Ordered to be printed.

Mr. ROBSION of Kentucky: Committee on the Judiciary. H. R. 5796. A bill to amend the Bankruptcy Act to make tax liens of States and their subdivisions valid against trustees in bankruptcy; with amendment (Rept. No. 2212). Referred to the House Calendar.

Mr. BENTLEY: Committee on Foreign Affairs. House Resolution 627. Resolution reiterating the opposition of the House of Representatives to the seating of the Communist regime in the United Nations; without amendment (Rept. No. 2213). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 2015. A bill to authorize the sale of certain land in Alaska to Lloyd H. Turner, of Wards Cove, Alaska; with amendment (Rept. No. 2186). Referred to the Committee of the Whole House.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 7229. A bill to provide for the conveyance to T. M. Pratt and Annita C. Pratt of certain real property in Stevens County, Wash.; with amendment (Rept. No. 2187). Referred to the Committee of the Whole House.

Mr. JONAS of Illinois: Committee on the Judiciary. S. 46. An act for the relief of E. S. Berney; with amendment (Rept. No. 2196). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 1165. An act for the relief of Paul E. Rocke; without amendment (Rept. No. 2197). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. S. 1634. An act for the relief of Alton Bramer; without amendment (Rept. No. 2198). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H. R. 1157. A bill for the relief of Herbert Roscoe Martin; with amendment (Rept. No. 2199). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 1701. A bill for the relief of Ewing Choat; without amendment (Rept. No. 2200). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H. R. 3237. A bill for the relief of Paul Nelson; with amendment (Rept. No. 2201). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 4185. A bill for the relief of John G. Zeros; without amendment (Rept. No. 2202). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H. R. 5807. A bill for the relief of Mary Rose; with amendment (Rept. No. 2203). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 5870. A bill conferring jurisdiction upon the United States District Court for the Eastern District of South Carolina to hear, determine, and render judgment upon certain claims of Roderick D. Strawn; with amendment (Rept. No. 2204). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H. R. 6526. A bill conferring jurisdiction upon the United States District Court for the Eastern District of Michigan to hear, determine, and render judgment upon certain claims of Mr. and Mrs. Donald D. Parrish; with amendment (Rept. No. 2205). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H. R. 6697. A bill for the relief of J. B. Phipps; without amendment (Rept. No. 2206). Referred to the Committee of the Whole House.

Mr. JONAS of Illinois: Committee on the Judiciary. H. R. 7093. A bill for the relief of H. W. Robinson & Co.; without amendment (Rept. No. 2207). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H. R. 9357. A bill for the relief of S. H. Prather; with amendment (Rept. No. 2208). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BERRY:

H. R. 9880. A bill to change the name of the Gavins Point Reservoir in the State of South Dakota to "Lewis and Clark Lake"; to the Committee on Public Works.

By Mr. HOWELL:

H. R. 9881. A bill to establish a program of grants to States for the development of fine arts programs and projects, to provide for the establishment of an American National War Memorial Arts Commission, and for other purposes; to the Committee on Education and Labor.

By Mr. HYDE:

H. R. 9882. A bill to incorporate the Foundation of the Federal Bar Association; to the Committee on the District of Columbia.

By Mr. KILDAY:

H. R. 9883. A bill authorizing the transfer of certain property of the United States located in proximity of San Antonio, Bexar County, Tex., by the Secretary of the Air Force to the State of Texas; to the Committee on Armed Services.

By Mr. MILLER of Nebraska:

H. R. 9884. A bill to establish an employment preference for residents of Alaska in connection with fishing activities in the Bristol Bay area; to the Committee on Interior and Insular Affairs.

H. R. 9885. A bill to amend the Packers and Stockyards Act, 1921, with respect to the charging of brand inspection fees; to the Committee on Agriculture.

By Mr. PHILBIN:

H. R. 9886. A bill to exempt from duty the importation of certain handwoven fabrics when used in the making of religious vestments; to the Committee on Ways and Means.

By Mr. SADLAK:

H. R. 9887. A bill granting the consent of Congress to certain New England States to enter into a compact relating to higher education in the New England States and establishing the New England Board of Higher

Education; to the Committee on Education and Labor.

By Mr. SPRINGER:

H. R. 9888. A bill to amend the laws granting education and training benefits to certain veterans to extend the period during which such benefits may be offered; to the Committee on Veterans' Affairs.

By Mr. BUDGE:

H. R. 9889. A bill to authorize the Secretary of the Interior to execute an amendatory contract with American Falls Reservoir District No. 2, Idaho, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. OSMERS:

H. R. 9890. A bill to establish a Federal policy concerning the termination, limitation, or establishment of business-type operations of the Government which may be conducted in competition with private enterprise, and for other purposes; to the Committee on Government Operations.

By Mr. FULTON:

H. Con. Res. 253. Concurrent resolution to include the Federal Republic of Germany in the community of free nations as an equal partner; to the Committee on Foreign Affairs.

By Mr. BENTLEY:

H. Res. 627. Resolution reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations; to the Committee on Foreign Affairs.

By Mr. FALLON:

H. Res. 628. Resolution opposing the seating of Communist China in organs of the United Nations; to the Committee on Foreign Affairs.

By Mr. HILL:

H. Res. 629. Resolution to provide additional funds for the expenses of the study and investigation authorized by House Resolution 22; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DELANEY:

H. R. 9891. A bill for the relief of Pasquale Andriola; to the Committee on the Judiciary.

By Mr. DONDERO:

H. R. 9892. A bill for the relief of Susanne Fellner; to the Committee on the Judiciary.

H. R. 9893. A bill for the relief of Takako Riu Reich; to the Committee on the Judiciary.

By Mr. FENTON:

H. R. 9894. A bill for the relief of Galen H. Clark Packing Co., Inc.; to the Committee on the Judiciary.

By Mr. HART:

H. R. 9895. A bill for the relief of Judy Anne Marie Burton; to the Committee on the Judiciary.

By Mr. MILLER of California:

H. R. 9896. A bill for the relief of Charlie Sylvester Correll; to the Committee on the Judiciary.

By Mr. O'BRIEN of New York:

H. R. 9897. A bill for the relief of Sister Giovina (Rosina Vitale) and Sister Olga (Calogera Zeffiro); to the Committee on the Judiciary.

By Mr. SHELLEY:

H. R. 9898. A bill for the relief of Mrs. Genowefa Kryzwkowska Tilden; to the Committee on the Judiciary.

By Mr. VAN PELT:

H. R. 9899. A bill for the relief of Andreas Kafarakis; to the Committee on the Judiciary.

By Mr. WARBURTON:

H. R. 9900. A bill for the relief of Emil Arens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

1097. By Mr. HOSMER: Petition of Mrs. George Foott and other armed services wives residing in Los Angeles County, Calif., for restoration of rights and privileges of the Armed Forces and their dependents; to the Committee on Armed Services.

1098. By the SPEAKER: Petition of Judge William Denman, Court of Appeals, Ninth District of San Francisco, Calif., relative to a resolution adopted by the judicial conference of the ninth circuit on July 8, requesting Congress not to take action on the bills pending in the House and Senate for the division of the 9th circuit into a new 9th circuit and a new 11th circuit and for the creation of additional circuit judgeships for the 2 circuits; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

B-N-G Solution: A Miracle Drug for Burns, Sunburns, Poison Ivy, and Poison Oak Made From the Mung Bean Sprouts

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. PATTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

There appeared in the CONGRESSIONAL RECORD in 1953 a number of insertions in the Appendix from various Congressmen, as follows:

March 16, 1953: Remarks of Hon. VICTOR WICKERSHAM, CONGRESSIONAL RECORD, volume 99, part 9, page A1324.

May 11, 1953: Remarks of Hon. ROBERT H. MOLLOHAN, CONGRESSIONAL RECORD, volume 99, part 10, page A2497.

June 5, 1953: Remarks of Hon. JOHN L. MCMILLAN, CONGRESSIONAL RECORD, volume 99, part 11, page A3228.

July 31, 1953: Remarks of Hon. HAROLD A. PATTEN, CONGRESSIONAL RECORD, volume 99, part 12, page A4904.

I was the last person who made an insertion in reference to this product before Congress adjourned in 1953.

Mr. Speaker, this product was discovered in a Chinese chop suey canning plant under the ownership of Mr. Ben E. Zaremba. This company had been in the Chinese chop suey canning process for over 18 years. In 1944, Mr. Zaremba started trying to can a hog food made from the residues of the Chinese chop suey in 1- and 2-gallon cans. Mr. Zaremba realized that since the meat supply in this country was almost back to normal, there would very likely be a decrease in the sales of the Chinese chop suey which would, of course, be detrimental to his business.

Dr. Joseph Ryankciwicz, Mr. Zaremba's chemist was doing research in regard to a formula for the canning of hog food, and while doing this work there was an explosion in the plant which scalded a number of people. Mr. Zaremba and those present who were not burned had nothing with which to apply first aid except the mung-bean sprouts which had been freshly cut along with the juice in the vats. An ambulance was summoned from the Chicago area and these people were sent to an outstanding hospital and placed under the care of the doctors there. The doctors immediately noticed that there was very little blistering from these burns and that most of the blistering was on those parts of the body that the mung-bean-sprout juice did not reach. They suggested to Mr. Zaremba that this product evidently had a value for the treatment of burns and they should try to develop it. Mr. Zaremba and the chemist returned to the plant and for a period of 1½ years concentrated on trying to discover just what had happened in the accident and why mung-bean-sprout juice was so effective on burns. In so doing, Dr. Ryankciwicz with his biochemical background found that they had stabilized an enzyme in a vegetable product and later on within 6 months they discovered they had stabilized an additional enzyme—both purely through accident. Mr. Zaremba then started making this product, and he put it on the market in 2-ounce bottles having received the approval of the Pure Food and Drug for the label to read as follows: "Ben-Gee, mung-bean-sprout juice for the relief of minor burns, sunburns, poison oak, and poison ivy."

Mr. Zaremba had difficulties during the years of 1947 through 1950 in securing burn tests on this product. He was refused these tests by such Government agencies as the Army, Navy, and Air Corps. He was unable to take it to private laboratories for testing because at that time the facilities for testing products in these private laboratories were so overcrowded that they were unable to guarantee Mr. Zaremba any definite date when they might be able to make such tests.

In 1951, Mr. Zaremba came to Washington with a number of radio people from Chicago. He was introduced to Mr. William Vaughan who at that time was serving as aide to Vice President Barkley. He was anxious to secure the services of Mr. Vaughan to help in the promotion of this product. Mr. Vaughan was not sure that he would have enough time on his off hours, and when he discussed the matter with the Vice President they agreed that even though there might be time, they were not convinced the product had any merit. They also considered the fact that there might be some adverse publicity as had resulted in

some other patent medicines. The Vice President advised Mr. Vaughan against taking part in its promotion. Mr. Zaremba was persistent, however, as he had utmost faith in his product. Mr. Zaremba seemed so convinced that Mr. Vaughan could be of great service in the promotion of the product that he sent a large number of samples asking Mr. Vaughan to see that they were given away. Mr. Vaughan was not too interested until a serious burn occurred in his own family. Lacking any medication he immediately applied the Ben-Gee Sprout Juice and was amazed at the results it had on the burn. Mr. Vaughan then thoroughly convinced of the merits of the product, became a crusader giving samples to his friends and telling of its great value. Mr. Vaughan gave samples to many Senators and Congressmen, to employees on Capitol Hill and to the Capitol Physician's Office where many samples were given away.

In August 1951, the Vice President had a rather serious burn on the arm and used the Ben-Gee Bean Sprout Juice. Upon finding that there was no pain after 30 minutes and that there was no blistering and no scar left, and subsequently after having used the medicine on a case of athlete's foot with remarkable results, he gave his approval and permission to Mr. Vaughan to go into this business on a part time commission basis during his off hours. Mr. Vaughan then made a contract with the Ben-Gee Products Co. to be the regional distributor for all States on the eastern coast from Maine to Florida and also for his home State of Kentucky.

Mr. Vaughan proceeded to establish a distributorship company, secured a storage place in Washington, D. C., and received some $20,000 worth of merchandise. Their plan was to go on the market for retail sale in March 1952, but the company making the product was stopped by an injunction obtained by another pharmaceutical company which claimed a similarity of name. This, of course, caused delay as they could not sell the product under the name in question. Mr. Zaremba did not give up but set out to get an approved name and trade-mark that would be agreeable. Mr. Vaughan started to give out the merchandise then in storage in Washington as samples to doctors, clinics, and any hospitals which would agree to take them for clinical research.

Mr. Vaughan and Mr. Zaremba felt that if this product could have a fair and full test on burns by one of the branches of the armed service, the results would be such that there would be no question in the minds of the medical profession as to its value.

They worked for several months with this pharmaceutical company which had cooperated with them trying to agree on a name that would be acceptable to all. A year later this company agreed on the new name, which was "B-N-G solution, containing tyrosinase, for the relief of minor burns, sunburns, poison ivy, and poison oak dermatitis; for external use only; manufactured by the Worth Pharmacal Co. Division of the Ben-Gee Products Co., Oak Lawn, Ill."

In February 1953 Mr. Zaremba and Mr. Vaughan began to attain results of their efforts made in the free distribution promotion of this product. There were a number of outstanding publications and newspapers which carried articles on this medicine and various radio commentators made mention of it. There were also, as mentioned above, insertions in the CONGRESSIONAL RECORD referring to the relief that this product had given to people with burns, sunburns, and skin disorders.

The following publications and radio broadcasts regarding B-N-G solution appeared as follows:

February 3: Radio broadcast of Earl Godwin, station WRC, NBC, Washington.

March 21: Drew Pearson, Washington Merry-Go-Round, appearing in the Washington Post and other papers.

May 8: Arlington (Va.) Daily Sun, story relative to the effect of B-N-G.

May 21: NEA syndicated story by Douglas Larsen, staff correspondent, published throughout the United States by various Scripps-Howard newspapers during May and June.

May 25: Radio station WRC, 11 p. m. news broadcast, Stewart Findley reporting. This broadcast was received on NBC network as far west as Chicago.

June 10: Associated Press story by Frank Carey. Published in Washington Evening Star, page 1, and eventually in more than 800 other newspapers and in some 600 of these papers appearing on page 1. Appeared in such papers as the Glasgow (Scotland) Evening Times and the Korean edition of Stars and Stripes.

June 11: References to the AP story in the morning news broadcast of Claude Mahoney, CBS network, and on numerous other local news broadcasts throughout the United States.

June 13: Washington Times Herald feature story by Don Munson.

June 21: Feature story from Washington by Ed Edstrom in Louisville (Ky.) Courier-Journal.

June 25: Glasgow (Ky.) Times reprint of Louisville Courier-Journal story with prefatory remarks.

July 13: New York Herald Tribune leading comment in Hy Gardner's column.

July 21: Radio broadcast of Ray Henle, Three-Star Extra—Sunoco.

Mr. Speaker, at this point I would like to call your attention to the fact that on January 6 of this year Congressman FRANK CHELF inserted an article in the Appendix of the daily CONGRESSIONAL RECORD on page A2, and I inserted an additional article in reference to this product on February 12. Further, on February 17, Senator KERR, Senator MONRONEY, and Congressman WICKERSHAM signed a letter addressed to the Surgeons General of the Army and Navy requesting that they test this B-N-G solution as its wide use would increase the market value of the mung bean in their State.

Senator KERR, Senator MONRONEY, and Congressman WICKERSHAM also claimed that since Oklahoma was the only State at the present time which could properly grow the mung bean suitable for the sprouts which are used in this medicine, they had had considerable correspondence from the mung bean growers in this State. In reply to their request the Army and Navy answered they would ask the National Research Council Committee on Trauma—the medical name for burns—for permission to test this product. The Navy in a reply to Senator KERR, Senator MONRONEY, and Congressman WICKERSHAM requested a meeting in Washington on March 12, with the chemist and a group from the Worth Pharmacal Co., asking them to bring samples and data of medical composition on burns regarding this medicine. This procedure was not followed by the Army. They made their request for the test directly to the National Research Council Committee on Trauma.

On April 16, the Navy Department Bureau of Medicine and Surgery answered the requests made by these three gentleman stating that they were refused permission by the National Research Council Committee on Trauma to test this product on burns for the following reasons: First, because the company which discovered it had no pharmaceutical background and second, because there was not any hospital or clinical data on burn cases where this had been used.

This product is a vegetable product and has no formula, therefore, it cannot be patented. It was made purely through accidental discovery, and I might add that this product contains only 2 percent Thimerosol (methiolate) preservative.

It has been difficult for the company to get this product into hospitals for the necessary data with the position taken by the National Research Council Committee on Trauma.

Mr. Speaker, there have been a number of prominent physicians in the Washington area who have used this product. It has been used on several burn cases where it gave very fine results. One particular case called to my attention is that of an electrician in this area who received a severe electrical burn. This man was burned on both arms up to his shoulders and on both legs from above his knees and to his ankles. He has been very grateful for the results credited to the use of this medicine since his arms, and particularly his hands, are free of scars, and he is left with complete movement of his fingers which was most important to him as his hands were his source of livelihood. The above case has hospital clinical data at a local hospital in Washington, D. C. This clinical data was taken under the supervision of a local physician and anyone wishing to review this report can do so.

Mr. Speaker, it occurs to me that since we are faced with a possible atomic attack and also confronted with suspected sabotage action and with accidents such as the recent one on the aircraft carrier *Bennington*, this B-N-G solution made by Worth Pharmacal Co. should have a burn test made by the Government.

I am told that, if properly conducted, it takes considerable time to run a burn

test, and I feel that the best way to carry on such a test would be through the facilities of the Armed Forces. They could conduct these tests more rapidly and thereby hasten the time when this medicine would be available to all mankind.

Mr. Speaker, I have had numerous personal experiences with the use of this product. Since we have entered into the summer months, I have had the opportunity to observe its miraculous results on many types of skin disorders and especially on burns and sunburns. A fact that interests me a great deal is that, to date, there has not been brought to my attention a single case where any harmful effects resulted from its use. I have been informed that no adverse report on the use of the medicine has come to the company's attention even though they have made it widely available through free sample distribution.

Therefore, Mr. Speaker, it occurs to me that these facts should be brought to the attention of those in our armed services who have the authority to see that this product is tested, and to the attention of the National Research Council Committee on Trauma which has so far refused permission for these tests claiming it lacks clinical data. I also feel that these agencies should inform the Worth Pharmacal Co. just what must be done in order to have these tests made.

Surely there is an end to the string somewhere, and if found, might lead to the unraveling which is necessary for this product to be tested and made available to the suffering and the afflicted.

Let Us Build a New World

EXTENSION OF REMARKS
OF
HON. RUTH THOMPSON
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Miss THOMPSON of Michigan. Mr. Speaker, about a year ago I introduced a bill in the House which would create a Department of Peace in our Government. The Secretary of such a Department would have Cabinet status and would work toward peace and good will throughout the world. No action was taken by the committee, but I am still of the opinion that all the guns, all the tanks, and all the bombs we are building during these hectic times are not going to save us from our enemies at home or abroad.

I firmly believe that our only salvation lies in the fact that we must revert back to the more simple life, and give more thought to that overruling power from which all blessing flow. God, in his infinite goodness, and the teachings of Jesus Christ, His son, are the only answer if we are to survive in these days of universal insecurity.

Last week I was one of 160 Members of Congress who attended a breakfast honoring Evangelist Billy Graham, who has just returned from a preaching trip abroad. His audience was most attentive as he told of speaking to a total attendance of more than 2 million people in Great Britain over a period of 12 weeks. On the Continent he addressed 300,000 persons more through interpreters. Mr. Graham stated that much of the success of his meetings was due to a spiritual resurgence as the result of World War II and the fear of the atom bomb. Friends, right now is the time to start building a new world. And, we can only build a new world when we discard the old implements of war and put God back into the center of life. Let us do it now, not only for ourselves, but for generations to come.

Mr. Speaker, Evangelist Billy Graham has had a great revelation. And that revelation means much responsibility. He should be supported by the Congress of the United States, and the present administration.

At any cost, let us make this great God-fearing man, and his equally great team, our official ambassadors of good will and spiritual awakening. A miracle could yet happen.

Glorified Blackmail: H. R. 9820 and S. 3718 Give New Jersey and Pennsylvania the Green Light To Pick Your Pocket—Motorist Beware

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. SIEMINSKI. Mr. Speaker, I trust the Congress will reject H. R. 9820 and S. 3718.

Both bills will no doubt be called up for approval on a sleeper play when few Members are in the Chamber. They could not pass otherwise.

H. R. 9820 and S. 3718 is another one of those gold dust attempts to kid the public. Gold for the money men. Dust for the eyes of the motorist. Both bills, as now written, should be defeated. I will object to their passage.

H. R. 9820 and S. 3718 is another one of those bistate agency deals between New Jersey and Pennsylvania to set toll rates and collect handsome profits from helpless motorists using New Jersey-Pennsylvania facilities. It is a medieval practice. And why Uncle Sam gets suckered into these booby trap consent bills, is difficult to understand.

H. R. 9820 and S. 3718 is glorified blackmail. Not a word in either bill talks about the rights of the motorist. Not a word in either bill assures the motorist that tolls will be flexible, like farm price supports. Not a word in either bill assures the motorist that tolls will be geared to maintenance cost of facilities after debts are serviced and retired. Not a word in either bill guarantees the motorist that he isn't being taken for a sucker in being forced to contribute to profits that will build warehouses and private enterprise facilities that should come from venture and not blackmail capital. Strong words? Sure. But what is so brave and enterprising about these bills? They smack of a lack of a bill of rights for the American motorist.

Were Texas Guinan around today, as she was in the days of the speakeasy, her greeting would, I am sure, reach the ears of every motorist who will be affected by H. R. 9820 and S. 3718: "Hi Sucker."

Health Insurance—Whose Interests Does It Serve?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. RABAUT. Mr. Speaker, in my judgment, the reinsurance bill, H. R. 8356, is a hoax which the administration, innocently or otherwise, is perpetrating upon the American people. With a good deal of fanfare in the press and on television we are being sold a bill of goods, which, when examined, turns out to have been blatantly misrepresented.

The fact that the administration, in various pronouncements, has so accurately put its finger on some of the crying needs of the people in the field of health makes this misrepresentation all the more reprehensible.

It is true that our families are burdened and often financially ruined by the unpredictable and high cost of illness. It is true that only about 17 percent of private medical and hospital expenditures are presently covered by existing health insurance plans. Most insurance plans do not cover all the medical needs—and they are far from paying all the bills of those items that are covered. There are too many exclusions in insurance policies—the benefits often stop too soon. They are too expensive for middle- and lower-income groups. They have not been able to adequately provide for rural people, for retired persons, and for the unemployed. The long-term, chronic illness is barely touched upon under these plans.

All these are urgent problems and the administration has the temerity to tell us that its reinsurance bill would go a long way toward helping solve them. I say this bill, with its $25 million appropriation to set up a so-called reinsurance fund, could do nothing of significance to meet many of the problems.

At the hearings on this bill practically all the experts who testified—from diverse groups, many of whom have entirely different ideas about how to approach the problem—have said that reinsurance cannot do the job. Reinsurance is not a magic potion as the administration seems to think, or which it would have us believe.

I would like to point out that at no time has there been a concrete and conclusive demonstration of how reinsurance would actually perform its magic. I have even heard it suggested that we should vote for this bill because "it will

not do any harm," and it should at least "be given a try."

I say that a bill with no more assurance than this of working is a downright imposition upon the American public—an insult to the people who look to the Congress for sound and effective measures to meet current problems. Enactment of a bill of this sort would be bad and irresponsible legislation.

The needs of the people for something to be done in reducing the tremendous burden of medical and hospital costs and in making available to everyone the best of medical care which modern science has made possible—are immense and urgent. We ought to show boldness and foresight in devising a program to meet the need. We must assess these problems and be willing to provide the funds necessary to cope with them.

This reinsurance bill deserves the treatment it has received in the House of Representatives.

Cushing Veterans' Administration Hospital

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. LANE. Mr. Speaker, I wish to include herein the statement I made this morning before the Subcommittee on Hospitals of the House Committee on Veterans' Affairs in favor of H. R. 9646, to establish a Veterans' Administration center at Framingham, Mass.:

CONVERT CUSHING VA HOSPITAL INTO A VETERANS' HOME

(Statement of Hon. THOMAS J. LANE, of Massachusetts, before the House Committee on Veterans' Affairs, July 15, 1954)

Last month we celebrated the 10th anniversary of the GI bill of rights.

We are proud of this well-rounded program to rehabilitate the men and women who gave up the best years of their lives to protect us.

It is our obligation not only to provide eligible veterans with disability compensation, educational benefits, and hospital care—to mention but a few of a veterans' rights—but to carry out the continuing responsibility of caring for the aged, the homeless, and those who will never be well again.

Congresswoman ROGERS, of Massachusetts, has prepared H. R. 9646, to establish a Veterans' Administration center at Framingham, Mass., to provide domiciliary care for needy veterans, and those suffering from chronic disabilities.

It is similar to H. R. 509, the bill I introduced for the same purpose on JANUARY 3, 1953. Other Massachusetts Congressmen, acting separately, have submitted companion bills, which indicate the growing public demand for a domiciliary home in the Northeastern States.

This is not a plan to clear a forest and build a resort hotel.

It is not a maximum cost project.

We look upon it as Operation Salvage.

To save the old and chronically ill veterans from abandonment by efficient conversion of an existing facility from one use to another.

The Cushing VA Hospital at Framingham, Mass., has more than paid for itself by the army of veterans it has saved from ill health by the excellent medical services it has supplied over the years.

Now that its duties have been taken over by more modern facilities, is not reason why we should junk this hospital, and dispose of it in haste.

Cushing is a familiar haven for tens of thousands of veterans who were rehabilitated by its competent care. It is a symbol of the Government's consideration for those whose health was impaired by their service in the Nation's defense.

We have seen other installations closed up or sold at a tenth of their real value, and we have been disturbed by such waste.

Cushing offers us the opportunity to set a new standard for the efficient use of Government buildings. As one use declines, we can convert it to serve a growing need. Duplication is avoided. Costs are cut. A new life for Cushing, as it is adapted to meet the changing needs of an aging veteran population, would be a service to them, and at a minimum charge to the taxpayers.

Cushing is near Boston, where the regional office of the Veterans' Administration is located.

It is the meeting place of the New England States, and a logical site for convenient service to dispossessed and chronically ill veterans.

In a quiet and peaceful environment, yet near to the world's finest medical facilities and skilled specialists at Boston.

This is an ideal spot for a veterans' home.

Ten years ago they were spending their splendid manhood for us in Normandy, and in the steaming islands of the Pacific.

Now some of them are disabled—beyond recovery.

If we are to complete our promise to them, we must begin to provide sanctuary for those who can never pick up the threads of their broken lives.

Cushing is available, and it can be converted into a rest home for old soldiers at a fraction of the cost that would be required to build a new facility for this purpose.

Cushing is an opportunity for us to fulfill the obligation inherent in the GI bill of rights.

Their job is done. Ours is continuing.

Blair Moody Recovering

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. DINGELL. Mr. Speaker, inquiries have come to my attention about the health of Blair Moody, once a Senator from Michigan, and again a candidate this year.

I am pleased to report that Blair Moody is well on the road back to the excellent health that marked his long tenure in Washington as a great journalist and as a great Senator.

Blair was stricken with pneumonia while campaigning in Michigan's vast upper peninsula. He was rushed to St. Joseph Hospital in Hancock, Mich., where first diagnosis showed some possibility of a heart problem on top of the pneumonia. Two outstanding heart specialists, however, on thorough checking reported no heart attack and added that he was recovering rapidly from the pneumonia and soon would be able to resume his campaign.

Blair will be released from the hospital very soon and will rest for several weeks. He can then resume his campaign to return to the Senate as a Democratic Senator from the great State of Michigan. I know you all join me in wishing him complete and early recovery from the pneumonia that temporarily interrupted his campaign.

Those many of you who remember Blair Moody as a reporter or as a Senator will recall his prodigious energy in any task to which he set his hand. The medical opinion out of Michigan, I am reliably informed, is that he will return to his campaign, and, we Democrats hope, to the Senate, equally vigorous and energetic in his service to the people.

Native North Carolinian Still Going Strong in His Adopted State of Georgia

EXTENSION OF REMARKS
OF
HON. F. ERTEL CARLYLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 13, 1954

Mr. CARLYLE. Mr. Speaker, on the 26th day of July, in the year 1879, Johnston Williams was born in the little town of Castle Hayne, N. C.

Seventy-five years later, on July 26, 1954, this aggressive though kindly gentleman of the Old South celebrated his diamond birthday among his hundreds of friends and followers at his home in Waycross, Ga., where he has lived and labored so successfully for nearly a half century.

It is fitting, indeed, that Jack Williams' native State and district join the grateful people of south Georgia in a tribute to this man who is leading such an outstanding life of service to others—a life dedicated to development and progress of the South. Among his many interests were the worthwhile projects of the development of Warm Springs, Stone Mountain Memorial, the development of Okeefenokee Swamp Park, and the advancement of Dr. Charles Herty's program of reforestation with slash pine in the Southeast.

An impressive force through the splendid newspaper he built into one of the most modern and efficient in the South, Mr. Williams has materially aided the development of the New South of today with wise counseling and assistance to hundreds of young people. He has been owner, editor, and publisher of the Waycross Journal-Herald since 1915, receiving coveted awards throughout the years for greatest service to his city, county, and State.

Who's Who in America, volume 27, 1952–53, contains the following:

Williams, Jack, editor, publisher: Born Castle Hayne, N. C., July 26, 1879; son of Thomas and Ellen Elizabeth (Johnston); preparatory education, Cape Fear Academy, Wilmington, N. C.; graduate of Oak Ridge (N.

C.) Institute, 1904; married Ethel Katharine Woodard, June 19, 1912; children, Jack, Katharine Lee, Ruth Winifred, Betty Louise, Eva. In purchasing department, Atlantic Coast Line Railroad, Wilmington, N. C., and Waycross, Ga., 1899–1903; same position with Atlanta, Birmingham & Atlantic Railroad, Waycross, 1905–06; general storekeeper, same railroad, Fitzgerald, Ga., 1906–07; manager publishing company, Boston, 1909–11; editor owner, and publisher Waycross Daily Journal-Herald and Waycross Weekly Journal since 1915; also publisher of Blackshear Times 1924–26, Hogansville News 1925–26, and La Grange Reporter 1924–27; president Waycross Journal-Herald Publishing Co., radio station WAYX; vice president Georgia Loan & Savings Co., 1939–41; president Merchants & Mechanics Loan Co., since 1941; Waycross Building & Loan Co., Waycross Hotel Co., Progressive Life Insurance Co., president First Federal Savings & Loan Association. Served as State senator 1937–38 and 1943–44, member State legislature 1939–41 and 1942–47. Lieutenant colonel on Governor's staff. Member city board of education; president Kings Daughters Home for Children 1935–36. President Georgia Press Association, member 11th District Press Association (president); president, advisory board, Salvation Army; vice president Waycross Railroad YMCA; vice president Georgia Forestry Association; president Waycross and Ware County Chamber of Commerce 1936–37 and 1945–47. Awarded Sutlive trophy, Georgie Press Association, 1925 "for greatest service to community" of any paper in the State; Baynard Knight cup, Kiwanis Club, 1923 "for greatest service to community"; Miller medal "for having rendered greatest service to his city and county during the year 1932." Democrat. Presbyterian. Mason (Shriner). Elk. Clubs: Kiwanis (vice president 1928, president 1929), Okefenokee Golf (secretary), Dovers Bluff Fishing (president). Farmer, dairyman, and stock raiser. Home Cherokee Drive, Waycross, Ga. (summer home St. Simons Island). Address, Journal-Herald Building, Waycross, Ga.

Mr. Speaker, it is so apparent that Mr. Williams has lived an extremely active and fruitful life, and to me it is a source of real pride that he is a native North Carolinian born in the congressional district which I am honored to represent.

House Judiciary Committee Tables Butler Resolution, Senate Joint Resolution 44, Amending Constitution Relating to Number of Supreme Court Judges, Etc.—Celler Opposed Restrictions on Supreme Court

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 13, 1954

Mr. CELLER. Mr. Speaker, Senate Joint Resolution 44 is a four-pronged constitutional amendment. First, it freezes the number of Justices of the Supreme Court to nine. As a member of the Committee on the Judiciary at the time of President Roosevelt's proposal to pack the Supreme Court, I protested with such vehemence that Roosevelt never forgave me for it. I cannot say, however, that the Court-packing proposal of 1937 justifies this proposed constitutional amendment. We force upon ourselves a rigidity which can in the future make much mischief. It is in the flexibility of the Constitution that we can lay claim to a government that moves with history. Members of Congress do not have the gift of clairvoyance. In the event there is another such move to increase the members of the Court, the then Congress, in the final analysis, can approve or reject, as is deemed best in the national interest. This attempt to mortgage the future when no good reason exists for doing so is begging for trouble.

Secondly, Senate Joint Resolution 44 compels retirement of Justices of the Supreme Court at the age of 75. Again, this is the kind of rigidity and generalization which is unhealthy in constitutional amendments. Judges may now retire at 75 if they wish. Some of our best judicial activity was performed by judges over 75 years of age. I point to Justice Holmes, Hughes, Brandeis, and Judge Learned Hand. There are scores of others. There are judges today over the age of 75 who are serving with great distinction.

Thirdly, the House Judiciary Subcommittee seeks to propose another section which was wisely discarded by the Senate; namely, that no Justice of the Supreme Court shall be eligible to serve as President or Vice President of the United States until 5 years have passed after the termination of such service. What is the compelling need for such a provision that makes it constititutional matter? What if one of the Justices of the Supreme Court were of presidential caliber? Is the country to tie its hands from seeking the best possible man for the highest elective office in our land? There is an ugly implication in such a provision that the possibility of attaining a presidency or vice presidency can mar the integrity of the future members of the Supreme Court.

Fourthly, Senate Joint Resolution 44 seeks to prevent Congress from curtailing the appellate jurisdiction of the Supreme Court. While I do not oppose such a measure I can see no need for its present enactment at the end of a session when time is so pressing. True, Congress has the power to curtail this appellate jurisdiction, particularly in cases involving constitutional questions. Only once did such a situation arise and that was in the tremendous upheaval of the Civil War.

Unless the reasons are compelling, I cannot approve such amending of the Constitution. This almost casual approach to so far reaching a process is contrary to our best interests. Three of the four provisions in Senate Joint Resolution 44 are actually placing us in a box within a box within a box. In a similar connection it was once said, "striving to better, often we mar what's well."

Questionnaire To Constituents: What Is Your Opinion?—How Would You Vote?

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 13, 1954

Mr. HAGEN of Minnesota. Mr. Speaker, under leave granted, I wish to extend in the RECORD my own remarks and a questionnaire and opinion poll which I intend to send to my constituency. It follows:

WHAT IS YOUR OPINION?—HOW WOULD YOU VOTE?

DEAR FRIENDS: During the past few months a number of statewide opinion polls have been conducted in Minnesota and perhaps you have been asked to contribute your views and answers to them.

The results of these polls, you may have noted, have been varied and often contradictory. What is more, they do not necessarily reflect the opinions of you who live in the Ninth Congressional District of Minnesota.

Much useful information may be obtained from a public opinion poll which is properly executed. Principally, it may serve to strengthen the link between the people and their representatives in government, a link which due to obvious limitations of time and distance is not as strong as it ought to be.

This brief questionnaire is principally devoted to the farm problem which is so vital an issue with us in the Ninth Congressional District. Your opinions on these and other questions will be helpful to me as your United States Representative in Congress.

If there are other issues or problems not included in this form on which you would like to comment, I urge you to do so. Your suggestions, advice, and counsel always are welcome and greatly appreciated. I would like to hear from you.

THE QUESTIONS

1. A proposal has been made which would set up a system of flexible price supports for farm crops. In periods when there were large surpluses of crops, the support prices would be lower; in periods when there were no large surpluses, the support prices would be higher. Do you favor or oppose flexible price supports? Favor ☐. Oppose ☐.

2. Under Federal law, price supports on basic farm crops are guaranteed through 1954. Do you favor or oppose the Government's continued support of farm crop prices after 1954? Favor ☐. Oppose ☐.

3. Dairy price supports were lowered recently. Do you believe they should be restored or raised? Yes ☐. No ☐.

4. A suggestion has been made that the Federal Government dispose of some of our food surpluses by giving food stamps to low-income families. These stamps could be exchanged for certain kinds of surplus foods. Would you approve or disapprove of a food-stamp program like that? For ☐. Against ☐.

5. In general, do you approve or disapprove of the ways Ezra Benson is handling his duties as United States Secretary of Agriculture? Approve ☐. Disapprove ☐.

6. As a Representative of a predominantly farm area I have consistently supported 90-percent of parity for basic farm products and similar supports for other farm produce. In fact, for years I have fought for 100 percent of parity. In other words I have always favored and vigorously supported at least 90 percent of parity for all farm products,

and I intend to continue to do so, recognizing of course some controls on production and marketing are necessary. The question is, Do you think I have been right in my position? Yes ☐. No ☐.

7. In general, do you approve or disapprove of the way the Eisenhower administration is handling our foreign affairs? Approve ☐. Disapprove ☐.

8. Did you vote for Eisenhower or Stevenson in 1952? Eisenhower ☐. Stevenson ☐.

9. Suppose you were voting today—which one would you vote for? Eisenhower ☐. Stevenson ☐.

10. Suppose that Freeman were running today against Gov. C. Elmer Anderson, a Republican, for the governorship of Minnesota. Which man would you personally favor? Freeman ☐. Anderson ☐.

11. If you were choosing a Senator today, which man would you personally favor, HUMPHREY or Bjornson? HUMPHREY ☐. Bjornson ☐.

12. Do you agree that Congress was wise in approving the St. Lawrence seaway project? Yes ☐. No ☐.

13. Do you favor statehood for Alaska? Yes ☐. No ☐.

14. Do you favor statehood for Hawaii? Yes ☐. No ☐.

(NOTE.—It is not necessary to sign your name. You may not wish to answer all of the questions. If not, please answer those on which you desire to express an opinion. You may just place an "X" in space provided after each question.)

Please return to United States Representative HAROLD C. HAGEN, Crookston, Minn. Feel free to use reverse side for your comments and remarks. Thanks for your cooperation.

Sincerely yours,

HAROLD C. HAGEN.

Celler Repeats Demand for Action Against Saudi Arabia-Onassis Oil Monopoly

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 13, 1954

Mr. CELLER. Mr. Speaker, the Saudi Arabia-Aristotle S. Onassis oil tanker agreement—with its monopolistic and discriminatory features—may initially cost the American consumer directly, or the American taxpayer indirectly, a minimum of $16 million a year. Before long, this excessive and unnecessary drain may rise to $100 million a year or more.

It is inconceivable, therefore, that our Government can stand by and permit this agreement to operate.

The nature of these exorbitant charges and the damaging features of this unfair contract were first cited in my statement of May 18, 1954. They were announced in more detail in my statement of June 24, 1954, when I urged the Department of State and the Foreign Operations Administration to review this unpalatable agreement and to do something about it.

More than a month has passed since my last statement was issued. Yet, I have received no further report from these agencies; nor have I learned of any real action which they have taken to put a stop to this unwarranted discrimination against American interests and against nationals of a friendly power.

The present oil concession in Saudi Arabia is an American one. In the long run, British and other foreign interests will not be affected nearly as much as our own. Nevertheless, Britain has made a strong démarche to the Saudi Arabian Government. So have Finland, Norway, and Denmark.

As far as I can tell from the meager public information on action taken by our own Department of State, there has been only one official statement on this matter. Made to the House Committee on Merchant Marine and Fisheries, it consisted of 13 words:

> The Department has protested this agreement as a violation of the concession rights.

These 13 words will scarcely prove very reassuring to the American public.

By way of contrast I append to my statement a report of the far more forthright British stand, as reported in the Times of London on July 20, 1954.

Clearly, it is "time for a change"—strong American action in this matter is imperative.

Rather than repeat the details of my previous statements, I shall confine these remarks to an explanation of three points:

First. An estimate of the inordinate burden which would be exacted from American consumers or taxpayers;

Second. A reference to the specific responsibility of the Department of Justice to examine the Saudi Arabia-Onassis agreement in accordance with the provisions of our antitrust laws—especially as they apply to American firms which elect to import articles—in this case, oil—from such an international conspiracy in restraint of lawful trade as this one appears to be; and

Third. A mention of the definite obligation with which the Federal Maritime Board is charged to investigate the action of any foreign government where it appears that United States vessels "are not accorded equal privileges in foreign trade with vessels of such foreign countries or vessels of other foreign countries."

THE COST OF THIS MONOPOLY

It is not my intention to provide here an unduly detailed breakdown of each of the factors that make up the exorbitant potential profit for Mr. A. S. Onassis from this negotiation which has such serious overtones for Americans.

It is my intention, however, to urge once again that the rightful authorities carefully examine this matter. If the facts are as I believe them to be, appropriate measures should be taken immediately to stop an unmitigated raid upon the purses of American consumers or taxpayers.

The carriage rate, which is provided in the Saudi Arabia-Onassis contract, is stated below in summary as being "in accordance with the rates announced monthly by the London Tanker Brokers Board, provided that this rate shall not be less than the average rates of the London Tanker Brokers Board during the last two years starting April 1952 through March 1954."

The London Tanker Broker Board rate fluctuates with the market. For the principal tanker run involved—United States to the Continent—the two-year average specified in the agreement as a minimum works out at what the shipping trade calls USMC minus 15—that is, 15 percent less than the rates established by the United States Maritime Commission during the war.

In dollars this would mean payments of $9.26 per ton to Mr. Onassis. The actual present market rate is much lower—USMC minus 55, which means $4.90 per ton.

Hence, Mr. Onassis will receive an estimated $4.36 per ton more than the market—in fact only 54 cents less than twice the present rate.

The contract initially calls for Mr. Onassis to supply a minimum of 500,000 deadweight tons of tanker capacity to Saudi Arabia. Let us make some assumptions: that eight round trips can be made by a vessel each year and that 500,000 tons of deadweight capacity would permit carriage of 460,000 tons of oil, and that the rate for United States-Continent carriage would be used—then Mr. Onassis would receive excessive amounts of gross profit as follows: $4.36 per ton times 460,000 tons of oil times 8 trips per year. This would amount to around $16 million per annum. It is only one estimate of the basic profit. There are, of course, various other contingencies, which I have not included, but these computations give us a rough indication of the scope of this pernicious agreement.

In return for the monopoly, Mr. Onassis would pay the Saudi Arabian Government 21 cents per ton, or approximately $700,000. Also he will pay for the expenses of a Saudi Arabian naval academy, estimated at $50,000; and he will also transport an estimated 50,000 tons of oil locally free of cost, the cost of which is estimated to be another $50,000. He is further expected to build drydock facilities at Jidda. These might be expected to amortize their own cost. Hence, in total, he will pay the Saudi Arabian Government roughly $800,000 per annum.

In my opinion this $800,000 is just an initial bite. More likely we will find that the $800,000 per annum will be nothing more than the camel's nose coming under the tent.

The figures I have projected above represent the minimum benefit under the terms of the contract. Should the Onassis monopoly succeed in cornering 60 percent of the total Saudi Arabian output, the increase in cost of oil would probably approach $100 million per annum.

If the monopoly should succeed in cornering the total Saudi Arabian output, the excess in price would be in the neighborhood of $150 million to $200 million per annum.

I do not purport to say that my estimated computations are wholly accurate. There are too many variables, including among others: the carrying capacity of the vessels, their speed, the turnaround time, and many others.

However, those computations which I have made indicate the magnitude of the profit which Mr. Onassis and the Arabians would make.

But I do say that these estimates are not unfounded projections. They are written right there in the terms of the contract.

Insofar as the American consumers are affected, they would end up paying the bill for the price increases on perhaps 15 or 20 percent of the Arabian oil—that being more or less the proportion which comes to the United States.

But that is only the beginning. If the other nations of the free world are forced to draw down their scanty foreign exchange reserves to pick up the bill for the balance of the oil—perhaps 80 or 85 percent—it will mean that there will be less foreign exchange in their coffers. Hence, requests for increases in the grants and loans annually sought from the American taxpayer will no doubt appear in due course.

My conjecture is that, if this agreement is permitted to stand, the American consumer and/or the American taxpayer will end up paying these gigantic sums for the support of Mr. Onassis and for the support of this nationalistic Arab nation.

LEGAL STEPS WHICH THE AMERICAN GOVERNMENT CAN TAKE

After further study of what appears to be a serious international conspiracy, I have found that two additional agencies of the Federal Government—the Department of Justice and the Federal Maritime Board—are charged with responsibility in matters such as this one. This agreement appears to be in violation of our antitrust and shipping laws. It is, therefore, high time that American consumers and taxpayers receive affirmative assurance by appropriate Government officials that their rights are being protected. Their rights must not be abused by indecision, ineptness, or unwillingness to investigate and prosecute a flagrantly unfair and monopolistic trade agreement.

I trust that the Department of Justice has reviewed or will review promptly this Saudi Arabia-Onassis agreement in light of the specific wording of our antitrust laws.

RESPONSIBILITY OF THE FEDERAL MARITIME BOARD

With reference to the responsibility of the Federal Maritime Board, section 26 of the Shipping Act of 1916 states:

The Board shall have power, and it shall be its duty whenever complaint shall be made to it, to investigate the action of any foreign government with respect to the privileges afforded and burdens imposed upon vessels of the United States engaged in foreign trade whenever it shall appear that the laws, regulations, or practices of any foreign Government operate in such a manner that vessels of the United States are not accorded equal privileges in foreign trade with vessels of such foreign countries or vessels of other foreign countries, either in trade to or from the ports of such foreign country or in respect of the passage or transportation through such foreign country of passengers or goods intended for shipment or transportation in such vessels of the United States, either to or from ports of such foreign country or to or from ports of other foreign countries.

While the number of United States-flag vessels engaged in this trade may not be numerous, 40 percent of the oil is carried by vessels controlled by Aramco companies; and the United States Navy in the Mediterranean may be dependent upon this oil.

SUMMARY

In short, I think that the American people should now demand that these four agencies of the Federal Government—the Department of State and the Foreign Operations Administration, to which I referred previously, and the Department of Justice and the Federal Maritime Board, which I have mentioned herein—report on this trade agreement with respect to, first, its monopolistic and discriminatory provisions; and, second, what steps are being taken, or will be taken, to protect American interests.

I repeat once again the need for an awareness of the serious aspects of this matter. I would again urge the oil companies not to compromise in any such conspiratorial and probably illegal arrangements. I restate my earlier remark that this Middle East oil-tanker agreement "militates against the best interests of our national security, our traditions of free trade and fair play, and our time-honored guaranties of justice and equity to friendly countries and the American consuming public."

The American people are entitled to action and to results.

[From the London Times of July 20, 1954]

SAUDI ARABIAN OIL—BRITISH CONCERN OVER ONASSIS AGREEMENT

Mr. James Hoy (Edinburgh, Leith, Laborite) and Mr. Grimond (Orkney and Zetland, Laborite) asked for a statement on the agreement reached between Saudi Arabia and Mr. Socrates Onassis.

"Mr. DODDS-PARKER (Under Secretary, Foreign Office (Banbury, Conservative)). The Government have now studied the agreement between the Saudi Arabian Government and Mr. Onassis. There is no doubt, in their view, that this agreement constitutes flag discrimination by seeking to force buyers of oil to use tankers of one particular flag. It is therefore contrary to accepted maritime practice. Her Majesty's Government deplore such interference by a Government with the shipper's freedom of choice of vessel, and it is clear that British interests will be adversely affected by this agreement. We have been in the closest touch with the United States Government and with other governments and commercial interests, whose objections to this agreement are as strong as our own. The Foreign Secretary has expressed to the Saudi Arabian Ambassador his grave concern at this agreement, and his hope that the Saudi Arabian Government will think very carefully before pursuing a course which seems calculated to lead them into difficulties with friendly powers."

He added that no reply had been received yet from Saudi Arabia.

"Mr. HOY. Is it intended to take this matter before some international organization?

"Mr. DODDS-PARKER. We hope to reach an agreement with the Saudi Arabian Government, with whom we have friendly relations."

SENATE

WEDNESDAY, JULY 14, 1954

(Legislative day of Friday, July 2, 1954)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

O God, our Father, again through sleep and darkness safely brought, restored to life and power and thought, we face a new day; but we would not face it alone. Only by a sense of Thy presence is duty lifted above drudgery. Daily Thou dost invite us to seek Thee. We thank Thee that Thou hast so framed our hearts that our deeper instincts anchor us to Thee; that Thou hast so created everything that he who loves and follows the truth can never miss Thee at the last.

Grant to us to dream great dreams, and not to disobey the heavenly vision; and though the hope sometimes seems forlorn may we be found ready to lead it against unnumbered foes; without stumbling and without stain may we follow the gleam of our highest and best, until the day is ended and our work is done. We ask it in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. KNOWLAND, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, July 13, 1954, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Tribbe, one of his secretaries, and he announced that on today, July 14, 1954, the President had approved and signed the following acts:

S. 455. An act for the relief of Johan Gerhard Faber, Dagmar Anna Faber, Hilke Faber, and Frauke Faber;

S. 490. An act for the relief of Josephine Reigl;

S. 520. An act for the relief of Mr. and Mrs. Ivan S. Aylesworth;

S. 747. An act for the relief of Jacek Von Henneberg;

S. 1382. An act for the relief of Elie Joseph Hakim and family;

S. 1517. An act for the relief of Helen Knight Waters and Arnold Elzey Waters, Jr.;

S. 1689. An act for the relief of Mrs. Cacila Gotthardt Gange;

S. 1991. An act for the relief of Esperanza Jimenez Trejo;

S. 2465. An act for the relief of Lydia Wickenfeld Butz;

S. 2488. An act to provide that each grant of exchange assignment on tribal lands on the Cheyenne River Sioux Reservation and the Standing Rock Sioux Reservation shall have the same force and effect as a trust patent, and for other purposes; and

S. 3336. An act to promote the apportionment of the waters of the Columbia River and tributaries for irrigation and other purposes by including the States of Nevada and Utah among the States authorized to negotiate a compact providing for such apportionment.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had agreed to the amendment of the Senate to each of the following bills of the House:

H. R. 1067. An act to authorize the Supreme Court of the United States to make and publish rules for procedure on review of decisions of the Tax Court of the United States; and

H. R. 5578. An act for the relief of Hatsuko Kuniyoshi Dillon.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 1673) for the relief of James I. Smith.

The message further announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5731) to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from the Santa Margarita River, Calif., and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, and for other purposes.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 1303. An act to provide for the expeditious naturalization of former citizens of the United States who have lost United States citizenship by voting in a political election or plebiscite held in occupied Japan; and

S. 3480. An act to amend section 24 of the Federal Reserve Act, as amended.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. JENNER, and by unanimous consent, the Committee on Rules and Administration was authorized to hold hearings this afternoon, during the session of the Senate.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. KNOWLAND. Mr. President, I ask unanimous consent that immediately following the quorum call and a brief executive session, there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. KNOWLAND. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KNOWLAND. Mr. President, I move that the Senate proceed to consider executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nominations of Sara K. Lea and Mrs. Jessie C. Brewer, to be postmasters at Flat Rock, Ala., and Higginson, Ark., respectively, which nominating messages were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF A COMMITTEE

The following favorable reports of nominations were submitted:

By Mr. BRICKER, from the Committee on Interstate and Foreign Commerce:

James C. Worthy, of Illinois, to be Assistant Secretary of Commerce; and

John C. Bose, and sundry other persons for permanent appointment in the Coast and Geodetic Survey.

The VICE PRESIDENT. If there be no further reports of committees, the clerk will state the nominations on the calendar.

UNITED STATES DISTRICT JUDGE

The Chief Clerk read the nomination of Walter E. Hoffman, to be United States district judge for the eastern district of Virginia.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

UNITED STATES MARSHAL

The Chief Clerk read the nomination of William A. O'Brien, to be United States marshal for the eastern district of Pennsylvania.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, the President will be notified forthwith.

NOTICE OF CONSIDERATION OF CERTAIN NOMINATIONS

Mr. WILEY. Mr. President, the Senate received today the following nominations:

Francis A. Flood, of Oklahoma, for promotion from Foreign Service officer of class 2 to class 1.

William W. Walker, of North Carolina, for promotion from Foreign Service officer of class 3 to class 2.

The following-named Foreign Service officers for promotion from class 4 to class 3:

William Barnes, of Massachusetts.
Findley Burns, Jr., of Minnesota.
John E. Devine, of Illinois.
Harrison Lewis, of California.

The following-named Foreign Service officers for promotion from class 5 to class 4 and to be also consuls of the United States of America:

Frank J. Devine, of New York.
David H. Ernst, of Massachusetts.
Douglas N. Forman, Jr., of Ohio.
Harold G. Josif, of Ohio.

The following-named Foreign Service officers for promotion from class 6 to class 5:

Alan G. James, of the District of Columbia.
Abraham Katz, of New York.
Lawrence C. Mitchell, of California.
Jacob M. Myerson, of the District of Columbia.
Peter J. Peterson, of California.
Milton K. Wells, of Oklahoma, now a Foreign Service officer of class 2 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

The following-named persons, now Foreign Service officers of class 3 and secretaries in the diplomatic service, to be also consuls general of the United States of America:

C. Vaughn Ferguson, Jr., of New York.
Paul Paddock, of Iowa.

The following-named persons, now Foreign Service officers of class 5 and secretaries in the diplomatic service, to be also consuls of the United States of America:

Thomas H. Murfin, of Washington.
Harry F. Pfeiffer, Jr., of Maryland.
DeWitt L. Stora, of California.
William O. Hall, of Oregon, for appointment as a Foreign Service officer of class 1, a consul, and a secretary in the diplomatic service of the United States of America.

The following-named persons for appointment as Foreign Service officers of class 2, consuls, and secretaries in the diplomatic service of the United States of America:

Alexander B. Daspit, of Louisiana.
Harvey Klemmer, of Maryland.

The following-named persons for appointment as Foreign Service officers of class 4, consuls, and secretaries in the diplomatic service of the United States of America:

John M. Bowie, of the District of Columbia.
Miss Edelen Fogarty, of New York.
Francis J. Galbraith, of South Dakota.
William F. Gray, of North Carolina.
Miss Jean M. Milkowski, of Florida.

The following-named persons for appointment as Foreign Service officers of class 6, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Sam G. Armstrong, of Texas.
Daniel N. Arzac, Jr., of California.
Robert S. Barrett IV, of Virginia.
Melvin Croan, of Massachusetts.

Walker A. Diamanti, of Utah.
Richard W. Finch, of Ohio.
Martin B. Hickman, of Utah.
Edwin D. Ledbetter, of California.
S. Douglas Martin, of New York.
Calvin E. Mehlert, of California.
John E. Merrian, of California.
J. Theodore Papendorp, of New Jersey.
Harry A. Quinn, of California.
Charles E. Rushing, of Illinois.
Robert H. Wenzel, of Massachusetts.

The following-named Foreign Service staff officers to be consuls of the United States of America:

John L. Hagan, of Virginia.
Arthur V. Metcalfe, of California.
Nestor C. Ortiz, of Virginia.
Normand W. Redden, of New York.

The following-named Foreign Service reserve officers to be secretaries in the diplomatic service of the United States of America:

Lucius D. Battle, of Florida.
Richard E. Funkhouser, of the District of Columbia.
John T. Hanson, of Maryland.
Donald D. Kennedy, of Oregon.

I give notice that these nominations will be considered by the Committee on Foreign Relations at the expiration of 6 days in accordance with the committee rule.

LEGISLATIVE SESSION

Mr. KNOWLAND. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following communications and letters, which were referred as indicated:

PROPOSED SUPPLEMENTAL APPROPRIATION, TREASURY DEPARTMENT (S. DOC. NO. 142)

A communication from the President of the United States, transmitting a proposed supplemental appropriation for the fiscal year 1955, in the amount of $650,000, for the Treasury Department (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DEPARTMENT OF AGRICULTURE (S. DOC. NO. 138)

A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1955, in the amount of $9,532,000, for the Department of Agriculture (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DEPARTMENT OF LABOR (S. DOC. NO. 137)

A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1955, in the amount of $29,081,000, for the Department of Labor (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE (S. DOC. NO. 139)

A communication from the President of the United States, transmitting a proposed supplemental appropriation for the fiscal year 1955, in the amount of $1,800,000, for the Department of Health, Education, and Welfare (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE (S. DOC. NO. 140)

A communication from the President of the United States, transmitting proposed supplemental appropriations in the amount of $33,556,000, together with a proposed provision and an increase in a trust fund limitation for the Department of Health, Education, and Welfare, for the fiscal year 1955 (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

PROPOSED SUPPLEMENTAL APPROPRIATIONS, HOUSING AND HOME FINANCE AGENCY (S. DOC. NO. 141)

A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1955, in the amount of $17,610,000, and increases in limitations and transfer authority, in the amount of $6,400,000, for the Housing and Home Finance Agency (with an accompanying paper); to the Committee on Appropriations and ordered to be printed.

LAWS ENACTED BY MUNICIPAL COUNCIL OF ST. THOMAS AND ST. JOHN, V. I.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, copies of laws enacted by the Municipal Council of St. Thomas and St. John, V. I. (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT ON BORROWING AUTHORITY

A letter from the Director, Office of Defense Mobilization, Executive Office of the President, transmitting, pursuant to law, a report on borrowing authority, for the quarter ended March 31, 1954 (with an accompanying report); to the Committee on Banking and Currency.

PETITION

The VICE PRESIDENT laid before the Senate the petition of Daniel B. Maher, an attorney at law, and a resident of the State of Maryland, on behalf of Clyde L. Powell, a resident of the State of Missouri, praying for a redress of grievances in the case of Mr. Powell, which was referred to the Committee on Rules and Administration.

SEVERANCE OF DIPLOMATIC RELATIONS WITH IRON CURTAIN GOVERNMENTS — RESOLUTIONS OF MARYLAND AND MONTANA STATE CONVENTIONS OF THE AMERICAN LEGION

Mr. JENNER. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, a resolution adopted by the Maryland State Convention of the American Legion, favoring the adoption of Senate Resolution 247, to sever diplomatic relations with Iron Curtain governments.

There being no objection, the resolution was referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

RESOLUTION SUPPORTING OBJECTIVES AND PURPOSES OF SENATE RESOLUTION 247, TO SEVER DIPLOMATIC RELATIONS WITH IRON CURTAIN GOVERNMENTS, ADOPTED BY MARYLAND STATE CONVENTION OF THE AMERICAN LEGION, BALTIMORE, MD., JULY 8, 1954

Whereas the Congress of the United States, on September 30, 1950, after years of investigation, inquiry and direct observation, legislatively declared:

"There exists a world communism movement which, in its origins, its development and its present practice, is a worldwide revolutionary movement whose purpose it is to establish a Communist totalitarian dictatorship in the countries throughout the world through the medium of a worldwide Communist organization.

"The Communist organization in the United States, pursuing its stated objectives, the recent successes of Communist methods in other countries, and the nature and control of the world Communist movement itself, present a clear and present danger to the security of the United States and to the existence of free American institutions"; and

Whereas there are an estimated 20 million agents of this conspiracy against humanity spread out in a deadly fifth column encompassing the globe; and

Whereas hearings currently being held by the Internal Security Committee of the United States Senate prove conclusively that the so-called diplomatic missions of Soviet Russia and the alleged governments enslaved by Soviet Russia presently recognized by the United States and other countries of the free world are in fact nests of espionage, seditious propaganda, and sabotage; and

Whereas the conscience of the world demands that the United States, as the last great bastion of freedom, take the lead in expelling from the family of nations the tyrants of Moscow; and

Whereas such action would give notice to the enslaved peoples of the world, and those who are threatened with enslavement, that we will no longer welcome their vile oppressors at the council tables of the world to spew forth their venom in mockery of men of good will; and

Whereas these dastardly bandits have but recently had the temperity to violate the sanctity, safety, and welfare of the Western Hemisphere by shipping arms to Guatemala, in arrogant defiance of the accepted principles of the Monroe Doctrine, for the obvious purpose of widening the Communist breach that exists in that enslaved country: Therefore be it

Resolved, That this 1954 convention of the Department of Maryland of the American Legion, in session in Baltimore, Md., July 7–10, does hereby support the objectives and purposes of Senate Resolution 247 to the end that the United States sever all diplomatic relations with the Government of Soviet Russia and with the alleged governments of the countries which have been enslaved by the Government of Russia; and be it further

Resolved, That copies of this resolution be sent to all Senators and Congressmen of the State of Maryland; and be it further

Resolved, That this resolution, through proper channels, be presented to the 1954 convention of the American Legion, meeting in Washington, D. C., August 30 and 31 and September 1 and 2, 1954.

Mr. JENNER. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in the RECORD a resolution adopted by the convention of the Montana Department of

the American Legion, at Bozeman, Mont., favoring the adoption of Senate Resolution 247, to sever diplomatic relations with Soviet Russia.

There being no objection, the resolution was referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE 36TH ANNUAL CONVENTION OF THE MONTANA DEPARTMENT OF THE AMERICAN LEGION AT BOZEMAN, JUNE 25–27, 1954

Resolution 5

Resolution supporting the purposes and objectives of Senate Resolution 247, the severence of diplomatic relations with Soviet Russia

Whereas the Congress of the United States, on September 30, 1950, after years of investigation, inquiry, and direct observation, legislatively declared:

"There exists a world Communist movement which, in its origins, its development, and its practice, is a worldwide revolutionary movement whose purpose it is * * * to establish a Communist totalitarian dictatorship in the countries throughout the world through the medium of a worldwide Communist organization.

"The Communist organization in the United States, pursuing its stated objectives, the recent success of Communist methods in other countries, and the nature and control of the world Communist movement itself, present a clear and present danger to the security of the United States and to the existence of free American institutions"; and

Whereas there are an estimated 20 million agents of this conspiracy against humanity spread out in a deadly 5th column encompassing the globe; and

Whereas hearings currently being held by the Internal Security Committee of the United States Senate prove conclusively that the so-called diplomatic missions of Soviet Russia and the alleged governments enslaved by Soviet Russia, presently recognized by the United States and other countries of the free world, are in fact nests of espionage, seditious propaganda and sabotage; and

Whereas the conscience of the world demands that the United States, as the last great bastion of freedom, take the lead in expelling from the family of nations the tyrants of Moscow; and

Whereas such action would give notice to the enslaved peoples of the world, and those who are threatened with enslavement, that we will no longer welcome their vile oppressors at the council tables of the world to spew forth their venom in mockery of men of good will; and

Whereas these dastardly bandits have but recently had the temerity to violate the sanctity, safety, and welfare of the Western Hemisphere by shipping arms to Guatemala in arrogant defiance of the accepted principles of the Monroe Doctrine, for the obvious purpose of widening the Communist breach that exists in that enslaved country: Therefore be it

Resolved, That the American Legion of Montana, in convention assembled, at Bozeman, Mont., this June 25–27, 1954, does hereby support the objectives and purposes of Senate Resolution 247, to the end that the United States sever all diplomatic relations with the Government of Soviet Russia and with the alleged governments of the countries which have been enslaved, by the government of Russia; be it further

Resolved, That copies of this resolution be sent to all Senators and Congressmen of the State of Montana; and be it further

Resolved, That this resolution, through proper channels, be presented to the 1954 convention of the American Legion meeting in Washington, D. C., August 30, 31, September 1 and 2, 1954.

THE HYDROGEN BOMB—RESOLUTION OF WISCONSIN PIPE TRADES ASSOCIATION, A. F. OF L., SHEBOYGAN, WIS.

Mr. WILEY. Mr. President, I have received from Anthony J. King, secretary-treasurer of the Wisconsin Pipe Trades Association of the American Federation of Labor, a series of resolutions adopted by the convention of the association in June of 1954, at Sheboygan, Wis.

The resolution with which I am most directly concerned, as chairman of the Senate Foreign Relations Committee, pertains to the views of the membership on the grim subject of the hydrogen bomb. I send to the desk its text, and ask unanimous consent that it be printed at this point in the RECORD, and be thereafter appropriately referred to the Joint Committee on Atomic Energy. I believe that this important statement from the grassroots will be of deep interest to my colleagues, as are similar expressions from the rest of our Nation.

There being no objection, the resolution was referred to the Joint Committee on Atomic Energy, and ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY WISCONSIN PIPE TRADES ASSOCIATION AT CONVENTION HELD JUNE 19, 1954, SHEBOYGAN, WIS.

H-BOMB

Whereas the horrible threat of the H-bomb warfare hangs precariously over our civilization and especially over the workers of the great industrial cities of the world, and in the event of such a war they would find themselves utterly helpless unless an avenue of escape and measures of protection were provided: Therefore be it

Resolved, That this convention call upon the President of the United States to continue forthrightedly to reveal the great dangers of atomic warfare so that the people are made more aware of it than they are at present; and be it further

Resolved, That this convention support a strong and comprehensive civil-defense program in city, State, and Nation to insure that the worker especially will be protected; and be it further

Resolved, That we call upon the President to develop an effective bipartisan policy for foreign affairs in a fashion that will win us friends among the free nations; and be it

Resolved, Also that we support an aggressive effective program of international inspection and control of atomic energy under a joint control such as the United Nations or similar organizations; and be it further

Resolved, That we call upon the shackled workers in totalitarian states and countries, urging them to break their chains and to make their masters realize that they will not support an H-bomb war against American workers.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JENNER, from the Committee on Rules and Administration:

S. Res. 270. Resolution to amend Senate Resolution 225 of the 83d Congress, relative to investigation of employee welfare and pension funds under collective-bargaining agreements, by increasing funds therefor; with an amendment (Rept. No. 1801); and

S. Res. 271. Resolution providing for an investigation of critical raw materials by the Committee on Interior and Insular Affairs; with amendments (Rept. No. 1802).

By Mr. SCHOEPPEL, from the Committee on Interstate and Foreign Commerce:

S. 904. A bill to standardize rates on household goods shipped by the United States Government for its employees; with amendments (Rept. No. 1803).

By Mr. BUTLER, from the Committee on Interstate and Foreign Commerce:

S. 3219. A bill to amend certain provisions of title XI of the Merchant Marine Act, 1936, as amended, to facilitate private financing of new-ship construction, and for other purposes; with amendments (Rept. No. 1804).

By Mr. DUFF, from the Committee on Interstate and Foreign Commerce, with amendments:

S. 3630. A bill to permit the city of Philadelphia to further develop the Hog Island tract as an air, rail, and marine terminal by directing the Secretary of Commerce to release the city of Philadelphia from the fulfillment of certain conditions contained in the existing deed which restrict further development (Rept. No. 1805); and

S. 3713. A bill to give effect to the International Convention for the High Seas Fisheries of the North Pacific Ocean, signed at Tokyo, May 9, 1952, and for other purposes (Rept. No. 1806).

By Mr. AIKEN, from the Committee on Agriculture and Forestry, without amendment:

H. R. 4928. A bill to authorize the Secretary of Agriculture to convey a certain parcel of land to the city of Clifton, N. J. (Rept. No. 1808); and

H. R. 6263. A bill to authorize the Secretary of Agriculture to convey certain lands in Alaska to the Rotary Club of Ketchikan, Alaska (Rept. No. 1809).

By Mr. ANDERSON, from the Committee on Agriculture and Forestry:

S. 3339. A bill to authorize the Farm Credit Administration to make loans of the type formerly made by the Land Bank Commissioner; with an amendment (Rept. No. 1807).

PRINTING OF ADDITIONAL COPIES OF SENATE REPORT NO. 1064, RELATING TO JUVENILE DELINQUENCY

Mr. JENNER, from the Committee on Rules and Administration, to which was referred the resolution (S. Res. 264), submitted by Mr. HENDRICKSON on June 22, 1954, reported it favorably, without amendment, and it was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on the Judiciary 2,500 additional copies of Senate Report No. 1064, 83d Congress, 2d session, entitled "Juvenile Delinquency."

FUNERAL EXPENSES OF THE LATE SENATOR HUGH BUTLER OF NEBRASKA

Mr. JENNER, from the Committee on Rules and Administration, to which was referred the resolution (S. Res. 275), submitted by Mrs. BOWRING on July 7, 1954, reported it favorably, without amendment, and it was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate the actual and necessary expenses incurred by the committee appointed to arrange for and attend the funeral of Hon. Hugh Butler, late

a Senator from the State of Nebraska, on vouchers approved by the Committee on Rules and Administration.

PRINTING OF ADDITIONAL COPIES OF SENATE REPORT NO. 1627, RELATING TO ACCESSIBILITY OF STRATEGIC AND CRITICAL MATERIALS

Mr. JENNER, from the Committee on Rules and Administration, to which was referred the resolution (S. Res. 277), submitted by Mr. MALONE on July 12, 1954, reported it favorably, without amendment, and it was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on Interior and Insular Affairs 3,000 additional copies of Senate Report No. 1627, 83d Congress, relative to accessibility of strategic and critical materials to the United States in time of war and for our expanding economy.

PRINTING OF ADDITIONAL COPIES OF THE SLIP LAW FOR THE INTERNAL REVENUE CODE OF 1954

Mr. JENNER, from the Committee on Rules and Administration, to which was referred the concurrent resolution (H. Con Res. 250), reported it favorably, without amendment, and it was considered and agreed to, as follows:

Resolved by the House of Representatives (the Senate concurring), That there be printed 12,590 additional copies of the slip law for the Internal Revenue Code of 1954, of which 2,475 copies shall be for the use of the Senate, 500 copies for the use of the Committee on Finance, 6,615 copies for the use of the House of Representatives, and 3,000 copies for the use of the Committee on Ways and Means.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, July 14, 1954, he presented to the President of the United States the following enrolled bills:

S. 1303. An act to provide for the expeditious naturalization of former citizens of the United States who have lost United States citizenship by voting in a political election or plebiscite held in occupied Japan;

S. 3378. An act to revise the Organic Act of the Virgin Islands of the United States; and

S. 3480. An act to amend section 24 of the Federal Reserve Act, as amended.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. FERGUSON:

S. 3743. A bill to provide for the recruitment and training of Foreign Service Officers; to the Committee on Foreign Relations.

(See the remarks of Mr. FERGUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE (for himself and Mr. MUNDT):

S. 3744. A bill to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake; to the Committee on Public Works.

(See the remarks of Mr. CASE when he introduced the above bill, which appear under a separate heading.)

By Mr. JENNER:

S. 3745. A bill to establish rules of interpretation governing questions of the effect of acts of Congress on State laws; to the Committee on the Judiciary.

(See the remarks of Mr. JENNER when he introduced the above bill, which appear under a separate heading.)

By Mr. LANGER:

S. 3746. A bill to authorize the employment in a civilian position in the Department of Justice of Maj. Gen. Frank H. Partridge, United States Army, retired, and for other purposes; to the Committee on the Judiciary.

By Mr. CASE:

S. 3747. A bill to provide for the acquisition by the United States of lands required for the reservoir to be created by the construction of the Fort Randall Dam on the Missouri River, and to provide for rehabilitation of the Sioux Indians of the Crow Creek Reservation in South Dakota; and

S. 3748. A bill to provide for the acquisition by the United States of lands required for the reservoir to be created by the construction of the Fort Randall Dam on the Missouri River, and to provide for rehabilitation of the Sioux Indians of the Lower Brule Indian Reservation in South Dakota; to the Committee on Interior and Insular Affairs.

By Mr. DOUGLAS:

S. 3749. A bill for the relief of Gong Poy, also known as Fred Gong; to the Committee on the Judiciary.

FOREIGN SERVICE SCHOLARSHIP TRAINING PROGRAM

Mr. FERGUSON. Mr. President, I introduce for appropriate reference a bill to provide for the recruitment and training of Foreign Service officers. I ask unanimous consent that the bill, together with a statement by me, and an article from the Washington Star of July 13, 1954, written by Gould Lincoln, entitled "Plan Would Strengthen Foreign Service Setup," be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill, statement, and article will be printed in the RECORD.

The bill (S. 3743) to provide for the recruitment and training of Foreign Service officers, introduced by Mr. FERGUSON, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That this act may be cited as the "Foreign Service Scholarship Training Program Act."

SEC. 2. The Congress hereby declares that the objectives of this act are to provide the Foreign Service with a more constant flow of qualified candidates for appointment, who shall be chosen from among the best young men and women America produces, who shall have been carefully trained for their future work, and who are representative citizens of the United States.

SEC. 3. A Foreign Service scholarship training program is hereby established, which shall be administered by the Secretary of State, in accordance with the provisions of this act.

SEC. 4. No person shall be enrolled in the scholarship training program unless he or she—

(a) has been a citizen of the United States for at least 8 years;

(b) has completed 2 years of scholastic work at an accredited college or university;

(c) has passed such examinations and aptitude tests as the Secretary of State may prescribe;

(d) will not be more than 27 years of age on July 1 of the calendar year in which he or she will have successfully completed the 2 years of scholarship training provided by this act; or

(e) has entered into a contractual arrangement with the Secretary of State, or his designated representative, acting for and on behalf of the United States, in which said individual agrees——

(1) to pursue his studies for the next 2 years under the supervision and guidance of the Secretary of State,

(2) upon completion of his college training, to accept appointment as a Foregin Service officer or Foreign Service Reserve officer, if offered, and

(3) having accepted such appointment, to serve continuously as a Foreign Service officer or Foreign Service Reserve officer for a period of at least 4 years, unless sooner released by the Secretary of State in accordance with the provisions of the Foreign Service Act of 1946.

In the event an individual is a minor, such contract shall be entered into only with the consent of his or her parent or legal guardian. The Secretary of State may release any individual from such contractual obligation and may separate the individual from the training program at any time that, in the opinion of the Secretary of State, the best interest of the Service requires such action.

SEC. 5. The Secretary of State is authorized to make a Federal grant-in-aid of not to exceed $900 per year to any person enrolled in the Foreign Service scholarship training program for the purposes of defraying expenses for each of 2 years at an accredited college or university of the trainee's choice, and in addition to pay necessary travel expenses in connection with examinations for entrance into the Foreign Service, provided that such person continues in status, and provided further that the individual consistently stands in the upper 25 percent of his class, except that the Secretary of State may, in his discretion, waive the provision with respect to a trainee's standing in his class.

SEC. 6. The Secretary of State shall, during the second quarter of the calendar year in which a participant in the training program expects to complete his or her scholastic training, cause to be examined the record of each participant who applies prior to April 1 of that year to take the examinations for appointment in the Foreign Service for the purpose of determining the applicants who appear suitable for appointment to the Foreign Service. Persons deemed suitable shall take such comprehensive examinations as may be prescribed by the board of examiners pursuant to section 516 of the Foreign Service Act of 1946 (60 Stat. 1008), and, if successful, shall be eligible for appointment as a Foreign Service officer, by the President, with the advice and consent of the Senate: *Provided*, That participants who have completed their training under this act may be given temporary appointments as Foreign Service Reserve officers, pending completion of the examination process and appointment as a Foreign Service officer if recommended.

SEC. 7. There shall be admitted each year to the Foreign Service scholarship training program 200 qualified trainees designated by the President, and 1 trainee for each Senator, Representative, Delegate in Congress, Resident Commissioner from Puerto Rico, and President of the Board of Commissioners of the District of Columbia. Each such Senator, Representative, Delegate, Resident Commissioner from Puerto Rico, and President of the Board of Commissioners may nominate annually 1 candidate and 1 first and 1 second alternate candidate. If the first

nominee fails to qualify, the appointment shall be given to the first alternate, if he qualifies, and if not to the second alternate, if he qualifies. In the event any of the above-named officials of the Government fail to nominate candidates or if their nominees and first and second alternates fail to qualify the President may designate candidates in lieu thereof, such designations to be in addition to the 200 hereinbefore authorized.

SEC. 8. The Secretary of State may prescribe rules and regulations to effectuate the purposes of this act.

SEC. 9. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this act.

The statement by Senator FERGUSON is as follows:

STATEMENT BY SENATOR FERGUSON TO ACCOMPANY PROPOSED LEGISLATION FOR ESTABLISHMENT OF A FOREIGN SERVICE SCHOLARSHIP TRAINING PROGRAM

In this era of the "cold war" the Foreign Service of the United States is in the front line of America's defense against Communist imperialism. Secretary Dulles has called the Foreign Service our first line of defense in time of peace. Its officers, staffing posts all over the globe, make up a relatively small force in view of the power and size of the great Nation it represents. Yet, this virtual handful of dedicated American men and women is charged with carrying out policies which may determine the welfare and security of our country for decades to come. Indeed, elementary wisdom would seem to dictate a most careful selection and training of the young people to whom we are to entrust such grave responsibilities.

The Congress in the past, through various legislative actions, has shown its concern for the calibre of our Foreign Service personnel. It has sought to promote a broadening of the base of recruitment so that capable Americans from all parts of our country, and regardless of financial status could be given an opportunity to serve in our diplomatic corps. The responsibility of Congress in this field has been recognized as going far beyond its functions of confirming nominations to the Service by the executive branch. It begins with the legislation which regulates the manner in which the Executive can draw upon the resources of talent, intelligence, and experience of the young people of our Nation.

Therefore, it is prudent in this time of international tensions to examine whether our present procedures of recruitment for the Foreign Service are adequate to the needs of the country.

Do they tend to produce a diplomatic service of the calibre and stature which the United States requires for its worldwide and growing responsibilities, interests and commitments?

Do they adequately attract candidates from all parts of the Nation so that the best representative sampling of America can be known by peoples abroad?

Do they provide an incentive for persons with the technical skills required in present day diplomacy?

Do they provide a place for the men with much talent but little money?

The answers to these and similar questions have been sought periodically either by the Congress or by committees of the executive branch. And these inquiries have produced valuable knowledge leading to improvements in the past in the direction and management of the Foreign Service.

The most recent of these studies was conducted by the Secretary of State's Public Committee on Personnel, under the able Chairmanship of Dr. Henry M. Wriston, president of Brown University. The Committee's report was just made public last month.

While the report is a comprehensive appraisal of the personnel operations of the State Department and the Foreign Service, I want to address myself here particularly to those findings and recommendations of the Committee which concern the problems of recruitment for the Foreign Service. I do so as chairman of the subcommittee on State Department organization of the Senate Foreign Relations Committee and because the execution of some of the most effective of these recommendations requires congressional action. Although it is now late in the session and much important work is still to be accomplished, I am bringing legislative proposals on this matter before the Senate at this time. I trust this will emphasize the urgency and importance which I attach to consideration of the problems of our diplomatic service.

Let me return for a moment to the questions I posed previously on the present state of recruitment for the Foreign Service. Does the system work as it should?

I refer you to the words of the Wriston committee report which maintains that, "As a mechanism for supplying the Foreign Service with a continuous and adequate inflow of junior officers * * * (the present system of recruitment) has proved time-consuming and increasingly defective."

The committee's report also states that the present examination system has produced an officer corps which "is not geographically representative, nor adequately reflective of the wide and essential variety of American life, nor sufficiently diversified in the technical skills required in present day diplomacy."

Nor does the present system promote the aim of the Congress as expressed by the framers of the Foreign Service Act of 1946, that recruitment should be on the basis of merit "regardless of the possession of private means." According to the Wriston committee, the present system is "an undue hardship upon those without such means."

Fortunately, the committee did not confine its activities to fact-finding alone. It is apparent from the report that its members brought to their task an exceptional degree of insight and imagination. The specific and forthright recommendations which they proposed should go far, when implemented, toward rectifying the faults and inadequacies of the present system of recruitment for the American diplomatic service.

One of these recommendations I consider particularly noteworthy as an example of a fresh approach to an old problem. I propose to introduce legislation herewith to give it effect. That is the recommendation for the establishment of a Foreign Service scholarship training program. It is, as the committee says, "a fundamentally new method of recruitment, designed to provide the Foreign Service with a more constant flow of qualified candidates representing the different segments of American life."

Let me outline for you briefly the main provisions of this proposed recruitment device which is intended to supplement and encourage—but not altogether supplant—the present methods of entrance into the Service through examinations.

Essentially, the Foreign Service scholarship training program would be based on the idea of the Navy's Reserve Officer Training Corps contract system, a recruitment method tested and proven highly successful. It would be administered throughout the States and Territories by the Secretary of State through the agency of the Foreign Service Institute, which, according to other recommendations of the committee, would also be enhanced and strengthened.

Candidates for the scholarships would be chosen from all the States of the Union, the Territories, and the District of Columbia on the basis of examinations prescribed by the Secretary of State.

Candidates who qualify would be enlisted into a 2-year training program at the end of their sophomore year of college, and would be offered a Federal grant of $900 a year to permit them to complete their studies at an accredited institution of higher learning of their own choice. To remain eligible for the second year of the scholarship program they would have to maintain their standing in the upper 25 percent of their class. Appointees to the scholarships would also agree to serve in the Foreign Service, if finally eligible for appointment to it, for a period of at least 4 years.

Appointment to the Foreign Service Officer Corps itself would—as at present—be on the basis of competitive examination. These examinations, which would remain open as well to candidates who had not participated in the scholarship program—would be held under State Department auspices in the various States and Territories—thereby equalizing their availability to candidates regardless of their proximity to Washington or their financial means. It is expected that during the first year the total cost of the scholarship program would amount to about $1 million, and would eventually reach about $2 million a year, a small price indeed for a program that will go so far toward developing the finest kind of Foreign Service.

Another provision of the legislation which I will propose, and one also based partly on experience with officer recruitment for our armed services, is that following appropriate examination approximately two-thirds of the appointments to the scholarship training program would be made by Members of Congress, and the remainder by the President of the United States.

Some apprehension may be felt that the choice of candidates to the proposed training program might be influenced by political considerations with a consequent bias introduced into the future officer corps. I am confident, in the light of our experience with appointments to West Point and Annapolis, that we should discount such fears and not permit them to dissuade us from taking this progressive step in Foreign Service recruiting.

On the contrary, I foresee many decided advantages to be derived from this method of appointment. Let me say first, that I have been informed that the President and the Secretary of State welcome the more active participation and interest of the Congress in this matter. The executive branch sees therein a means to aid in promoting greater cooperation between the two branches of government on matters concerning our diplomatic establishment. It foresees also increased public confidence and a closer feeling on the part of the public of identification with the Foreign Service, as well as increased interest in its activities. I might add here that in its report the Wriston committee made the strongest recommendations that whatever the method, the aim of a reformed recruitment program should be a Foreign Service reflecting national characteristics, with its roots among all the people. I can conceive of no other method so well designed to achieve this objective as the Foreign Service scholarship program, which will reach into every corner of our country and draw on the best available young men and women to serve our Nation in diplomatic posts abroad.

Under the proposed program a happy balance can be struck in the training of our future statesmen since the Department of State will be able to help in directing the course of study without sacrificing the welcome diversity of background provided by our colleges and universities in all parts of the country. Also, new candidates for the Foreign Service, while benefiting from a somewhat more specialized training in foreign affairs under this program, would not lose the advantages of the first 2 years of general academic training.

It should be recognized that if this program is put into effect the general character

of the Foreign Service will be more truly representative of the United States than ever before. Its members to a great extent will be drawn from among candidates who, in the best judgment of their Senator or Congressman, are capable, patriotic, and loyal Americans. This factor of selectivity will continue to operate during the 2-year scholarship period, so that candidates who might prove undesirable—for one reason or another—may be weeded out early in the recruitment process. These provisions should do much toward increasing public confidence in our Foreign Service, and toward guaranteeing the genuinely American character of its personnel.

The time when the United States could afford an elite in the diplomatic service based on wealth or family prestige is long since past. The Foreign Service represents all Americans and it should be representative of us all. We cannot effectively preach our message of democracy abroad unless we practice democracy to the greatest extent in our foreign representation. The State Department recognizes this. The Congress recognizes it. We now have at hand the means for taking this large step in the right direction. I urge the Senate to give this proposal its most careful consideration.

The article referred to is as follows:

[From the Washington Evening Star of July 13, 1954]

PLAN WOULD STRENGTHEN FOREIGN SERVICE SETUP—RECRUITMENT, PROMOTION CHANGES ASKED BY DULLES

(By Gould Lincoln)

Nothing today is of greater importance to the United States and the peace of the world than a dynamic and firm foreign policy and its administration. With this in mind, the State Department, under the direction of Secretary Dulles, is pressing a program to strengthen the Foreign Service through the recruitment of qualified Foreign Service personnel and through better training for service in the higher grades. The program, which grows out of the Secretary of State's Public Committee on Personnel, headed by Henry M. Wriston, president of Brown University, will require certain legislation and a modest appropriation by Congress.

Two fundamental proposals of the program are (1) to integrate the personnel of the Department of State—the so-called civil-service officers—and of the Foreign Service, where their official functions converge, into a single administration system, and (2) to improve and broaden recruitment methods through the institution of a Foreign Service scholarship training program.

What the State Department desires of the Congress at its present session, and which with sympathetic and understanding study by Congress and its committees could be accomplished before adjournment, is the first item of the program. At present the civil-service personnel of the Department is in one watertight compartment, with its own system and procedures for recruitment, training, placement, promotion, and separation.

CORPS IS SMALL

The Foreign Service is in another watertight compartment. The departmental service (civil service) is not committed to Foreign Service at all. The Foreign Service Officer Corps is small—only 1,285 officers. These careerists in diplomacy man the 68 embassies, 9 legations, and 167 consulates which the United States maintains in 105 countries. Only about 119 Foreign Service officers are on duty in Washington and only 2 percent of the home desks are occupied by them. The Department desires authority to use the civil-service officers in the Foreign Service posts without loss in pay. Under the Foreign Service Act of 1946, it is possible to move a civil-service officer to the Foreign Service, if he is willing, but the transferee must take the lowest pay of the class to which he is assigned. This might result—and in most cases would—in forcing him to accept a reduced salary. An estimate has been made that the small sum of $130,000 would cover the discrepancies in pay which would arise if the program now recommended were put into effect. Because retirement pay is higher for the Foreign Service, eventually further appropriation would be necessary.

The statistics of overseas service by the Foreign Service officers reveal a startling and unfortunate situation. Many of these officers are kept outside of the United States for many years, with no opportunity to learn at first hand the facts of life in America.

For example, of 197 officers with more than 20 years' service, 45 have not had more than 2 years of their service in the United States on assignment. One of these officers, with 29 years' service, has spent a total of only 8 months on home duty. Two others, with 31 years' service or more, have each had only 2½ years' home service, and there is a chief of mission with 43 years' service who has spent only a total of 13 months on assignment in the United States. The proposed change, by which it would be feasible to use competent men in the departmental service in foreign missions, would make it possible to correct this to a great degree. The Department would like to see every Foreign Service officer on home assignment at least every 6 years.

IMPROVEMENT SOUGHT

The Department is particularly anxious to improve its recruitment system of men coming into the Foreign Service. The long-range recommendation for this, which will require legislation and which the Department believes should be enacted when Congress meets again next winter, calls for the establishment of the Foreign Service scholarship training program, patterned after the Navy's contract system for its Reserve Officer Training Corps. The idea is to enlist promising candidates for the Foreign Service into a 2-year training program at the end of the sophomore year of college. Appointment to Foreign Service scholarships would be on the basis of competitive examinations, given in the various States and Territories. Successful candidates would receive $900 a year grants to complete their education at an accredited college of their choice. On their side, the candidates would agree to complete their education under the guidance of the Foreign Service Institute, and to serve at least 6 years in the Foreign Service. Such a system would bring about a Foreign Service reflecting national characteristics, with its roots among all the people.

The morale of the Foreign Service and the State Department is on the up and up, now that a re-examination of the entire organization under the new security regulations is nearly completed and there is hope that an improved system of administration of the services is to be put into effect. The needs of the country cry for prompt action on this program, which has been carefully developed, which will aid the Foreign Service, and which will cost comparatively little.

CHANGE OF THE NAME OF GAVINS POINT RESERVOIR TO LEWIS AND CLARK LAKE

Mr. CASE. Mr. President, on behalf of myself and my colleague, the senior Senator from South Dakota [Mr. MUNDT], I introduce for appropriate reference a bill to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake. I ask unanimous consent that a statement by me relating to the bill be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 3744) to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake, introduced by Mr. CASE (for himself and Mr. MUNDT), was received, read twice by its title, and referred to the Committee on Public Works.

The statement by Senator CASE is as follows:

STATEMENT BY SENATOR CASE

Members of the South Dakota congressional delegation today join in introducing legislation to give the name of Lewis and Clark Lake to the new reservoir which is to be created by the dam being built on the Missouri River near Yankton, S. Dak., and heretofore known as Gavins Point.

I am introducing the bill in the Senate in behalf of the senior Senator from South Dakota [Mr. MUNDT] and myself, and in the House it is presented by Representative HAROLD O. LOVRE. Representative E. Y. BERRY has earlier introduced a bill to give the name to both reservoir and dam, but the new bill uses the word "lake" instead of "reservoir," and does not disturb the name of the dam.

The new Lewis and Clark Lake has been described by the division engineer of the Missouri River Division Corps of Engineers, Gen. W. E. Potter, of Omaha, as the finest for recreational purposes" of any created by a structure built by the Army engineers within his knowledge.

This is due, General Potter testified at a Senate appropriations hearing last spring, to the fact that the body of water will have a constant shoreline. Its level will be maintained by the inflow of water from the chain of giant lakes on the Missouri River upstream for which it will serve as a regulator of downstream flows of the Missouri River.

This Lewis and Clark Lake thus will be full at all times and will constitute a body of water 37 miles long and from 2 to 3 miles wide covering 33,000 acres of land. Heavy natural growths of oak and cottonwood trees and both level and rugged topography will provide approximately 100 miles of attractive shoreline and beaches.

The decision to formally propose the name "Lewis and Clark Lake" stems from a recommendation made by a committee of the interested citizens at Yankton, headed by Clayton Christopherson and editorially supported by Fred Monfore of the Yankton Press and Dakotan.

The proposal has met with wide public acceptance as evidenced by letters pouring into congressional offices and by editorials in various newspapers. An editorial by Robert Lack, of the Daily Plainsman of Huron, S. Dak., noted that a name should have wide historical interest.

In connection with the use of the name of Lewis and Clark for this lake, it has been pointed out that this lake near Yankton will be the one farthest downstream in the chain of great lakes on the Missouri and nearest to the point of departure when Lewis and Clark started on their special exploration of the Louisiana Purchase in 1804, just 150 years ago this summer.

RULES OF INTERPRETATION GOVERNING QUESTIONS OF EFFECT OF ACTS OF CONGRESS ON STATE LAWS

Mr. JENNER. Mr. President, I introduce for appropriate reference a bill to establish rules of interpretation governing questions of the effect of acts of Congress on State laws. I ask unan-

imous consent that a statement by me be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 3745) to establish rules of interpretation governing questions of the effect of acts of Congress on State laws, introduced by Mr. JENNER, was received, read twice by its title, and referred to the Committee on the Judiciary.

The statement by Senator JENNER is as follows:

STATEMENT BY SENATOR JENNER

I am today introducing a bill (S. 3745) designed to guide the Federal courts in resolving conflicts between Federal and State laws.

The purpose of my bill is to reverse the current expansion of the doctrine of Federal preemption; an expansion which has reached such unreasonable proportions that there are few, if any, State laws of any importance which are not of questionable validity today.

ANTISEDITION LAWS

My interest in this problem was aroused in connection with our efforts to combat internal communism.

Forty-seven of the forty-eight States have antisedition laws. While these State statutes are of varying degrees of effectiveness, taken as a whole, they add considerable strength to the overall effort to wipe out subversion within our borders.

All of these State laws are now in jeopardy. A decision of the Pennsylvania Supreme Court in *Commonwealth* v. *Nelson* holds that the doctrine of Federal preemption applied, and that since Congress entered the field of regulating internal subversion, the Pennsylvania Sedition Act was no longer valid.

The Federal law cited as occupying the field was enacted in 1940, and is popularly known as the Smith Act.

As a direct result of this decision, the dissenting justices of the Pennsylvania Supreme Court requested the author of the Smith Act of 1940, Representative HOWARD W. SMITH, of Virginia, to correct the situation by legislation. Judge SMITH, denying any intent on the part of Congress to invalidate State antisedition laws, immediately had the Legislative Reference Service draft H. R. 8211, which he then introduced. The bill I am introducing today is identical with the Smith bill.

The measure itself amends no existing law. It states simply that no act of Congress shall be construed to preempt or otherwise invalidate State laws on the same subject unless the Federal act contains an express provision to that effect. Second, where there is a conflict between Federal and State laws, the State law is to be construed as valid unless obedience to the State law would constitute disobedience to the Federal.

Neither Judge SMITH nor myself has any pride of authorship in the particular words selected by the Legislative Reference Service. If any Senator feels he can improve this language to accomplish the same objectives stated above, I will welcome such suggestions.

EFFECT ON OTHER LAWS

The effect of the bill is not limited to antisedition laws.

In the area of State health regulations, for example, a State law providing for the inspection of butter was held invalid in *Cloverleaf* v. *Patterson* (315 U. S. 148). The dissent in this case pointed out that if the Congress had desired to wipe out State health regulations, it could easily have said so in the Federal statute.

In the field of State police power exercised in regulating labor-management disputes we find the same preemption doctrine in the Garner decision of last December. In this case a State was held without authority to prevent a strike for an objective directly prohibited by both Federal and State laws.

TEXT OF BILL

"A bill to establish rules of interpretation governing questions of the effect of acts of Congress on State laws

"Be it enacted, etc., That no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect. No act of Congress shall be construed as invalidating a provision of State law which would be valid in the absence of such act, unless there is a direct and positive conflict between such act and such provision, so that the two cannot be reconciled or consistently stand together."

STUDY OF PRESIDENT'S HIGHWAY PROGRAM BY COMMISSIONER OF PUBLIC ROADS

Mr. BURKE submitted the following resolution (S. Res. 278), which was referred to the Committee on Public Works:

Resolved, That the Commissioner of Public Roads, under direction of the Secretary of Commerce, is requested (1) to make a comprehensive study of the recommendations of the President relating to the planning, construction, and financing of a 10-year $50 billion highway program, outlined in the address of the Vice President to the Governors Conference at Lake George, N. Y., on July 12, 1954, and (2) to make available to the Senate at the beginning of the first session of the 84th Congress the results of such study.

AMENDMENT OF ATOMIC ENERGY ACT OF 1946—AMENDMENTS

Mr. HICKENLOOPER submitted amendments intended to be proposed by him to the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes, which were ordered to lie on the table and to be printed.

Mr. ANDERSON submitted an amendment intended to be proposed by him to Senate bill 3690, supra, which was ordered to lie on the table and to be printed.

BASTILLE DAY

Mr. LEHMAN. Mr. President, today is Bastille Day, which is celebrated in France and throughout the world by people of French descent and by all who love the ideals of freedom. Bastille Day is a universal holiday, as the ideals of the French Revolution are universal ideals.

I ask unanimous consent that a statement I have prepared in appreciation of the ideals and the observance of Bastille Day be printed at this point in the body of the RECORD, as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LEHMAN ON THE ANNIVERSARY OF BASTILLE DAY, JULY 14, 1954

Today marks the anniversay of the storming of the Bastille during the French Revolution and of the adoption of the French tricolor as the national flag of the French Republic. These symbols and dates are celebrated by Frenchmen everywhere as we celebrate our Fourth of July and the American Declaration of Independence.

We in the United States have a feeling of common affection for these symbols as we do for the ideals of liberty and fraternity which inspired the French Revolution in 1789. These bonds have grown over the years as the people of the United States and of France have stood side by side on the battlefield and at the conference table in the never-ending struggle to create a peaceful world in which all peoples can live together in freedom and brotherhood.

I am convinced that in the historic struggle for men's minds and lives which now engages the free nations of the world the destinies of France and the United States are inexorably entwined. This hour in world history calls for the utmost in understanding and comprehension of the problems facing both France and the United States.

The hopes and prayers of the American people go out to the people of France in these days. Let us hope that the present conferences between Secretary of State Dulles and the Premier of France will lead to a constructive and unified plan of honorable action which the peoples of both our countries can and will support with all their hearts.

Mr. HUMPHREY. Mr. President, as today, July 14, is Bastille Day, I ask unanimous consent to have printed at this point in the RECORD a statement prepared by me in honor of the occasion.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY ON THE OCCASION OF BASTILLE DAY, JULY 14, 1954

Today is the Fete Nationale of the French people, the celebration of the commencement of the French Revolution which led to the foundation of the first Republic and the establishment of the social and individual rights of that great people. The occasion is perhaps better known throughout the world as Bastille Day.

One hundred and sixty-five years ago today the citizens of Paris rose up in unappeasable wrath to destroy the hated prison, the Bastille, which symbolized for them the essence of the tyranny which they had so long borne. They spoke not only for the whole of the French nation but for all humanity which then suffered under the despotic rule of the ancient regime. The storming of Bastille was the death knell of absolute monarchy throughout Europe. However long it took and whatever the setbacks, thereafter the cause of human freedom marched steadily across the face of that continent, toppling the system of rule by royal prerogative and establishing self-government in its place.

There was, as we know, a close historical and spiritual relationship between the American and French Revolutions. The uncompromising advocacy of human liberty by the great French philosophers, Voltaire and Rousseau, did much to inspire our Founding Fathers, and the sympathetic aid of the French Government provided much of the material wherewithal for the success of our Revolution. Ironically for that Government, it was that very success which in large measure gave hope and decision to the French nation's desire for individual liberty and self-government. Indeed, if the blow we struck in 1776 staggered the principle of absolute monarchy, it may fairly be said that the storming of the Bastille on July 14, 1789, sent it reeling to ultimate and complete defeat. The French Declaration of the

Right of Man is known and revered throughout the free world, along with our Declaration of Independence, as one of mankind's great clarion calls for the full measure of human dignity.

We need hardly say more. This is a festival day in France and a symbolic occasion for the free world. In extending our greetings to the French nation today, we also replenish our awareness of the principles of human freedom.

INVENTIONS FOR NATIONAL DEFENSE — LETTER FROM ENGINEERS JOINT COUNCIL

Mr. WILEY. Mr. President, I have previously commented on the very important issue of encouraging American inventive technology. One of the crucial aspects of this problem is the availability of sufficient reservoirs of trained manpower, engineers, and scientists, in laboratories and installations, capable of making the fullest contribution to United States defense.

For a number of years I have noted what many observers and I feel to be a rather shortsighted policy of our Government in failing to use scientists and engineers where they could prove of maximum service to Uncle Sam, rather than drafting them, willy-nilly, and failing to utilize their specialized talents.

In this connection, I have received an important letter from T. H. Chilton, chairman of the Engineering Manpower Commission, of the Engineers Joint Council, who commented on my recent remarks in the Senate on United States inventions. I present Mr. Chilton's letter, and ask unanimous consent that it be printed at this point in the body of the RECORD, to be preceded by a list of the constituent societies of the Engineers Joint Council.

There being no objection, the letter and list of constituent societies were ordered to be printed in the RECORD, as follows:

(Constituent societies: American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers, American Water Works Association, American Institute of Electrical Engineers, the Society of Naval Architects and Marine Engineers, American Society for Engineering Education, American Institute of Chemical Engineers.)

ENGINEERS JOINT COUNCIL,
New York, N. Y., July 2, 1954.

Senator ALEXANDER WILEY,
United States Senate,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: It was most interesting and quite encouraging to read in the CONGRESSIONAL RECORD of June 24 your remarks which appeared under the heading "The Importance of Inventions for National Defense." I was particularly pleased to note your cognizance of the increasing tempo and improving quality of Soviet engineering and science and your realization that the free world must keep ahead as far as we can. It is indeed true that "To do this we must have sufficient reservoirs of well-utilized technicians, scientists, engineers, so that we do not lose out in the life-and-death race."

It is most reassuring to realize that within the Senate of the United States there is recognition of the fact that as of now we are probably losing ground to our major potential adversary in this most vital field. I am sure you will appreciate the information that a great contributory cause of this loss is that at the very time when we, as a badly outnumbered Nation, must, as you point out, be sure to make the most of what we have, we are being forced to dissipate our limited manpower resources in science and engineering by a military manpower policy that is fantastically shortsighted when measured against the realities of the world in which we live.

The Engineering Manpower Commission of Engineers Joint Council, of which I am chairman, has watched, for 4 years, the gradual development and implementation in Selective Service and in the Department of Defense of the concept of Universal Military Service. It is this concept and the practical policies that have flowed from its application that is threatening our entire graduate student program, taking many hundreds of engineers and scientists from the laboratories and installations that produce modern weapons and, in general, is enforcing a level of mediocrity of performance which is making it increasingly difficult for our technological manpower to make its highest contribution to the national well-being.

Hopefully, it is becoming increasingly evident that concern about this problem is not confined to professional groups. The New York Times indicated this in an editorial on June 28 when it said: "The survival of this country depends in great part upon how well we do in the unceasing technological competition with the Soviet Union and its allies. Only a week ago an Assistant Secretary of Defense warned us gravely that our technological edge is being reduced seriously. In this situation can there be a more inexcusable waste of resources than to subject a brilliant young scientist or engineer to military duty unrelated to the technological defense of this country? The concept of equality of sacrifice must yield to the basic security needs of our Nation."

In March of this year, Senator FLANDERS introduced Senate bill S. 3068, "A bill to amend the Universal Military Training and Service Act, as amended, relative to the process of selection, and for other purposes." The purpose of this bill is to reemphasize the need for selectivity which Congress expressed in the Universal Military Training and Service Act of 1951. We are advised that there will not be an opportunity for hearings on this bill during this session. May we recommend, however, your further study of this aspect of our national defense pending its discussion during the first session of the 84th Congress.

Sincerely yours,

T. H. CHILTON,
Chairman, Engineering Manpower Commission.

SOVEREIGNTY OF THE FEDERAL REPUBLIC OF GERMANY

Mr. WILEY. Mr. President, I received a letter yesterday from the Secretary of State relating to the German question.

For some years I have urged that proper action be taken to bring the Federal Republic of Germany back into the family of nations as rapidly as possible, so that it can make its contribution to the common defense of the free world.

Of course, I am still hopeful that the French Assembly, under the leadership of the Mendes-France Government, will approve the participation of France in the European Defense Community agreement. If that is not done, I think the course of action suggested by Secretary Dulles is a wise one. In all fairness to the German people, we should not delay any longer.

The sovereignty of the Federal Republic of Germany should be restored so that it can cooperate fully, as an equal partner, with other free nations in building our joint defenses against the Communist threat.

I ask unanimous consent that the letter of the Secretary of State and the statement issued by the President and Prime Minister Churchill after their recent conferences in Washington be printed in the RECORD following my remarks.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

JULY 12, 1954.

The Honorable ALEXANDER WILEY,
Chairman, Committee on
Foreign Relations,
United States Senate.

DEAR MR. CHAIRMAN: For over 2 years it has been the policy of the United States, Great Britain, and France to improve the international status of the Federal Republic and to enable the Germans to make their proper contribution to the common defense of the free world. These objectives were to be accomplished by certain agreements with which you are already familiar. The conventions signed at Bonn on May 26, 1952 (the Convention on Relations Between the Three Powers and the Federal Republic of Germany and the Related Conventions) would terminate the occupation regime and establish sovereign equality for the Federal Republic (subject only to certain rights retained by the occupying powers because of the division of Germany and the presence of Soviet forces there). At the same time, the Treaty on the Establishment of the European Defense Community, signed at Paris on May 27, 1952, would bring into being an international body through which the Federal Republic could make an effective defense contribution without creating a national military establishment for that purpose.

The conventions and the treaty are connected by a provision in the conventions that they will become effective upon the entry into force of the treaty. However, since the French Government has not ratified the conventions and neither it nor the Italian Government has ratified the treaty, none of the agreements has yet entered into force. There is still an opportunity for the French Assembly to approve the treaty (which is the principal source of difficulty to the French) before the close of its session this summer, now scheduled for August 15 or thereabouts, and, if it should do this, I believe that further necessary action would follow and the agreements would all become effective without too great an additional delay. It is my earnest hope that events will take this course and the administration is doing all it can to bring this about.

On the other hand, we must be prepared for the situation that would arise if the French Assembly should reject the treaty or adjourn without having voted on it. I know you fully appreciate what serious consequences any further delay in the application of these agreements might have. A continued denial of sovereignty for the Federal Republic would bring a risk of political developments within that country which could cause apprehension to other nations as well, while a continued failure to include the Federal Republic in the common-defense arrangements would prolong the danger to Germany and to the free world as a whole.

Because of these possibilities, the question of what measures should be taken with respect to the Federal Republic in the event of failure to ratify the present agreements has been the subject of urgent attention. It was discussed during Prime Minister

Churchill's recent visit and has been further considered during the past week in London by representatives of the Department and the British Foreign Office. As a result of these talks, it has been recommended on both sides that, if the French Assembly adjourns without taking action on the European Defense Community Treaty, the French Government should, as a first step, be asked to join with the United States, the United Kingdom, and the Federal Republic in bringing the Bonn Conventions into force in the absence of the treaty. If the four parties will consent to this move, it could be accomplished by agreement among them in the relatively near future, and the Federal Republic would acquire the status it has been expecting for more than 2 years. Provision would also be made that German financial support of the Allied forces in Germany would continue and that German rearmament would be deferred for the time being. This would afford an opportunity to complete arrangements for a German defense contribution.

This course should make possible an important measure of realization of what we have been trying to achieve in the Federal Republic of Germany. The British Parliament and the French Government are to be informed of these intentions within the next day or two.

I am sending a similar letter to the chairman of the House Foreign Affairs Committee. There is enclosed, for your convenience, a copy of the statement on this subject issued by the President and Prime Minister Churchill at the conclusion of their recent talks in Washington.

Sincerely yours,

JOHN FOSTER DULLES.

THE WHITE HOUSE STATEMENT

At the end of their meetings today, the President and the Prime Minister issued the following statement:

"In these few days of friendly and fruitful conversations, we have considered various subjects of mutual and world interest.

"I

"Western Europe

"We are agreed that the German Federal Republic should take its place as an equal partner in the community of western nations, where it can make its proper contribution to the defense of the free world. We are determined to achieve this goal, convinced that the Bonn and Paris treaties provide the best way. We welcome the recent statement by the French Prime Minister that an end must be put to the present uncertainties.

"The European Defense Community Treaty has been ratified by four of the six signatory nations, after exhaustive debates over a period of more than 2 years. Naturally, these nations are unwilling to disregard their previous legislative approvals or to reopen these complex questions.

"In connection with these treaties, the United States and the United Kingdom have given important assurances, including the disposition of their armed forces in Europe, in order to demonstrate their confidence in the North Atlantic Community and in the EDC and the Bonn treaties.

"It is our conviction that further delay in the entry into force of the EDC and Bonn treaties would damage the solidarity of the Atlantic nations.

"We wish to reaffirm that the program for European unity inspired by France, of which the EDC is only one element, so promising to peace and prosperity in Europe, continues to have our firm support.

"II

"Southeast Asia

"We discussed southeast Asia and, in particular, examined the situation which would arise from the conclusion of an agreement on Indochina. We also considered the situation which would follow from failure to reach such an agreement.

"We will press forward with plans for collective defense to meet either eventuality.

"We are both convinced that if at Geneva the French Government is confronted with demands which prevent an acceptable agreement regarding Indochina, the international situation will be seriously aggravated.

"III

"Atomic matters

"We also discussed technical cooperation on atomic energy. We agreed that both our countries would benefit from such cooperation to the fullest extent allowed by United States legislation.

"IV

"In addition to these specific matters, we discussed the basic principles underlying the policy of our two countries. An agreed declaration setting forth certain of these will be made available tomorrow."

The VICE PRESIDENT. Is there further morning business? If not, morning business is closed.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. PASTORE. Mr. President, I offer an amendment to Senate bill 3690, which I ask to have printed and lie on the table.

I ask unanimous consent also to have the amendment printed in the body of the RECORD, and that immediately following the amendment there be printed also my separate views on international activities.

The VICE PRESIDENT. The amendment will be received and printed, and lie on the table.

Without objection, the amendment and the separate views will be printed in the RECORD.

There being no objection, the amendment and the separate views on international activities were ordered to be printed in the RECORD, as follows:

On page 53, line 17, to strike out section 124.

On page 6, line 1, after the word "nation", to insert "group of nations."

On page 29, line 11, after the word "nation", to insert "or group of nations."

On page 29, line 14, after the word "nation", to insert "or group of nations."

On page 34, line 12, after the word "nation", to insert "or group of nations."

On page 34, line 14, after the word "nation", to insert "or group of nations."

On page 40, line 6, after the word "nation", to insert "or group of nations."

On page 40, line 8, after the word "nation", to insert "or group of nations."

On page 52, line 7, after the word "nation", to insert "or group of nations."

On page 57, line 10, after the word "nation", to insert "or group of nations."

On page 57, line 11, after the word "nation", to insert "or group of nations."

SEPARATE VIEWS ON INTERNATIONAL ACTIVITIES

I have been impressed by the spirit of patriotic unselfishness and the display of bipartisanship demonstrated by the committee and its staff through the long days spent in preparation of this bill.

The atomic energy program is both highly technical and complex. The framers of this law had to examine and understand the past and present complexities of nuclear energy activities and try somehow to predict the future. Issues arose which went to the very roots of individual political and economical philosophies, and yet these were resolved by the members of the committee in a spirit of compromise and good will which is the very essence of our democratic legislative process. The difficult questions of compulsory licensing of patents, of antitrust provisions, and of licensing and regulatory provisions were settled in this fashion.

I am frank to state that several portions of this bill do not have my unqualified endorsement, but I am compelled to join the majority in its favorable report on S. 3690 because, on balance, the compromises reached have been for the greater good, and I can accept—as should any reasonable man in a position of responsibility—something less than what I think is perfect in each of its parts if the whole structure is worthwhile. But to compromise on anything of deep principle is personally and morally repugnant to me. Therefore, in all conscience, I must append a statement of my views on the all-important matter of international cooperation.

I urge that section 124 of the bill be struck, and that the words "group of nations" be inserted in sections 11b, 54, 57, 64, 82, 103, 104, and 144 to make those sections read as in the committee print of May 21, 1954.

I have not taken this position lightly; I take it because I believe the very existence of our civilization depends on our finding some way to end safely the mounting atomic and hydrogen armaments race which bodes to annihilate man and all his works. To my mind, the key to finding such a solution lies in the hearts of men of good will everywhere; it is a solemn duty for us, the most powerful Nation on earth, to seize the initiative in bringing about a renascence of the cooperative spirit of common humanity that is needed to solve the basic causes of war—want, hunger, poverty, and disease. President Eisenhower gave voice to these thoughts when he addressed the United Nations General Assembly last December. There he boldly outlined a plan to bring the great benefits of atomic energy to mankind everywhere. To my mind, in this address the President did what we must now do—he rose to meet the basic problem head on. His proposal gave heart to all.

In testimony before the joint committee on June 3, 1954, the Secretary of State, Mr. John Foster Dulles, made some highly important comments on the subject of international arrangements for the sharing of atomic knowledge:

* * * * * *

"As I see it, a main purpose of the proposed legislation is to do just that—'to increase our emphasis on the peaceful uses of atomic power at home and abroad.'

* * * * * *

"We cannot any longer adhere to the theory that knowledge, because it is capable of use for destruction, must be denied for uses of construction.

* * * * * *

"By amending the Atomic Energy Act now as proposed, we will be laying some of the groundwork for a future era of peace when atomic energy inevitably will be doing constructive work in the world.

* * * * * *

"Three circumstances, (1) the developing Soviet program, (2) our dependence on foreign uranium, and (3) legitimate hopes for nuclear power abroad, combine to create the need to amend the international cooperation provisions of the Atomic Energy Act of 1946.

* * * * * *

"Other countries are making progress in atomic power technology. There is a growing tendency for certain raw materials supplying nations which are not industrially

well advanced to turn to such other countries for nuclear power information because they have been disappointed by our inability to give them significant help. It is clear to me that if this trend continues the interests of the United States will be seriously and detrimentally affected. There is no need here to emphasize how important it is for us to stay ahead of the U. S. S. R. in providing knowledge of how to put atomic energy to peaceful uses.

"In extending abroad, under proper security safeguards, the evolving technology of atomic energy for peaceful purposes, we shall tighten the bonds that tie our friends abroad to us, we shall assure material resources that we need, and we shall maintain world leadership in atomic energy—leadership which today is such a large element of our national prestige.

* * * * *

"In modernizing our atomic-energy law I feel that we will be taking three steps in the direction of peace: First, we will be increasing the deterrent factor represented by our weapons stockpile by the provisions we have requested permitting us to integrate certain tactical weapons information into our foreign military planning. Second, by being able to give our friends abroad atomic energy information and material, we shall be strengthening our capacity to build the raw material base on which our entire atomic energy program rests; and, third, we will be strengthening the ties which unite the free nations by a sense of fellowship.

* * * * *

"Perhaps most significant of all, however, are the hundreds of millions of people in the world who, having heard of the promise of atomic energy, wait eagerly to see if there are benefits in it for them in addition to the military shield which has held off the aggressive forces of Soviet communism for almost a decade. The military atom is a fearsome thing, even to those who owe their liberties to it. The constructive uses of atomic energy could promote both peace and plenty, and so holds a special place in man's dream of the future.

"The bills which your Committee is considering need to be enacted if our Nation is to serve its own interests and at the same time to show the world anew that our national interests harmonize with the interests of men everywhere."

* * * * *

I believe the Secretary of State clearly and forcibly pointed out that the provisions of the bill which are most important to our very survival are those that treat with international cooperation. I share that view.

I also believe that the development of atomic power in this country is important. Coming from an area of the United States which has high power costs and no foreseeable way of reducing these costs except by the speedy development of this new, primordial source of energy—I believe I am as aware as any man of the responsibilities of this Congress to provide fully for the fastest development of atomic energy for peacetime uses in this country.

The United States Government has expended many billions of dollars in the development of its atomic program. While the primary purpose of this was the creation of armaments, there were secondary discoveries and advancements of importance in the peacetime uses of nuclear power. Despite this activity, the field of peacetime development is still embryonic. To hasten advancement in this art, it is being proposed to Congress that the private business community of the United States be allowed to share in the opportunities of developing useful applications of what has been but barely touched on in our Government monopoly of the field. In this we can say that the greater good is in making available to the people of the United States at the earliest moment the fruits of such combined Government and private development. We can hardly say that permitting friendly nations to collectively share in some small part of our knowledge for the purpose of the peace and good of all mankind is not equally advantageous.

Our responsibilities transcend our national borders. We have developed materials, knowledge, and techniques which, if exploited fully for the benefit of all mankind, will redound not only to our international credit, but more importantly to the establishment of peace and prosperity in all portions of the globe. We are not alone in this race for atomic-power development. Twenty nations, as the majority report points out, are embarked upon atomic-development programs. Nor the least of these programs is that of the Soviet Union which now stands second in world effort on the searching out of the atom's secrets. Coupled with this is the fact that we and the free world are joined against the Soviet Union in a competition for the minds and souls of men. This competition will not be won by words, but by deeds. Consider the effect on the downtrodden of Asia, for example, if the Soviet Union should seize the initiative in bringing to these power-starved nations the great benefits of atomic energy. I say on that day we shall have lost the battle.

It is argued that our national security is in greater jeopardy if we deal with a "group of nations" as against dealing with one nation at a time, in transmitting information on peacetime developments of atomic energy. I find it very difficult to reconcile this distinction and I would further point out that this is not so, for the information with which we are here concerned is of a low degree of sensitivity and is far removed from the area of information on atomic weapons and atomic production that we must carefully circumscribe.

It is argued by the majority that S. 3690 offers, in section 124, a possible mechanism for the President to employ in bringing to reality his great plan for spreading atomic blessings to all. I maintain that the bill as presented does little more than restate the powers he already has under the Constitution and existing law. It is no more than an indication—and a half-hearted indication at that—of congressional encouragement. It is, to my mind, inadequate and I urge favorable consideration to the amendment on this subject which I will introduce on the floor of the Senate.

In explanation of why I believe that amendment, which will insert the important phrase "group of nations" in the international portions of the bill, is of transcendent importance, I would point out the following:

Section 123 of the bill contains carefully drawn conditions under which the Government is authorized to cooperate bilaterally with another nation in the field of peacetime development of atomic energy or with a regional defense organization on tactical uses of atomic weapons. These stringent safeguards are:

(1) The agreement for cooperation must include (a) the terms, conditions, duration, nature, and scope of the cooperation; (b) a guaranty by the cooperating party that security safeguards and standards as set forth in the agreement will be maintained; (c) a guaranty by the cooperative party that any material to be transferred will not be used for atomic weapons or for any other military purpose; and (d) a guaranty by the cooperating party that any material or any restricted data to be transferred will not be further transferred to any unauthorized person or beyond the jurisdiction of a cooperating party.

(2) The agreement for cooperation must be approved by the Commission or, in the case of a transfer of military data, the Department of Defense.

(3) The President himself must approve the agreement for cooperation and he must also determine in writing that the performance of the agreement for cooperation will promote and will not constitute an unreasonable risk to the common defense and security.

(4) The proposed agreement for cooperation, together with the President's approval and determination, must lie before the Joint Committee on Atomic Energy for 30 days while Congress is in session.

These conditions are indeed adequate to protect the national interest. It should be noted that these agreements for cooperation can be entered into only bilaterally; that is to say, the statute does not authorize the President to enter into agreements for cooperation with a group of nations or with an international agency unless, as specified in section 124, an international agreement has previously been entered into with a group of nations. This means that the President must negotiate a treaty (which must receive the approval of two-thirds of the Senate before it can be effective), or an executive agreement (which, under the terms of the law, must be submitted to both Houses of Congress and receive a favorable majority vote before it can become effective), before he can cooperate under the bill with any group of nations.

I would submit that this is an unwarranted and unwise restriction and destroys the pool idea suggested by the President. If the President can deal with a single nation in the atomic field under the stringent safeguards prescribed in this bill, then he should be able to deal with a group of nations under the same stringent arrangement.

Section 124, which purports to deal with the international atomic pool, is, in my considered opinion, nothing more than a restatement of what the President can do now under existing law, without the necessity of passing this bill.

In short, section 124 is illusory and a naked grant, since unless we add the phrase "group of nations," we are, under the language of this bill, giving voice to a pious hope, but in fact giving no additional authority to the President to carry out his atomic-pool plan which he does not already have under existing law.

While I consider it desirable and important for us to cooperate bilaterally in the field of peacetime atomic energy, I feel nevertheless that the real solution to the problem which drives men to war will not be found until we deal broadly and collectivey with many nations in a spirit of cooperation and partnership to bring the God-given benefits of this new source of power to our friends all over the world. It is for these reasons that I urge the reinsertion of the phrase "group of nations" in the international section of the bill.

The very foundation of our foreign policy has been built on a philosophy of collectiveness. As a result we have seen the free world grow stronger step by step. It would be wiser for us to take no action at all, rather than injure the spirit of unity which now prevails in the free world. Psychologically, I am afraid that we do exactly this if we make it more difficult for us to deal with a group of nations as against dealing with one nation in this very important field.

Because of this deep-seated feeling I am constrained to disagree with the committee on this point and submit my own minority view.

JOHN O. PASTORE.

I subscribe to the foregoing views of Senator PASTORE.

MELVIN PRICE.
CHET HOLIFIELD.

SALE OF CERTAIN WAR-BUILT PASSENGER-CARGO VESSELS

The PRESIDING OFFICER (Mr. BUSH in the chair) laid before the Senate a message from the House of Representatives announcing its disagreement to the amendment of the Senate to the joint resolution (H. J. Res. 534) to authorize the Secretary of Commerce to sell certain war-built passenger-cargo vessels, and for other purposes, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. BRICKER. I move that the Senate insist upon its amendment, agree to the request of the House for a conference, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. BUTLER, Mr. POTTER, and Mr. MAGNUSON conferees on the part of the Senate.

A FARM PROGRAM FOR AMERICA

Mr. FERGUSON. Mr. President, in the past few months we have heard a great deal of debate on the farm issue. Some of it has been calm consideration of the problem. Quite a bit of it has been more on the hysterical side. We have received information and misinformation. We have heard that the farmers will be ruined under one program and also that they will be better off under the same program.

It is about time that we consider what we are trying to achieve in the development of the Nation's agriculture, and then determine whether our present program or the President's proposals moves us closer to these goals.

Let us ask ourselves, first, whether we want to shift from a wartime to peacetime agriculture.

I think the answer must be "Yes." We have to make the transition sometime. The longer we wait, the more difficult it will become. Our economy has undergone some sizable adjustments since the all-out production days of the Korean war. In my own State of Michigan the industrial cutback has been quite severe. Still, no one seriously suggested that we continue the production of military equipment we do not need. The record with respect to the armed services appropriation bill for fiscal 1955, which comes under my chairmanship, amply bears out this statement.

The situation in agriculture is similar. We are still producing some important commodities on a wartime, emergency basis. It does not make much sense to continue to produce food and fiber that we do not need and cannot dispose of.

The mere fact that a shift from a wartime to peacetime agriculture is needed speaks against our present program of supporting the six so-called basic commodities at a rigid 90 percent of parity. This is a wartime and an emergency program. It was so conceived, and it operated to provide us with the necessary farm products. It worked well. It did the job. But the job had been completed. A continuation of this program will only mean more wartime production for peacetime needs.

The President's program, on the other hand, will start us back to peacetime conditions. It will not do the job all at once, but it will head us toward more normal production. I may say that the President's program was made last December, at which time the leadership on both sides in the Senate and in the House of Representatives helped make up and agree to the program. It will do this by gradually reducing the premiums paid by the Government for wartime production. If we want to pay premiums, at least they should be directed toward adjusting our production to peacetime requirements.

Closely associated with this shift from a wartime to a peacetime agriculture is the question of whether a balanced agriculture is desirable or whether it should be our national policy to produce excessive surpluses.

The answer here must be for a more balanced agriculture for the benefit of farmers and the Nation as a whole. As a matter of pure and simple national policy, it does not seem at all wise to encourage production that cannot be used. This only depletes our soil needlessly.

From the point of view of the farmer alone, however, excessive surpluses are damaging. An oversupply of any commodity tends to drive down the price. The more excessive the surplus, the more price depressing it becomes. Our surplus of wheat is now so large that even with the Government supporting wheat at 90 percent of parity, and buying about half of the total crop, the price is still only about 77 percent of parity.

Perhaps the worst feature of large surpluses, from the farm viewpoint, is that there can never be a natural and vigorous market except in time of disaster, when the surpluses might be used up. How can the farmer ever reach full parity, short of Government price fixing, when there is always an excessive supply available to be placed on the market if the price should ever increase? The answer is that he cannot.

This constitutes borrowing from tomorrow's market. It means that the farmers of today are mortgaging the markets which rightly belong to the farmers of tomorrow.

It is certainly true that our policy should be one of maintaining adequate reserve to take care of forseeable emergencies. But we can never store enough to meet all possible emergencies. As in anything else, we must depend in large measure on our capacity to produce to meet most emergencies rather than on our storehouses.

If our national policy is to be that excessive surpluses are not desirable, then we must change our present farm program because it is this program that has built up the surpluses. Certainly we cannot cut down our excessive supplies by the very same program that created them.

Here again, the President's program will start us on the road to reduction of surpluses by lowering price supports when production is excessive and increasing supports when and if production lags.

I have heard it said many times in the Senate that farm production will not respond to the price incentive—that if the price goes down the farmer will produce more to offset the drop in price. If that is true, Congress should have lowered the support level rather than raised it when we wanted wartime production of farm products. Also, if we want to lower production we should increase price supports. Does not that sound a little fantastic?

It seems to me that those who say a farmer will produce more if the price declines underrate the management ability of our farmers. Farmers have shown time and again that they respond to price incentives; that they will produce the crops on which they can make the most profit. That is to say, farmers are selective in what they will grow and are more conscious of particular prices rather than agricultural prices in general.

Another question that confronts us as a matter of national policy is whether we want an abundant agriculture. The answer here should most certainly be "Yes," since we understand abundance as meaning the way we meet the needs of our citizens and contribute to an ever-increasing standard of living. But abundance is really abundance only if it is put to use. It does not help our standard of living much to have our production stored in warehouses. We could have our warehouses filled with wheat and cotton and still be woefully short of other commodities. That would not be abundant production in the true sense. We need an abundance of production of the right things at the right time.

The present program fails to accomplish this. It gives us surpluses that we cannot use. Then after we acquire these surpluses we are forced into an economy of scarcity while we drastically cut back our acreages in order to get rid of the surpluses.

The program proposed by the President and the congressional leaders in the House and the Senate would lead us to true abundance by offering the most attractive price supports to commodities consumers were ready to buy.

This leads us to the question of whether we want a program which adjusts itself to changing conditions. Again the answer must be "Yes." I am told farm horses are now selling at about 13 percent of parity. How fortunate we are that we did not have a support program on horses that took no recognition of the automobile, the airplane, and other modern means of transportation.

Not to key our programs to changing conditions sounds ridiculous. Yet our present wheat program fails to take into account vitally important changes in both production and consumption. Parity on wheat is still based on the horse era rather than the tractor age. On the consumption side, the program fails to take into consideration that the per capita use of wheat has fallen sharply, and that to a great extent wheat in our diet has been replaced by meats, fruits, vegetables, and other foods. The President's program takes these vital changes into account and allows for the necessary adjustments.

Another question we must answer is whether we want to point out agricultural programs toward increasing Government control or toward greater freedom for our farmers. There may be

room for differences of opinion, but I believe that all of our citizens should have the maximum amount of freedom consistent with our organized society.

The present program works to take freedom of decision away from farmers. Production controls must be a part of high and rigid price supports. The higher the support the tighter the controls must be. That does not make for efficient farming. It does not make for consistency in Government to offer production premiums and then turn around and sharply cut back production through controls. Let us not forget that our farmers know more about operating their farms than the Government does.

The President's program is directed toward a relaxation of Federal controls. Once our present surpluses are disposed of and the flexible supports become fully operative, most of the necessary production adjustments would be made voluntarily on the basis of supply and demand. I am sure that is the way most of the farmers prefer to operate.

Do we want a program that will be fair to all farmers? Certainly, the answer to this is "Yes." Yet our present program channels most of the benefits to the large producer and leaves little or nothing for the small operator.

I wish to emphasize the words "large producer," because it is a fact that the small farmer receives a mere pittance, while the large producers receive thousands of dollars.

Mr. WATKINS. Mr. President, will the Senator yield?

Mr. FERGUSON. I would prefer to complete my statement before yielding.

Not only is this true, but the little fellow has to pay taxes to support the program. In some instances the tax will exceed his benefits.

In many States the average crop loans run $500 or $600. Whether these crops are supported at 90 or 80 percent makes a difference of only $50 or $60.

In return for this $50 or $60 the farmer faces loss of markets, restrictions of his management decisions, and all the other disadvantages of the present program. That can amount to selling your birthright for something less than a mess of pottage.

The present program channels most of our agricultural assistance funds into commodities that account for less than 25 percent of our cash farm receipts. Not only does the program not benefit many farmers, but it actually penalizes them by holding feed prices at artificially high levels. This is important to the farmers of Michigan, who receive about a third of their income from dairying.

Recently I pointed out in the Senate, on the basis of information from the Department of Agriculture, that 85 percent of the cash farm receipts in Michigan comes from nonsupported commodities and dairy products. Only 10 percent comes from the basic commodities in which the Government has now more than $5 billion invested.

The President's proposals would work to level off this one-sided program and lessen some of the inequities now imposed on farmers in Michigan and about three-fourth of the other States. Perhaps the most vital question we must ask ourselves is which program will do the most to maintain farm income. We know that the present program does not accomplish this. In 5 of the past 6 years, farm income has declined. It is declining now, in spite of the largest expenditures in history for price supports.

Mr. President, let us face the facts. High and rigid price supports cannot even maintain prices in the face of large surpluses, to say nothing of maintaining income. Let us not concentrate our program too much on price. High prices alone will never make farmers prosperous. It also takes volume to produce income.

It is not the theory of large profits and small turnover that has led to economic wonders in America. It is rather just the opposite—small profits, large turnover. That is the way to raise the standard of living. The key to our mass production in industry is a price that will reach the mass markets.

The way to have a really high standard of living and prosperity is to have great and ever-increasing consumption. We must be careful in agriculture that we do not pursue the fallacy that price alone will lead to prosperity. We must have good markets. And we cannot build these markets with artificially high prices that tend to cut off world markets, restrict domestic consumption, and invite the use of substitutes.

Of course, we do not know specifically what would happen to farm income under flexible supports, but the proof of the pudding is in the eating of it. Therefore, the way to determine that question is by trial. We do know, however, that we were not trying to reduce farm income when we approved these supports in 1948 and again in 1949. We know that our agricultural leaders are not trying to reduce farm income when they endorse flexible supports. We should know that the President and the Secretary of Agriculture Benson are not trying to reduce farm income when they tell us we must switch from rigid to flexible supports. I do not think President Truman was trying to reduce farm income when he called for flexible supports in 1948. I do not think the Democratic Secretaries of Agriculture of the past 20 years were trying to reduce farm income when they supported the flexible principle.

Mr. President, we also know that flexible supports will help restore our markets, both domestic and foreign; that they will make our farm commodities more competitive with substitutes, and that they will help keep production in line with demand. I am sure we do not have to be economic specialists to know that this is the road to a sound agricultural policy.

But even if we close our eyes to all the prospective benefits of flexible supports, it would still behoove this Congress to change the present program solely on the ground that it has failed.

It has failed in spite of the fact that the Government now has about $6½ billion tied up in price supports, and that by the end of this year the figure will probably rise to around $9 billion.

The cost of our present farm program might not be too alarming if the program was actually working for the overall benefit of farmers. But when the program actually hurts rather than helps agriculture, the cost seems indefensible.

We hear the statement oft reiterated that our price-support operations over the past 20 years have cost only about a million dollars a year. But let us look at the facts. The Government storage bill alone on surpluses is now approximately $250 million a year, $700,000 a day. Actual losses of Commodity Credit Corporation last year were more than another quarter of a billion dollars. That is a half-billion dollars right there, or $499 million a year more than some persons claim to be the cost.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. FERGUSON. I would rather finish my statement first. Then I shall be happy to yield.

In 4 years we spent nearly $550 million in subsidizing exports under the International Wheat Agreement. That certainly is a price-support operation. If the wheat had not been exported, it would have wound up in Government hands at even a much larger cost.

In addition to deciding the support level for the basic commodities, we have a vital decision to make on dairy products. I hope we can take a long-range view on this issue, as it is tremendously important to Michigan and a number of other dairy States.

The action Congress takes may well determine whether the dairy industry in the immediate years ahead is to be a subsidized industry or one standing on its own feet.

Spurred on by the cut in dairy price supports from 90 to 75 percent last April, the dairy industry now has a vigorous campaign underway to promote and expand its markets. This campaign is beginning to pay off. Consumption is going up.

Several statements were made in the Senate last April that the cut in the support level would not increase consumption. But the facts are that the price reduction together with the sales campaign by the industry is increasing the consumption of these products.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. FERGUSON. I shall be glad to yield in a moment.

Just a few days ago the Department of Agriculture reported that although production of butter, cheese, and dried skim milk has been running about 5 percent ahead of last year, Government purchases of butter and cheese are smaller and dried milk purchases are only slightly higher.

During April, May, and June of this year the Government bought 125 million pounds of butter compared with 134 million pounds a year ago, 65 million pounds of cheddar cheese compared with 103 million pounds a year ago, and 215 million pounds of dried milk as against 205 million pounds a year ago.

The American people are beginning to eat more dairy products. The dairy industry is moving ahead. Let us not put a crimp in this progress now by an un-

wise increase in the price of these products. Let us not increase the price of butter, unless we are interested in seeing the consumption of butter reduced and the use of butter substitutes increased.

The dairymen of Michigan took quite a jolt when the support level was reduced. But it is to their credit that most of them could see it was the best thing to do—that their investments would be a lot safer if good, vigorous markets were built up than if their products were sold to the Government at 90 percent of parity.

If a person was to be in the dairy business for only a year or two, then the 90 percent supports would be just the thing to assure him a short-term income. But Michigan dairymen intend to stay in business year after year. They know the industry can pull out of its present troubles. They know great things are ahead for dairying—that science is on the brink of advances that may actually result in a shortage of milk in the new future. They know that once sterile milk or frozen milk concentrates get on the market consumption of milk in many areas will increase greatly.

Certainly, most of us must recognize the need for a more realistic farm program, a program that will give more real assistance to the farmer, a program that will be fair to all farmers, fair to consumers, and good for America, economically and socially.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. FERGUSON. I yield.

Mr. YOUNG. Did I understand the Senator correctly to say that the 90 percent price supports were largely or entirely responsible for our present surpluses?

Mr. FERGUSON. I certainly will say that that is true.

Mr. YOUNG. Does the Senator realize that only 2 years ago, as a part of our security program, the Government asked farmers to increase their production?

Mr. FERGUSON. There is no doubt that we wanted a production increase. By supporting the price is the way to get the increased production.

Mr. YOUNG. That was only 2 years ago, in 1952. I doubt if there is a Member of the Senate who realizes that the farmers were asked to increase production as much as they were 2 years ago. I should like to read some figures to the Senator.

Mr. FERGUSON. Will the Senator tell us why the farmers were asked to increase their production?

Mr. YOUNG. As a part of our war program. The figures I have before me were given to the Committee on Agriculture and Forestry on February 29, 1952.

Mr. FERGUSON. We were at war 2 years ago.

Mr. YOUNG. That is true. Let me now read some figures. The farmers were asked to increase their production of corn 115 percent over the previous year; cotton, 105 percent; wheat, 118 percent. It was only 2 years ago that we asked the farmers to increase their production greatly as a measure to further the war effort. Today we find Members of Congress condemning the program of 90-percent support prices for our present surpluses.

Mr. FERGUSON. If the Senator had heard what I said earlier in my remarks he would have noted my statement that that was done in furtherance of a desire—and it was a proper desire—to stimulate production. We were engaged in a war at the time. That is why it was thought desirable to increase production.

Mr. YOUNG. This is the first year the wheat farmers have been asked to reduce their production, and there has been a reduction of 200 million bushels forecast by the last United States Department of Agriculture report.

Mr. FERGUSON. It is not a consistent policy to pay fixed prices and encourage increased production, and then tell the farmers they must cut down their acreage production.

Mr. YOUNG. Does the Senator believe that this program can be sold to the wheat farmers when they have been asked to cut their production 34 percent; that is, 21 percent last year and 13 percent this year? On top of that the Department of Agriculture is proposing to reduce the price-support level and to switch over to a flexible parity program.

Mr. FERGUSON. The sooner we adopt a program which will allow the farmers to produce for a profit, and not say to them, "We will guarantee you 90 percent; we will put your products in storage, and cut down your acreage so you cannot produce so much," the better off agriculture will be.

Mr. YOUNG. I know all that, but for almost 10 years we asked the wheat farmers and other farmers to increase their production, and now that they have increased it we take away approximately half of their income by the methods I have outlined. That would break any business institution in the Nation required to sustain a similar cut in production and sales price.

Mr. HUMPHREY. Mr. President, will the Senator from Michigan yield?

Mr. FERGUSON. I yield.

Mr. HUMPHREY. I was impressed, but not convinced, by the Senator's remarks, and I should like to ask him two questions. He has, first of all, condemned the 90 percent price-support program as a rigid price-support program, and then he says that those supports were responsible for about 20 percent of the national income.

Mr. FERGUSON. About 25 percent.

Mr. HUMPHREY. Then the Senator uses the argument that agricultural income is dropping and dropping and has been dropping during 5 out of the past 6 years. He does not answer the question, How much has the agricultural income dropped on fixed parity commodities?

Mr. FERGUSON. I stated in my remarks that we are pyramiding surpluses. Take butter as an example. I voted against the bill allowing oleomargarine to be colored, and the Senator from Minnesota did also, because we saw the effect it would have on the dairy farmers of America. There can be no doubt that we are paying the bill today.

Mr. HUMPHREY. What program does this administration offer as to butter that we did not already have? I challenge any Member of the Senate to show me any improvement that this administration offers with reference to butter. It offers from 75 to 90 percent of parity. This is what we had for 3 or 4 years. The administration's program with reference to butter does not offer one thing that is not already being done.

Mr. FERGUSON. The administration program since last April shows——

Mr. HUMPHREY. Shows what?

Mr. FERGUSON. That less butter is being placed in storage.

Mr. HUMPHREY. And that more dried milk is placed in storage.

Mr. FERGUSON. And more people are using butter, because under the program people are enabled to buy it at a less price, and, at the same time, there is not the incentive to buy substitutes. We priced ourselves out of the market.

Mr. HUMPHREY. Fluid-milk consumption is down and fluid milk prices are up.

Mr. FERGUSON. I do not so understand.

Mr. HUMPHREY. Whether the Senator understands it or not, it is the truth.

Mr. FERGUSON. I asked the chairman of the Committee on Agriculture and Forestry, and he says that is not the case.

Mr. HUMPHREY. I may say to the chairman of the Committee on Agriculture and Forestry that the Department reports that fluid milk consumption is down and the supply of powdered milk is up. The Senator pointed it out himself. So we get a little increase in butter consumption, and also an increase in dried-milk purchases.

Mr. AIKEN. Mr. President, will the Senator from Michigan yield?

Mr. FERGUSON. I yield.

Mr. AIKEN. Of course, the purchases of powdered milk are up a little bit—I think, approximately a million pounds overall for the first 3 months of the dairy year. They are up because more is being made. There is an increase of roughly 5 percent in the production of milk this year, but in the Senator's own State of Minnesota the Commodity Credit Corporation is having to buy only about two-thirds to three-fourths as much butter as it bought last year. Butter and cheese are going to the consumer's table once more, whereas, it had been priced off the table during the past 2 or 3 years.

Mr. HUMPHREY. Would the Senator be interested in knowing that the price of fluid milk is going up?

Mr. AIKEN. Is not that what the Senator has been arguing for?

Mr. HUMPHREY. Would the Senator be interested in knowing that one of the reasons why there has been less butter stored is that farmers are selling off a number of their cows?

Mr. AIKEN. That is a part of the program advocated by the Department of Agriculture. The State of Minnesota produced 3 percent less milk in June than it produced in May, and the whole country is putting production in line with consumption. So far as I know, most of the dairy farmers would rather see

their products go to the consumer's table than into Government refrigerators.

Mr. THYE. Mr. President, will the Senator from Vermont yield?

Mr. AIKEN. I do not have the floor, but I shall be glad to yield.

Mr. FERGUSON. I have yielded the floor.

Mr. AIKEN. If I have the floor, I will yield.

Mr. FERGUSON. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Vermont has the floor.

Mr. AIKEN. I yield to the Senator from Minnesota.

Mr. THYE. Mr. President, I was in Minnesota last Saturday morning. I had intended to remain out of this argument today. I listened to the Senator from Michigan making his statement. I could enter into a debate with him on many phases of his statement, but that I will not do. At first I had intended not to open my mouth on the question, but when I listened to the colloquy between my colleague [Mr. HUMPHREY] and the Senator from Vermont [Mr. AIKEN], I could not help relating to the Senate what I heard on radio station WCCO Saturday morning of last week. Station WCCO is one of the large stations in the Northwest. I was driving on the highway through a great dairy section of Minnesota when I heard this broadcast:

> The fluid milk dealers in the Twin Cities area announce that the price of fluid milk will have to be raised 1 cent a quart.

It can be imagined what my reaction was when I knew that the Twin Cities Milk Producers, a farmers' organization, produce about 90 percent of the fluid milk consumed in the Twin Cities area. They are the so-called wholesalers to whom the distributors were referring. The distributors announced that the reason why they had to raise the price was because wholesale prices were up.

The Twin Cities Milk Producers are a cooperative organization and have suffered a dollar a hundred loss in the price of milk within the past year, and most of it has been since April 1. Now the distributors are intending to charge housewives a cent more a quart on the pretense that the wholesale price has gone up. The wholesale prices has dropped $1 a hundred. There is neither rhyme nor reason to the entire argument, and that is why I do not want to enter into it.

Mr. AIKEN. I do not think the Senator from Minnesota is so naive as to believe that a cent a quart has been arbitrarily taken out of the consumer. Anyone familiar with the milk industry knows that in April, May, and June the wholesale price goes down. There is an automatic reduction in consumer prices over the flush months. About the first of July the price automatically starts going up again. It is happening all over the United States. The price is going up in New England, in New York, in Virginia, in Maryland, and all over the country. It is a seasonal change in the price. It is unfortunate that frequently distributors charge consumers more than the increased amount they pay the producers. But that has been going on ever since I can remember, and we have found it very difficult to get the change in price to the consumer exactly to reflect the situation. I am sure the milk producers for the Twin Cities' market are getting an increase during this month. They got a reduction of as much as a dollar a hundred through April, May, and June.

Mr. THYE. Mr. President, will the Senator from Vermont yield further?

Mr. AIKEN. I yield.

Mr. THYE. Mr. President, I served as a director of the Twin Cities Milk Producers for a number of years. I know the milk business. I know the trends in prices in both spring and fall.

This is the flush period of the year. There is an ample supply of milk. Milk should go down in price, rather than up. The producers have taken a cut of $1 a hundred pounds in the past few months. There is no rhyme or reason why the distributors should increase the price of milk at this time, except the general, overall influence of the attack upon the farm support program, which has created the impression that the farmer and the support program are responsible; and any profits taken, whether they be excessive or not, are condoned and accepted as being proper because the criticism rests upon the farm support program rather than upon the gouging on the part of the distributors.

Mr. AIKEN. I agree with the Senator. In many cases producers and distributors take unwarranted profits.

Mr. THYE. Indeed they do.

Mr. AIKEN. But I say to the Senator from Minnesota that he will find that if the price of milk to the consumers in the Twin Cities goes up 1 cent a quart in July, the price to the farmers also, undoubtedly, will go up. If it does not, then that is a situation into which the officials of the State of Minnesota should look.

In my own State, the milk control board—and Vermont is one of a dozen or so States which have milk control boards—has given the milk distributors the right to sell a gallon of 3.7 milk for 60 cents, cash and carry. If it is 4.2 milk, they have to charge 64 cents. Many distributors are doing that, and it is bringing about an increase in the consumption of milk.

In my area of the country, there has been a 9 percent increase in consumption of butter as compared to the consumption of last year, and an increase of 3 percent in the consumption of fluid milk. I do not know whether that is true of all sections of the country. I understand that for the Nation as a whole there has been an increase of 7 percent in the use of butter, and a slight decrease in the use of oleomargarine. The producers of butter are experiencing an increase in the consumption of butter for the first time in a long, long time.

I wanted to point out that the changes in milk prices are seasonable. Beginning July 1 they go up, up, and up, until December. Usually on January 1 milk prices begin to drop a little, reaching their lowest point in May and June. I am very happy to say that the country as a whole, and particularly the States of Minnesota, Wisconsin, and Iowa, are putting their production more in line with the requirements. There has been a reduction of 4 percent in the production of milk in Wisconsin over that of last month; 3 percent in Minnesota; and 2 percent in Iowa. That is due, in considerable part, to the smaller numbers of cattle in the herds, showing that, at last, some of the undesirable cattle in the herds have been culled; animals which, while not profitable, nevertheless contributed to the milk surplus.

The situation is improving. It will get better during the next few months. Until the marketing methods are changed in many parts of the country, the consumer probably will not get milk cheaper. Very likely milk will be higher by a cent or two a quart during the period of the next 6 months. But since the inauguration of the new program on April 1, there has been a steady tendency to bring production in line with consumption. When that has been accomplished, the dairymen of the United States will be in infinitely better condition than when they were constantly trying to see how much milk they could produce in order to sell it to the Government.

PROPOSED CONSTITUTIONAL AMENDMENT TO REQUIRE ANNUAL BALANCING OF THE BUDGET

Mr. LENNON. Mr. President, it is now perfectly obvious that the present legislative procedure to deal with the Federal fiscal situation is totally inadequate. It is also apparent that the need is urgent for some sound reform to lead our Federal Government to a balanced budget in periods of normal military and economic conditions.

Yesterday, a ray of hope shone through the gloom of national financial instability. It is Senate Joint Resolution 174 introduced by the senior Senator from New Hampshire [Mr. BRIDGES], and the senior Senator from Virginia [Mr. BYRD].

This joint resolution proposes an amendment to the Constitution of the United States to provide for the imposition of Federal taxes to provide revenues at least equal to appropriations, except in time of war declared by the Congress or when the United States is engaged in open hostility against an external enemy.

In my opinion, without having had the benefit of careful study of the proposal, it will go a long way toward balancing the Federal budget and restoring the natural balance between budget revenues and budget expenditures. It will not penalize any legitimate or necessary service now being rendered by the Federal Government, but it will, in a large measure, weed out and cast aside much unnecessary spending.

As Senator BYRD ably pointed out, it will prohibit deficit spending. Mr. President, this is the heart of the resolution—and I believe it represents the thinking of the American people. This is indeed one of the most important matters we must face.

Here, at last, is a practical approach to a grave problem. It is an effective way to establish faith and understanding among the people in fiscal procedures

in the Federal Government at a time when the maze of technicalities simply astound us all.

Mr. President, I am not an expert on budget matters, but I am disturbed, as I believe all of us should be, by the fact that our Federal budget has been in balance only four times in a quarter of a century. There seems to be no end in sight to deficit spending.

We have just come to the end of a fiscal year. The national budget was unbalanced. We operated last year in the red $3,750,000,000, and the best information that has been available here, is that the budget will be in the red even more next year, unless effective savings and cuts in unnecessary spending are made at once.

To bring home to every Member of the Congress the great responsibility which rests upon our shoulders, the national debt now stands in excess of $270 billion.

The Senate will soon be debating the Mutual Security Act which will further saddle the taxpayers of the country with a Federal deficit. It is my intention to support any effort which will eliminate foreign economic aid not directly geared to our military support of free nations resisting international communism.

Mr. President, in order to show the budget deficits and surpluses of those nations scheduled to receive economic aid under 1955 authorization, I requested the Legislative Reference Service of the Library of Congress to prepare this information.

Mr. President, I ask unanimous consent to have the tables printed at this point in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Budget deficit in 1953 (or most recent year) of countries scheduled to receive economic aid under 1955 authorization

[Budget deficit (−) or surplus (+) in dollars]

Europe:[1]	
France	−$2,320,000,000
Germany, West Berlin	[2]+354,000,000
Spain	−92,436,000
United Kingdom	−814,280,000
Yugoslavia	−42,097
Near East, etc.:	
Afghanistan	[3]
Egypt	−46,409,000
Ethiopia	[3]
Greece	−14,533,000
India	−318,510,000
Iran	−13,270
Iraq	+12,229,000
Israel	−2,874,400
Jordan	[3]
Lebanon	[3]
Liberia	−384,005
Libya	[3]
Nepal	[3]
Pakistan	−149,393,000
Saudi Arabia	[3]
Turkey	−71,239,000
Asia and Pacific:	
Formosa	[3]
Indochina	[3]
Indonesia	−157,800,000
Philippines	+27,174,000
Thailand	−52,286,000

Mr. LENNON. Mr. President, we can successfully resist the pressure to increase the statutory national debt limit from $275 billion to $290 billion by eliminating unnecessary foreign economic spending.

With the belief that we should reduce foreign economic spending by the substitution of more international trade, I supported the amendment to extend the Reciprocal Trade Agreements Act for 3 years.

The Senate will recall that the President sent a message to the Congress last July 30, requesting legislation raising the statutory debt limit. It was at a time when sufficient study could not be given the necessity for such action. Many Members of Congress had left, some having had plane and train reservations, to return to their respective homes, when Congress was called upon to enact legislation on the subject.

I now read a portion of the message of the President, in which he expressed concern about the ability of the Government to remain solvent unless an extension of the debt limit were granted:

> Under present circumstances, the existing statutory debt limit is so restrictive that it does not allow the financial operating leeway necessary to conduct the Government's fiscal affairs effectively. This is specific with respect to the seasonal variations of Federal receipts and disbursements and also in view of the uncertainty as to future income and expenditure levels.

Mr. President, the Senate Finance Committee on August 1, 1953, postponed action indefinitely on this request. The Congress went home. There was no extension of the debt limit. Today, thankfully, we are still operating below the statutory limit of $275 billion. It is my understanding there is now about an $11 billion gap, consisting of approximately $6 billion in the Treasury and about $5 billion below the statutory debt limit.

I should like to pay tribute to the great men of the Senate who are members of the Senate Finance Committee, who had the courage successfully to resist the pressure of the White House, the Director of the Bureau of the Budget, and the Secretary of the Treasury, and to postpone action indefinitely on the bill then before the committee, which would have raised the national debt limit from $275 billion to $290 billion.

I recall that upon adjournment on August 3, 1953, the Members of Congress returned to their homes somewhat under a cloud, and under a feeling that they would likely be called back for a special session in order to enact the legislation increasing the debt limit. I recall, too, that the press and the great radio stations of America took the message to the grassroots. I recall, too, that it was the first occasion, certainly in a long period of time, perhaps as much as 20 years, that the Congress of the United States had said, "Mr. President, you must try to live within your budget. You must make an honest effort, if you can, to reduce expenditures."

I was not called upon, Mr. President, to cast a vote on that proposed legislation, for the reason that it did not come from the committee; but had I been permitted at that time to cast a vote, my vote would have been against raising the national debt limit. I cannot escape the conclusion that if the Congress at the last session had raised the debt limit, when we met here in January of this year every department and every agency and bureau of the Federal Government would have raised its sights on its requested appropriations.

As I have said many times, I sincerely hope it will not be necessary to raise the national debt limit.

One problem which I believe concerns the people of the United States is the cost of debt management. I am reminded of the fact that the interest on the debt is a fixed item of cost. I sometimes wonder if the people of America are truly concerned about the magnitude of the national debt, but certainly they must be vitally concerned about the cost of debt management. I am told that, including the interest on the national debt and the management of the national debt, the cost amounts to approximately $7 billion. Every Member of the Senate recalls that at one time the annual budget of the Federal Government was less than the present debt management cost. That is a surprising and astounding fact, Mr. President, a fact which should be of grave concern not only to the Members of Congress, but to the people of the entire Nation.

The Congress and the people must face up to the problem of national solvency, effect reasonable economies, and provide the revenue with which to operate our great Nation.

It is my judgment, Mr. President, that the people of America are not demanding economy in Government such as to cause cessation of absolutely needed services, reduction in our national defense or military assistance to our friends in the free world. Rather, I believe, it is their desire to face up to the requirements of citizenship with the certainty that their Government is realistically handling its finances.

Mr. President, ours is a great Nation. Its destiny has not been fulfilled. We must be strong in order to provide effective and militant leadership for the free world. I am reminded that our physical

strength to a very great degree rests on our budgetary soundness.

Mr. President, I am grateful for the opportunity to endorse the principle of the joint resolution. It is my belief that a more effective fiscal policy can emerge from the resolution. It is my hope that North Carolina, along with many other States of the Nation, will have an opportunity soon to support the resolution as an amendment to the Constitution of the United States.

Mr. President, I yield the floor.

THE PRESIDENT'S HEALTH REINSURANCE PROGRAM

Mr. SMITH of New Jersey. Mr. President, as chairman of the Committee on Labor and Public Welfare, I feel very much concerned over the action of the House yesterday in sending back to committee and virtually killing President Eisenhower's Federal health reinsurance bill, which is really the heart of the President's health program. Our committee in the Senate has just reported our version of this bill, S. 3114, to the floor, and we had expected to have it come up for debate here within the next week or 10 days.

I have been in the Senate for 10 years and have been on the Committee of Labor and Public Welfare for that entire period. We have had facing us each year the consideration of an overall health program for the American people which would avoid the dangers of socialized medicine, but which would establish a voluntary system providing for our families the necessary health care, and particularly would provide for those catastrophes overtaking families with a sudden or prolonged illness, especially of the breadwinner.

We have seen the failure of socialized medicine in England, and I have been opposed to any such approach to the question. I am a son of a physician and my younger years were lived in a physician's family where I came to understand the values of the relationship of doctor and patient. There is no profession I respect more than the medical profession, and I admit I am prejudiced from the noble life that my father lived. I never could tolerate the thought of mechanized medicine where the patient becomes a number merely and he may be assigned to a doctor that may be good, or may be second rate. Anything that even tends to threaten the intimate relationship between patient and doctor is a distinct loss to this country. For that reason in talking over some kind of voluntary health insurance with Secretary Hobby and her very efficient staff, it was decided that we should endeavor to build on the voluntary health insurance plans that have been growing up in this country, such as the Blue Cross, and the Blue Shield, and on the plans of the many insurance companies which have been studying this subject for years. The problem was whether these insurance coverages could be expanded in two directions: First, to cover more of our population at a reasonable premium, and second, to widen the scope of the coverage. As of today I am advised that there are 54 million persons covered by the Blue Cross and 29 million persons covered by the Blue Shield in addition to the various insurance company coverages, and so forth.

Secretary Hobby has mobilized all the important insurance experts in the country, as well as other advisers who have studied both the medical side and the social side of the problem involved. We have come up with a plan, which, admittedly, may not be perfect, but which has all the earmarks of intelligent experimentation with the principle involved. With our 48 States as laboratories we should find an ultimate sound solution.

We want no interference with the individual family having its own family doctor, but we do want to develop that sense of security in our people so that if catastrophic illness overtakes them they will have at least reasonable coverage against such a disaster.

Much to my amazement the opposition to this intelligent conception has come principally from two groups of people. First, the American Medical Association, which shortsightedly and without adequate study, has suggested that this plan is a step in the direction of socialized medicine, and, two, from our large labor groups who have been favoring the compulsory program of socialized medicine. I have been conscious in my own office as chairman of the Labor and Public Welfare Committee of a barrage of high-pressure endeavors to kill this bill based on statements which are totally inadequate and totally untrue, which can have no motive other than the desire to frustrate this important program which President Eisenhower and his group are trying to offer to the American people at this critical time.

As chairman of the Labor and Public Welfare Committee, as I said at the opening of these remarks, I must protest vigorously against this sort of thinking and against this hysterical runaway under pressure of poltical groups from the responsibilities that lie before us.

I am not sure what the best course is to pursue, but my feeling is that we should go through with our bill in the Senate and in the debate here demonstrate to the people of the United States what this program is. Whether or not we would be successful in getting the legislation through, we would at least be able clearly to place the responsibility where it belongs—on the people who sabotaged one of the soundest experimental health programs ever offered to the American people.

JOINT COMMITTEE ON CIVIL DEFENSE

The PRESIDING OFFICER (Mr. BUSH in the chair). The Senator from Minnesota is recognized.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to submit for appropriate reference a concurrent resolution to create a Joint Committee on Civil Defense.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Minnesota? The Chair hears none.

The concurrent resolution (S. Con. Res. 94), submitted by Mr. HUMPHREY, was received and referred to the Committee on Armed Services, as follows:

Resolved by the Senate (the House of Representatives concurring), That there is hereby established a Joint Committee on Civil Defense to be composed of 9 Members of the Senate to be appointed by the President of the Senate, and 9 Members of the House of Representatives to be appointed by the Speaker of the House of Representatives. In each instance not more than five members shall be members of the same political party.

SEC. 2. The joint committee shall make continuing studies of the activities of the Federal Civil Defense Administration and of problems relating to civil defense. The Federal Civil Defense Administration shall keep the joint committee fully and currently informed with respect to its activities. All bills, resolutions, and other matters in the Senate or the House of Representatives relating primarily to the Federal Civil Defense Administration or to civil defense shall be referred to the joint committee. The members of the joint committee who are Members of the Senate shall from time to time report to the Senate, and the members of the joint committee who are Members of the House of Representatives shall from time to time report to the House, by bill or otherwise, their recommendations with respect to matters within the jurisdiction of their respective Houses which are (1) referred to the joint committee or (2) otherwise within the jurisdiction of the joint committee.

SEC. 3. Vacancies in the membership of the joint committee shall not affect the power of the remaining members to execute the functions of the joint committee, and shall be filled in the same manner as in the case of the original selection. The joint committee shall select a chairman and a vice chairman from among its members.

SEC. 4. The joint committee, or any duly authorized subcommittee thereof, is authorized to (a) hold such hearings, (b) sit and act at such places and times, (c) require, by subpena or otherwise, the attendance of such witnesses and the production of such books, papers, and documents, (d) administer such oaths, (e) take such testimony, (f) procure such printing and binding, and (g) make such expenditures, as it deems advisable.

SEC. 5. The joint committee is empowered to appoint such experts, consultants, technicians, and clerical and stenographic assistants as it deems necessary and advisable. The committee is authorized to utilize the services, information, facilities, and personnel of the departments and establishments of the Government.

SEC. 6. The expenses of the joint committee shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives upon vouchers signed by the chairman. Disbursements to pay such expenses shall be made by the Secretary of the Senate out of the contingent fund of the Senate, such contingent fund to be reimbursed from the contingent fund of the House of Representatives in the amount of one-half of the disbursements so made.

Mr. HUMPHREY. Mr. President, it is significant that I ask the Senate to concern itself with problems of civil defense on this July 14, the second anniversary of Operation Skyhook, the most intensive practice alert our country has yet held. This occasion has been marked all over the Nation, by civil-defense groups in my own State of Minnesota, and elsewhere. It is appropriate that we make careful note of it in the Senate.

Mr. President, I wish to address myself to the substance and purpose of the concurrent resolution which I have sent to the desk. Time has moved so rapidly in the last decade as to confound the label makers. Scarcely pausing for breath in this atomic epoch, we have hurried from the uranium age to the plutonium age, until we have arrived at the hydrogen or the thermonuclear age. Each step in this progression has meant the multiplication of the means of destruction in our hands—and in the hands of our enemies. The 1952 hydrogen bomb inflicted complete destruction over an area of 33 square miles, severe to moderate damage over 154 square miles, and light to unknown damage for 314 square miles. Mr. President, I make note of the fact that that was the 1952 hydrogen-bomb test, not the most recent experiments that have been conducted, which, according to the information we are able to obtain, made the 1952 explosion almost of pigmy proportions, as compared to the explosions which could now be made with the materials at present available. Like the dinosaur of a still earlier age, we have been content for the last several years to survey serenely our own strength, our capacity for massive retaliation, without stirring our brains to any serious consideration of our defense. Mr. President, as we know, the dinosaur of prehistoric days, today is extinct. I would suggest that that lesson might be somewhat apropos to existing circumstances.

The policy of the American Government has been a constant search for peace and for means to avert war. If, however, war should come—and we must always project our planning and our thinking upon that terrible eventuality—and if our country should be attacked, then our civil defense will become the business of all Americans, for the American public will have to take the final steps to insure its own survival. The business of Government in the essential enterprise of civil defense is to provide the knowledge, planning, and direction so that our people can take steps to protect themselves.

Mr. President, I emphasize this point because today very few voices are being raised in the United States in terms of the defense of the people of the United States. We spend billions and billions and billions of dollars to build up what we call our security forces, and we spend billions of dollars for research and development to perfect weapons which can deliver lethal destruction. Yet, as I shall point out in the course of these remarks, there is no one who today can assure Americans that our cities are safe from attack. It is perfectly obvious that the weapons of mass destruction which have been created are not weapons for the traditional battlefield alone, but are weapons to be used against mass concentrations of people. They are essentially weapons for use against civilians, and I wish to emphasize the fact that the hydrogen bomb, its cobalt partner, and its atomic junior partner, are essentially weapons to be used against helpless civilians, not against military objectives in the traditional sense.

The somewhat less than heartening nationwide civil defense test that was held recently indicates that the Government has been far from successful in filling the role of providing the knowledge, planning, and direction, so that our people can take steps to protect themselves.

Mr. President, let me digress to say that I believe our present Civil Defense Administrator, Mr. Val Peterson, is doing a good job. I commend him for his diligence, his imagination, and for the dedication to his responsibilities that he seems to demonstrate. Lest any of my remarks be misinterpreted, let me say that throughout the Nation there are literally hundreds of persons who are applying themselves unselfishly and devotedly to the task of civil defense. But, Mr. President, I sympathize with the Nation's Civil Defense Administrator; he simply is not receiving support. He has been talking and talking to persons who seem to be unwilling to recognize the seriousness and the importance of his message.

Mr. President, I have just said that the recent nationwide civil-defense test was anything but heartening. If the Members of the Senate who recently voted approximately $30 billion for military preparedness would take time to examine the results of the test, they would shake in their boots. Not only that, but I suggest that we are even derelict in the performance of our responsibility of providing for the common defense.

Here are the facts: The mock attack was carried out by 425 enemy planes against some 64 cities in the continental United States, supposedly using A-bombs and other means. About 70 percent of the attacking force was presumed to have gotten through our defenses, causing 8,983,000 deaths and 4,053,000 injuries. Mr. President, I submit that these figures are considered by the authorities to be conservative. What is more, the fact that some 30 percent of the theoretical attacking planes were stopped is an unbelievably large number of enemy planes to be intercepted or destroyed before they could arrive at their target. I am sure the Air Force will say that is an unusually large figure for the interception or destruction of attacking planes.

On the credit side, the drill demonstrated that the warning system worked well, and the sirens were usually audible; the 5 million people in the Federal or State civil-defense organizations generally demonstrated themselves as well-trained cadres. However, the other side of the ledger showed that we were still short some 12 to 15 million civil-defense workers, and that the public was generally apathetic to the whole experiment.

The source of this apathy is not hard to find. The menace of the atom has been threatening our cities for years now. Our steps for civil defense have been halting and indecisive. A score of great debates boiled and simmered. Should we stay in our cities and take the atomic blow on the chin? Should we build mass air-raid shelters?

Of course, this great debate has been resolved. But if we join any general conversation, flippant or otherwise, on the topic of what to do in the event of an atomic attack, the free advice we receive will be of the order of go to the cellar, line up in the hallway, and crawl under the bed. Apparently most Americans are not aware of what President Eisenhower called a new concept of civil defense, which emphasizes improved warning of pending attack and planning for the dispersal of populations of potential target cities in advance of enemy attack.

It is small wonder that the American public is unaware of plans for evacuation, when to date only two cities—Spokane and Mobile—have made any real effort to rehearse the procedure. In the face of the most appalling threat imaginable we cannot seriously expect that such a vacuum of public information can breed anything but a narcotic apathy to our real and present danger.

Mr. President, the immediate effect of apathy may mean little more than a reduction in the statistics of national hypertension. But if a bomb should fall, today's unconcern and lack of information will mean confusion, panic, and death. The eminent psychologist, Dwight W. Chapman, put it this way:

> The Federal Government has a unique role in providing authoritative information. Whether an individual will act wisely or foolishly during an attack will depend on what he knows. * * * If no proper precautions are made, the already certain casualties and physical damage will be compounded by foolish actions verging on panic.

Mr. President, now that we have accepted a policy of evacuation of our large cities in the event of attack—and it is now the official policy—the natural next need is an early warning system which would give us a hoped for irreducible minimum of 2 hours' notice. Mr. President, we are still without such an early warning system. We are still without it, despite the fact that, in the newspapers, we read every day about the development in the Soviet Union of intercontinental bombers, and despite the fact that we are beginning to hear of the development of intercontinental rockets with atomic warheads.

More than a year and a half ago, a group of scientists known as the Lincoln summer study group did a study of United States defenses. They concluded that a chief requisite of civil defense was an early warning system. Yet, at the time, this policy was resisted by the Air Force.

I digress again to say that, of course, a strong Air Force, including interceptor planes with the finest full radar equipment, is the first essential of any continental defense. But the Air Force resisted the policy of the early warning system. According to Fortune magazine, the military felt that the expense estimate of an Arctic early warning belt was out of line. It felt that Arctic operations had not been successful in the past and were skeptical of their value in the future. It seems that these doubts have been stilled, and our Government has finally joined Canada in beginning the construction of such a belt of warning stations. But this is being done more

than a year and a half after the necessity of these stations became clear. During that year and a half we have been without an adequate warning system—and according to the Civil Defense Administration we are still without one.

When the argument over the feasibility of an Arctic warning system was producing equatorial heat, it was generating very little light so far as the public was concerned. Indeed, most Americans were not even made aware of the fact that there was a difference of opinion on this vital matter. Imagine it. A great public question affecting the lives of every man, woman, and child in the United States was kept a guarded secret. Actually the whole problem was nothing more or less than a problem of coordinating civil-defense policy with military policy, and of obtaining a military policy that would make civil defense possible. Adequate public discussion of this problem in the fall of 1952 might have resulted in a total defense policy which took more account of civil-defense needs.

In addition to the need for knowledge as a means of defense, a guard against panic, an informed public is a necessary ingredient in the formulation of the Government's attitude and policy toward civil defense. I am sure that such an informed public would have made a greater stir when the administration this year asked for a paltry $68 million for civil-defense purposes. This is how the President's budget message defined the job of the Civil Defense Administration:

> It will be the Federal responsibility as reflected in this budget to provide warning of impending attacks, and to stockpile medical supplies. The Federal Government will not assume the responsibilities which belong to local governments and volunteer forces, but will supplement State and local resources, provide necessary information on weapons effects, and advise and assist States and localities.

Even if we construe these words in their narrowest sense "warning, medical supplies, advice," $68 million does not seem adequate to perform these functions for more than 160 million Americans in the event of a hydrogen holocaust. However, I do not believe that the role of the Federal Government ends with the performance of these functions. I have talked with city and State officials who are fully aware of the danger to their communities, and yet are powerless to do anything about it. State and local resources are simply not adequate for the kind of expenditures required for civil defense. Everyday expenses for education, civic maintenance, and the like, press upon and often surpass the balance in the local treasuries and necessitate making civil defense a marginal or token activity.

I think the time has come for a definite and distinct affirmation of the Federal Government's primary responsibility for civil defense. The obliteration of a large city is not simply a local disaster. Any of our larger cities is part of a commercial, industrial, and governmental complex in which the whole Nation is involved. The Federal Government, not the local governments, operates our military defenses, and it is the only Government that can assure the proper integration of military and civil defense. In many instances local governments simply do not have the authority to initiate certain programs. The mayor of a large city, for example, finds his plans for population redistribution through housing developments stop at the city limits. The State government is unable and often reluctant to urge industrial dispersal in areas that border on other States. The Constitution guarantees us, however, that the Federal Government will "provide for the common defense." We must now have the assurance that the Federal Government has taken the responsibility for the common survival.

There are many simple and direct steps that the Federal Government can take. The Civil Defense Administration must, of course, receive appropriations large enough for the fulfillment of its enormous task. Only $68 million was requested by President Eisenhower for 1955, compared to $74 million for 1954. Oh, things have changed since last year. We now know that the Russians have bombers, the equivalents of our B–47's and B–52's capable of delivering atomic bombs. We know the Russians have exploded their thermonuclear device, and that their atomic stockpile has grown. This was certainly not the year, therefore, to cut civil defense appropriations. President Harry Truman had sought $600 million in the fiscal year 1953 and $150 million for this year. Even these figures do not measure up to the problem, but they are a considerable improvement over the ones presented by this administration.

America's industrial might is now concentrated in a few major areas, virtual sitting ducks if even a small fraction of an attacking force should get through. Industrial dispersal, a policy long and meaningfully carried out by the Russians, is an absolute necessity if America is to have the strength to launch its vaunted massive retaliation.

I digress again to remind the Senate that it is about time we got some information as to the amount of industrial dispersal that is going on in the Soviet Union. I know a considerable amount of it has taken place. When we talk about massive retaliation as a theory of military warfare, I suggest that we had better know where we are going to retaliate and have some idea as to what exactly will be the impact of such retaliation.

Is it true that Soviet industry is much more dispersed than ours? Is it true that the Soviet Union has for 10 years, or since 1940, been engaged in a dispersal program of its economic and industrial development? Is it true that we have done little or nothing in this area?

In fact, Mr. President, we have aggravated an already bad situation by placing more new military plants and industrial installations in the ever-growing urban areas.

I do not believe that we can have a successful defense policy until we know the answers to those questions.

We spend all our time talking about ourselves, about what we are doing. I suggest that an intelligent military and defense policy demands an understanding of what the potential enemy is doing and what he has in mind or might have in mind. We spend far too little time in Congress studying the economic and political developments of the Soviet Union and her satellites.

We spend too little time understanding the political tactics of the Soviet Union and her satellites. We spend all our time investigating some of our own little problems, and developing a military policy, it seems to me, on the basis of what we think ought to be right.

I cite the most recent example by referring to our complete adherence to the Navarre plan in Indochina. That plan has proved to be a failure, and it has been scrapped. Yet the foreign-aid bill which will soon be before the Senate, and, in fact, the military appropriation bill, which has already passed, were dovetailed with and were conditioned on the acceptance of the Navarre plan in Indochina, which is no longer a plan and has been relegated to the archives or to the military scrap heap.

Mr. President, I say it is absolutely necessary that industrial dispersal in America take place, if we are to protect ourselves.

Henry Parkman, Assistant Director for Nonmilitary Defense in the Office of Defense Mobilization, writing in the Bulletin of the Atomic Scientists, noted:

> A quick glance at the 1950 census reveals that 40 percent of the Nation's population and over 50 percent of those employed in manufacturing are concentrated in the 40 top metropolitan areas.

In other words, we now telephone to the Soviet Union that all they need to do is to get their bombers through to 40 cities, and we are done.

> Thirty percent of the population and 40 percent of the manufacturing employees are in the top 15.

That refers to 15 cities.

> Big concentrations of manpower, vital industry and Government within small areas make excellent targets for weapons of mass destruction. * * * A few high-yield bombs exploded over the centers of several of them can disrupt manufacturing, transportation, communications, Government, business management, labor forces, and most of the other elements of a smooth-running economy.

A certain amount of industrial dispersion has taken place since the A-bomb threat developed. But it is still not adequate, and probably cannot be without the proper Government encouragement. The noted military expert, Hanson Baldwin, writing in the New York Times, commented:

> The decrease of population density in our urban areas was advocated by the East River report, but little has been done about this. At present American cities are increasing population density by replacing slums with multistoried apartment-type buildings. Strict building codes, city planning, and laws with teeth in them could reverse this trend, reduce crowding, and spread out our cities.

I may say to Mr. Baldwin that even if we do not look forward to the prospect of an attack, dispersal would still save many people in America from hypertension and heart attack. The growing concentration of our cities, the density of population, the crowding, the hubbub

of traffic, and the movement of commerce are enough to drive anyone out of his mind. For the mental health of the Nation, it would be good to do a little planning with respect to population dispersal. Returning to Mr. Baldwin's statement:

> But the process would be slow and painful for some; real-estate values would change and the political and psychological hubbub would be major. With such planning, however, we could reduce our urban vulnerability by about 2 percent each year.

A plan to encourage population and industrial dispersal through the creation of Federal metropolitan development authorities, has recently come to my attention. It is a plan that calls for careful consideration of the Senate.

I ask unanimous consent that the details of the plan be printed in the RECORD at the end of my remarks.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. HUMPHREY. I merely bring this plan to the attention of the Senate for study by the appropriate committee and by individual Senators. I myself am not prepared to say whether it is an acceptable project, or whether I could support it. I believe that at least it is something to work on, something to plan from, and something to direct our attention to.

In addition, the vast power of Government contracts, housing and business loans, and relief on amortization rates could be used to hasten this vital business of breaking up our provokingly vulnerable industrial congestion.

It would have been interesting if in the recent tax bill, in which we provided for quick writeoffs for new plants and new equipment, as a means of inviting investment capital, if we had tied the provision down to industrial dispersal and a wider placement of industrial enterprise, in place of the continuous concentration in an ever-smaller area.

There is another whole series of problems connected with a possible atomic attack that has scarcely been touched by the Federal Government. The Washington Post and Times Herald reporting on an article by Dr. Hornell Hart, said a Soviet attack on the Nation's Capital would, "paralyze the Federal Government by obliterating Washington, D. C., as far south as Alexandria, as far north as Chevy Chase, and beyond the city limits to the east." The Supreme Court, most of the Congress, the President and perhaps all of his successors, all destroyed. Who would carry on? Who would constitute the new Government? The new Commander in Chief? What would happen to the records of revenue collection? Selective Service? Or picture the explosion of an atomic bomb over the financial heart of New York City. The stock exchange would be closed and with it the exchanges across the whole country. New York's banks, the greatest clearinghouses of the Nation would be in ruins. What would happen to America's whole credit structure? How would the vast number of bankruptcies caused by the bomb be handled? If we can devise the solutions to some of these problems now, it will literally be money in the bank when and if the awful eventuality should ever arise.

Mr. President, our problem is not the printing of ration books ahead of time; that is no problem. Our problem is figuring out what would happen if our great, complex industrial society, with great areas of communication, transportation, and industrial production, were disrupted or laid low by atomic attack. The whole Nation depends upon our credit structure. No other nation is so integrated as is ours. All means of communication, whether it be by rail, highway, telephone, telegraph, radio, television, are vital to the efficient functioning of the American economic system. We have done little or nothing to plan ahead as to how we would protect ourselves and protect this lifeline of the vitality of our national well-being.

A resolution has passed the Senate and is now before the House Judiciary Committee which would provide for a constitutional amendment allowing State governors to appoint replacements to the House of Representatives in the event of a large number of congressional deaths due to some disaster. Until this amendment is passed by the House and three-fourths of the State legislatures there is no provision for the appointment of provisional Members of the House of Representatives in the event of a national emergency.

If there is to be any such trouble as I have been contemplating I hope the enemy will give us sufficient time to get these constitutional amendments out of the way. It should not step it up too fast.

Prof. David F. Cavers, writing in the excellent periodical the Bulletin of the Atomic Scientists, has proposed several measures which would help extricate us from the nightmare of business confusion that would follow an atomic attack. Professor Cavers writes:

> A plan of protection should start with the banking system. Provision should be made for a bank holiday (probably on a nationwide basis). Advantage should be taken of this to transfer accounts from bombed-out banks to untouched banks by prearranged plan. The microfilm account records that are now going daily to holes in the ground would have been sent to banks chosen for this purpose. * * * Arrangements could be made to initiate a system of emergency loans to be administered by the banks, using Government funds; * * * preservation of a functioning civilian economy would be the objective * * * prompt substitution of drastically revised bankruptcy laws for the cumbersome machinery we worry along with in peacetime * * * the system would have to be free to allocate cases without regard to State lines * * * [authorize] a court to rewrite [long-term] contract terms to conform equitably to the new conditions.

These are just a few of the many proposals made by Professor Cavers and others. The adoption of foresighted measures like these, or the examination of equivalent alternatives, is a step toward the elimination of atomic havoc which must not be forestalled by complacency or preuranium mentality. When the bombs fall it will be too late for planning. That is my plea.

Industrial and urban dispersion, evacuation rehearsals, provisions for emergency Government credit facilities, duplication of vital Government and business records, succession to office, emergency bankruptcy procedures, these are all matters which must be taken care of now. Of course, it is my prayerful hope that they will never be needed.

Yet, Mr. President, I am sorry to say the initiative for such action seems to have been largely lacking in Congress—and I say this without partisanship. Preceding administrations did not do very much in this area, either. However, Mr. President, as we consider the full portent of a problem we have largely ignored, we recognize the fact that this is a condition we cannot allow to persist.

I, therefore, have proposed the creation of a Special Joint Committee on Civil Defense. This committee would have the responsibility of drafting and introducing legislation to take care of America's defense needs. Its activities would focus the public's attention on this vital problem and would bring to light the full information which is necessary for an intelligent public response. Moreover, such a committee would soon constitute itself the spokesman for America's civil-defense needs. Having become aware of the terrifying portent of the problem, no such committee would allow Congress to shunt aside the urgent requests for civil defense and offer appropriations which put such an insignificant price on the safety of the American public.

I fully realize that the suggestion for the creation of such a Joint Committee on Civil Defense is not one to be made lightly. There are already many demands being made on Congress' time. For a while I thought that possibly the establishment of a Special Commission on Civil Defense might suffice. I proposed such a commission some 2 years ago. Then I considered the manifest task of Congress is to provide for the present welfare of the Nation and to promote the future. But to what avail is our concern for the farmer's, the worker's, the businessman's prosperity if we do not exert every effort in insuring their security in the face of the greatest threat that has ever menaced our civilization?

It almost astounds me when I think how we spend hours and months of our time in the Halls of Congress arguing about legislative proposals to insure the prosperity and solvency of great areas of America's industry, including the farmers. At the same time we are doing this we are contemplating the directing of our effort toward what we call security. Although we have dedicated most of the tax dollar to security, we are not doing anything about the security of our people. What we are really talking about is a program which will carry the weapons of destruction to the enemy, closing our eyes to the fact that possibly the enemy may not be asleep on the job and may want to carry some weapons of destruction to us. It is reasonable and plausible that we should so reason.

Continental United States has never been attacked except by the British in 1812. We were, of course, attacked at

Pearl Harbor on December 7, 1941, but since 1812 there has not been an attack upon the mainland of the United States. In 1812 the British burned the Capitol at Washington and devastated some of our cities. But this is 1954, and every month, every year, we delay, more fantastic weapons of destruction are created. I say it is the height of stupidity, it is the culmination of a complete denial of responsibility to ignore the fact that the enemy is going to place bombs of destruction on American cities if ever there is trouble. When we have a policy of massive retaliation as an announced public policy of the Nation, we can rest assured that the men of the Kremlin, who are not detoured or held back by any moral scruples—there is no Christian compassion in their hearts—are planning a policy of massive retaliation, too.

I say there is no person in the Government who can demonstrate that our cities and our people are protected from such an attack. There is evidence to lead us to one conclusion, namely, that we are sitting ducks. We are more exposed to attack than were the people of Nagasaki and Hiroshima. We blindly pursue our course and talk about security and defense. I go back to my original premise, that the thermonuclear weapons, the hydrogen bombs, and cobalt bombs are not solely weapons in the military sense. They are to be used against industry, transportation, and civilians, and the destruction would be fantastic.

Mr. GORE. Mr. President, will the Senator from Minnesota yield?

Mr. HUMPHREY. I yield.

Mr. GORE. The newspapers today carry stories that an agreement is imminent in the Geneva Conference, indicating that the representatives of the United States are about to agree to guarantee a defense line in Indochina. I should like to inquire of the Senator how the policy of massive retaliation would work against the Vietnam forces under this guaranty of a defense line in Indochina.

Mr. HUMPHREY. I answer the Senator from Tennessee by saying that I personally do not believe that such a policy or military principle of massive retaliation has any application whatsoever to the situation which exists in Indochina, unless the administration is willing to say it will deliver the lethal weapon to the source of the trouble, and thereby precipitate world war III. I do not believe this administration or any other administration wants to precipitate a war. Therefore, massive retaliation in this area is again but a phrase, a boast, a statement of policy which is not applicable to existing conditions.

My point was—and I am certain the Senator from Tennessee agrees with me—that once such a policy were announced, we could rest assured that the enemy would pursue a similar course, or a course even more disastrous or more destructive, if we were within their capability and potentiality.

There has been nothing to indicate to us that the military leaders and the political bosses of the Kremlin are going to stop at anything, if they think they can accomplish their mission. I am only saying that the United States should be prepared for any eventuality.

Foresighted, intelligent civil-defense legislation, now, is not too much to expect from Congress when the demand is made in behalf of an American public faced with the dread prospect of vaporization.

I want the word "vaporization" to ring out through this Chamber. What we are talking about today is not society being able to pick up the rubble after the bomb has exploded, because there will not be any society. We are talking about the vaporization of man and of man's works. We are talking about the kind of destruction which is beyond human comprehension.

It is in this spirit of urgency and deep concern that I have addressed myself to a topic which apparently has no political appeal and which is of little or no national interest. But I want to be on the record now, as a Member of the United States Senate, as saying that the Government has been derelict in its responsibility for the protection of the public and the safety of the American people. A defense structure has been planned which provides a defense in conventional military terms without any thinking having been done to provide an appropriate organization for the protection of the civilian population.

EXHIBIT 1

A MEMORANDUM ON URBAN DECENTRALIZATION FOR DEFENSE

The world has recently been shocked by demonstrations of the destructive power of hydrogen bombs. The facts regarding destruction potentials have long been known. What is shocking is 10 years of official inaction in the face of this threat. The head of the Joint Chiefs of Staff proclaims that we face a 100-year war. In half of this time, and with insignificant expenditures we could reduce our present disastrous vulnerability and make our country's basic industry and urban population relatively safe from attack. Our normal construction volume provides homes for 30 million people and the shops, roads, factories, and other things that accompany these homes in each decade. At this rate we could relocate 60 million people in 20 years. At some considerably lower and more feasible rate we could so reduce our vulnerability as to reduce materially the attractiveness of war.

The following recommendations are a minimum program for reducing urban vulnerability:

1. Federal metropolitan development authorities: A Federal corporation, called the Federal Metropolitan Development Authority shall be established in each metropolitan area with a population of 100,000 people or more. It shall be the duty of the Authority to encourage the dispersal of population and industry through the development of dispersed satellite communities.

(a) The Authority shall be governed by a board of 5, 2 appointed by the governor of the State or States concerned, and 3 by the Secretary of Housing and Public Works. At least one of the latter shall be a locally elected official.

(b) The Authority shall be a corporate body with authority to acquire sites for satellite communities or as new towns, to plan such communities, to install public utilities, streets, and other community facilities, and to sell or lease sites to private or other developers for housing, shopping centers, and industry.

(c) The Authority shall have the power to contract with local governments for the provision of local government services and to arrange for payments in lieu of taxes to such local governments pending incorporation or annexation proceedings. Pending the establishment of suitable arrangements for local government the Authority could act with all of the defense powers of the Federal Government, could provide local government services but at charges or equivalents of tax rates which would permit transfer to local control in time.

(d) The Authority could erect only such public housing as was shown by its plan to be indispensable for the accommodation of the dispersed population and industry, but in no event more than 25 percent of all housing.

(e) Each Authority would be authorized to borrow $10 million for site acquisition and other general purposes, plus such funds as were made available to it for housing and local public works purposes by the Secretary of Housing and Public Works.

(f) Authorities would be required to abide by the decisions of the Secretary of Defense with respect to maximum size and minimum distance from metropolitan centers.

(g) Each Authority would be required to prepare a comprehensive plan for the decentralization of population in its metropolitan area over a period of 40 years. The plan would show the proportion of the population proposed to be decentralized, the proportion and types of industry, power, transportation, and other facilities proposed to be located in the decentralized location, and a plan showing that in the event of emergency the proposed plan would permit the evacuation of the remaining central population and the continuation of essential military production in the area.

2. Federal defense zones: The Federal Metropolitan Development Authority would be required to establish zones of population density, firebreak zones, protective open zones, and such other zones as proved to be necessary to provide for the defense and protection of the metropolitan area and its survival in the event of attack.

(a) Within such zones the Authority would have the power to prohibit the use of Federal financial aids for housing, community facilities, public works, or for other improvements inconsistent with the defense plan.

(b) The Authority would be required to report annually to the Secretary of Housing and the Congress on the effects of the defense plan upon the peacetime life of the community, and to make recommendations concerning steps necessary to assist communities in adjusting to necessary changes.

3. Upon the establishment of a duly constituted metropolitan government for any metropolitan area, with powers considered adequate by the Secretary of Housing, the functions of the Federal Metropolitan Development Authority would be transferred to the governing body of such metropolitan government.

Mr. HUMPHREY subsequently said: Mr. President, a few minutes ago I read an Associated Press dispatch on the news ticker, which reads, in part, as follows:

President Eisenhower today delegated to the Department of Health, Education, and Welfare 10 responsibilities for developing civil-defense plans and then asked Congress for a supplemental appropriation of $1,800,000 to enable it to carry out the work.

Earlier today I addressed myself to the subject of civilian defense, and also submitted a resolution which would authorize the establishment of a Joint Committee on Civil Defense. I am very happy to read the announcement of the President, and I rise to commend him

for his delegation of the responsibilites to the Department of Health, Education, and Welfare.

Mr. President, I ask unanimous consent that the entire dispatch, which outlines the responsibilities delegated to the Department of Health, Education, and Welfare, be printed in the RECORD at this point in my remarks.

There being no objection, the press dispatch was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE PLANS

WASHINGTON.—President Eisenhower today delegated to the Department of Health, Education, and Welfare 10 responsibilities for developing civil-defense plans and then asked Congress for a supplemental appropriation of $1,800,000 to enable it to carry out the work.

He delegated to Secretary Oveta Culp Hobby the following responsibilities:

1. Plan a national program, develop technical guidance for States, and direct Federal activities concerned with financial assistance for the temporary relief of civilians injured or in want as a result of an enemy attack.

2. Plan technical guidance for the States and direct Federal activities concerned with the acquisition, transportation, and payment for clothing of civilians in want as a result of attack.

3. Plan a national program regarding research on detection, identification, and control of (a) communicable diseases in humans, (b) biological warfare against humans, (c) chemical warfare against humans, and (d) other public-health hazards.

4. Plan and direct Federal activities for a national program designed to provide Public Health Service reserve professional personnel from support areas to those damaged by enemy attack.

5. Plan and distribute training materials for use in the curricula of schools and colleges in order to integrate the teaching of civil-defense skills and knowledge and fundamentals of behavior during emergencies.

Mr. HUMPHREY. Mr. President, I stated earlier that I believe we have spent far too little time on this subject and have given too little consideration to it. It is reassuring to me to have the President give the subject priority consideration and to take this forward step.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading clerk, announced that the House had passed, without amendment, the bill (S. 3539) to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services.

PLAN OF PROCEDURE ON SENATE RESOLUTION 261

Mr. FLANDERS. Mr. President, the purpose of the junior Senator from Vermont in offering Senate Resolution 261 was to put an end to the destructive forces in the power and influence of the junior Senator from Wisconsin [Mr. MCCARTHY]. The necessity for doing this has become more and more apparent as the months have gone by, and it is my expectation to go into this matter in some detail when I make the next motion on this subject.

It is evident that a number of different kinds of motions and resolutions could have been drawn up to effect this basic purpose. The one calling for the removal of the junior Senator from Wisconsin from his chairmanship seemed to be the most immediately effective.

In basing this request for removal on the unanswered questions in the Rules Committee print the matter becomes related to an unprecedented exhibition of contempt, first for the members of the subcommittee and the Committee on Rules and Administration. After the 60 to 0 vote in the Senate supporting the committee, that contempt applied to the Senate as a whole.

What is here spoken of is not contempt in the legal sense. It is personal contempt of the Senator for his peers. No statute of limitations runs on this. The purging, like the original display, is a personal matter. In pressing for action in this unusual situation, no judgment is being passed as to the truth of the evidence on which the questions were based. The evidence was so detailed and so serious that the unwillingness to answer them even by a nominal defense is completely unjustifiable.

The mover of the motion to separate the Senator from his chairmanships agreed to have it referred as a resolution to the Committee on Rules, into whose jurisdiction such resolutions fall. He was glad to do this for two reasons. First, this is no matter for snap action. It must have the serious consideration of every individual Senator for a length of time sufficient for him to form in his own mind a judgment on the issue. The second reason was that in referring it to the Rules Committee, an official Senate group was indicated to which the junior Senator from Wisconsin could offer his defense if he had any and was so disposed. That defense, to the best of my knowledge, has not been offered.

It was agreed with the majority leader of the Senate that the matter would rest until about the middle of the month. The middle of the month is now approaching so that the junior Senator from Vermont is free to take such steps as the situation may require. During this waiting period he has been careful to avoid stirring up the controversy and has, in fact, canceled 3 radio appearances and 2 speeches. This silence on his part has not encouraged any action on the part of the junior Senator from Wisconsin.

My present plan is to move on July 20 that the Rules Committee be discharged from further consideration of Senate Resolution 261. The next move will be to ask for a vote of the Senate on that motion, or one of the substitute motions available, which, as stated by the Vice President, must be substantially different.

The procedure may not be so simple as this. There are innumerable hurdles to be cleared should individual Senators desire to erect them. Both the motion to dismiss and the motion to pass can meet a countervailing motion to lay on the table. This motion, of course, is not subject to debate. If a motion to table is made, a request for a show of hands will be made so that a yea-and-nay vote can be taken.

Another hurdle would be erected in case the Senate was asked to recess from day to day instead of to adjourn. This would block consideration of the votes and such a motion likewise is nondebatable, but is subject to a yea-and-nay vote if a sufficient show of hands so requires.

These are the obvious hurdles and are cited for illustration. There are many others besides these.

I am grateful to the majority leader for the assurance that he will facilitate a decisive vote. If, however, hurdles are raised by others, it will be because Senators feel that there are serious objections to presenting this resolution at this time or, in the case of some Senators, at any time. Among the objections raised is the fact that it makes a break in the rule of seniority which we have followed for many years and on which Senators have come to depend.

It is not proposed to break the rule. There is an old saying full of wisdom that the exception proves the rule. If the rule cannot be laid aside momentarily to take account of an unprecedented situation, that makes the rule a bad rule. If it can be set aside for an unprecedented situation, the rule remains a good rule. There need be no fear that a precedent will be established, because the junior Senator from Wisconsin is himself unprecedented.

It has been suggested that bringing this matter to the attention of the Senate at this time will open Pandora's box. This objection is invalid because Pandora's box is already wide open. There has been a sizable crack in it for months, as the public has seen and passed its judgment upon the activities of the junior Senator from Wisconsin. The lid was blown off in the presence of the TV public during the hearings in the caucus room. Pandora's box is open. What concerns us is the possibility of closing it again, and to that purpose Senate Resolution 261 addresses itself.

It has furthermore been suggested that taking up this matter at this time will delay adjournment. There need be no delay so far as the junior Senator from Vermont is concerned. The procedure is for the most part a matter of voting, and only as Senators feel some necessity for explaining their votes is there need for prolonged debate.

It has also been urged that the adoption of this resolution would stop a useful and needed investigation of Communist infiltration. That idea again does not hold. That investigation properly belongs in the Internal Security Subcommittee of the Judiciary Committee, of which the Senator from Indiana [Mr. JENNER] is the chairman. Anyone who knows the junior Senator from Indiana knows that subcommittee would do an aggressive job in discovering and eliminating subversives. What has happened is that the junior Senator from Wisconsin has moved into the field which belongs to the junior Senator from Indiana and has taken jurisdiction where there was no clear jurisdiction. We can trust the junior Senator from Indiana to do work that is even more thorough and much less disturbing than that

which has been done by the junior Senator from Wisconsin.

Meanwhile the functions which the Senate intended to be performed by the junior Senator from Wisconsin have been left undone—undone that is, by the man whose responsibilities they were. The work has gone ahead through the activity of other committees, and particularly by a certain one-man investigator who has no appropriation and no expensive staff. I refer, of course, to the senior Senator from Delaware [Mr. WILLIAMS], who singlehanded has brought to light masses of corruption in the Bureau of Internal Revenue and elsewhere. This properly lies within the field of the junior Senator from Wisconsin, but does not seem to engage his interest.

Finally the junior Senator from Vermont wishes to express certain fervent hopes. The first is that Senators, having had due notice of the proposed action on July 20, will realize the responsibilities which are found in such apparently minor matters as getting a show of hands for a record vote. His second hope is that he may have sympathetic support from the majority leader. He has already mentioned the promise of the majority leader that he will not interpose artificial barriers to a decisive vote, and he is very much gratified by that statement on the part of the majority leader. His third hope is that this whole matter will be seen to transcend party lines and will become a bipartisan effort to promote the national welfare.

Mr. KNOWLAND. Mr. President, will the Senator yield?

Mr. FLANDERS. I yield.

Mr. KNOWLAND. For the sake of the record, it should be made clear that the discussion the Senator from Vermont had with the majority leader, which I am frank to say I had not expected to see published in the New York Times this morning, was to the effect that there would be no effort on my part by the artificial means of merely recessing from day to day rather than taking an adjournment to deny the Senator an opportunity to make his motion to discharge the Committee on Rules and Administration from the further consideration of the resolution which is pending there; but I think I made it perfectly clear, speaking for myself at least, that I would consider as decisive of the matter a vote on a motion by the majority leader to lay on the table the motion to discharge the committee. I hope the Senator was under no misconception that it related to his resolution itself, but, rather, on his motion to discharge the committee.

Mr. FLANDERS. I say to the majority leader and to the Senate that I would not consider a motion to lay on the table as an artificial procedural or parliamentary hurdle. A motion of that sort lies well within the perquisites and the rights of any Senator, and I shall not be surprised, nor will I be pained, if the majority floor leader makes such a motion.

Mr. GORE. Mr. President, will the Senator yield?

Mr. FLANDERS. I yield.

Mr. GORE. I take it the distinguished Senator from Vermont is aware of the parliamentary rule that a motion to lay on the table is not debatable?

Mr. FLANDERS. I am perfectly aware of that parliamentary rule.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. UPTON in the chair). The Secretary will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Barrett	Gore	Monroney
Bricker	Green	Murray
Burke	Hendrickson	Payne
Bush	Hickenlooper	Reynolds

Mr. SALTONSTALL. I announce that the Senator from Nebraska [Mrs. BOWRING] and the Senator from Kansas [Mr. CARLSON] are necessarily absent.

Mr. CLEMENTS. I announce that the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr. ELLENDER], the Senator from Delaware [Mr. FREAR], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Oklahoma [Mr. KERR], and the Senator from Arkansas [Mr. MCCLELLAN] are absent on official business.

The Senator from Missouri [Mr. HENNINGS] is necessarily absent.

The Senator from Florida [Mr. HOLLAND] is absent by leave of the Senate, attending the Sixth Pan-American Highway Congress at Caracas, Venezuela.

The PRESIDING OFFICER. A quorum is not present.

Mr. BUTLER. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Maryland.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After a little delay, Mr. AIKEN, Mr. ANDERSON, Mr. BEALL, Mr. BENNETT, Mr. BRIDGES, Mr. CAPEHART, Mr. CHAVEZ, Mr. CLEMENTS, Mr. COOPER, Mr. CORDON, Mr. DANIEL, Mr. DUFF, Mr. ERVIN, Mr. FULBRIGHT, Mr. GEORGE, Mr. GILLETTE, Mr. GOLDWATER, Mr. HAYDEN, Mr. HILL, Mr. HUMPHREY, Mr. IVES, Mr. JENNER, Mr. JOHNSON of Colorado, Mr. JOHNSTON of South Carolina, Mr. KENNEDY, Mr. KILGORE, Mr. LANGER, Mr. MAGNUSON, Mr. MALONE, Mr. MARTIN, Mr. MCCARRAN, Mr. MCCARTHY, Mr. MILLIKIN, Mr. MORSE, Mr. MUNDT, Mr. NEELY, Mr. PASTORE, Mr. POTTER, Mr. PURTELL, Mr. RUSSELL, Mr. SALTONSTALL, Mr. SMATHERS, Mr. SMITH of New Jersey, Mr. THYE, Mr. WATKINS, Mr. WELKER, Mr. WILEY, Mr. WILLIAMS, and Mr. YOUNG entered the Chamber and answered to their names.

The PRESIDING OFFICER (Mr. UPTON in the chair). A quorum is present.

Mr. HICKENLOOPER. Mr. President, I send to the desk some amendments and ask that they be stated.

The PRESIDING OFFICER. The clerk will state the amendments offered by the Senator from Iowa.

The CHIEF CLERK. On page 22, line 17, after the word "located", it is proposed to insert a comma——

Mr. HICKENLOOPER. Mr. President, I have submitted the amendments to the Senator from Tennessee [Mr. GORE]. They are in the nature of correcting verbiage and punctuation, and, based upon that assurance, I ask unanimous consent that the further reading of the amendments be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER. I wanted to call up the amendments to have them made the pending question.

The PRESIDING OFFICER. The amendments offered by the Senator from Iowa will be printed in the RECORD.

The amendments offered by Mr. HICKENLOOPER are as follows:

On page 22, line 17, after the word "located" to insert a comma.

On page 24, line 22, change "42" to "41."

On page 33, line 24, amend to read: "(1) subsection 63 A. (2), or subsection 63 a. (4), and shall make a reasonable."

On page 34, line 6, amend to read: "subsection 63 a. (1), subsection 63 a. (2), or subsection 63 a. (4), considering."

On page 35, line 5, the word "Aquisition" is amended to read "Acquisition."

On page 36, line 24, the word "cause" is amended to read "caused."

On page 37, line 16, delete "prior to its amendment hereby."

On page 48, line 9, after the words "the antitrust laws", insert "as specified in subsection 105 a."

On page 50, line 22, "Subsection 11 w. (2)" should read "subsection 11 v. (2)."

On page 58, line 24, delete the words "Atomic Energy", and line 25.

On page 74, line 9, amend subsection h. to read "consider in a single application one or more of the activities for which a license is required by this act, combine in a single license one or more of such activities, and permit the applicant or licensee to incorporate by reference pertinent information already filed with the Commission."

On page 74, line 16, delete the words "The Commission is authorized to."

On page 70, line 23, put parentheses around the numeral "1" and the numeral "2."

On page 76, line 17, the word "refiinining" should read "refining."

On page 77, line 25, the word "no" should be "not" and the word "elegible" should be "eligible."

On page 78, line 9, delete "the Commission may."

On page 78, line 10, add after the words "or other officers" the words "of the Commission."

On page 81, line 13, delete the word "and."

On page 82, line 24, section "44" should be section "43."

On page 83, line 15, the year "1937" should be "1931."

On page 83, line 17, delete the sentence starting at the beginning of the line.

On page 89, line 23, in the phrase "section 9 b.", put parentheses around the "b."

The PRESIDING OFFICER. Does the Senator from Iowa desire to have the amendments considered en bloc?

Mr. HICKENLOOPER. Yes, Mr. President. They are entirely corrective.

Mr. KNOWLAND. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. KNOWLAND. Are the amendments offered by the Senator from Iowa now the pending question before the Senate?

The PRESIDING OFFICER. That is correct.

Mr. KNOWLAND. Mr. President, will the Senator from Iowa yield for a privileged matter, with the understanding that he shall not lose his right to the floor?

Mr. HICKENLOOPER. With that understanding, I yield.

CERTAIN CONSTRUCTION AT MILITARY AND NAVAL INSTALLATIONS—CONFERENCE REPORT

Mr. CASE. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9242) to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of today.)

The PRESIDING OFFICER. Is there objection to the present consideration of the conference report?

Mr. GORE. Mr. President, reserving the right to object, do I correctly understand that the minority members of the committee are agreeable to the consideration of the conference report at this time?

Mr. CASE. It is a unanimous report of the conferees of both the House and Senate.

Mr. GORE. If consent is given to the consideration of the report, would it be agreeable to explain the conference report?

Mr. CASE. I shall be glad to answer any questions.

Mr. GORE. Mr. President, I withdraw my objection.

There being no objection, the Senate proceeded to consider the conference report.

Mr. CASE. Mr. President, the attention of the Senate is invited to the fact that the construction authorization agreed to by the committee of conference is in an amount that is $292,000 less than the version of the bill that passed the Senate. I ask unanimous consent that there may be inserted in the RECORD at this point a table showing the totals by military departments as the bill was initially recommended by the Department of Defense, as it passed the House, as it passed the Senate, and as it was agreed to by the conference committee.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Recommended by Department of Defense	Approved by House	Approved by Senate	Agreed to by conference
Army	$256,773,000	$269,873,000	$229,325,000	$236,060,000
Navy	207,239,000	203,319,000	208,920,000	201,893,000
Air Force	432,502,000	403,436,000	398,954,000	398,954,000
Alaska system	462,600	462,600	462,600	462,600
Total	895,976,600	877,090,600	837,661,600	837,369,600

Mr. CASE. Mr. President, I ask unanimous consent that a summary of the conference action be printed at this point in the RECORD as a part of my remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

At Fort Belvoir, Va., the Senate agreed to the addition of $497,000 to provide 1 additional barrack.

At Fort Bliss, Tex., the Senate agreed to an additional $3,119,000 to provide 5 additional barracks and 2 bachelor officers' quarters.

At Fort Hood, Tex., the Senate agreed to an additional $3,119,000 to provide 5 enlisted men's barracks and 2 bachelor officers' quarters?

Conference action on the Army title results in an addition of $6,737,000 to the Army authorization previously approved by the Senate.

With reference to the Navy title, the conference added $1,036,000 to the Senate figure at the Marine Corps Auxiliary Air Station, Beaufort, S. C. This action provides for 4 barracks that had been deferred by the Senate.

An item for $278,000 at the Naval Ammunition Depot, Fallbrook, Calif., was deleted from the bill.

An item of $8 million for the construction of pipeline facilities at Naval Petroleum Reserve No. 1, Elk Hills, Calif., was removed from the bill. This item had been added by the Senate after the House had omitted it.

Mr. CASE. Mr. President, I should like to invite especial attention to the two legislative amendments which were adopted during the consideration of the bill by the Senate, and explain what the conferees did with respect to them.

The House insisted on modifications to the amendments offered by the junior Senator from Oregon [Mr. MORSE] and the senior Senator from Delaware [Mr. WILLIAMS].

In the case of the amendment offered by the junior Senator from Oregon, the House insisted on vesting some discretionary authority in the Secretary of the Army to rehabilitate existing barracks and bachelor officer quarters instead of requiring rehabilitation in lieu of construction in the amount of $5 million.

With reference to the amendment offered by the senior Senator from Delaware, providing that contracts entered into pursuant to the authorizations contained in this bill should be awarded by competitive bidding to the lowest responsible bidder, so far as practicable, and so far as the national security shall not be impaired thereby, the House insisted on adding a provision that such award must be consistent with the provisions of the Armed Services Procurement Act of 1947. The House position was that in the absence of this modification, the amendment offered by the senior Senator from Delaware would be in derogation of existing law on the subject—the Armed Services Procurement Act of 1947—and that such changes should be approved only after careful hearings by the legislative committees having jurisdiction over the subject matter.

With that insertion, the so-called Williams amendment was included in the agreement of the conferees.

Mr. President, if there are any questions, I shall be glad to answer them. If not, I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from South Dakota.

The motion was agreed to.

Mr. CASE. Mr. President, I move that the vote by which the conference report was adopted be reconsidered.

Mr. HICKENLOOPER. Mr. President, I move that the motion of the Senator from South Dakota be laid on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Iowa to lay on the table the motion of the Senator from South Dakota that the vote by which the conference report was adopted be reconsidered.

The motion to lay on the table was agreed to.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. HICKENLOOPER. Mr. President, with reference to the amendments which I sent to the desk, I should like to have the attention of the Senator from Tennessee [Mr. GORE].

The question before the Senate is the amendments containing various corrections of verbiage and punctuation in the bill. I have already submitted the amendments to the Senator from Tennessee and other Senators. They contain nothing of substance or alteration of the language of the bill.

Mr. President, I ask unanimous consent that the amendments be considered en bloc.

Mr. GORE. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. GORE. As acting minority leader, I have taken the matter up with Senators on this side of the aisle, and I shall interpose no objection.

The PRESIDING OFFICER. Without objection, the amendments offered by the Senator from Iowa [Mr. HICKENLOOPER] will be considered en bloc. The question is on agreeing to the amendments offered by the Senator from Iowa.

The amendments were agreed to.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Goldwater	Millikin
Anderson	Gore	Monroney
Barrett	Green	Morse
Beall	Hayden	Mundt
Bennett	Hendrickson	Murray
Bricker	Hickenlooper	Neely
Bridges	Hill	Pastore
Burke	Humphrey	Payne
Bush	Ives	Potter
Butler	Jackson	Purtell
Byrd	Jenner	Reynolds
Capehart	Johnson, Colo.	Robertson
Case	Johnson, Tex.	Russell
Chavez	Johnston, S. C.	Saltonstall
Clements	Kennedy	Schoeppel
Cooper	Kilgore	Smathers
Cordon	Knowland	Smith, Maine
Crippa	Kuchel	Smith, N. J.
Daniel	Langer	Sparkman
Dirksen	Lehman	Stennis
Douglas	Lennon	Symington
Duff	Long	Thye
Dworshak	Magnuson	Upton
Ervin	Malone	Watkins
Ferguson	Mansfield	Welker
Flanders	Martin	Wiley
Fulbright	Maybank	Williams
George	McCarran	Young
Gillette	McCarthy	

The PRESIDING OFFICER. A quorum is present.

The bill is open to further amendment.

Mr. GORE. Mr. President, I offer the amendment, which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The CHIEF CLERK. On page 82, after line 19, it is proposed to insert the following: "SEC. 170."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Tennessee.

Mr. HICKENLOOPER. Mr. President, will the Senator from Tennessee explain what the amendment proposes to do?

Mr. GORE. My present proposed amendment adds a section number. An amendment which I shall offer later will embody the substance of the new section. The pending amendment provides only for the numbering of the new section.

Mr. HICKENLOOPER. I do not understand the procedure, Mr. President. I understand that the amendment which is offered by the Senator from Tennessee proposes to add a section number, but not the substance of the section.

Mr. GORE. That is correct. Later, I shall offer the substance of the section. It has not yet been written.

Mr. HICKENLOOPER. I do not desire to interfere with the procedure of the Senator from Tennessee, but I wish to state that I have never known such a procedure to be followed.

Mr. GORE. Does the Senator from Iowa object?

Mr. HICKENLOOPER. It is impossible to know how to vote, when there is before the Senate an amendment merely proposing a new section number, and when the substance of the amendment is not before us. I shall be glad to be informed of the substance of the proposed new section. I earnestly hope the Senator from Tennessee does not wish to have added at this time merely a new section number, because if the proposal to insert the number were to be agreed to, but if subsequently the substance of the section were not agreed to, it would be necessary to eliminate the section number.

Mr. GORE. Mr. President, a little later I shall be glad to accommodate the wishes of the Senator from Iowa.

AMENDMENT OF BANKHEAD-JONES FARM TENANT ACT, RELATING TO INTEREST RATES ON CERTAIN LOANS

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 1276) to amend the Bankhead-Jones Tenant Act in order to increase the interest rate on loans made under title I of such act, which were, to strike out all after the enacting clause and insert:

That the Bankhead-Jones Farm Tenant Act, as amended (7 U. S. C. 1001), is further amended as follows:

(a) The words "less any prior lien indebtedness" shall be added at the end of and as a part of the parenthetical phrase of section 3 (a) (7 U. S. C. 1003 (a)), and the words "or second" shall be inserted after the word "first" where it appears in the first sentence of section 3 (a).

(b) The words "a rate of interest not in excess of 5 percent per annum as determined by the Secretary" shall be inserted in lieu of the words "the rate of 4 percent per annum" in section 3 (b) (2) (7 U. S. C. 1003 (b) (2)).

(c) The words "shall not be in excess of 4 percent per annum as determined by the Secretary" shall be inserted in lieu of the words "shall be 3 percent per annum" in section 12 (c) (4) (7 U. S. C. 1005b (c) (4)).

(d) The words "pursuant to section 43" shall be deleted from section 46 (7 U. S. C. 1020).

(e) Section 51 of said act (7 U. S. C. 1025) is amended to read as follows, except insofar as said section affects title III of the Bankhead-Jones Farm Tenant Act, as amended:

"The Secretary is authorized and empowered to make advances to preserve and protect the security for, or the lien or priority of the lien securing, any loan or other indebtedness owing to or acquired by the Secretary under this act, the act of August 14, 1946, the act of April 6, 1949, the act of August 28, 1937, or the item 'Loans to Farmers, 1948, Flood Damage' in the act of June 25, 1948, as those acts are heretofore or hereafter amended or extended; to bid for and purchase at any foreclosure or other sale or otherwise acquire property pledged, mortgaged, conveyed, attached, or levied upon to secure the payment of any such indebtedness; to accept title to any property so purchased or acquired; to operate for a period not in excess of one year from the date of acquisition, or lease such property for such period as may be deemed necessary to protect the investment therein; and to sell or otherwise dispose of such property in a manner consistent with the provisions of section 43 of this act."

And to amend the title so as to read: "An act to amend the Bankhead-Jones Farm Tenant Act, as amended, so as to provide for a variable interest rate, second mortgage security for loans under title I, and for other purposes."

Mr. AIKEN. Mr. President, Senate bill 1276 was passed by the Senate a year ago, and has just been passed, with amendments, by the House. The amendments of the House of Representatives put the bill in much better form than it was at the time when it was passed by the Senate.

I now move that the Senate concur in the amendments of the House of Representatives.

Mr. GORE. Mr. President, do I correctly understand that the minority members of the committee have agreed to the House amendments?

Mr. AIKEN. Yes, indeed. Furthermore, the amendments have been taken up with the majority and minority leaders of the Senate, as well as with the Senator from New Mexico [Mr. ANDERSON], who is presently on the floor of the Senate. The committee, so far as I know, unanimously favors the amendments adopted by the House of Representatives, which improve the bill.

Mr. GORE. Will the Senator from Vermont explain the House amendments?

Mr. AIKEN. Yes, Mr. President.

A year ago, when interest rates were rising, the Senate passed the bill authorizing interest rates of 4 or 5 percent on certain types of loans. The House of Representatives has amended the bill so as to provide for not more than 4 or 5 percent—a much better provision, because I think the interest rates have dropped a little since the Senate acted on the bill; and the purpose is to charge only whatever rate is necessary. The matter was gone into thoroughly by both the House and the Senate committees. I agree that the House version of the bill puts it in much better form.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Vermont that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. GORE. Mr. President, I desire to take a few moments to read into the RECORD an editorial from the Memphis Commercial Appeal, which will indicate to the Senate how strongly the people of that great city feel about the location of a steam plant in the immediate vicinity of Memphis, in view of the fact that the prevailing winds would blow the smoke from the plant directly over the city, and in view of other circumstances to which the editorial refers.

The editorial appeared on Sunday, July 11, under the title "Why We Oppose Powerplant Deal." I quote the editorial:

President Eisenhower has undertaken to give a private power combine a $107 million powerplant.

By Executive order he has directed the Atomic Energy Commission to underwrite it with taxpayers' money.

He has ordered acceptance of a proposal from this combine, the Middle South Utilities, Inc., and the Southern Co., which includes a guaranty of 9 percent on earnings.

At the end of 25 years the plant would belong to this combine.

This has been done without any effort at competitive bidding.

The plant would be situated in West Memphis, a part of our community.

Three years of a big contruction payroll would ring cash registers—for 3 years.

This 3-year gain will be lost many times in future years by higher prices for electricity because of undermining the Tennessee Valley Authority.

The principal purpose of this plant would be to keep TVA from building a plant.

TVA is being prevented from starting new plants necessary to serve its customers.

This policy has created a power shortage, principally because the Nation's defense is diverting so much TVA power.

The shortage is most severe in Memphis and the tightening shortage ahead will be worse here.

For the Government to give private power a plant at Memphis sets the stage for reducing the TVA power shortage by taking Memphis out of TVA.

We are on the extreme edge of TVA territory.

We see this proposed private powerplant at Memphis as the second step of a policy of which the third step would be forcing TVA out of Memphis.

We see it followed by another step in which northeast Mississippi would have to give up TVA, and another step taking TVA from the westward-sloping portions of west Tennessee.

Private power prices, or a crippled TVA forced to raise its prices, or small, locally owned plants—any of these would take from this community a purchasing power far higher and much longer than the 3-year construction payroll.

While power prices quiver under the assault of this plant, Memphis would be showered with fly ash and sulfur dioxide from boiler stacks.

We know modern combustion engineering can, if it is used, end the visible smoke and reduce fly ash and fumes, but it is only a reduction.

Ash and sulfur continue to come from the stacks, in particles reduced in size by the best engineering and therefore traveling greater distances.

This harmful waste from the boilers would be spread alike over Red Acres, Glenview, Fort Pickering, West Memphis, and all other Memphis communities.

This is a proposal to hand a power plant, to be paid for from the Nation's taxes, to a specific company.

This is a proposal for powerplant that would be 100 percent subsidy, while even TVA's most bitter critics can claim only a fractional subsidy in TVA powerplants, principally in the matter of freedom from Federal taxes on Federal property.

We consider this proposal would result in years of net harm to this community which would be so apparent in the future that we could be held responsible unless we raised the alarm now. We consider it to be a wasteful, unsound attempt at favoritism with the Nation's funds.

As citizens of Memphis and of the United States we protest because we must.

That ends the editorial in the Memphis Commercial Appeal of last Sunday.

Immediately below the editorial, and also on the editorial page, there is a collection of editorials under the heading "Why Others Oppose It." The first editorial in that group is from the Milwaukee Journal—quite a distance from Memphis. The editorial reads as follows:

A Senate judiciary subcommittee requests that the Atomic Energy Commission halt negotiations with a private power combine for electric power for its Paducah (Ky.) plant, ought to be heeded. Anything that will give opportunity to study the scrambled mess created by the negotiations is all to the good.

The story is this: AEC gets about 600,000 kilowatt-hours of electricity from the Tennessee Valley Authority. TVA power commitments require it to obtain more power. President Eisenhower, by executive order, has directed AEC to negotiate a firm contract with two private power concerns for construction of a plant to produce 600,000 kilowatts of electricity.

Mr. President, I digress from the reading of the editorial, to say that the Atomic Energy Commission receives far more than 600,000 kilowatts of electricity from the TVA. The contract for Paducah alone is for 1,200,000 kilowatts.

Continuing the editorial, Mr. President:

The plant would be built at West Memphis, Ark., 200 miles from Paducah. The power would be sold to TVA for use in the Memphis area to replace power now being sold to AEC by TVA.

There are a number of questions that need answers:

The AEC, by a 3 to 2 vote, opposed the plan ordered by the President. Is it proper for the President to overrule an independent agency in operating matters?

The President's order specifies the private combine with which AEC shall negotiate. Other private firms, as well as TVA, have offered plans for providing the needed power. Shouldn't matters of this kind—if TVA is ruled out—be handled by competitive bid?

AEC is unhappy because the President's plan will cost it more money than its present method of obtaining power. AEC estimates that power obtained under the President's plan would cost it at least $97 million more in the next 25 years than its present TVA power costs. Others estimate the added cost at $139 million.

Of this sum (the lower $97 million), TVA would have to pay about $1,360,000 a year and the AEC about $2,320,000 a year. That means that TVA customers would be charged for providing power for AEC. It means that AEC would not be allowed to operate as economically as it might. It means that both would be paying what amounts to subsidies to a private firm.

I digress to say again that this editorial is from the Milwaukee Journal. Continuing to read:

The private company, meanwhile, would be in a most happy position. It would get its contract without competition. It would get a guaranteed customer for 25 years. It would end up not only with an annual profit but owning a $107-million plant. If TVA built the plant, the Government would own it and save at least $97 million as well. If other private firms were allowed to bid, there is every indication that costs would be cheaper. For instance, one offer by private interests which was turned down would have provided the power for 25 years and turned the plant over to the Government. Is the President's order good economy?

Much is made by proponents of the plan that it will help stop creeping socialism and aid private enterprise. What kind of private enterprise is it that is given direct subsidy to the extent that all risk is removed from its venture?

AEC has always been notable for its lack of politics. It is now being shoved into the middle of a hot political fight. It is being used as a tool to curb TVA.

I remind my colleagues that these are not the words of the junior Senator from Tennessee. I am reading from an editorial published in the Milwaukee Journal:

It may be that TVA should not expand. But, should AEC, which has the great job of handling our vital atomic and hydrogen developments, be pushed into a fight which does not concern it?

TVA does not have authority to enter into long-term contracts to buy private power under the law. AEC does have that authority. The law says that it may make 25-year contracts for power in connection with its installations at Paducah, Oak Ridge, and Portsmouth, Ohio. Is it proper to stretch that language to cover a plant 200 miles away which would not provide power to AEC but to TVA?

The President said in Memphis in 1952 that he would not "impair the effective working out of TVA." Not too long ago he called TVA an example of creeping socialism. He said at a press conference the other day that TVA's future would be 'studied. Well and good. Even TVA's most rabid supporters cannot object to a fair study of TVA's place in the future.

But isn't the strange order telling AEC to negotiate with the private combine prejudging TVA's place in the future? And, even if one accepted the idea of TVA critics that the project is creeping socialism and a monstrosity, isn't the new proposal merely creating another monstrosity supported by the creeping socialism of full subsidy?

The next editorial listed is from the Washington Post and Times Herald, also located far from the city of Memphis and from the Tennessee Valley. It reads as follows:

President Eisenhower's letter instructing the Atomic Energy Commission, in effect, to purchase power from certain private utility companies is unfortunate from every point of view.

As a matter of administration, this kind of interference with the independent judgment of a commission is mischievous.

In terms of business practice, it is an uneconomic arrangement, certain to prove costly to American taxpayers.

Considered as policy, it seems to reflect a doctrinaire preference for private power instead of public power, regardless of the needs and problems of a specific situation.

Through the Bureau of the Budget, the President has virtually ordered the AEC to do what 3 of its 5 Commissioners actively oppose and what the other 2 regard if not with misgivings at least without fervor. The new private powerplant will serve as a justification for denying TVA the funds it has requested for the purchase of steam plants to meet the power needs of the AEC and of area residents.

It is really a fight for TVA's life.

There have been few American achievements of the 20th century which have contributed more to the public welfare than TVA's achievement in harnessing the Tennessee River and its tributaries for the welfare of the valley's residents.

That magnificent American development must not now be stifled out of a mere doctrinaire opposition to public power and a nightmare fear of creeping socialism.

Next I read an editorial from the Louisville Courier-Journal, also outside the Tennessee Valley, but a great journal serving a State encompassing a part of the Tennessee Valley.

It reads as follows:

President Eisenhower and the Republican Congress teamed up in an attack on the Tennessee Valley Authority that threatens to destroy not only TVA but the entire public power structure.

The attack was launched to the trumpet calls of economy and "protection of free enterprise." But behind this smokescreen loomed the unmistakable outline of the spoilers.

We seriously doubt that the President, who has appeared in the past to use the phrases of the private-power people without fully understanding their meaning, now understands fully the implications of the plan he proposes.

The situation has the makings of a sellout to dwarf the tidelands oil giveaway.

I read an editorial likewise reprinted in last Sunday's Memphis Commercial Appeal, from the Anderson (S. C.) Independent, which is also outside the Tennessee Valley:

The President's action is not surprising in itself. The surprising thing is the arrogance with which the public interest is shoved aside in favor of paying off political debt to the power interests that helped elect him.

The action is also in straight contradiction of Candidate Eisenhower's promise to balance the national budget and relieve the burden of the taxpayers, for here we have him deliberately spending $3,685,000 more than necessary every year for 25 years.

Special interests are in the saddle, riding hell for leather to gouge the American people of their natural heritage and property built with their tax money. Is this the moral crusade we were promised?

I now read an editorial likewise reprinted in last Sunday's Memphis Commercial Appeal, from the Trenton, N. J. Evening Times:

Considered from any angle, President Eisenhower's letter to the Atomic Energy Commission is a mistake.

The arbitrary interference with the independent judgment of the AEC is a questionable practice. Unless Congress intervenes, it may well mark the beginning of the end for one of America's greatest social and conservation achievements of the 20th century.

The next editorial is from the Nashville Tennessean. It reads:

The AEC will be responsible for fantastic concessions to the private power syndicate. This governmental agency, it is revealed, will pay all State, local, and Federal taxes on the private plant. Moreover, it will be required to pay one-half of the cost of the plant over $107,250,000 and up to $117 million.

The net effect of this brazen deal will be to block needed TVA expansion, and to guarantee the participating companies a huge built-in profit at the expense of the American taxpayer.

In ordering this incredible contract, President Eisenhower not only has reemphasized his hostility to public power but has demonstrated the hollowness of his platitudes about encouraging local private interests to develop power projects.

For Middle South Utilities, Inc., and the Southern Co. are not local interests but are holding companies with headquarters in New York.

Mr. President, I have a series of editorials published in newspapers from the Atlantic to the Pacific, from the Canadian border to the gulf, which I shall read later for the edification, I hope, of Members of the Senate. I shall not at this moment further intrude upon the Senate by reading them, but I shall take them up in turns.

I ask unanimous consent to withdraw my amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. ANDERSON. Mr. President, if it is agreeable to the Senator from Tennessee, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, in addition to the things which will relate exclusively to the Dixon-Yates contract, I desire to mention several provisions in the bill itself which I think ought to persuade Members of the Senate that this is an extremely important piece of proposed legislation, that it should be most carefully considered, and that it should not be quickly passed. By that I do not mean that action needs to be unduly delayed, but I believe it is of sufficient importance so that the Members of the Senate will see an obligation to read the bill, at least, and will decide that there are things in it which might cause them to pause and ask some questions before it becomes the law of the land.

Mr. President, I want to commend the statement made last night by the distinguished senior Senator from Iowa [Mr. HICKENLOOPER], once chairman of the joint committee on atomic energy and a valuable member of it for many years. He tried to show, as I hope I shall be able to show, that what we discussed in connection with the bill is not political, and it is certainly nonpartisan. We are all interested in trying to produce a better bill. I am happy that the committee worked at it for a long time and tried its best to bring forth amendments to which we all thought we could subscribe.

What I am trying to say now is that, upon further study of the bill, things occur to us which did not seem to be apparent while we were in the committee sessions. Someone might ask, "Why did you not try to correct it when the bill was in the committee?" I can only say that after we have discussed the provisions of a bill for a great many days, the language appears somewhat different from what it may appear some days later.

For example, Mr. President, on page 23 of the bill, beginning at line 3, there appears section 44, which applies to byproduct energy, and provides:

If energy which may be utilized is produced in the production of special nuclear material at production or experimental utilization facilities owned by the United States, such energy may be used by the Commission, or transferred to other Government agencies, or sold to publicly or privately owned utilities or users at reasonable and nondiscriminatory prices. If the energy produced is electric energy, the price shall be subject to regulation by the appropriate agency, State or Federal, having jurisdiction.

At the time I read that language in the committee and when we were considering the draft, it seemed to me it related only to what might happen to certain byproducts, but as I now read it I wonder if it does not affect the development of power as power by the Atomic Energy Commission. I wonder if it does not provide that the Atomic Energy Commission shall never build a test plant of its own to see whether it can utilize for civilian uses this great new source of energy. If the primary or sole purpose of a plant is the production of electric energy, then I believe, under this language, it is barred, and I think that might be a very serious thing which we may want to consider.

Mr. GORE. Mr. President, will the Senator read that language again?

Mr. ANDERSON. I shall read it again, and I want to say to the Senator from Tennessee that I read the language over and over in the committee and thought we were discussing only byproduct energy which might be developed in connection with a thermo-nuclear plant or a plant which was developing plutonium. The language provides:

If energy which may be utilized is produced in the production of special nuclear material at production or experimental utilization facilities owned by the United States, such energy may be used by the Commission, or transferred to other Government agencies, or sold to publicly or privately owned utilities or users at reasonable and nondiscriminatory prices.

There is now a question in my mind as to whether this would bar the construction of a facility to develop power for power's own sake.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico yield for a question?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. With reference to the Senator's concern about this particular provision of the bill, I join with him and will say that I also read this provision any number of times in studying the bill in committee. I assumed then and I assume now that the provision is intended by the committee to apply to a case where in an experimental development certain amounts of electricity being produced in an atomic program will not have to go to waste. The Government could, if there was any outlet, use this byproduct material in connection with its general experimental and developmental operations. I do not myself assume that it is a prohibition against the Commission doing such things as it may already have the authority to do. In other words, I do not consider it to be a new bar against some power which the Commission already has.

Mr. ANDERSON. I thank the able Senator from Iowa. I am trying to make some legislative history on the point, and I think it should be made certain that we do not intend to bar the possibility that the Atomic Energy Commission can erect its own pilot plants and try to find peacetime users for atomic energy.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico yield further?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. I should like to make myself clear as to my understanding of this matter. I do not believe the Commission is barred at this time from erecting experimental plants in the field of the development of atomic power. I am quite sure the Commission has that authority. I think the law is clear on that point. In the preparation of the pending bill I do not believe there was any intention, indeed, I am quite sure there was not, to place any bar on the authority of the Commission which it already possesses.

I feel that I can assure the Senator that this section is an attempt to reach a situation where some byproduct material might be produced under certain circumstances and might have to go to waste unless a possible means of securing some sale value from it, although not very much, were provided.

Mr. ANDERSON. I hope that is the purpose of it and that it has that objective.

I now come to another provision of the bill which I think is of much greater importance. It is on page 41, under chapter 9, which deals with the military application of atomic energy.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico yield further?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. I should like to read the language again in section 44, beginning in line 4: "is produced in the production of special nuclear material at production of experimental utilization facilities."

It seems to me that connotes that the Commission may build production facilities, because it specifically says it has power to produce special nuclear material at production or experimental utilization facilities.

Mr. ANDERSON. Yes, but I call the Senator's attention to the fact that in the development of atomic weapons and the manufacture of nuclear fuel, there are only two types of facilities. One is experimental, and the other is for production. So this provision covers the whole field.

I now wish to turn to section 91 of chapter 9, Military Application of Atomic Energy.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. GORE. Before the Senator leaves the section relating to the development of power, would he inform me and other Senators if the bill contains the preference clause for municipal and other public bodies, which is usually written into Federal power bills, and which has been a part of the Federal power policy for a good many years past?

Mr. ANDERSON. I feel the need to have the general counsel with me, but I think the bill does not contain such a provision.

Mr. HICKENLOOPER. I beg the Senator's pardon. I did not hear his statement.

Mr. ANDERSON. I was only going to say to the junior Senator from Tennessee that, not being a lawyer, I have long since learned that I should consult with someone else when a question of this nature arises.

I have been advised that my answer is correct. The bill does not contain such a provision. I feel reinforced in my opinion on learning that the bill does not contain such a provision.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. ANDERSON. I yield.

Mr. GORE. Does not the Senator from New Mexico think that that omission is a matter of great import?

Mr. ANDERSON. I attempted to say last night that I felt the bill was not something to be passed in a couple of hours. If the Congress of the United States, and particularly the Senate now, decides that it wants to eliminate preference clauses, that is all right. If the majority vote to do that, then I say it is proper. But I think Congress ought to know what it is doing.

I may say to the Senator from Tennessee that I do not believe any of the ordinary preferences which apply to falling water, for example, are included in the bill at all. That may be the way it should be. It may also not be the way it should be. At least, there is a difference of opinion in the United States Senate and throughout the country as to whether such preference clauses belong in this type of legislation.

I visualize a day, not very distant, when the generation of power from nuclear energy will be far more important than all the water power which now exists in the United States. When that day comes, the preference clauses may be of great importance or the absence of preference clauses may be of great importance.

I am merely trying to say to my able and distinguished colleague that if Congress decides to eliminate preference clauses, I shall not interpose objections, one way or the other. I shall vote as I have always voted. But Congress should know what it is doing; and whatever it does, it should do with its eyes wide open; and it ought to say, if that is to be its decision, that in the great field of nuclear energy preference clauses will not exist hereafter, so far as the production of electrical energy from nuclear materials may be concerned.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. ANDERSON. I yield.

Mr. GORE. The Committee on Public Works spent a good long while debating and considering the inclusion of a preference clause in a bill providing for the hydroelectric development of Niagara Falls or a part of Niagara Falls. Yet the Senate has before it a bill relating to power potentialities so great as to render infinitesimal the power potentialities of Niagara.

The able Senator from New Mexico has spoken of the potentialities which he foresees. Is it not possible that in future years the generation of power by atomic energy may not only equal, but also supplant the hydroelectric and other orthodox methods of the generation of power?

Mr. ANDERSON. As the Senator already knows, I am neither a scientist nor a good prophet, but I have a right to guess.

Mr. GORE. I have only asked the Senator, is not that possible?

Mr. ANDERSON. It is my opinion that the possibilities for the development of nuclear power hold more promise in certain sections of the country than the development of hydroelectric power has held, for example, in the great Northwest.

Let me state that in another way. We have all been disturbed, sometimes, about the flight of industry from certain of the New England States. In part the reason for that flight is the availability of cheap power in the Tennessee Valley area, and the abundance of cheap power in the area centering around Bonneville Dam, Grand Coulee Dam, and the other industrial areas of the West.

I think it is entirely possible that electric energy developed from nuclear resources may make it possible for current to be developed in the New England States at a level comparable to, and eventually below, the hydroelectric rate now prevailing in the great Northwest.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. ANDERSON. I yield.

Mr. GORE. The Senator has again drawn a comparison between power generated by atomic energy and hydroelectric development of power. The flowing stream is regarded as a natural resource belonging to the people. Therefore, for many years, so far as I can now recall, every single power bill which has been enacted relating to the use of the natural resource of the flowing water has contained a preference clause for the benefit of public bodies, municipal systems, State-owned systems, and REA's.

Are plutonium and uranium, refined at the taxpayers' expense, any less natural resources belonging to the people than the water in a flowing stream?

Mr. ANDERSON. In general, I think they are no more or no less a resource than is the falling water.

I point out to the Senator that it is difficult to get too far into this field, because there are various other factors relating to values; but I say to him that certainly, in general, the citizens of the United States have some rights to atomic energy power, because they paid the $2 billion to get it started, and they put up the next $10 billion to make it a great industry. So this $12 billion industry is something which should be utilized for the benefit of all the people of the United States and that can be done if some control is kept over the development of the power which flows from it.

I now turn to section 91, of chapter IX. Paragraph (b) reads as follows:

The President from time to time may direct the Commission (1) to deliver such quantities of special nuclear material or atomic weapons to the Department of Defense for such use as he deems necessary in the interest of national defense or (2) to authorize the Department of Defense to manufacture, produce, or acquire any atomic

weapon or utilization facility for military purposes.

I may be wrong, but this, in my opinion, brings back again the old fight of 1946, as to whether the utilization of atomic energy shall be placed in the hands of the military, or shall be under civilian control. The present law reads quite differently. It provides:

The President from time to time may direct the Commission (1) to deliver such quantities of fissionable materials or weapons to the Armed Forces for such use as he deems necessary in the interest of national defense or (2)—

These are important words—

to authorize the Armed Forces to manufacture, produce, or acquire any equipment or device utilizing fissionable material or atomic energy as a military weapon.

The difference between the two wordings is this: Under the old wording, the President might authorize the Armed Forces to manufacture equipment or devices which would utilize atomic energy as a weapon. The proposed language would permit the President to authorize the Department of Defense to manufacture, produce, or acquire any atomic weapon. I think it is very serious to say that we will change the procedure under which atomic weapons are now being manufactured, and to put their control back under the military, when in 1946 Congress provided for the civilian control of atomic energy.

In my opinion, the proposed language would give the military jurisdiction over, for example, the Sandia Laboratory, in my home city, but not over Los Alamos Laboratory, which is close by. To me that does not make too much sense. I think the Atomic Energy Commission, which operates both facilities, should continue to operate both of them. It seems to me that in the discussions in the committee it was never intended to transfer to the Department of Defense the right to manufacture, produce, and acquire atomic weapons.

I wanted to see this question raised, so we can think about it as we consider the bill.

Mr. HILL. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield to the Senator from Alabama.

Mr. HILL. Does the committee have much, or any, testimony to the effect that the military should be permitted to manufacture atomic weapons, that such authority should be transferred and taken out of the hands of the Atomic Energy Commission and put into the hands of the military?

Mr. ANDERSON. If I should be led into a discussion of that question, I could hardly do so without entering a field which I am forbidden to discuss. There is some justification for allowing the military to do certain things in connection with atomic weapons. I feel that the authority granted is pretty broad, and that perhaps it ought to be further restricted. I do not say it is wholly bad, but I say I would hesitate very much to include any provision which might result in a renewal of the old fight of 1946, so that we would revive it again at this late date.

Mr. HILL. Will the Senator yield further?

Mr. ANDERSON. I yield.

Mr. HILL. One of the biggest controversies in Congress over the passage of the act was with regard to the question of whether or not the Atomic Energy Commission was to be under military rather than civilian control.

Mr. ANDERSON. I think it was. I was not a Member of either House of Congress at that time, but, in another capacity, I was trying to distribute food around the world. Nevertheless, I am sure that was a very important consideration, and I cannot too strongly commend the Members of the Senate and the House who insisted upon civilian control. I hope the activity will remain under civilian control.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Iowa.

Mr. HICKENLOOPER. I call to the attention of the Senator the fact that the particular portion of section 91 to which he has just referred, subparagraph (2), is actually a restatement of the existing law. If he will consider the definition of atomic weapons as contained in the law, I think he will find that the use of the words "atomic weapons" results in shortening the provision of the present law, and does not, in fact, alter or change the definition down to that point.

The one material change which can be pointed out in the new section is the use of the words "utilization facility." Those words were placed in that section for the purpose of covering either the delivery or carrying devices which are peculiar to the Military Establishment.

The point the Senator from New Mexico has raised was discussed at length in the committee, and a great deal of thought was given to the very careful wording employed. I assure the Senator it was not the intention of the committee to make any fundamental alteration in the existing law, or to enlarge the scope of it to such a point that the fears of the Senator should be aroused.

The words "utilization facility" were used in the section so as to include, let us say, the submarine *Nautilus*. That is a utilization facility in which atomic devices are carried; that is, the whole submarine becomes a utilization facility. A special airplane, for example, designed especially to transport an atomic bomb, and being utilized very little for any other purpose, would be a utilization facility.

Mr. ANDERSON. I thank the Senator. I think the history which the Senator has stated is useful, but, as I said in the committee, I believe the language could be clarified. It provides that the President may authorize the Department of Defense to manufacture any atomic weapon, and when I read the definition of atomic weapon, I find it means any device utilizing atomic energy. I have been right on hand in one of our assembly plants when the workers have been assembling an atomic bomb, and I believe I know what an atomic weapon is. It strikes me that when the language says that the Department of Defense may manufacture an atomic weapon, it means the Army may manufacture a bomb.

Mr. HICKENLOOPER. If the Senator will yield, I should like to call to his attention that at the end of subdivision (2), which we have been discussing, there is a proviso which reads:

Provided, however, That such authorization shall not extend to the production of special nuclear material other than that incidental to the operation of such utilization facilities.

That proviso was put into that section with the specific intent of preventing the military arm of the Government from going into the business of producing special nuclear material for weapons.

Mr. ANDERSON. I again thank the Senator, but I point out to him that the production of special nuclear material has very little relation to the manufacture of an atomic bomb. I think the Senator and I know where atomic bombs are manufactured. He and I know that in the place where they are manufactured no special nuclear material is produced.

Mr. President, if I may pass on to section 102, it reads:

Whenever the Commission has made a finding in writing that any type of utilization or production facility has been sufficiently developed to be of practical value for industrial or commercial purposes, the Commission may thereafter issue licenses for such type of facility pursuant to section 103.

The language of the provision sounded all right, and probably is all right, but it does suggest that, once the Commission makes its findings, it can issue licenses to produce nuclear power. What is to stop the granting of dozens of licenses thereafter? The minimum requirement should be that the Commission should hold hearings and let the public know what the Commission plans to do.

I do not say this should not have been considered earlier, but it was called to my attention when I received in the mail for release in the morning newspapers for Tuesday, July 13, an announcement by the Atomic Energy Commission that "AEC and North American Aviation will share the cost of sodium graphite reactor experiment." It says:

The first sodium-graphite reactor in the United States will be developed and constructed in a project sponsored jointly by the Atomic Energy Commission. * * * The project, a new step toward the development of atomic nuclear power, will cost about $10 million.

I do not see how the public knew this contract was going to be awarded, because I do not think any member of the Joint Committee on Atomic Energy knew it was going to be awarded. If there is no chance that the members of the joint committee will hear about such contracts, I do not see how the public will hear about them.

This is an important field. It seems to me the reactor is a little small. It may be that it is exactly the right size, but it appears to me we ought to have the fullest possible publicity in connection with the granting of the licenses.

While I am not trying to quarrel with the provision of the section, I believe it

would be wise, so far as it could be done, to make provision so that the greatest possible amount of public good may result from the granting of the licenses. If enough provisions to safeguard that objective have been written into the bill, I am satisfied. If not, I think we ought to try our best to write sufficient provisions into the bill.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. I call the Senator's attention to the fact that section 102 refers to the granting of licenses, whereas the illustration of the contract with North American to which the Senator has just referred is a matter of contract.

Mr. ANDERSON. I concede that.

Mr. HICKENLOOPER. In the matter of licenses, I call the Senator's attention to chapter 16 of the bill, which sets forth the provisions for consideration of the licenses according to standards of equity and fairness. Under the Administrative Procedures Act, notice is provided for. I believe that if all the provisions are considered together, very ample protection is provided against any secret or precipitate deals.

Mr. ANDERSON. I appreciate the suggestion of the able Senator from Iowa; but now he has mentioned chapter 16, which provides for judicial review and administrative procedure. Section 181 reads in part as follows:

SEC. 181. General: The provisions of the Administrative Procedure Act shall apply to "agency action" of the Commission, as that term is defined in the Administrative Procedure Act .

And so forth. I read that, and I thought it meant that the provisions of the Administrative Procedure Act in relation to hearings automatically become effective in connection with the granting of licenses by the Commission. But, unfortunately, the Administrative Procedure Act, when we read it—and again I say I read it as a layman, not as a lawyer—does not require a hearing unless the basic legislation requires a hearing. If the basic legislation does require a hearing, a hearing is required by the Administrative Procedure Act. But in this case the basic legislation does not require a hearing, so the reference to the Administrative Procedure Act seems to me to be an idle one.

I merely am trying to say that I believe these things should be carefully considered.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

The PRESIDING OFFICER (Mr. BARRETT in the chair). Does the Senator from New Mexico yield to the Senator from Tennessee?

Mr. ANDERSON. I yield.

Mr. GORE. In whom is the discretionary authority vested?

Mr. ANDERSON. In the Commission, I believe. As I have said, it may be that I have misread the bill; it may be that the bill requires a hearing. But because I feel so strongly that nuclear energy is probably the most important thing we are dealing with in our industrial life today, I wish to be sure that the Commission has to do its business out of doors, so to speak, where everyone can see it.

Although I have no doubt about the ability or integrity of the members of the Commission, I simply wish to be sure they have to move where everyone can see every step they take; and if they are to grant a license in this very important field, where monopoly could so easily be possible, I think a hearing should be required and a formal record should be made regarding all aspects, including the public aspects.

Mr. GORE. Mr. President, will the Senator from New Mexico yield further to me?

Mr. ANDERSON. I yield.

Mr. GORE. What protection does the bill provide, to preserve the integrity and independence of the Commission? If the Commission reaches a formal decision which it considers to be in the public interest, is the committee satisfied that the Commission could not be overruled by means of a telephone call from a member of the White House staff or from some other source; or does the Senator from New Mexico think that under certain precedents recently established, the Commission might be in danger of being overruled on the matters upon which it reached a decision in public, as the Senator from New Mexico has suggested?

Mr. ANDERSON. Of course, the Senator from Tennessee is now referring to the Dixon-Yates contract and the related matter.

Mr. GORE. I do not wish to hurry the distinguished Senator from New Mexico into a discussion of that subject; I know he will reach it in due time. But inasmuch as so much power is vested in the Commission, and inasmuch as the able Senator from New Mexico has placed such great store upon the decisions of the Commission and upon the manner in which the Commission will reach its decisions, I believe it pertinent to inquire what protection the bill throws around the Commission, in which so much discretionary authority is vested.

Mr. ANDERSON. I should like to say to the Senator from Tennessee that I thought the Commission was a completely independent body. The members are nominated by the President and are confirmed by the Senate, after a hearing regarding their qualifications and ability to perform their responsibilities; and the members have complete authority to transact the business of the Commission.

I am somewhat disturbed by the Dixon-Yates contract, but I hope it will not constitute a precedent in regard to what may happen in the future.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. I yield.

Mr. HICKENLOOPER. I wonder whether the Senator from New Mexico does not feel that sufficient protection is afforded in section 181 and in section 182–b. In that connection, I should like to have the Senator from New Mexico refer to section 182–a, on page 85, beginning in line 9, from which I now read, as follows:

Upon application, the Commission shall grant a hearing to any party materially interested in any "agency action."

So any party who was materially interested would automatically be afforded a hearing, upon application for one.

Then, in section 182–b this provision is found:

b. The Commission shall not issue any license for a utilization or production facility for the generation of commercial power under section 103, until it has given notice in writing to such regulatory agency as may have jurisdiction over the rates and services of the proposed activity, and until it has published notice of such application once each week for 4 consecutive weeks in the Federal Register, and until 4 weeks after the last notice.

Mr. ANDERSON. Mr. President, I may say to the Senator from Iowa that when in committee we discussed this language, I thought it was sufficient. I still think it ought to be sufficient. But I do not find myself able to tie the Administrative Procedure Act to this requirement of the bill.

To return to section 181 and the portion on page 85 reading—

Upon application, the Commission shall grant a hearing to any party materially interested in any "agency action"—

Let me say I think it is important to tell who may be interested, and therefore the widest publicity is necessary. For example, if the Commission were going to grant a franchise to enable someone to establish a new plant inside the Chicago area, there might be many persons who would be interested, but they would not know that the matter was under consideration. I am trying to say that the people who are interested will not be reached unless they are given notice. I say again to the Senator from Iowa that nothing in the section may need changing. I am merely stating that, upon a second reading, some doubts arise, and I wonder what the section actually provides.

Mr. President, I intend to discuss, perhaps at considerable length, the proposed contract between Dixon-Yates and the Atomic Energy Commission. So far as I know, the material relating to that matter is not yet in the RECORD. Therefore, I ask unanimous consent that a letter and exhibits submitted by Middle South Utilities and the Southern Co. to the Atomic Energy Commission, under date of April 10, 1954, be printed at this point in the RECORD.

There being no objection, the letter and exhibits were ordered to be printed in the RECORD, as follows:

APRIL 10, 1954.

ATOMIC ENERGY COMMISSION,
Washington, D. C.
(Attention: Gen. K. D. Nichols, General Manager.)

DEAR SIRS: In response to the suggestion in the President's budget message that the power industry might furnish 500,000 to 600,000 kilowatts to your Commission by the fal lof 1957, Middle South Utilities, Inc., and the Southern Co. submitted a proposal to you under date of February 25, 1954. It was our understanding of the budget message that this power was desired in order to reduce the commitments of Tennessee Valley Authority to your Commission for service at Paducah, with a resultant reduction in the amount of capital expenditures which would have to be budgeted for TVA. Our proposal was designed to accomplish that purpose.

As you know, our February 25 proposal was formulated upon short notice and on the basis of data which was not as complete as is desirable in connection with such a matter. Since February 25, we have acquired additional information and have had time for further study. As a result, we are pleased to be able to make an offer to your Commission on a more favorable basis. Accordingly, we hereby withdraw our letter of February 25, 1954, and submit to you the proposal set forth in this letter and the accompanying appendix.

Our proposal provides for rates, exclusive of taxes, having a base annual demand charge of $14.62½ per kilowatt-year, subject to variation up or down in case of increase or decrease in actual cost of construction as compared with the present estimate, with a maximum increase of 47½ cents per kilowatt-year. The base-energy charge is 1.863 mills per kilowatt-hour, which is estimated cost, subject to variation up or down in case of increase or decrease in fuel costs and wage rates.

In considering our proposal for purposes of comparison, it is important to bear in mind that there are two classes of factors to be weighed. One class includes those where a Government agency enjoys advantages not available to private industry and with which private industry cannot hope to compete—Government credit, freedom from taxation, certain subsidies, etc. The other class of factors has to do with performance. As to the latter, private industry can perform at least as well as Government and is willing to face any fair comparison. In the present proposal an attempt has been made, insofar as possible, to separate these two classes of factors so that a fair comparison may be made.

It is, of course, impossible to know now, on the basis of presently estimated cost, what the actual ultimate cost of a new plant will be. The effect of our proposal, however, is to provide that if the actual construction cost is less than anticipated the Government is to participate equally with us in the benefits from such reduction. Its effect also is to provide that if the construction cost exceeds the estimate, the resulting increased costs are to be divided equally between us and the Government, except that there is a guaranteed maximum above which the Government does not bear any such additional costs and we bear them all. Thus the Government is provided with a ceiling—we with an incentive to benefit the Government as well as ourselves.

Under our proposal, a new corporation to be formed by us will make the expenditure to build the plant, and the taxpayers will make only annual payments related to the annual cost of supplying the power for the 25-year period of the contract. Moreover, if the Government's need for this power should for any reason come to an end, the Government may terminate its contractual obligation on a reasonable basis and thereby relieve the taxpayers of any further payments on account of power their Government no longer needs or uses.

Every consideration has been given to the fact that a 25-year contract with the United States Government, acting through your Commission, will tend to lower the cost of money to the new corporation. Full allowance has been made for the lesser risk of a Government contract as compared with risks in normal situations involving relatively short-term contracts with ordinary businesses. As is indicated in the Appendix, we have also given full consideration to the fact that the power involved will be utilized by the Government itself for a purpose related in the main to defense. Naturally, under such special circumstances, we are able to finance with a substantially larger proportion of long-term debt than would be permitted by regulatory authorities in a normal public-utility situation. Moreover, we are willing and able to go further in this special defense situation than we otherwise would.

As stated above, our proposal has been formulated with the end in view of supplying power and energy to your Commission, an agency related in the main to national defense, for use in pursuance of your statutory purposes. At the same time, however, we have attempted by our proposal to assist the Government in the solution of a broader overall problem. TVA testimony before congressional committees indicates that the power released by your Commission upon acceptance of our proposal will be of use to TVA in west Tennessee, and particularly in the Memphis area. It will, therefore, be both practical and economical if deliveries by our new generating company are made to you or for your account over interconnections with TVA in the Memphis area, and if TVA, in turn, delivers a like amount of power to your Paducah facilities from its Shawnee station. To do this the facilities of the new company will be located near Memphis. This plant site will have the following advantages: (a) It will locate the plant where fuel can be readily obtained via the Mississippi River or by rail; (b) it will locate the plant where interconnections can be readily made with major power systems; (c) it will make it unnecessary for TVA to build transmission lines back from Shawnee to the Memphis area, thus avoiding assessment of further amounts against taxpayers for this purpose; and (d) the additional capacity will not be built in the Paducah area which, if the AEC demand were canceled, would be oversupplied with power.

Both the Middle South system and the Southern Co. system have regularly delivered substantial blocks of power to TVA over existing interconnections. If interim power is desired, the undersigned are prepared to negotiate a separate definitive agreement for such purpose.

We have received assurances from responsible financial specialists expressing the belief that financing can be arranged on the basis which we have used in making this proposal and under existing market conditions, and our office is conditioned upon the arranging of such financing. Our proposal is also subject to our securing appropriate Treasury Department rulings or agreements with respect to the sinking-fund depreciation upon which the computations underlying our proposal are predicated.

The attached appendix sets forth an outline of additional matters in our proposal, including the more important provisions which will be embodied in a contract growing out of it. We are ready to negotiate a definitive contract at your early convenience.

Very truly yours,

MIDDLE SOUTH UTILITIES, INC.,
By E. H. DIXON, *President.*
THE SOUTHERN CO.,
By J. M. BARRY,
Chairman of the Executive Committee.

PRICE

Capacity charge: A base capacity charge of $8,775,000 annually, payable one-twelfth monthly for contract capacity of 600,000 kilowatts, subject to adjustment as follows:

(a) For cost of seller's initial facilities: Plus or minus 50 percent of an amount computed at the rate of $58,550 annually for each $1 million by which the sum of (i) the cost of seller's initial facilities and (ii) $1,135,000, the estimated cost of transmission additions required in the Middle South system in connection with the proposed transactions is greater or less than $107,250,000: *Provided, however,* additions to base capacity charge shall not exceed $285,000.

(b) For no-load fuel: Plus or minus an amount computed at the rate of $3,500 per month for each 1 cent by which the cost of coal delivered (unloaded) at seller's plant is greater or less than 19 cents per million B. t. u.

(c) For power factor of less than 93 percent: The monthly payment for capacity shall be increased in the ratio of the maximum kilovolt-ampere at the primary delivery points during any 30-consecutive-minute interval, to 645,000 kilovolt-ampere.

Energy charge: 1,863 mills per kilowatt-hour delivered at primary and secondary delivery points, subject to adjustment as follows:

(a) For cost of coal: Plus or minus an amount computed at the rate of one-eleventh mill per kilowatt-hour for each 1 cent increase or decrease above or below 19 cents per million B. t. u. in the cost of coal (including any taxes and other imposts assessed against the coal, its extraction, sale, transportation, use, or otherwise) delivered (unloaded) at the company's generating station near West Memphis, Ark.

(b) For cost of labor and other operating and maintenance expenses for each 6-month period beginning with January or July: Plus or minus an amount computed at the rate of one one-hundredth mill per kilowatt-hour for each 4-cent increase or decrease above or below $1.97 in the 6-month average of hourly earnings of production workers in gas and electric utility industries, as compiled by Bureau of Labor Statistics for the preceding 6-month period ending with March or September. Such adjustment shall be made as though not less than one-twelfth of 4 billion kilowatt-hours were delivered each month, whether or not actually delivered.

Other conditions: (1) This offer is subject to approval of regulatory bodies having jurisdiction and to force majeure. In the event of new laws, orders or regulations or changes in existing applicable laws, orders or regulations adversely affecting wage rates, hours of work or other conditions, or active hostilities, any of which shall result in increased costs hereunder, the effect of such changes shall be incorporated in any contract resulting from this offer to the end that the rights of the seller shall not be impaired by such changes, and the parties will enter into appropriate amendments of such contract to that end.

(2) In consideration of the fact that seller's production, delivery, and other initial facilities are to be installed primarily for the purpose of making deliveries to or for the account of the buyer, and that the base prices and adjustments for the service to be provided hereunder do not include any taxes except those referred to below in clause (a), it is understood that the buyer will pay such additional amounts for capacity and energy as will result, after the payment by seller of Federal, State, and local taxes, licenses, fees, and other charges in the seller having net operating revenue (as such term is defined or derived under the presently applicable Federal Power Commission uniform system of accounts) in the same amount as seller would have had if seller were not liable for any taxes, licenses, fees, and other charges; *Provided, however,* That—

(a) inasmuch as the taxes hereinafter referred to are included in other reimbursable costs or charges, buyer shall not be required to pay to seller any additional amounts on account of taxes at current rates in the category commonly called social-security taxes (such as State unemployment, Federal unemployment, Federal old-age benefit, or similar taxes) currently applicable to payrolls; nor shall buyer be required to pay to seller any additional amounts on account of sales and use taxes on operating supplies, taxes, and other imposts assessed against the coal, its extraction, sale, transportation, use or otherwise, at currently applicable rates, in-

cluding Federal, State, and local taxes on gasoline, tires, oils, stationery, etc.; and

(b) All the seller's initial facilities are to be first devoted to service to buyer, up to the contract capacity, but seller may make use of initial facilities for purposes other than the supply of capacity and energy to or for buyer at such times and to such extent as such service to buyer does not prevent such other use; and to the extent that the initial facilities are so used for such other purposes and seller derives income therefrom and incurs tax liabilities as a result thereof, such tax liabilities shall be discharged at the sole cost and expense of seller. Seller will maintain records of the revenue derived from such other use, and the incremental cost of generating such energy, so that the tax liabilities arising out of such other use may be determined and excluded from bills payable by buyer.

(3) Buyer will take service on not less than minimum schedule and shall not be entitled to service at any rate greater than contract capacity.

(4) The base capacity charge includes the costs associated with initial facilities of approximately 650,000 kilowatts, of which capacity in excess of 600,000 kilowatts is reserve capacity, and the base capacity charge includes the costs associated with such excess as compensation to seller for furnishing reserve capacity sufficient to provide firm service with one unit out of service. In recognition of the fact that such reserve capacity is not adequate to provide the equivalent of one generating unit of the size likely to be installed, seller will make arrangements with others, including the companies making this proposal, to furnish, without additional charge to buyer, additional supplies of power and energy sufficient, with one generating unit out of service to deliver 600,000 kilowatts at the primary and secondary delivery points.

(5) This offer is premised on the fact that the equivalent of the power and energy involved will be utilized by the AEC, an agency related in the main to national defense, in pursuance of its statutory purposes. In this special situation, seller is willing and able to go further than it otherwise would or could. Accordingly, it is understood that TVA will accept such power and energy for delivery to buyer by transmission or displacement, and that all such power and energy is for buyer's utilization, and not for resale except as otherwise specifically provided.

(6) The term of the contract will be 25 years.

(7) Termination:

(a) After commencement of full-scale operation, termination will be allowed on 3 years' notice, during which period assignment may be made to another governmental agency, at contract rates, including all taxes and other adjustments.

(b) Upon termination seller shall be entitled to and will absorb capacity at least as rapidly as load growth will permit, but in any event in the amount of at least 100,000 kilowatts in each year, absorbing associated proportions of costs. Buyer may assign any balance to another governmental agency at an increased price to be approved by FPC, such price to include recognition of any increased costs then encountered or foreseen by seller. To extent such capacity is not used by buyer or assignee, buyer will reimburse seller for pro rata proportion of base capacity charge, as adjusted, and taxes.

(c) In event of partial termination above formula will be applied on a pro rata basis.

(d) In event buyer relinquishes right to capacity after termination, base capacity charge (including adjustments) will be thereafter reduced $1,500,000; proportionally in case of partial reductions.

(e) Buyer will repay seller for any fair and reasonable cancellation charges payable by seller to a third party and costs, losses, and other expenses incurred by seller by reason of cancellation.

(8) Seller will use its best efforts to have the first unit of the generating station in operation 36 months after the contract is entered into, and to have subsequent units in operation at reasonable intervals thereafter.

(9) Seller will receive cooperation from buyer for any necessary priority assistance.

(10) Buyer will arrange with TVA for receipt and displacement of power and energy.

(11) There will be a pro rata determination of capacity charge during interim between completion of the first generating unit and the final generating unit.

(12) Miscellaneous: The contract will also contain, among other things, provisions, similar in principle to those hereinafter referred to contained in the buyer's power agreement with Ohio Valley Electric Corp. dated October 15, 1952, relating to transfers of energy for use at other Government installations (sec. 2.05, pars. 2, 3, and 4, and sec. 7.12), extensions of contract term for two additional periods of 5 years each (sec. 3.09), review of seller's plans and procedures (sec. 3.10), purchase of fuel (sec. 7.02), review and audit of seller's accounts (sec. 7.04), all in such form as may be mutually agreed upon.

DEFINITIONS

Seller: New company to be formed by Middle South Utilities, Inc., and the Southern Co.

Buyer: Atomic Energy Commission.

TVA: Tennessee Valley Authority.

Primary delivery points: New points of delivery to be established, by agreement among buyer, seller, and TVA, at the middle of the Mississippi River between Shelby County, Tenn., and Crittenden County, Ark.

Secondary delivery points: Existing and future points of connection between systems of seller, Arkansas Power and Light Co., Mississippi Power and Light Co., subsidiaries of the Southern Co. and TVA, it being understood that the flow of power and energy cannot always be confined to primary delivery points.

Seller's initial facilities: A new steam electric generating station to be constructed by seller, of approximately 650,000 kilowatts capacity (approximately 50,000 in excess of contract capacity, for reserve), together with all other lines, property, equipment and other assets and debits of seller, including $2 million of net current assets as working capital, acquired for the purpose of or incident to making or carrying out of this proposal. Additional facilities that may be constructed subsequent to completion of initial facilities shall have no effect on this proposal or any resulting agreement.

Contract capacity: 600,000 kilowatts.

Minimum schedule: Not less than 35 percent of the contract capacity, which is the minimum capacity and energy which can be economically produced by seller's production facilities, not less than which will be scheduled for delivery at all times except upon reasonable notice of reduced requirements, and for resumption of minimum or greater requirements.

Mr. ANDERSON. Mr. President, as a member of the Joint Committee on Atomic Energy, I feel an obligation at this time to discuss in some detail with the Senate a report which has been developing considerable controversy, and occasionally a little heat and fury.

I have attended, insofar as I found it possible to do so, the hearings on the proposed new Atomic Energy Act, including the special investigation of the so-called Dixon-Yates contract, which the President has directed the Atomic Energy Commission and the Tennessee Valley Authority to consummate.

The crucial question for those of us not directly involved in the controversy because our State might gain some tax revenues or because of a local devotion to the TVA, is whether the proposed contract will constitute a good, businesslike arrangement for the United States; whether it is a wise arrangement, which is opposed by the advocates of public power because of enthusiasm for their cause; or whether it is an unwise arrangement, which is defended by the backers of private ownership because of an excess of enthusiasm for their views.

Mr. President, I wish to say that some persons have tried to insist that those of us—or, at least, some of us—who at least in some degree question the desirability of the contract, are worried about the proposal because we regard it—so they state—as an attempt to "fence in" the TVA, or as an attempt to place an obstacle in the way of expansion of the TVA to the north or to the west.

Let me say that my position regarding the contract is not determined in any way by considerations of whether the TVA would be "fenced in" or whether there would be a private monopoly in connection with the development of such power in the United States. Generally speaking, Mr. President, if private capital is available for the development of these resources, I should like to see private capital do the job; and I wish to disassociate myself completely from the claim that the persons who are interested in this matter are interested in it solely because of a dedication to the TVA principle.

Economy is the watchword these days. The Dixon-Yates proposal is urged because it would relieve us of an early advance of $100 million to the TVA to build a new steam power plant at Memphis. It is opposed on the grounds that the annual costs to the Government of the Dixon-Yates contract would be either $3,685,000 per year or $5,567,000 per year more expensive to the Government, over a 25-year period, than for TVA to construct facilities. Additionally, the TVA advocates point out on their side that at the end of the period, residual values in the plant would belong to the Government instead of a private utility concern.

Our distinguished colleagues from the Tennessee Valley area have presented the TVA side of the case from time to time. On July 9 our very able colleague from Arkansas [Mr. FULBRIGHT] defended the Dixon-Yates proposal as a wise arrangement. In his remarks he made this statement:

> I will grant that if the figures which were used by some Senators from the TVA area, which indicated that there was an overcharge of $5½ million, that would be a very substantial amount, and would be improvident. However, if it is only $282,000, as I believe it is, on any fair comparison, then it is a justified contract, and the other advantages which are involved further justify it.

I shall assume, for the purposes of this discussion, that the Senator from Arkansas would also agree that $3,685,000 of extra expense annually to the Government, totaling more than $90 million over 25 years, would be a substantial amount, and would be improvident. While I do not consider $282,000 as an

insignificant sum, for my own part I would concede that if upon careful analysis this proved to be the real difference, then, on a strictly dollars-and-cents basis, disregarding the issue about impairing the TVA, or the question of the value of alternative power sources, the sum would be so relatively small that it might be outweighed by policy considerations.

I have supported the TVA. I have voted consistently for the agency and its appropriations. But I am not a dyed-in-the-wool advocate, blind to the facts. If the Government needs power, and can make a better deal with private utilities than with the TVA, I shall be for that course.

First, I went back over the record to see what the power experts said about the cost differential. There have been several expert and inexpert analyses at one time or another.

Mr. FULBRIGHT. Mr. President, will the Senator yield, or does he prefer not to be interrupted?

Mr. ANDERSON. I will say to my able and distinguished friend from Arkansas that this is one of the tasks which I have regretted very much, because I find myself in agreement with the Senator from Arkansas so much of the time, and I have supported so many of the same philosophies which he supports, and have such great faith in his integrity and high standing that I dislike to reply to a speech which he has made. On the other hand, any time I am so doing, if he wishes to interrupt, I shall appreciate it, and will be glad to yield.

Mr. FULBRIGHT. I thank the Senator for his kind words and for yielding.

The first inquiry I wish to make is of a general nature, with regard to the difference in cost. Does the Senator see any difference between costs made up of taxes and interest which accrue to TVA only because it is a governmental operation and other costs?

Mr. ANDERSON. I can answer the Senator's question. I say that there ought to be a distinction drawn between differences in cost which represent operating efficiencies and differences in costs which represent taxes paid by TVA, or not paid by TVA, or taxes paid by the Government in behalf of some private contractor. Therefore, I should say to the able Senator from Arkansas that I feel that it is too bad that people have been placed in different categories when, if they stop and look at the issue carefully, they may learn that many of the things over which they are arguing are not real differences, but represent merely a difference in application.

I say to the Senator in all candor that whenever the Government makes a contract to buy guns, tanks, planes, bunting, or anything else, it pays in the established price, the taxes of the manufacturing group, with this very important exception—and I shall return to it again and again. I do not think it is proper for us to include Federal income taxes as an expense which should be absorbed, because while such taxes may represent a proper charge, and while unquestionably they enter into consideration in the case of any business firm worth its salt when it calculates the figure it will bid for work, it is a strange provision—I was about to say a foreign provision—to put into contracts, that the Federal Government shall agree to make whole a private contractor for his property taxes in the county where his plant is located and his State taxes in the State where it is located, and will then pay his Federal income taxes, without knowing how those taxes may be figured, and without knowing what relationship they bear to the cost of the contract.

Mr. FULBRIGHT. I leave the Senator on that last qualification. They do know, I think, what the taxes are, within very close limits. Taxes are the only things that are certain.

Mr. ANDERSON. I am not sure that taxes are certain. In a period when excess-profits taxes are in effect—and happily we are not now in such a period—I hardly think they can be called certain.

Mr. FULBRIGHT. But the Government would make the contractor whole only to the extent that he pays such taxes. If taxes are reduced, the Government will not continue to pay $820,000.

The point I am trying to make is that in arriving at a judgment as to the efficiency of the operator and the cost to the Government, income taxes should certainly be considered as a deductible item in comparing what the cost to the Government is on the one hand, and the cost to TVA, which pays no income taxes.

Mr. ANDERSON. I will say to the Senator that I would not consider them. I speak only as an average businessman might try to speak. I hope I may still regard myself as one. I have an interest in one business to which I have never devoted any personal attention. I bought into it as an investor. I found during the period of the war that that business paid some pretty heavy excess-profits taxes, because of an unusual circumstance relating to the purchase—a change in the corporation status which removed the tax base which it might have used, and placed it on an entirely different basis.

What is the relationship of that case to this? We learn only by experience. In this particular instance one of the virtues of the excess-profits tax is that the Government thereby has a way of taking back from a private contractor any unusual profit he may make as the result of a Government contract. In this particular instance, the Dixon-Yates people are virtually guaranteed a 9-percent return. Suppose there should be certain cancellations and that Dixon-Yates could thereafter sell their power to another purchaser at a rate much higher than the Government expected to pay. Let us say that Dixon-Yates might make an earning of 16 or 20 percent on invested capital. If we should happen to enter a period of war again, the excess-profits tax might operate against that company, and the Government might recover from it at a very high rate of tax. But the Government will reimburse this Dixon-Yates Co. and let it put the money into its surplus account. If that is the way it works, I do not exactly think it is a fair arrangement.

Mr. GORE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. These are general questions. I have some specific data on the question of taxes and other matters. However, with regard to the question of taxes as a general proposition, when the Government undertakes a businesslike operation such as the TVA, involving the production of power, is it not true that when the TVA does not pay taxes, that means that private interests that operate in the same field have a greater tax burden than they otherwise would have? In other words, the burden which this particular operation would normally carry is shifted to the backs of all other operators in a similar type of business.

So in this particular instance, if TVA paid taxes on a basis similar to that applying to a private company, this entire question would not arise.

I was coming to this point: Would the Senator support a provision in the bill to the effect that TVA should pay taxes, local and governmental, for the purpose of keeping the books straight, just as anyone else would pay taxes?

Mr. ANDERSON. No. We have gone over that subject many times.

Mr. FULBRIGHT. The Senator would not?

Mr. ANDERSON. No. I do not propose to start rewriting the TVA legislation.

Mr. FULBRIGHT. I wish the record to show that that is a very special consideration for a commercial type of operation. Does not the Senator agree?

Mr. ANDERSON. I do not think it is special.

Mr. FULBRIGHT. It is not an exercise of sovereignty, such as the maintenance of a defense establishment. It is a commercial type of operation.

Mr. ANDERSON. But TVA does pay taxes, or the partial equivalent of taxes.

Mr. FULBRIGHT. I only asked the Senator if he would support an amendment which would make TVA pay taxes on a comparable basis, and I understood the Senator to say that he would not.

Mr. ANDERSON. As an amendment to this bill, I would not.

Mr. FULBRIGHT. I ask him whether he would support such an amendment to any bill.

Mr. ANDERSON. I would prefer to wait until such a bill comes before us.

Mr. FULBRIGHT. I ask the Senator whether he supports the principle that I have stated.

Mr. ANDERSON. No; I do not support the principle.

Mr. FULBRIGHT. Why does not the Senator support the principle?

Mr. ANDERSON. Because I do not believe we can begin requiring Government corporations, of which TVA is one, to pay taxes. At one time I had close contact with the institution known as the Commodity Credit Corporation. Almost the first thing I found when I became Secretary of Agriculture was that I had to sign a receipt for $1,600,000,000 worth of commodities.

Mr. FULBRIGHT. Is that a commercial type corporation?

Mr. ANDERSON. I did not believe the Commodity Credit Corporation should immediately start hunting down $1,600,000,000 worth of commodities, subject to a tax in every county and in

every State where the commodities were located, including the farmers' bins.

Mr. FULBRIGHT. Is there any commercial corporation comparable to the Commodity Credit Corporation?

Mr. ANDERSON. I do not know.

Mr. FULBRIGHT. The Senator knows there is not, and he knows that the Commodity Credit Corporation is a completely unique operation. There is no business corporation in the country that does what the Commodity Credit Corporation does. I referred to a commercial type of operation or corporation. In the case we are talking about power is produced by a corporation known as TVA, which produces power just as hundreds of other corporations produce power, except that TVA has an exemption from taxes, and has the privilege of using public money. It is an entirely different situation from the Commodity Credit Corporation.

Mr. ANDERSON. I believe I can cite to the Senator a host of Government corporations that operate in exactly the same way that some business corporations operate. I may refer him to the Crop Insurance Corporation. A great many insurance companies in the United States write crop insurance. However, they do not cover the field satisfactorily. Therefore Congress created the Crop Insurance Corporation. I would not believe in applying against the Crop Insurance Corporation the same kind of taxes the insurance companies pay.

Mr. President, I shall not commit myself on how I would feel about anything of that nature until a bill incorporating a specific situation comes before Congress. There have been times—and frequently—when bills have come before Congress which would provide for the taxing of this type of business. There have also been bills before Congress which would compel the Government to pay to every community a tax representing the amount of property it may own within a municipality, such property as a Federal building or post office, or similar property. That matter has been considered many times. It is an extremely difficult situation.

Mr. FULBRIGHT. Does the Senator recognize any difference between a Government corporation which operates on a nationwide basis, and a regional corporation which has special privileges, but operates only within a restricted part of the United States? Is there any difference in the Senator's view as to how they should be treated?

Mr. ANDERSON. I doubt if there should be a difference, but I would say to the Senator that I believe in the Dixon-Yates contract, if it is to be made, there should be a different provision with reference to taxes than now appears in the pending proposal of the group. I believe a provision should be written to take care of most of the taxes the holders of the contract would pay, if they were supplying power only to the Government, but I would not favor a provision requiring the Government to reach out and pay their income tax.

Mr. FULBRIGHT. In case of termination or cancellation, the contract does not provide that the Government shall continue to pay the income tax. That is correct, is it not?

Mr. ANDERSON. That is correct.

Mr. FULBRIGHT. Only while it is supplying the AEC. The provision certainly does not apply after the contract is canceled or after the work has been performed. That meets the Senator's objection in that respect, does it not?

Mr. ANDERSON. I do not believe it is possible to meet my objection with respect to the payment of income taxes.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. GORE. Mr. President, the able junior Senator from Arkansas has raised the question of whether TVA, a wholly Government-owned corporation, should pay taxes to the Government, which owns it. As a matter of fact, all the income and all the profit and all the net earnings of TVA belong to the Government, which owns TVA.

In the case of a private corporation, we levy a tax, which requires payment into the Federal Treasury of a portion of the net income. To start taxing a wholly Government-owned corporation would mean that only a part of the corporation, which we as a people wholly own, would come back to us. To whom would the other part go? I hope the Senator from Arkansas will not be ludicrous in his argument.

The operations of the TVA are arranged with a goal of a net earning of 4 percent upon invested capital, to provide a net earning of 4 to 5 percent for the Treasury of the United States. Obviously, a net earning of 4 percent, which is the goal TVA has achieved during its history, is not so great an earning as many private corporations make—and in the particular suggested contract to which reference has been made, the return to the stockholders would be 9 percent—but all the 4 to 5 percent, or if it turns out to be 3½ percent or 6 percent, or whatever it may be, goes into the Treasury of the United States and belongs to the Government of the United States, which owns the entire TVA.

Therefore I believe the Senator's contention is about as devoid of merit or meaning as any situation I have ever heard of.

The distinguished and able Senator from Arkansas, for whom I have a deep and lasting affection and respect has for the second time made what borders upon a slighting reference to the bookkeeping methods of TVA.

Mr. ANDERSON. I intend to deal with that subject directly, but I am happy to have the Senator deal with it now.

Mr. GORE. I can dispose of it in a moment. There is no mystery about the TVA bookkeeping. Books are kept according to Federal law. Under the law TVA must keep its books in accordance with the uniform system of accounting prescribed for public utilities by the Federal Power Commission.

I may say, for the advice of my able friend from Arkansas, that the TVA bookkeeping system has been lauded by the General Accounting Office, by congressional committees which have conducted investigations of TVA, and by the Hoover Commission. Perhaps the last does not appeal too much to the Senator from Arkansas, although he may be leaning in that direction of late.

I should like to cite one other thing to the Senator from New Mexico, and then I shall not ask him to yield further.

In connection with the Federal taxes, which it is estimated would be paid by the private concern, for whose benefit this contract would be made, I should like to state that on page 1026 of the hearings there is found an estimate of the Federal income tax, added as an expense, of $820,000 a year. It will also be seen that the amount is subtracted as reimbursable by the Federal Government under the contract.

Later on in the debate I shall be glad to cite decisions of the Comptroller General and other agencies of the Government holding that the Federal income tax is not a legally reimbursable item of cost.

Mr. ANDERSON. I thank the able Senator from Tennessee. I wish to say he has touched on what has been my principal concern about the contract. I think it is a bad precedent to start reimbursing a private company for Federal income taxes. That has never been done, and I hope we shall never do it.

Mr. HILL. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. HILL. The Senator has correctly stated the fact that TVA makes payments in lieu of taxes. It pays 5 percent of all the gross revenue which comes in from all purchasers of TVA power except when the Government of the United States is a purchaser. What we are to have, then, if this contract is executed, will not only be the payment of income taxes, but also State and county and ad valorem taxes, and then, when the power is sold under the TVA law, the TVA will have to make an additional payment of 5 percent on the gross amount coming in from the sales, because it is not contemplated that the power which may be generated under the Dixon-Yates proposal will go to the Government. It will be sold to the general power consumers, and TVA will have to pay an additional 5 percent of the gross revenue on the power sold. So we have not only the question so ably raised by the distinguished Senator from New Mexico, and by the distinguished Senator from Tennessee, but we have the proposition of double taxation.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico permit me to make one comment?

Mr. ANDERSON. Certainly.

Mr. FULBRIGHT. Of course, the basic difficulty with the argument of the Senator from Tennessee is his identifying TVA with the United States, or, one might say, with God. He makes no distinction between TVA as a regional organization and the United States. That is a very important distinction, I may say.

With reference to the question of the payment of taxes, a similar provision is included in the TVA contract at Shawnee. There is a provision which I placed in the RECORD yesterday with reference to the payment of taxes. Under this

contract it is said, "Congress makes us pay income taxes, so we want you to reimburse us." I imagine that is the origin of the idea. That is TVA's own idea, that it is going to be reimbursed.

The Senator from Tennessee stated that I made ludicrous remarks in regard to the identity of the TVA in connection with the rest of the country, in connection with ownership by the people of the United States.

With reference to the net profit mentioned by the Senator from Tennessee, with the permission of the Senator from New Mexico, will the Senator from Tennessee tell us whether all the net profit of the TVA is turned back each year into the Treasury and not retained by the TVA?

Mr. GORE. Mr. President, will the Senator from New Mexico yield in order that I may reply?

Mr. ANDERSON. I am happy to yield.

Mr. FULBRIGHT. This bookkeeping is a great mystery to me. I am not able to see it so clearly as does the Senator from Tennessee.

Mr. GORE. I would not say that the able Senator from Arkansas is stupid.

Mr. FULBRIGHT. The Senator said I was ludicrous. Maybe that is a preferable word.

Mr. GORE. As a matter of fact, I did not say the Senator from Arkansas was ludicrous. The Senator from Arkansas is a very elegant gentleman——

Mr. FULBRIGHT. But he makes a ludicrous argument.

Mr. GORE. Yes; I was going to say——

Mr. FULBRIGHT. I accept the amendment.

Mr. GORE. Even the greatest of men can now and then slip on a banana peel, and the Senator from Arkansas certainly went head over heels when he stepped on this one.

All the property, all the net earnings, and all the net losses, if there are any, of the TVA, belong to the people of the United States.

Mr. FULBRIGHT. I did not ask the Senator that question at all. I asked him whether the annual profit of the TVA is turned in to the Treasury of the United States. I simply asked that narrow question.

Mr. GORE. Mr. President, with the further indulgence of the Senator from New Mexico, I shall be very glad to reply. The reply will also answer the suggestion—not the argument, but the suggestion—regarding the TVA contract with AEC. Under the law, the TVA is required to amortize each and every one of its power projects in 40 years. The law requires the TVA to repay actually and physically into the United States Treasury a sufficient amount each year to amortize the investment in power projects within 40 years.

Mr. FULBRIGHT. Mr. President, I beg the Senator to answer my question. I asked him nothing about amortization and appropriations. What happens to the net profits?

Mr. GORE. I have answered that question.

Mr. FULBRIGHT. The Senator is evading the question. He has not answered it at all.

Mr. GORE. I beg the able Senator's pardon. I am trying to answer his question.

Mr. FULBRIGHT. Does the Senator know what the bookkeeping does with the net profit of the TVA?

Mr. GORE. Yes, I do know. Is the junior Senator from Arkansas interested in having all the information, or does he wish a partial answer?

Mr. FULBRIGHT. Does the Senator know what happens to the TVA profit each year?

Mr. GORE. Does the junior Senator from Arkansas want to know?

Mr. FULBRIGHT. I certainly do, but I should like to know today, if the Senator can tell me.

Mr. ANDERSON. Mr. President, I ask unanimous consent that I may yield to the Senator from Tennessee in order that he may answer the question of the Senator from Arkansas.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. The provision of law requiring amortization I supported. I thought it would be an answer to the critics of the TVA that the appropriations for power development were handouts of money to be poured down a rathole. It has proven a good answer thus far. That amount is necessarily, by law, reimbursed physically and actually to the Treasury of the United States. Since the enactment of that law more than that amount has actually been transmitted in cash to the Treasury of the United States each year, without a single exception. In addition to that, the TVA has had net earnings. The Congress upon each occasion, in its appropriation bills, has had the disposal of the net earnings. Congress has sometimes directed the TVA to use the net earnings in a specific manner. The appropriation bill this year did exactly that. All the money has not been actually, physically transmitted to the Treasury of the United States.

Mr. FULBRIGHT. How much has the TVA retained?

Mr. GORE. I do not at the moment have that figure. I shall be glad to supply it for the RECORD.

Mr. FULBRIGHT. Is it approximately $238 million?

Mr. GORE. I shall supply the figure to the Senator. If I may proceed, now, with my answer, all the earnings of TVA are within the disposition of the Congress each year. The Treasury of the United States is a part of the Government——

Mr. FULBRIGHT. I make no contention that any law has been violated, or that the practice is illegal or bad. I am trying to get at the truth of the situation, but it seems impossible to ascertain what the bookkeeping provides. It seems that $228 million, which represents net earnings, is really left in the hands of the TVA—if it is not used in the development of local facilities in the community—which TVA does have to return to the Treasury. Is not that a true statement?

Mr. GORE. I do not believe it is.

Mr. FULBRIGHT. In what regard is it in error?

Mr. GORE. All the net earnings, all the proceeds, all the properties are subject to the disposition of the United States Congress.

Mr. FULBRIGHT. I did not say they were not.

Mr. GORE. Each year Congress acts upon the matter. The TVA has been authorized—and not only authorized, but directed—to retain certain of its net earnings to be invested in other properties. Thcse, too, I may point out to the Senator, are amortized. So I come back to my original statement, that all the earnings of the TVA, not simply a part of them, as is the case with respect to taxes paid by private concerns, are the property of the United States Treasury.

Mr. FULBRIGHT. The question whether they are the property of the United States Treasury is not a very significant one. The significant question is, What use is made of them? Are they available to the Government? Are they available to reduce taxes? Can they be used to produce things which the Government needs? Obviously, they are not such funds.

Mr. ANDERSON. May I say that I think they might be regarded as being available? It seems to me that if profits accrue from the operation of the TVA, and Congress, instead of making new appropriations for new capital funds, directs that the moneys shall be used for expanding powerlines, or doing anything of that nature, that is just the same kind of utilization as if the money had been taken into the Treasury, and then a brandnew warrant had been issued by the Treasury to pay for the lines.

The able Senator from Arkansas was a Member of Congress when I became a Member of it in 1941. He and I, and all the Members permitted the TVA to do exactly that.

Mr. GORE. And not only permitted, but directed.

Mr. ANDERSON. If that is not making use of the money, then it is not only TVA, but also Congress ought to sing that old hymn, "It's Me, It's Me, It's Me, O Lord, Standin' in the Need of Prayer."

Mr. HILL. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. HILL. The TVA cannot start one single new power facility, it cannot put $1 of its income or any other funds into any new power facility, except by and with the advice and direction of Congress.

Mr. ANDERSON. That is exactly what precipitated the Dixon-Yates contract. If the TVA could take $228 million, which I believe it must have—and I am certain the Senator has the correct information on that point—and the various other sums which have been given it by Congress, to set itself up as an institution wholly foreign from all the other properties of the United States, it might be able to borrow all the money it needed, because it is in the finest shape of any utility I know of in the United States. But it cannot do that, because it is under the control of Congress; and every dollar it nets is owned by all the people of the United States. It does not matter whether the particular dollar is carried into the Treasury and deposited

there, or whether it stays to the credit of the United States, in Tennessee, or at some other spot.

I am quite willing to say that the profits of the TVA have not been gathered up into one wad and shipped back into the Treasury.

Mr. FULBRIGHT. That is the information I was trying to get—a very simple statement—but it has been very difficult to get it.

Mr. ANDERSON. I am certain the Senator from Arkansas realizes that the people who live in the TVA area are very proud of and happy with the institution which has been developed there, and they would hate to see anything happen which would in any way imperil it.

Mr. FULBRIGHT. They certainly ought to be proud of it and happy with it.

Mr. ANDERSON. The Senator from Arkansas has voted for the TVA, I think, as many times as I have.

Mr. FULBRIGHT. The people in the area of the TVA have made a great contribution to it, but it seems to me that they carry their devotion to it a little far when they oppose any project in the periphery which may contribute to an adjoining State or an adjoining community, or which may in any way infringe upon their very special prerogatives, in this case in the form of much lower power rates than are enjoyed by anyone else.

I wonder if the Senator would permit me to comment with respect to a quotation by him of a statement yesterday. It was, to me, a very significant statement. The Senator from New Mexico quoted the statement with approval. I think it is important for the Senator from Tennessee to consider it. It was quoted by the senior Senator from Tennessee [Mr. KEFAUVER] from the hearings, but it is a statement which, I assume, would be quoted favorably also by the junior Senator from Tennessee. It appears on page 10376 of the RECORD of July 13, and is as follows:

> The day TVA is forced to buy a kilowatt of power that it does not own the facilities for producing and does not control the rate of production, the cost of production, TVA, as it has existed, is a dead duck.

That seems to me to be an illustration of the overconcern and overzealousness on the part of the TVA people for the TVA, because that is obviously an absurd statement, is it not?

Mr. ANDERSON. I am not going to pass judgment on what the Senator from Tennessee said.

Mr. FULBRIGHT. These are the words of a witness who appeared before the subcommittee; they are not the words of the Senator from Tennessee. They are what he quoted as having been said at the hearings. Does the Senator see the statement?

Mr. ANDERSON. Yes; but it is a quotation from an entirely different person; it is the statement of a witness before the subcommittee.

Mr. FULBRIGHT. It is a statement which, I say, is typical of the people of Tennessee in their overenthusiasm, when they say that the TVA will be a dead duck if and when a kilowatt of power is brought into the TVA area from the outside.

Mr. GORE. Mr. President, will the Senator from New Mexico yield once more?

Mr. ANDERSON. Yes; I yield.

Mr. GORE. I desire to call the record as my witness. In appearing before the Joint Committee on Atomic Energy, I specifically said that, with respect to this issue, I wished to appear in the role of a Senator of the United States, and not to be regarded as a Senator from the Tennessee Valley. I think, as I have said on the record, that the Tennessee Valley Authority is incidental to this issue. There are far bigger issues, which I shall discuss a little later.

Mr. ANDERSON. Mr. President, my friend, the distinguished junior Senator from Texas [Mr. DANIEL] has asked if I would request unanimous consent to yield to him for 10 minutes. I have considerable additional material which I desire to present, and which I assume will take some time.

Since the junior Senator from Texas has another engagement which he desires to keep, I ask unanimous consent that I may yield to him for 10 minutes, without losing my right to the floor, and with the further understanding that the remarks which he may make, together with any interjections which may occur, will be placed at the conclusion of my statement.

The PRESIDING OFFICER (Mr. BARRETT in the chair). Without objection, it is so ordered.

(Mr. DANIEL addressed the Senate on the subject of the bill prohibiting picketing of the White House. His remarks appear at the conclusion of Mr. ANDERSON's speech.)

Mr. ANDERSON. Mr. President, the President of the United States first proposed that the TVA be relieved of a part of its contract to supply power at Paducah in his budget message in January, advising the Congress that the Atomic Energy Commission would explore the possibility of releasing the TVA from part of that contractual commitment to supply 1,200,000 kilowatts at Paducah. Accordingly, discussions were held with Messrs. Dixon and Yates. A proposal was submitted to the AEC by Dixon and Yates in February.

Upon analysis, this proposal involved costs so much in excess of AEC costs at the TVA Shawnee plant serving Paducah that there was apparently mutual agreement between the AEC and the sponsors of the proposal that a better offer would have to be made.

The analysis of that original offer is not available and is not important because that offer is not under consideration.

Subsequently, Dixon-Yates made a revised and improved offer which I have today placed in the RECORD and it was submitted to the Bureau of the Budget by the AEC with a comparison between TVA costs at its Shawnee plant near Paducah and the Dixon-Yates revised proposal. That analysis indicated that the Dixon-Yates costs, compared to the TVA Paducah costs, would run $2,923,000 more each year. The TVA has indicated in the hearings that it regards this figure as too low. The initial term in TVA's Paducah contract ends 8½ years from July 1, 1957.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I have some figures which bear on this particular point, which explain, I believe, the figures we are discussing. I wonder whether the Senator would object to my asking unanimous consent to have these figures inserted at this point in the RECORD, as my views and the views of those on the other side of the issue from the Senator from New Mexico. In that way anyone who reads the RECORD will have available both figures.

Mr. ANDERSON. Mr. President, I ask unanimous consent that, following the remarks of the Senator from Arkansas at this point, the figures to which he has referred be placed in the RECORD.

Mr. FULBRIGHT. I believe they give an explanation of the difference in the estimated cost, and I believe they paint the picture very clearly from my point of view. Anyone who wishes to do so may compare these figures with the figures now being cited by the Senator from New Mexico.

Mr. ANDERSON. As we go along, if the Senator believes that a table of figures he has prepared should be inserted in the RECORD during the course of my remarks, it will be thoroughly agreeable to me to have it inserted, because in that way, as a person goes through my remarks, he will be warned that there is another side to the issue—and I concede, of course, that there is another side—and he can then judge between the two sets of figures as they are presented.

Mr. FULBRIGHT. The statement I have in my hand was prepared today. It is the latest information I can obtain, and I believe it is an explanation of the differences that have appeared between the estimated costs by the TVA and the charges to the AEC by the Dixon-Yates contract, and it also explains that the estimated costs are not those which TVA would incur if it should build the Fulton plant.

There being no objection, the table and explanation were ordered to be printed in the RECORD, as follows:

RE TVA PURCHASED POWER (FROM PRIVATE COMPANIES) IN RELATION TO TVA SALE OF POWER TO AEC AT PADUCAH, FISCAL 1953

During fiscal year 1953 TVA purchased and received net interchange power from private companies as follows:

Kilowatt-hours purchased and received: 2,696,749,000.

Amount paid: $13,680,749.

Average price: 5.07 mills.

During fiscal year 1953 TVA sold power to AEC at Paducah as follows:

Kilowatt-hours sold: 976,956,000.

Amount received: $8,396,058.

Average price: 8.59 mills.

Therefore TVA added 3.52 mills (8.59 − 5.07) to price of private power purchased and passed on to AEC. This is a 70-percent profit margin. (Data from AEC and FPC.)

EXPLANATION OF DIFFERENCES IN ESTIMATED NET COST

On July 13, Senator ANDERSON introduced into the RECORD a statement outlining the

proposal received by the AEC from the sponsors of Middle South Utilities, Inc., and the Southern Co., appearing on pages 10378 and 10379 of the RECORD, including a table of comparison of annual cost and power supply from the Dixon-Yates proposal versus cost to the AEC of power from TVA at Paducah using 600 MW capacity, 5.2 billion kilowatt-hours per year or 98 percent load factor and 19 cents per million B. t. u. fuel cost which shows a difference of Paducah versus Dixon-Yates, less Federal taxes of $282,000 per annum.

Using the terms of the TVA–AEC Paducah contract and the same fuel cost of 19 cents per million B. t. u., the $282,000 per annum represents the estimated difference in what TVA would charge AEC for the same amount of power acquired by AEC in the Memphis area in comparison to charges proposed by Dixon-Yates.

On page 10380 Senator ANDERSON quoted a statement made by Mr. Nichols, General Manager of the Atomic Energy Commission, before the joint committee, quoting a comparison of annual cost to the Federal Government for power supply delivered to the TVA system in the Memphis area, resulting in an estimated annual additional cost to the Government of $3,685,000 per annum. This is a comparison of estimated cost of TVA to produce power versus an estimated cost of AEC to procure power under the Dixon-Yates proposal. The TVA estimated cost of producing power does not represent what TVA would charge AEC for the same amount of power.

On page 10381 there is included the report originating from the Bureau of the Budget which Representative JONAS released. On page 10382 is included a table showing total estimated additional cost to the Government, including State and local taxes, of $3,685,000. This table represents the difference between the estimated cost to TVA of producing power, not the selling price, and the selling price to the AEC of the same amount of power under the Dixon-Yates proposal. It should be emphasized the estimated cost to TVA of producing power is not the price charged AEC.

On page 10383 there is inserted a table showing a comparison of annual cost of power supply for the AEC-Paducah project under the present AEC–TVA contract, assuming a fuel cost in 1957 of 15½ cents per million British thermal units for fuel for power then to be delivered by TVA to the AEC at Paducah and the estimated cost under the Dixon-Yates proposal for the same amount of power acquired by the AEC in the Memphis area at a fuel cost of 19 cents per million British thermal units. This results in an annual difference of $2,923,000 per year, including State, local, and Federal income taxes in the amount of $2,319,000 and including the difference in TVA transmission cost to primary point of delivery in the amount of $177,000. This comparison does not purport to show what TVA would charge AEC for the same amount of power in the Memphis area.

On page 10385 Senator ANDERSON introduced a table showing adjustments TVA would make to the difference in estimated cost to TVA of producing power versus cost of purchase of power under the Dixon-Yates proposal, indicating that the difference of cost under TVA's analysis would be $5,567,000 per annum.

In the data introduced by Senator ANDERSON on page 10379, subparagraph h, there is information to show that based on the data TVA presented as their cost to produce power, including 30-year amortization and 2½ percent interest, the AEC will be overcharged by TVA, when the full contract demand at Paducah of 1,205,000 kilowatts is met, by approximately $6 million per year and that a similar analysis of the AEC–TVA contract for Oak Ridge for at least 1,030,000 kilowatts of the total contract demand at Oak Ridge, would undoubtedly reveal a similar picture.

Either the TVA is charging AEC too much or their representation on cost of producing power is in error.

If the TVA representations on cost are correct, then the AEC is being overcharged. This places TVA in the position, at the expense of AEC, an arm of the Federal Government, of subsidizing other users of the TVA system at the expense of the taxpayers in the balance of the country.

Mr. ANDERSON. Mr. President, in that period, the TVA is completely amortizing certain special costs in the construction of Shawnee, such as overtime. When those special costs are out of the way, the monthly TVA demand charge at Paducah will fall about 10 percent resulting in a further decrease in TVA charges to AEC which, averaged over 30 years, would amount to another saving of $516,000 annually in favor of TVA. The TVA engineers felt that there were certain additional standby costs likely. The Dixon-Yates proposal provides direct standby capacity to pick up the load with only one generator out. If two went out at the same time, then the TVA people think standby costs would be greater. All in all, the TVA engineers contended that the cost differential between Dixon-Yates and its Paducah plant is $4,025,000 and that AEC would have to pay that much more every year if it canceled a part of its TVA contract at Paducah and substitute a contract with Dixon-Yates for 600,000 kilowatts of power. However, the $2,923,000 difference calculated by AEC and Bureau of the Budget was the only analysis supplied your committee in regard to the situation at this point.

At about this time the AEC made it clear that it would not release TVA from its Paducah contract, and the matter of entering into the arrangement for replacement power for TVA at Memphis would have to be decided by a higher authority. Chairman Strauss of AEC referred to the necessity for such a decision by higher authority in his letter submitting the second Dixon-Yates proposal to the Bureau of the Budget.

The inadequacy of this first comparison became apparent when AEC made it known that it was not going to release TVA from delivering power under its contract at Paducah, as originally proposed by the President. As long as that was the plan then a comparison showing how much it would cost AEC to cancel its contract for 600,000 kilowatts of TVA power at Paducah, and buy the Dixon-Yates instead, was a valid one.

But the whole basis of the deal was changed. The AEC decided to buy power, not for itself but for the TVA, to be fed into the TVA system near Memphis, Tenn., and to maintain its contract with the TVA at Paducah.

The facts that were needed under this new plan was a comparison of how the United States Government could get 600,000 kilowatts of new power at Memphis, Tenn., most economically. There were two obvious alternatives for the Government. First, the Dixon-Yates proposal, or, second, authorizing the TVA to build its projected steam plant at Fulton and add to its Johnsville capacity.

This was so obvious that the AEC, the Bureau of the Budget, the Federal Power Commission, and the TVA all got together and jointly analyzed the Dixon-Yates costs and the TVA costs if it built the Fulton plant near Memphis and expanded at Johnsville.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. GORE. In the consideration of this contract and in the consideration of the issue raised by the amendment of the able Senator, the comparison between the Dixon-Yates proposal and the TVA proposal at Fulton is the relevant comparison. Wholly irrelevant is a comparison of Dixon-Yates with Shawnee, or Shawnee with Memphis, or Memphis with Shawnee, or Memphis with Dixon-Yates. The choice which the President made was the choice between the Dixon-Yates proposal and the TVA proposal to build a steam plant at Fulton. All the other irrelevant comparisons come under the head of the strategy of confusion. Is that correct?

Mr. ANDERSON. I may say to the Senator that what he has stated is correct as to the fact that this is the only comparison, namely, between the Fulton steam plant and the West Memphis plant proposed by Dixon-Yates. I have not felt it was proper to use the Paducah figures because it is a matter of comparing two things which should not be compared. I believe that the experts of the Bureau of the Budget, the AEC, and the Federal Power Commission, once they met and agreed upon a figure, probably had a very good reason for taking that figure.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. These experts of all these agencies, when they came to an agreement, after very careful study, decided that the difference in the costs would be $3,685,000 a year, or more than $90 million over a 25-year period.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. It is quite understandable why the Senator does not wish to make a comparison with Paducah, because TVA does not like to be reminded of the Paducah figures, for the very reason that I mentioned the other day, regarding the overcharges. I should like to read from the memorandum I placed in the RECORD, in commenting upon the Senator's present statement:

On page 9940 Senator ANDERSON quoted a statement made by Mr. Nichols, General Manager of the Atomic Energy Commission, before the joint committee, quoting a comparison of annual cost to the Federal Government for power supply delivered to the TVA system in the Memphis area, resulting in an estimated annual additional cost to the Government of $3,685,000 per annum.

This is a comparison of the estimated cost of TVA to produce power, not the estimated cost to procure power under the Dixon-Yates proposal.

There is a difference between procurement and estimated cost. I wish to emphasize this:

The TVA's cost of producing power does not represent what TVA would charge AEC for the same amount of power.

Does the Senator agree to that?

Mr. ANDERSON. No; because it was what TVA did offer to make this power available.

Mr. FULBRIGHT. It is not, I am quite sure. It is the estimated cost of producing, not an offer to sell. Is the Senator sure about that?

Mr. ANDERSON. No; I am never sure of anything, but I shall be glad to introduce page after page of hearings.

Mr. FULBRIGHT. I can assure the Senator that it is carried in every instance as an estimated cost to TVA of producing power. That is one of the big differences between the cost of producing power and the cost of procurement by AEC. That explains much of the difference.

I come back again to the point I made yesterday that the TVA is overcharging the AEC by a very large amount.

I should like to read this comment by the AEC:

In the data introduced by Senator ANDERSON on page 9939, subparagraph (h), there is information to show that based on the data TVA represented as their cost to produce power, including 30-year amortization and 2½ percent interest, the AEC will be overcharged by TVA, when the full contract demand at Paducah of 1,205,000 kilowatts is met, by approximately $6 million per year and that a similar analysis of the AEC–TVA contract for Oak Ridge for at least 1,030,000 kilowatts of the total contract demand at Oak Ridge would undoubtedly reveal a similar picture.

Either the TVA is charging AEC too much or their representation on cost of producing power is in error.

I think the Senator should consider that statement very carefully. It is made by the AEC. It is at the root of much of the whole matter. The AEC is looking for a more reasonable source of power.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. GORE. Mr. President, this is the second or third time the distinguished junior Senator from Arkansas has referred to what he calls the TVA's overcharge for power to the Atomic Energy Commission. I should like to set the RECORD straight on that.

TVA does not overcharge the Atomic Energy Commission. The power from the Shawnee steam plant to the Atomic Energy Commission at Paducah this month is costing 3.56 mills. The cost for power to Memphis is 3.88 mills. The charge for power generated at the Shawnee plant and delivered to the Paducah atomic-energy plant in May was 3.59 mills.

I asked if the AEC was informed. I asked if there was a segregation in billing of the power generated by the Shawnee plant and the interim power which must be bought from other sources. I was informed that there was and that the figures are plain.

Up to January of this year the statement for normal power, that is, the billing for normal power, from the Shawnee plant to the Paducah AEC plant included energy produced at Shawnee as well as energy procured from other plants and purchased from outside sources. That is well understood. The TVA was asked to supply this interim power. It has done so. It has bought much of it from private sources at high prices and has delivered it to the Atomic Energy Commission. However, since Shawnee's fourth unit went into line on January of this year, all normal power has been Shawnee power. Statements since January reflect the actual charges for Shawnee power. A demand charge and an energy charge are added. The total charges developed by the number of kilowatt hours supplied reflect the average price per kilowatt hour. The statement for the month of May indicates an average charge of 3.59 mills a kilowatt-hour for normal power.

I do not like to keep making irrelevant comparisons. The only comparison by which the contract should be judged is the comparison between the Dixon-Yates proposal and the TVA proposal. It was between the two alternatives that the President and the Bureau of the Budget made this proposal.

Mr. FULBRIGHT. Does the Senator maintain that that is the full price?

Mr. ANDERSON. Mr. President, I should like to answer that. That is something which I regretted in the statement made by the Senator from Arkansas. He said one was a sales price and the other was production cost. I refer to page 956 of the hearings, where the general manager for AEC testified, the Mr. Nichols whose statement the Senator from Arkansas just read. Mr. Nichols said the figures represented a breakdown of differences in cost. He does not say it is the selling price; it is the cost the people will have to pay. If that is not true, then Mr. Nichols misled the committee. He said:

Analysis of the proposal from the standpoint of cost to the Government, including State or local taxes but excluding Federal income taxes, as compared with the estimate for constructing a plant near Memphis by TVA, shows an annual cost to the Government of $20,539,000 for the private companies as compared with $16,884,000 estimated for the TVA plant.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. The reason I started in the very beginning to make the point is that in my view there is some slight difference between the Government of the United States, the TVA, and the AEC. They are subsidiaries, limited agencies of the Government. Mr. Nichols was talking about the cost to the Government. It does not mean the sale price from the TVA to the AEC, which is the proper basis for comparison, because the Dixon-Yates price is the sale price to the AEC. Does not the Senator understand that?

Mr. ANDERSON. If it does not mean that, then Mr. Nichols misrepresented the situation.

Mr. FULBRIGHT. No. He said it was the cost to the Government. It may mean the bare cost of TVA's production of power.

Mr. ANDERSON. Does the Senator from Arkansas forget who owns TVA? The Government owns TVA. When he is talking about TVA, he is talking about the Government. Does he say, for example, that the Senate of the United States belongs to the Senate, and does not belong to the United States?

Mr. FULBRIGHT. If the Senator will yield, does he maintain that the cost of production of power which is sold to AEC at Paducah is the same as the contract price?

Mr. ANDERSON. No; I do not.

Mr. FULBRIGHT. Of course not. They are two different things.

Mr. ANDERSON. Certainly. But in this particular instance, they got together three organizations, the Bureau of the Budget, the AEC, and the Federal Power Commission, all interested, and they also brought in TVA. Their experts sat down and made an anlaysis which is represented to us by the general manager of the AEC as a basis of cost on both proposals. He says the basis of the cost on one would be $20 million, and on the other, $16 million.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a moment?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I am a citizen of the United States. I live in Arkansas. There is some slight difference to me, as a taxpayer, as to which of the bases is used. Under the Senator's statement, it makes no difference whatsoever to the Federal Government if the AEC is overcharged a hundred times, because it is all the Government. But what happens? In the final windup of that kind of business, accepting the Senator's theory, there would be siphoned out of the Treasury unlimited funds through overcharges to the AEC. It is, indeed, very mysterious to me. It is equity, I suppose, or a charge to the net profit account. There is a great difference as to whether the books are kept on a straight basis, or whether there is an equitable charge to the AEC. This is obviously a device, which becomes clearer to me every day, by which the TVA has siphoned out of the AEC, large sums for the use of the TVA. There is a great difference whether it is done that way, or whether it is appropriated directly by Congress. It has in no sense filled out the difference between the construction costs and the sale price.

Mr. ANDERSON. I wonder whether the Bureau of the Budget, the AEC, the TVA, and all the rest of these people are misleading Congress, because when they came before the Joint Committee on Atomic Energy, so far as they knew, they were testifying for the benefit of the Congress of the United States, and they testified to the same thing every time. I shall read from the record of the hearings, page after page, if the Senator will allow me to do so, which shows that testimony over and over and over again.

Mr. SPARKMAN. Mr. President, will the Senator yield for a brief question?

Mr. ANDERSON. Yes, but I would remind the Senator that I have been speaking since half past 2, and I have only reached page 4, out of 27 pages.

Mr. SPARKMAN. I merely wish to refer to the figures of the Budget Bureau and the Atomic Energy Commission and to the figures used by the distinguished Senator from Arkansas the other day. Is it not true that there is a variance of only perhaps $2 million between what the Bureau of the Budget and the Atomic Energy Commission used as a figure and the figure cited by the Senator from Arkansas?

Mr. ANDERSON. I agreed with the Senator from Arkansas earlier that if we would all try to read from the same book, we would come up with figures much closer together.

Mr. FULBRIGHT. Yes.

Mr. ANDERSON. I think it is only fair to say that if we take the figure used by the Senator from Arkansas and add $1,500,000 for taxes, and add to that several hundred thousand for the difference in cost of money, since the Government can borrow the money at 2½ percent, and this proposal makes it 3¾ percent—if all those items are added to the $228,000 the result is close to $3 million. So actually there is not much difference.

I have not quarreled with that, because as I said earlier before the able Senator from Alabama entered the Chamber, if it came to a matter of $200,000, I would not be alarmed, because we want private enterprise to have an opportunity. Nevertheless, I said that the $3,656,000 figure was given to us, so we should pay some attention to it. The TVA agreed to that figure, so far as it went, but argued that there would be some additional expenses to the Government, which would run the total up to $5,576,000 a year.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I have some figures relative to what the junior Senator from Tennessee said a moment ago, which were prepared only yesterday. They are with reference to TVA-purchased power, from private companies, in relation to the TVA sale of power to the AEC at Paducah. The origin of these figures is the AEC and the FPC. They indicate the relationship between cost and sale price.

During the fiscal year 1953, the TVA purchased and received net interchange power from private companies, as follows:

Kilowatt-hours purchased and received, 2,696,749,000.

The amount paid was $13,680,749, or an average price of 5.07 mills.

This is significant. That is what they paid for the so-called high-priced power. It was high-priced power. During fiscal year 1953, the TVA sold power to the AEC at Paducah, as follows:

Kilowatt-hours sold, 976,956,000.

The amount received was $8,396,058, or an average price of 8.59 mills.

Therefore, the TVA added 3.52 mills—the difference between 8.59 mills and 5.07 mills—to the price of private power purchased and passed on to the AEC. This is a 70 percent profit margin, which is no small profit.

That is what I mean. If there is anything at all to the averages—and I think there is—unless the TVA siphoned off only the high priced power to the AEC, which apparently was done, I do not see how there is any equity, if any attempt is being made to deal fairly between the two agencies. But these are the statistics furnished by the Federal Power Commission.

Mr. ANDERSON. I thank the Senator from Arkansas.

The TVA contention that this is a $5,567,000 business should not be dismissed lightly. There is merit in some of its additional cost figures that even I can understand. If the Dixon-Yates deal goes through, TVA will have to adjust some of its facilities at Shawnee. Amortizaton of those costs was estimated at $200,000 a year. TVA continued to contend that standby allowances for Dixon-Yates were not adequate to cover a 2-generator outage, which might occur. The TVA contended that its offpeak transmission costs would be increased $186,000 per year by the arrangement to get power from Dixon-Yates in Arkansas.

I shall not consider the TVA claim of $5.5 million annual differential here because there is complete agreement among the AEC, Budget Bureau, Federal Power Commission and the TVA experts that it will cost the Government at least $3,685,000 more per year to get the power from Dixon-Yates than to have TVA build the Fulton and Johnsville facilities.

Let me quote the record on this. These agencies sent expert witnesses before the Joint Committee on Atomic Energy during our hearings. In part II of the published hearings, page 957, General Manager Nichols' testimony appears as follows:

> Analysis of the (Dixon-Yates) proposal from the standpoint of cost to the Government, including State and local taxes but excluding Federal income taxes, as compared with the estimates for constructing a plant near Memphis by TVA, shows an annual cost to the Government of $20,569,000 for the private companies as compared with $16,884,000 estimated for the TVA plant.

The difference in those two items is $3,685,000.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I wish to emphasize again that the Senator is suggesting that the Government is not saying there is not that difference between the cost to the AEC of the power purchased from a private company or purchased from the TVA. The Senator is emphasizing the cost to the Government, and is ignoring any part which the TVA may play.

Mr. ANDERSON. In the whole discussion with the TVA concerning the Dixon-Yates contract, it was assumed that there would be regulation by the utility groups; that costs would be figured into the calculations; and there was not an element of profit when they analyzed the basic cost under the contract. What they were going to charge the Government later might have been another story. They did not base the contract on that.

The President of the United States decided he would not make money available by appropriations for a steam plant at Fulton, but before he made that decision, he asked the experts in the Government to calculate what the cost might be. They calculated the cost, and included certain items which the Senator from Arkansas and I say might be duplicated in both proposals.

It was, therefore, decided that it would be wise to make use of the private facilities.

Mr. FULBRIGHT. Does the Senator consider that it is a matter of no significance to overcharge the AEC for the power?

Mr. ANDERSON. No.

Mr. HILL. Mr. President, the Senator from Arkansas does not have the floor.

Mr. FULBRIGHT. The Senator from New Mexico had yielded to me, and I was asking him a question.

Mr. ANDERSON. I said it was a matter of significance. If there were to be profits from the operation, and if there were to be new dams and new facilities constructed, without congressional approval, that would be one thing. But actually it is merely a bookkeeping charge, because Congress has control of every dollar which comes into the TVA, and Congress can decide how much shall be used for plant improvement, and what amount shall go into the Treasury.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. ANDERSON. Does the Senator from Connecticut desire to comment on that point?

Mr. BUSH. Does the Senator from New Mexico think that Congress would approve of the TVA overcharging AEC, as the figures of the Senator from Arkansas show completely the TVA has done?

Mr. ANDERSON. I think I had better ask the Senator from Connecticut if he voted for the independent offices appropriation bill this year. If he did, he authorized these things.

Mr. BUSH. The Senator from Connecticut did not authorize them.

Mr. FULBRIGHT. Neither did I; and until this debate came up, I did not know they had been authorized.

Mr. ANDERSON. As I said a moment ago, if we do not approve such actions, we must reflect that it was not TVA, but the Members of Congress, who passed on them every time an appropriation bill came up.

Mr. BUSH. Does the Senator believe that the Atomic Energy Commission itself realized, up until recently, that they had been overcharged?

Mr. ANDERSON. I was going to present my facts in a more orderly fashion, but I shall now turn to page 1036 of the hearings, and I shall show the Commission has not been overcharged. If it has been overcharged, then someone else is doing an awful job.

Mr. HILL. Mr. President, will the Senator yield?

Mr. ANDERSON. I should like first to complete my reply to the Senator from

Connecticut. I turn to page 1035 of the hearings. General Nichols was testifying before the Joint Committee on Atomic Energy. He is the general manager of the Atomic Energy Commission. I refer to page 1035 only to identify who is giving the testimony. I now turn to the top of page 1036, and get down to the charges they are discussing. They are discussing the cost of power coming from the Paducah plant and what Electric Energy, Inc., was charging. There was a time when the charge of the TVA was somewhat higher than the EEI charge. General Nichols stated:

Again in fairness to TVA we have the latest compilation for January 1, 1954, to March 31, 1954, in other words, the first 3 months of 1954, from TVA we bought 1,447,184,000 kilowatt-hours at a cost of $7,028,310 or an average cost of 4.86—

Now, this is not production cost; this is sales cost—

and EEI, 1,151,881,000 kilowatt-hours at a cost of $5,892,770, or for the first time the price goes slightly higher than TVA, 5.08 mills per kilowatt-hour.

I only submit that if TVA is overcharging at 4.826 mills, then the private industry which is sharing the very contract with it is also overcharging at 5.08 mills.

Mr. BUSH. Certainly, that conclusion sounds very reasonable .

Mr. FULBRIGHT. That is not the question at all. That refers to the EEI. That has nothing to do with the problem the Senator is talking about.

Mr. ANDERSON. I think it does have something to do with the problem I am talking about. The Senator from Arkansas has stated that the Atomic Energy Commission was overcharged. The testimony which was read had to do with the cost of power at the Paducah plant. These are the very costs we are talking about.

I should like to say to the Senator from Connecticut that the difficulty with this situation is that there was a time when TVA costs were higher. TVA has its own explanation for that. I do not know whether its explanation is true or false. I have read it. It sounds all right to me. It may be that the able Senator from Connecticut, who has had far greater financial experience than I have had, could have looked at those figures and they may not have seemed right to him.

However, I think that question is not one for debate at this time, because, in reality, I think it is a moot question, as to a board or group trying to decide that the plant should not be built where TVA wanted to build it, and should not be a steam plant at Fulton. It decided another contract with Dixon-Yates should be entered into. Therefore, I have not concerned myself with whether the figures used indicated an overcharge or not, because currently the costs are down.

General Nichols, in the same testimony, only a very few minutes later said:

When everything is running, according to our contracts—

Contracts, now; not estimates—

the price will favor TVA by a margin here of about 10 percent.

If it is 10 percent cheaper to buy the power from TVA, it is not an overcharge, under the circumstances.

Mr. HILL. We are talking about power now, are we not, where TVA bought power——

Mr. ANDERSON. I want to dissociate myself from that statement.

Mr. HILL. We were talking about that.

Mr. ANDERSON. We were talking about that. If the Senator wants to discuss it, it is all right with me, but I say what we did do at the time, as I understand, was to ask both EEI and TVA to expand their power rapidly. EEI was a private organization which had already had much of its generation capacity expanded, not all of which was used to the fullest degree. It also had used all the capacity as rapidly as possible. It did a good job of supplying the Atomic Energy Commission. There is no question or argument about that.

TVA was also asked to expand, and it had no way of expanding, because it is not a private enterprise and did not have more generating capacity than it needed. Therefore, it went into the highways and byways and bought power, sometimes at high prices, sometimes at fair prices; but whatever the Atomic Energy Commission said it required from TVA, TVA went out and got. Perhaps it was not as careful as to price as we might desire. If, as the Senator argued, the Commission bought that power at 5 mills and sold it at 8 mills, then I think it gouged the Atomic Energy Commission, and I think such action was indefensible. But I shall not pass final judgment on it. I should like to have the Atomic Energy Commission officials explain why they did it if they did it. They may develop that it was not done at all. I believe they have as much right to a trial by jury as anyone else.

Mr. HILL. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Alabama.

Mr. HILL. Is not this the explanation, that TVA not only bought the power from private companies for AEC, and in very many instances had to pay prices which no doubt averaged up to 5.08 mills, but, in addition to that, it bought a larger amount of power for itself and other installations, and it was not under the same pressure and did not have to pay the same price for the power? Therefore, over all, not only as to the power for AEC, but for itself and other users and distributors, the overall price averaged 5.08 mills. But the 5.08 mills figure cannot be considered alone, since it includes power used entirely and separate and distinct from that used by the AEC. That cannot be used as a measure of what AEC was to pay for its power.

Mr. ANDERSON. Precisely. That is what I have tried to say. This matter was checked by the Joint Committee on Atomic Energy and by the Atomic Energy Commission. The Atomic Energy Commission is satisfied. It is headed by a very able person who is experienced in financing. I believe Admiral Strauss has had as fine a financial background as anyone ever connected with the AEC. He is a shrewd and capable financier. I think that if he had thought he was being overcharged he would have done something about it.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Alabama.

Mr. SPARKMAN. I should like to call attention to a statement by General Nichols, of the Atomic Energy Commission, which appears on page 1038, which I think bears out what my colleague, the senior Senator from Alabama, has said. If my colleagues will turn to about the middle of the page, they will see that General Nichols testified that of the power TVA supplies the Atomic Energy Commission, it supplied 2,654,000,000 kilowatt-hours of normal power, and of supplemental or secondary power only 334 million; whereas EEI supplied firm or permanent power, as Mr. Nichols calls it, to the extent of 1,289,000,000 kilowatt-hours, and of interim power almost the same amount, or a little more, 1,513,000,000 kilowatts.

Mr. FULBRIGHT. A little more? It is about five times as much.

Mr. SPARKMAN. In other words, whereas the TVA was supplying 88 percent of firm power and only 12 percent of secondary power, the EEI was supplying 48 percent of firm power and 52 percent of secondary power. Of course, there is a tremendous difference in the cost of that power. I think that is a weakness of the tables which have been presented for the RECORD by the able Senator from Arkansas. He has tried to compare things which are not comparable.

Mr. KNOWLAND. Mr. President, will the Senator from New Mexico yield to me at this point, so that I may address a question to the Senator from Arkansas?

Mr. ANDERSON. Let me add only the statement that, so far as I am concerned, it seemed to me that it was the responsibility of the Atomic Energy Commission to satisfy itself that it had been fairly handled; and the testimony before the committee, by the representatives of the Atomic Energy Commission, was that they thought it had been fairly handled. That testimony satisfied me.

If they had testified to the contrary, I would have wished to make a study of the matter.

Mr. SPARKMAN. Did they claim that the Atomic Energy Commission had been overcharged?

Mr. ANDERSON. Not so far as I am aware.

Mr. KNOWLAND. Mr. President, if the Senator from New Mexico will yield to me at this time, let me say that my question is as follows: Is it not correct that the Atomic Energy Commission would be a preference customer in the fullest sense of the word; and is there any Government agency that would be a preference customer in a sense higher than the Atomic Energy Commission?

Mr. ANDERSON. Mr. President, I think it should be pointed out to the majority leader that, insofar as the preference clause was concerned, the TVA was supplying the AEC with all the power the AEC had. The preference

clause applies only to sales of its own power.

Mr. KNOWLAND. My point is that if the TVA is going outside its own area and is supplying some of its power outside the TVA area, so that it is not in a position to deliver power to a preference customer, then it seems to me there arises quite a legal question as to whether the shortage is self-imposed by the TVA's going beyond the confines of its area, and then finding itself in short supply, and therefore having to go outside its area to buy power in order to make up the shortage, so that it will be able to carry out its commitment to the highest possible preference customer it could have.

Mr. ANDERSON. I would agree with the majority leader about that; but I do not recall that there was any testimony that that was the situation.

The difficulty is that if we are to examine the operations of the TVA and the AEC over a period of many years, we shall have to obtain more information than that contained in the hearings. I have gone over the hearings rather carefully, and I do not believe they contain anything on that point.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield to me?

The PRESIDING OFFICER (Mr. SCHOEPPEL in the chair). Does the Senator from New Mexico yield to the Senator from Arkansas?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I think it is clear that the TVA can charge the AEC whatever the TVA chooses to charge. I think that is apparent to the Senator from New Mexico and also to the Senator from Alabama [Mr. SPARKMAN].

Mr. ANDERSON. Oh, Mr. President, we must be fair to the TVA in connection with this matter.

Mr. FULBRIGHT. However, if the Senator says, "Oh, they bought this under stress," then it is apparent that the TVA charged the AEC the most that it was within the power of the TVA to charge; and, in reply, all that can be said is, "But the Government came out the same, in any case, because it got the 70 percent that was added and charged to the AEC.

Mr. ANDERSON. But in the hearing there is no testimony that the TVA charged more, either on the basis of an added 70 percent or any other percentage.

Mr. FULBRIGHT. But I have just set forth the facts.

Mr. ANDERSON. Mr. President, I am sorry to disagree with the Senator from Arkansas, for I do not think he has set forth the facts. What actually occurred is stated over and over again in the hearings. The TVA had a certain bloc of power that was available. The TVA did not have enough power to take care of the new installation at Paducah. Mr. Murray, one of the Commissioners, went there. His testimony is to be found on page after page of the hearings. He testified that he went there, and arranged a "marriage," as he explained the matter. He wished to ascertain whether private power could carry the whole load. He found that private power at Paducah could not do so; that it was not in a position to do so, and that it would be too hazardous for private power to attempt to do so. He found that the TVA could carry half of the load, and then he arranged to give the other half of the load to a group of private companies that were well managed and were in a position to deliver to the Atomic Energy Commission a good quality of service. He arranged to have the TVA deliver all the power it could deliver to the AEC. But that amount was not sufficient. Then they said, "Go out and buy the rest of it where you can."

Certainly the AEC should be charged the cost of buying the extra power.

Mr. FULBRIGHT. Plus 70 percent, does the Senator from New Mexico think?

Mr. ANDERSON. Mr. President, I say that the Senator from Arkansas cannot now or cannot tomorrow or cannot next week or next month provide any evidence whatever to show that TVA bought the power and then added 70 percent to the cost of it, before selling the power to the Atomic Energy Commission.

Mr. FULBRIGHT. I think the figures indicate something very similar to what I have stated.

Mr. ANDERSON. I say as respectfully as I can to the Senator from Arkansas that I do not believe that is the case, because I think the figure of 8 mills, that he has used—and certainly I am subject to correction if I am in error—represents the price at which TVA purchased the power and the price at which TVA billed the power to the Atomic Energy Commission.

I have agreed with the Senator from Arkansas that if the TVA bought the power at 5 mills and sold it to the Atomic Energy Commission at 8 mills, the TVA should be censured by the Congress for having done something absolutely wrong.

Mr. FULBRIGHT. Mr. President, I appreciate that statement.

Mr. President, the Senator from New Mexico paid his compliments to Mr. Strauss, the Chairman of the Commission, as a man of astute intellect, with a keen understanding of financial matters. Let me say that I hold in my hand a memorandum addressed to Mr. Strauss. He personally gave it to me. It is signed by Mr. K. D. Nichols, to whom the Senator from New Mexico has referred on numerous occasions.

Mr. ANDERSON. However, even though Mr. Strauss is a financial genius, the fact that Mr. Nichols sent a memorandum to Mr. Strauss does not make Mr. Nichols one.

Mr. FULBRIGHT. But the Senator from New Mexico has been quoting Mr. Nichols' testimony.

Mr. ANDERSON. Yes, and I was surprised by the testimony the Senator from Arkansas has quoted; namely, that Mr. Nichols said the TVA is overcharging them.

Mr. FULBRIGHT. Mr. President, this memorandum is rather lengthy. Therefore, I now ask unanimous consent that it be printed at this point in the RECORD, for reference purposes.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

JUNE 11, 1954.

Note to Mr. Strauss:

In the matter of rates charged the AEC by the TVA for power, the following comparison with rates charged during the same period by EEI for power delivered to the Paducah plant is pertinent:

	Kilowatt-hours	Costs	Average cost (mills per kilowatt-hour)
Jan. 1, 1951–Dec. 31, 1953			
TVA:			
Normal	2,653,349,972	$16,907,540.74	6.3721
Supplemental	334,053,688	3,370,045.04	10.0883
Total	2,987,403,660	20,277,585.78	6.7897
EEI:			
Permanent	1,289,097,810	4,153,650.59	3.2221
Interim	1,513,528,311	11,848,120.05	7.8281
Total	2,802,626,121	16,001,770.64	5.7095
July 1–Dec. 31, 1953			
TVA:			
Normal	1,709,062,951	8,642,400.56	5.0558
Supplemental	282,800,138	3,011,270.19	10.6481
Total	1,991,863,089	11,653,670.75	5.8515
EEI:			
Permanent	1,247,011,470	3,941,354.02	3.1606
Interim	814,843,158	6,319,398.46	7.7554
Total	2,061,854,628	10,260,752.48	4.9797
Jan. 1,–Mar. 31, 1954			
TVA:			
Normal	1,053,464,000	3,916,543	3.72
Supplemental	393,720,000	3,111,767	7.90
Total	1,447,184,000	7,028,310	4.86
EEI:			
Permanent	683,394,000	2,230,159	3.26
Interim	475,487,000	3,662,618	7.70
Total	1,158,881,000	5,892,777	5.08

It was not until February of this year that the average cost of power furnished by TVA became less than that furnished by EEI. During all the above periods to the cost to AEC of EEI permanent power was less than TVA normal power.

In negotiations with TVA that resulted in our present contract for normal or permanent power at Paducah, we understand that TVA included in the fixed-charge portion of the rate a charge that would amortize the original investment for the new facilities required in 28 years at 4 percent interest. To accomplish this, the charge must be equal to 6 percent of the original investment per year.

In recent joint discussions between the FPC, TVA, and the AEC to develop a comparison of cost to the Government between the Dixon-Yates proposal and TVA for 600,000 kilowatts of power, we had access for the first time to operating and construction cost data on which TVA based their position on actual cost to the Government.

Using this data and their present quoted cost of $145 per kilowatt of capability for the Shawnee plant; providing in the capital costs of $95,040,000 for a plant of 660,000 kilowatts of capability for the delivery of 600,000 kilowatts of power; $13 million for transmission, making a total capital cost of $108,040,000, and using 35-year depreciation for the useful life of the plant and 15½ cents per million B. t. u.'s for fuel costs; we have estimated the cost to TVA for delivery of 600,000

kilowatts of power to the Paducah plant from the Shawnee plant at 98 percent load factor.

It should be noted the TVA Act requires that new congressional appropriations for power facilities to be repaid over a period not to exceed 40 years after the year in which such facilities go into operation. No interest payment is required.

On the basis TVA should furnish power to the AEC at cost, and based on information from TVA that coal cost of 15½ cents per million B. t. u.'s will be reflected in the rate under our present contract at Paducah on July 1, 1956, AEC would be charged for 600,000 kilowatts under the present contract over and above estimated cost to TVA as follows:

	Annual cost to TVA	Mills per kilowatt-hour
Amortization, 35 years	$3,086,000	0.59
Operation and maintenance, general and administrative, transmission, replacements, etc	2,195,000	.42
Fuel, at 9,947 B. t. u.'s per kilowatt-hour and 15½ cents per million B. t. u.'s	8,037,000	1.55
Total	13,318,000	2.56
TVA-AEC Paducah contract	18,036,000	3.47
Difference	4,718,000	.91

We feel that TVA should pay interest on its investment equal to the cost to the Government long-term borrowings during the period of construction of the new facilities. On the basis this rate would be not less than 2½ percent, then the estimated cost to TVA for 600,000 kilowatts of power furnished at Paducah after July 1, 1956, and the difference between the contract rate would be as follows:

	Annual cost to TVA	Mills per kilowatt-hour
Amortization, 35 years, interest at 2½ percent [1]	$4,666,000	0.90
Operation and maintenance, general and adminsitrative, transmission, replacements, etc	2,195,000	.42
Fuel, at 15½ cents per million B. t. u.'s	8,097,000	1.55
	14,898,000	2.87
Paducah contract	18,036,000	3.47
Difference	3,138,000	.60

[1] Computed as follows: 0.432×$108,000,000=$4,666,000; amortization, $3,086,000; interest, $1,580,000.

By July 1, 1956, TVA will be furnishing under the contract 1,205,000 kilowatts of normal power. Thus on that date charges to AEC over estimated cost to TVA will be approximately double the $3,138,000 or $6 million. Since the original contract was on a commodity basis and TVA was taking a risk on capital costs, the rate then established had justification on the part of TVA. However, now that the capital costs are known and operating experience is being obtained, a continuation of the present contract rate does not seem justifiable on the basis TVA should sell power to the AEC at cost.

To continue the present Paducah contract rate could place TVA in a position, at the expense of the AEC, of subsidizing other users in the TVA system.

Many factors other than a policy of sales of power to defense agencies at cost to TVA may be involved that should be explored with the Bureau of the Budget and possibly TVA before these figures could be considered as a basis for contract renegotiation with TVA.

K. D. NICHOLS.

Mr. FULBRIGHT. Mr. President, I wish to read one paragraph which sums up the matter:

By July 1, 1956, TVA will be furnishing under the contract 1,205,000 kilowatts of normal power.

That will be after they have built all their plants.

Mr. ANDERSON. Under which contract is that? Is it under the Paducah contract?

Mr. FULBRIGHT. Yes; the Paducah contract.

Mr. ANDERSON. Yes.

Mr. FULBRIGHT. I read further from the memorandum:

Thus, on that date charges to AEC over estimated cost to TVA will be approximately double the $3,138,000, or $6 million. Since the original contract was on a commodity basis and TVA was taking a risk on capital costs, the rate then established had justification on the part of TVA.

This refers to the interim period to which the Senator from New Mexico has referred.

I read further from the memorandum:

However, now that the capital costs are known and operating experience is being obtained, a continuation of the present contract rate does not seem justifiable on the basis TVA should sell power to the AEC at cost.

To continue the present Paducah contract rate could place TVA in a position, at the expense of the AEC, of subsidizing other users in the TVA system.

That is the very crux of the matter. I read further:

Many factors other than a policy of sales of power to defense agencies at cost to TVA may be involved that should be explored with the Bureau of the Budget and possibly TVA before these figures could be considered as a basis for contract renegotiation with TVA.

That is the first statement.

I also hold in my hand——

Mr. ANDERSON. Mr. President, I should like to have the Senator from Arkansas pause at that point.

Mr. FULBRIGHT. Let me inquire what is wrong with what I have just read.

Mr. ANDERSON. I wish to answer that part of the memorandum. In it, Mr. Nichols says, in effect, "If the present rate is continued—if the present rate is continued—if the present rate is continued." But the AEC has power to renegotiate the rate.

If the AEC is to be robbed of $3 million, and Mr. Strauss is a great financial genius, I think he would be smart enough to renegotiate. If he does not do it, the AEC is in very poor hands. That is all I say. We cannot base an overcharge on the fact that the person who ought to ask for renegotiation sleeps on his rights. I do not believe the AEC is going to sleep on its rights.

Mr. FULBRIGHT. The Senator is not saying that they have not been overcharged, but that if they are, they ought to renegotiate.

Mr. ANDERSON. I would not make the positive statement that the TVA had not overcharged the AEC, but I do not recall in the testimony—and there are two volumes of it—any place where the AEC stated that it was being overcharged. If the Senator can find such testimony tonight and mark it and read it to me, I shall be very happy to have the information.

Mr. FULBRIGHT. Let me read from the memorandum which I received not more than 2 hours ago. It was prepared by the AEC. It is three pages in length. I have already asked that it be printed in the RECORD. The last two paragraphs are:

Either the TVA is charging AEC too much or their representation on cost of producing power is in error.

If the TVA representations on cost are correct, then the AEC is being overcharged.

There are no "ifs" about it.

Mr. ANDERSON. By whom is the memorandum signed?

Mr. FULBRIGHT. Let me finish.

This places TVA in the position, at the expense of AEC, an arm of the Federal Government, of subsidizing other users of the TVA system at the expense of the taxpayers in the balance of the country.

That memorandum came from the AEC. It was handed to me only an hour ago by Mr. Trapnell. It reaffirms what the other memorandum says.

Mr. ANDERSON. By whom is it signed?

Mr. FULBRIGHT. Mr. Trapnell handed me this memorandum only an hour ago. It was prepared by the AEC.

Mr. ANDERSON. I can only say that, having had a hearing on this subject, and having run into difficulty, and having decided to revise their testimony, the AEC ought to do it where they can be cross-examined and questioned as to how they reached these figures. If all five members of the Atomic Energy Commission including the Chairman, could testify before the committee and not reveal that information, when they knew all the time that it was here and we did not have it, there ought to be a housecleaning in the Commission.

Mr. FULBRIGHT. I think the Senator is taking an incorrect attitude. What they are doing is clarifying the testimony which members of the TVA have succeeded in confusing, with regard to the difference between cost of production and sale price. The situation has been "fuzzed up" so that no one can know what it is. This memorandum is an effort to clarify the figures. The figures contained in this memorandum are identical with the ones which were placed in the RECORD only yesterday by the Senator in his long address. He said the memorandum had disappeared. Nevertheless, he placed it in the RECORD.

Mr. ANDERSON. I said it had disappeared. I wish to explain that statement. I tried to get from the Bureau of the Budget a copy of the message which had been sent out early in July for the benefit of speakers on the Hill who wanted to defend the Dixon-Yates proposal. I could not find a copy of it.

Mr. FULBRIGHT. The statement was so popular that all the copies were exhausted.

Mr. ANDERSON. It was not quite that popular.

UNIVERSITY OF MICHIGAN LIBRARIES

I reasoned that the Joint Committee on Atomic Energy staffed by careful, conscientious persons, probably preserved a copy. I found a copy, had it photostated, and inserted it in the RECORD. I returned the original to the files of the joint committee, where I am confident it now reposes.

Mr. FULBRIGHT. There is no difference between the basic figures and those contained in this memorandum. The only thing the memorandum does is to clarify and give the significance of the figures.

Mr. HILL. Mr. President, will the Senator yield? I do not wish to impose upon him.

Mr. ANDERSON. Mr. President, I have been on my feet for about 4 hours. I have completed 5 of 27 pages of my prepared statement, and I am not trying to conduct a filibuster. I yield to the Senator from Alabama.

Mr. HILL. Is it true that the statement in the President's budget message which came to the Congress in January was to the effect that AEC might cancel a part of its contract with TVA, and release to the TVA some 600,000 kilowatts of power now committed by TVA to AEC, but that, in fact, AEC has been so pleased with the contract and the prices it has been paying for the power that it took an entirely different turn and went off with the Dixon-Yates proposal?

Mr. ANDERSON. I think that is true.

Mr. GORE. Mr. President, I regret to ask the Senator to yield, but I think a brief statement would clarify the difficulty in the mind of the Senator from Arkansas.

Mr. FULBRIGHT. There is no difficulty in my mind. The Senator misinterprets the situation.

Mr. ANDERSON. It is I that the Senator from Tennessee wishes to help.

Mr. GORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Tennessee.

Mr. GORE. I would not ask the junior Senator from Arkansas to reveal his strategy, but unless there is confusion in his mind, then there is purpose. The purpose seems to be—if there is no confusion in his mind—to try the TVA upon spurious charges.

I can understand why it would be more convenient and comfortable to try the TVA than to examine, in the public light, the proposed contract.

However, what I rose to point out is that the junior Senator from Arkansas has used two average figures. He has used the average cost of outside power to the TVA for its entire system, compared with an average cost of that portion of the outside power went to the Paducah plant.

The junior Senator from Arkansas and the junior Senator from Tennessee share at least one thing in common. Neither of us is an expert on power rates. However, I know that there is one significant fact which the junior Senator from Arkansas seems not to have taken into consideration.

The average load and demand throughout the TVA system is far different from the demand of the Paducah plant of the Atomic Energy Commission. Let me point out, for example, that in Alabama there is the Reynolds Metals Co. It puts on a shift of workers at 8 o'clock at night, and they go off at 4 o'clock in the morning. The TVA buys power, sometimes from an outside source, to supply that particular demand at those particular hours. That is what is called in the trade off-peak power. It comes cheap.

At Paducah, Ky., there is a plant which must operate 24 hours a day. It requested the TVA to purchase, from whatever source it could, power to keep that vital national defense plant in operation 24 hours a day. Some of those hours were at peak periods.

Mr. FULBRIGHT. Were none of them off-peak?

Mr. GORE. That power had to be bought at very high prices.

Mr. FULBRIGHT. I take it none of those hours were off-peak. They were all at the top price?

Mr. GORE. I should like to inform the Senator that some of the peak power which the TVA bought at the request of the Atomic Energy Commission cost as high as 18 mills, at the peak hours. The Senator from Arkansas confuses averages. In one case there is a 24-hour load, and some of the power must be bought at very high prices.

The junior Senator from New Mexico said that he would not make the positive statement that TVA had not overcharged the AEC. Perhaps the junior Senator from Tennessee has given more study to this problem than has the junior Senator from New Mexico.

For 10 years I piloted every TVA appropriation bill through the House of Representatives. I conducted the hearings. I have made it my business to study each appropriation request and to know infinitely every problem. I say categorically that the TVA has not overcharged the AEC, and I shall supply further records in that connection on my own time.

Mr. ANDERSON. If I remember correctly, I said to the Senator from Tennessee that it was not my function to serve as judge and jury in this case, until we had the evidence before us. However I did not see anywhere in the record a statement to that effect, although I did see the sort of record the Senator from Alabama read a few minutes ago, dealing with what General Nichols said about supplementary and normal power, namely, that TVA has supplied normal power in the amount of 2,654,000 kilowatts, and supplemental power in the amount of 334 million kilowatts.

It might be said that because that was true, the normal power was cheap. However, in the testimony at page 1038 the representative of the TVA stated:

> Would you go on and explain, or perhaps you don't know, that TVA normal power was power largely not generated by the Shawnee plant?
>
> Mr. NICHOLS. That is right. It is still TVA power.

The representative of the TVA said:

> It is not TVA power in the sense that TVA did not generate it. We bought it where we could find it and delivered it to you.

That is why I said a moment ago that they went forth and bought the power wherever they could find it, because they were under a mandate from the AEC to get this amount of power. They brought it in, and they should be commended for it.

Let me deal with this $3,600,000 again. At page 978 of the printed hearings the AEC General Manager, replying to a question by Congressman HOLIFIELD, said:

> I think $3,600,000 is a fair expression. There is no attempt to conceal that.

Again on page 985 of the printed hearings, General Nichols gives $90,700,000 as the 25-year additional cost of the Dixon-Yates proposal.

Mr. Francis Adams, Chief, Power Division, Federal Power Commission, was called as a witness. He testified that he participated with AEC and others in analysis of the comparative costs. His direct statement appears at page 1078 of the printed record. There he says:

> The additional cost of the Dixon-Yates proposal over the estimated cost of the TVA power is $3,685,000.

Witnesses called from the Tennessee Valley Authority, under examination of the committee, agreed to the $3,685,000 figure but insisted other items would run the total higher. R. A. Kampmeier, assistant manager of power for TVA, puts it this way at Page 1118 of the printed hearings:

> I don't think the $5.5 million figure should be considered as even approaching an upper limit. I do think that the $3,685,000 is a lower limit.

The weight of all the experts is behind the $3,685,000 figure. There is agreement at that point. Not one of them presented any analysis indicating that the additional cost to the Government would be $282,000.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I do not want to bother the Senator from New Mexico any more. However, I might say that if he is going to ignore the difference between the estimated cost of producing power and what the AEC will be charged, there is really no argument on that particular point, but I hope the Senator will admit that that figure is based on the estimated cost of producing power, as contrasted with the cost of procuring it from the power company. Is that correct?

Mr. ANDERSON. I have said all I can say about it. I say that is not correct, because every person who participated in the analysis said this was the analysis that was made by the Bureau of the Budget, the Atomic Energy Commission, the Tennessee Valley Authority, and the Federal Power Commission as to the relative costs. I do not believe that cost means a delivered price. Therefore I am only dealing with the relative cost. If that is incorrect, then the whole basis of my argument is incorrect.

Mr. FULBRIGHT. Then there is no point to trying to develop it. If we cannot agree on a simple statement, then we cannot agree on anything, and there is no point in seeking even to make a record that is understandable either to

the Senate or to the public. That particular fact seems to me to be so clearly obvious that there is hardly any point in continuing the discussion, inasmuch as there is no question about the fact that at no place does anyone say that TVA offers to sell to AEC power at that price. There is not one scintilla of evidence to that effect. We are merely butting our heads on differences, and we do not clarify anything.

Mr. ANDERSON. Mr. President, in last Sunday's newspaper there appeared a statement by the Bureau of the Budget about the Dixon-Yates decision at the White House. Attached to that statement was a "detailed analysis of the Middle South-Southern proposal." In that statement the Bureau of the Budget states that there is a difference in cost of $3,685,000, due to State and local taxes, difference in cost of money, extra fuel transportation costs, difference in operating costs, and a $607,000 TVA transmission cost resulting from the location of the Dixon-Yates plant. I ask unanimous consent to have the comparison which appears at page 3 of the statement printed in the RECORD at this point. I believe it will be useful.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

A comparison of annual cost to the Federal Government for power supply delivered to the TVA system in the Memphis area for the account of AEC is attached (attachment 1).

Analysis of the Middle South-Southern proposal from the standpoint of its net cost to the Government, including State and local taxes, as compared with the estimate for constructing a TVA plant near Memphis, shows an annual cost to the Government of $20,569,000 for the private companies' proposal, as compared with $16,884,000 estimated for the TVA plant. The difference of $3,685,000 is due to the following items:

	Amount	Percent of total
State and local taxes	$1,499,000	41
Difference in cost of money	1,059,000	29
Extra fuel transportation costs	309,000	8
Difference in operating costs	211,000	6
Total for Middle South-Southern	3,078,000	84
TVA transmission costs	607,000	16
Total additional costs	3,685,000	100

Mr. ANDERSON. Mr. President, the AEC and Federal Power Commission witnesses carefully put into the hearing record the reason for the higher Dixon-Yates cost. Mr. Adams testified that State and local taxes in Arkansas on Dixon-Yates would account for $1,499,000 of the additional cost, extra cost of money would be $1,059,000 per year of the additional cost, and that extra fuel costs to Dixon-Yates would be $309,000.

The Tennessee Valley Authority has excellent coal contracts and has been able to achieve considerable savings on fuel.

The matter of taxes, which the experts say accounts for $1.5 million of the additional annual costs of $3,685,000 is entirely Arkansas State and local taxes, the sum that the State of the Senator from Arkansas will get from this plant.

If the TVA builds a plant at Fulton, there will be no local tax cost to the Government. The TVA makes payments in lieu of taxes to Tennessee State and local governments on facilities serving the civilian system, but not on facilities serving direct Government demand.

The problem here is not whether the additional cost exists but whether we are going to make a businesslike decision, and save this $1.5 million for the Government, or go into this Dixon-Yates contract for the purpose of creating a way to give Arkansas a $1.5 million windfall.

I do not think that the fact that Dixon-Yates will collect $1.5 million annually out of the United States Treasury, through AEC, and turn it over to the State of Arkansas, is a valid argument when we are being urged to economize and be businesslike—for us to approve this Dixon-Yates contract. If we want to give Arkansas $1.5 million a year, we can do it far cheaper. Under this scheme it will cost the Treasury $3.6 million a year to transfer $1.5 million to Arkansas. It could be done by check for a few cents overhead.

The weight of all the testimony of the experts, and a look at the difference in cost, are convincing that it will take $3,685,000 of the Treasury's hard dollars every year to pay the additional costs inherent in the Dixon-Yates proposal. Over 25 years, it will cost an extra $90 million of Government funds to avoid building the Fulton steam plant and expanding Johnsville at this time.

The Senator from Arkansas invited us to show any error in his computation. At page 10145 of the RECORD for July 9, column 2, he put in a table which is labeled a comparison of annual cost of power supply from Dixon-Yates proposal against cost to AEC of power from TVA at Paducah, using 600,000 kilowatt capacity, 5.2 billion kilowatt-hours per year or 98 percent load factor, and 19 cents per million B. t. u.'s fuel cost.

This looked to me like a familiar table, and indeed it is.

This is the table that the AEC and Budget Bureau first compiled when the second Dixon-Yates proposal was transmitted from the AEC to budget. The one change is that fuel costs at the TVA's plant at Paducah have been raised to 19 cents per million B. t. u.'s arbitrarily, and that just cannot be done and come out with a comparison with any value whatever. Nineteen cents is not the TVA's fuel cost at Padacuh. Testimony at the hearing shows that the cost currently is 16.8 cents and that under their coal contracts it will be 15.5 cents in 1957, General Manager Nichols testified that this is the TVA coal cost at page 1065 of the joint committee printed hearings.

If this technique of using an arbitrary cost figure were valid and meritorious, it would be a great godsend to Secretary of Agriculture Benson and the dairy people.

They could assume that the price of coffee is 50 cents per cup and demonstrate beyond all question of a doubt that people ought to drink milk costing 10 cents a glass.

They could assume that oleo cost $1 per pound and thereby make butter at 60 cents a great bargain.

Unfortunately for this sort of calculations, coffee does not cost 50 cents per cup, oleo does not cost $1 a pound and coal does not cost the TVA 19 cents per million B. t. u. at Paducah.

By substituting the completely inaccurate 19 cents coal cost—a cost that is 11 percent more than what TVA is actually paying now and 123 percent of what it will pay over the long stretch of the contract—the table of the Senator from Arkansas boosts the TVA energy charge at Fulton around $1,800,000 per year. In the original AEC-Budget Bureau table, figured at reality, the TVA energy cost is shown as $9,828,000 per year. In the table the Senator from Arkansas used, based on an assumption of 19-cent coal, this annual energy charge shoots up to $11,648,000.

The key to the whole analysis, on which I fear the Senator has been misled, is the substitution of the mythical coal cost to TVA for TVA's actual coal costs.

There is a second basic wrong about the Senator's table which I have previously mentioned. A comparison of the AEC's costs for power from TVA at Paducah with the Dixon-Yates proposal is no longer applicable since the basis of the deal was changed. AEC is not buying power to replace power it gets from TVA at Paducah. It is buying power for TVA at Memphis, and the decision must be based on alternative costs there—alternative costs on which the experts are in agreement.

The original AEC-Budget Bureau table on Paducah versus Dixon-Yates costs, using the correct fuel-cost figures, will be found at page 1064 of part II of the joint committee's printed hearings. It was put in the record by the AEC.

I am sure that the Senator has been given inaccurate information on the situation. There are other bits of information contained in his address which I feel are faulty.

The Senator from Arkansas was wrong in indicating that the cost of construction and operation of steam plants are fairly well standardized. His comment to this effect is at page 10152 of the RECORD for July 9 in the first column. Four units of TVA's Shawnee plant near Paducah have cost $145 per kilowatt to build while construction costs of Electric Energy, Inc., across the river have run $190 per kilowatt or more. The TVA's coal costs at Paducah are a little under 17.5 cents per million British thermal units at Paducah and will go to 15.5 cents under TVA's existing contracts. It is understood that the EEI coal costs are running 19 cents or a little more.

I think the Senator unfairly reflected on the TVA bookkeeping system when, at page 10144, in the third column, he said, "I do not know—no one knows—how an activity as large as TVA keeps its books."

I hope the Senator from Tennessee, who is worried about that, will listen to these comments.

UNIVERSITY OF MICHIGAN LIBRARIES

The TVA keeps accounts in accordance with the uniform system of accounts prescribed by the Federal Power Commission for all major utilities. The Division of Audits of the General Accounting Office makes a commercial-type audit of the TVA accounts every year. T. Coleman Andrews, an able public servant when director of the Corporation Audit Division of the GAO, testified before a Committee of Congress:

> TVA has probably the finest accounting system in the entire Government and undoubtedly one of the best accounting systems in the entire world. It is an excellent system. There is no private enterprise in this country that has any better.

A statement like that from T. Coleman Andrews, who has been placed by this administration in a position of great responsibility, which he fills with credit to himself and credit to the country, is interesting to have. The comment was made before he was considered as a candidate for a special public office. For him to say that TVA has one of the best accounting systems in the entire world takes in a reasonable amount of territory, and I think it should be satisfactory.

The Senator from Arkansas has raised two other points that may confuse some people not expert on power matters which need a little study.

First, he alleges that TVA has been charging the AEC more for interim power at Paducah than Electric Energy, Inc.

This matter was raised by Admiral Strauss, chairman of AEC, at the joint committee hearings. There is a detailed explanation at pages 1069, 1070, 1071, and 1072 in part II of the printed testimony.

Briefly, the facts are that AEC needed power before the big generating plants at Paducah could be put in operation. It asked TVA and EEI to buy up and gather together whatever power anyone could spare in the area and get it to the Paducah facility, to be used until the plants came on the line.

Both concerns did buy up power for AEC. The Commission got its facilities operating faster than anticipated and needed more power. It asked EEI and TVA to find it. EEI was unable to respond. TVA said that it would try to scrape up more, but that it would be high cost. AEC said to go ahead, and TVA did.

It seems to me that this current criticism of TVA because as of now this interim power which it gathered together as a special service should be pointed to as evidence.

The current criticism of TVA for interim energy costs is the most unfair reward for service in my recollection. It is entitled to appreciation and not criticism for what it has done. It is entitled to recognition of the fact, also, that it is to some extent standing behind or firming up these odd lots of power obtained both by it and the EEI so that there will be a sufficiently steady flow to the AEC plant to make it possible to operate.

The allegation that TVA interim power costs are running somewhat higher than EEI is, beside being completely unfair, also wholly beside the point in any debate over costs of 600,000 kilowatts of new power at or near Memphis, Tenn.

The Senator from Arkansas likewise has taken the TVA's charges to the city of Memphis for wholesale power and attempted to compare it to TVA's Shawnee costs to prove that TVA is overcharging the Government.

He finds that Memphis actually paid 3.88 mills per kilowatt-hour for TVA power but that if the Paducah rates were applied—$1.10 per month demand charge and a 2-mill energy charge—the rate would have been 4.25 mills. The inference is that TVA is trying to rob Uncle Sam.

TVA made a long-term contract with Memphis in 1938 while its system was virtually all hydroelectric power. It was a nondiscriminatory rate, comparable to the rates TVA charges other communities throughout the valley. Memphis is and will be a TVA customer for many years. There is no apparent intention on the part of TVA or Memphis to have anything but a permanent relationship.

In 1952, they amended their contract to provide that if Memphis starts serving a customer with a high load factor, TVA will get a higher rate for the power than originally provided.

TVA has made term contracts with AEC to build steam plants at charges which will cover the costs of supplying that particular power and amortize costs incident to meeting the AEC needs.

The neglected fact that the TVA rate at the Shawnee plant in the first 8½-year period includes special amortization of such things as overtime paid out to get the job done speedily, and that the energy charge will go down about 10 percent after this is paid off, is illustrative of the special nature of the job and therefore the rate.

The Memphis rate has been based on system costs. The AEC rate is based on the costs inherent in its requirements.

Mr. GORE. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. GORE. I think if a comparison must be made as between the rates at Paducah, then a large industrial concern with a high load factor is the best comparison that can be made. No comparison of dissimilar power customers is good, but if one must be made, then this is perhaps the most apt and the most relevant. I do not know whether the Senator has the figure of the charge made to an industrial customer with a high load factor in Memphis under the contract revision in 1952. If he does not, I should like to point out that the stipulation is considerably higher than the rate at which power generated at the Shawnee plant is now going to Paducah. I shall not burden the Senator with figures, but later on I shall point out that particular comparison.

Mr. ANDERSON. The sort of thing the Senator is talking about is shown by comparing the 2 cents per kilowatt-hour charged residential customers with 1 cent charged commercial customers or an industry. Such a comparison would show that the residential customers are being robbed, because, on the average, they have to pay twice as much per kilowatt-hour as big users.

Let me explain why high load factor power is more costly than somewhat lower load factor power.

If a utility has a customer who has a 100-percent power load, and charges $1 per month per kilowatt demand charge, then all he can collect in demand charge is that $1.

But if a utility has several customers who do not always use their peak demand, and their peaks vary, the utility can take advantage of this diversity and collect more totally for demand charge than the capacity of its facilities.

In the TVA area, the peak load at Memphis is in the summer when air conditioners are running. The city of Memphis pays demand charge for enough power to meet this summer peak. Over on the east side of the TVA area, in Knoxville and Chattanooga, the annual peak comes in the winter when heating units are in use. The Knoxville and Chattanooga systems pay demand charge to meet those winter peaks.

Actually, the TVA does not have to have capacity to meet both peaks at once.

Like every other utility, public or private, it is able to take advantage of diversity of peaks and earn more in demand charges than is actually represented by its capacity.

But when the load factor is 98 percent, as the AEC requires, then this opportunity to earn part of the revenues through diversity is not present.

Consequently, there is a sound explanation of the TVA's Memphis rate and the REA rate in Arkansas, which to some may appear unreasonable.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. Is it true that the around-the-clock customer is charged the same as the offpeak customer, and is necessarily charged as much?

Mr. ANDERSON. Some users do not produce as much revenue to the company as they would if they were able to use a part of the load during the daytime and another part during the peak time.

Mr. FULBRIGHT. The offpeak works only one way?

Mr. ANDERSON. Not entirely.

One of the most interesting parts of the address made by the Senator from Arkansas, occurred during a colloquy between the Senator from Alabama [Mr. SPARKMAN] and the Senator from Arkansas.

The Senator from Alabama had just said, at page 10151 of the RECORD:

> I should like to ask the able Senator from Arkansas, who has been an advocate of legislation against monopolistic practices, is it not rather unusual that the President of the United States should direct the Atomic Energy Commission, an independent agency charged with a high responsibility, as pointed out by the Senator from Mississippi, to enter into a contract for which specifications had never been drawn, to make that contract with a corporation which had never been organized, and is not yet in existence, and to buy that power from a plant which has not yet been built?

The Senator from Arkansas then came in, saying:

I should like the Senator to yield for a moment because, very clearly, the Senator is misstating the facts. In the first place, the President did not order any such thing. The proposal really came through the Bureau of the Budget. There were inquiries made and discussions had with the electric-power industry regarding the possibilities of such a contract. However, the Senator from Alabama is creating a false impression.

Mr. FULBRIGHT. Mr. President, will the Senator yield so that I may place in the RECORD a statement in connection with that point?

Mr. ANDERSON. Yes, I shall be happy to yield to have the insertion made in the RECORD.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have a statement printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INDEPENDENCE

The complaint has been made that, since the AEC is an independent agency, it was somehow improper for the Bureau of the Budget to direct it to enter into this contract.

Actually, of course, the instructions to the Atomic Energy Commission were given to it by the Bureau of the Budget. Why? Because what is involved here is a budgetary problem. It is a problem which involves two independent agencies—the AEC and the TVA. Who, if not the President, should regulate or control negotiations, conflicts, or differences of opinion between two independent agencies?

Who, if not the Bureau of the Budget, should make the determination on the part of the executive branch of the Government as to whether or not it would request an appropriation by the Congress?

Do Senators contend that TVA and AEC should not be subject to budgetary procedures in the executive branch of the Government?

This argument, if carried to its logical conclusion, I suppose would mean that since these agencies are independent they should not even be required to submit to regulation by Congress.

Mr. ANDERSON. Mr. President, I do not feel that the CONGRESSIONAL RECORD should be allowed to stand with this charge of misstatement of facts, and of creating a false impression, appearing without correction. I feel that the distinguished Senator from Arkansas, who is always fair, may want to make such a correction to remove such an assertion against the Senator from Alabama [Mr. SPARKMAN]. The statements of the Senator from Alabama were entirely correct, and I want to deal with them in some detail.

First, the Senator from Alabama said that the President of the United States had directed the AEC to make a contract with Dixon-Yates. The Senator from Arkansas said that the President "did not order any such thing."

If Senators will turn to page 952 of part II of the hearings of the Joint Committee on Atomic Energy, covering hearings June 2 through June 18, 1954, they will find there a copy of a letter signed by Rowland Hughes, Director of the Bureau of the Budget, to Chairman Strauss of the AEC.

General Manager Kenneth D. Nichols presented the letter to the committee, pointing out that it was from the Executive Office of the President, Bureau of the Budget, dated June 16, 1954.

The letter, signed by the Budget Director and addressed to the AEC, said in part:

The President has asked me to instruct the Atomic Energy Commission to proceed with negotiations with the sponsors of the proposal made by Messrs. Dixon and Yates with a view to signing a definitive contract on a basis generally within the terms of the proposal. He has also requested me to instruct the Commission and the Tennessee Valley Authority to work out necessary contractual, operational, and administrative arrangements between the two agencies so that operations under the contract between AEC and the sponsors will be carried on in the most economical and efficient manner from the standpoint of the Government as a whole.

Mr. Nichols also placed in the record a copy of a letter Budget Director Hughes had written that same day to the Senator from Massachusetts [Mr. SALTONSTALL], chairman of the Armed Services Committee of the Senate—it is on page 956 of the joint committee hearings—in which Mr. Hughes said to the Senator from Massachusetts:

I have been asked by the President to instruct the Atomic Energy Commission to proceed with the negotiations of a definitive contract. Such instructions have been given this agency. The Commission and the TVA have also been instructed to work out the necessary interagency arrangements.

A little later during the day, at page 975 in the same record, the Senator from Tennessee [Mr. GORE] was questioning General Manager Nichols of AEC about the contract and this colloquy took place:

Senator GORE. What would be your position if this committee should instruct the Commission to enter into no contract until this committee approves it?

Mr. NICHOLS. I would be in a dilemma, because I would have a Presidential order.

President Eisenhower first made public the idea of AEC releasing TVA from 500,000 or 600,000 kilowatts of its contract obligation to the AEC in a message to the Congress early this year. The record is completely clear from beginning to end that this is, as the Senator from Alabama said, being done at Presidential direction.

The next statement that the Senator from Alabama made just before the Senator from Arkansas declared that "very clearly, the Senator is misstating the facts," was that the Dixon-Yates contract was a contract for which "no specifications had been drawn."

I have examined the record in regard to that statement of the distinguished Senator from Alabama and, again, he was entirely correct. There was no misstatement. I would like to refer to page 110 of the stenographic account of the hearings of the Langer Subcommittee on Monopoly of the Senate Judiciary Committee, reporting hearings of July 1, 1954.

A number of witnesses were heard during the day, and the record shows that present throughout the session—it was an executive session, but the proceedings were made public immediately after the hearings ended—present throughout the session was Mr. Daniel James of the law firm of Cahill, Gordon, Reindel & Ohl, of Washington, D. C., representing the Middle South Utilities, Inc., one of the partners in the Dixon-Yates proposal.

Mr. James was permitted to participate from time to time, and at page 110 in the RECORD the following colloquy appears:

Mr. JAMES. Mr. Chairman, I would like again to thank the committee for allowing me to appear here. I would like to ask that if there is nothing in the transcript that is of a confidential nature, may I have a copy of it, so far as it has gone?

The CHAIRMAN. Not right now, sir. We will give it all out at once.

Mr. JAMES. The second thing I would like to ask is a copy of the so-called specifications referred to here, which were issued by AEC, because, frankly, I have not seen them.

Senator KEFAUVER. They are in the CONGRESSIONAL RECORD. (Senator KEFAUVER here refers to a general statement of requirements issued by AEC.)

Mr. JAMES. My client never saw them until he read about it in the paper.

Mr. DAVIS (counsel for the subcommittee). Apparently they were available.

Senator KEFAUVER. Do you represent Dixon-Yates?

Mr. JAMES. That is right.

Senator KEFAUVER. They have never seen the specifications?

Mr. JAMES. They were never given specifications.

Mr. DAVIS. On what basis did they submit a bid?

Mr. JAMES. They were asked to submit a proposal, and they got up their own proposal, but we never had any specifications.

Mr. BURCH. The atomic energy proposed specifications to Dixon-Yates, and Dixon-Yates did not meet Atomic Energy specifications; is that the way it worked?

Mr. JAMES. We never saw the atomic energy specifications.

Senator KEFAUVER. Are you sure about that, sir?

Mr. JAMES. I am certain.

Senator KEFAUVER. Do you mean your engineer did not see it?

Mr. JAMES. Our engineers never saw that. We read about them in the paper in connection with the hearings, but I personally never have seen them.

The statement of the Senator from Alabama is further borne out by the testimony of General Manager Nichols of the AEC who described the proceedings to the Joint Committee on Atomic Energy. He testified at page 947, part II, in the recent hearings that Messrs. Dixon and Yates came into the office and talked to them about an arrangement. Nichols testified:

In other words, we talked with these three utilities surrounding the western end of the Tennessee Valley power area. Discussion led finally to a definite proposal and the proposal we will talk about this morning is the second proposal from the Middle-South and Southern Utilities.

The whole record shows that there was talk, but no specifications, just as Mr. James testified very positively before the Langer committee.

The next statement made by the Senator from Alabama was that the contract for which no specifications had been supplied was to be made with a corporation that had never been organized.

UNIVERSITY OF MICHIGAN LIBRARIES

Again, the RECORD shows that the Senator from Alabama was entirely correct. As a matter of fact, he understated the matter. There is some question as to whether or not the Securities and Exchange Commission will permit the organization of such proposed corporation if application is ever made to them.

The Dixon-Yates proposal, as outlined to the Joint Committee on Atomic Energy by AEC Manager Nichols, was a proposal to organize a corporation, which would be owned jointly by the Middle South Utilities of which Mr. Dixon is the head, and Southern Utilities, of which Mr. Yates is the head.

The question of whether or not these two utilities can actually organize such a corporation was raised by Representative CHET HOLIFIELD, after learning all the facts, in a letter to the Securities and Exchange Commission.

Mr. HOLIFIELD pointed out in his letter, which appears at page 1155 in part II of the hearings on the Atomic Energy Act recently closed, that the SEC had approved organization of the Ohio Valley Electric Corporation and of Electric Energy, Inc., with only brief consideration because national defense was involved, but that in both instances the SEC reserved the right to review later whether the participating utility companies might continue to own the new corporations under section 10 of the Public Utility Holding Company Act of 1935. Representative HOLIFIELD pointed out to the SEC that the Dixon-Yates partners could not plead urgent national defense requirements for their plant which is to provide TVA with replacement power.

In the reply of Chairman Demmler of the SEC, dated June 23, 1954, appearing on page 1156 of the joint committee hearings, Mr. Demmler affirms that the SEC reserved jurisdiction as Mr. HOLIFIELD stated, and had approved the OVEC and EEI, Inc., arrangements speedily for defense reasons, reserving the right to make later review. He added:

> No filings have yet been made with this Commission by either Middle South Utilities, Inc., or the Southern Co. with respect to any of the proposals mentioned in your letter.

Mr. HOLIFIELD thereafter wrote the SEC asking to be notified if and when the Dixon-Yates group applied to the SEC for approval of the organization of their company. He received an acknowledgment dated June 30 assuring him he will be notified if an application is filed. These letters appear at page 1157 of the joint committee hearing. As of a few moments ago, when last checked, no notice of application to form such a company had been received by Representative HOLIFIELD.

It is completely clear from the RECORD that on July 6 Senator SPARKMAN was not only completely correct that the corporation had never been organized, but that he might have gone further and mentioned the possibility that it never can be organized under section 10 of the Holding Company Act. I do not say that it cannot, but there is at least a legal question, raised by the Congressman from California with SEC—a question so substantial SEC has reserved jurisdiction in two other cases in the same respect.

Here again, I believe, the Senator from Alabama was entirely correct.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. I do not quite follow that. If it cannot be done legally, then I should think the Senator from New Mexico would not be worried about it.

Mr. ANDERSON No. The statement was made that the corporation had not been organized.

Mr. FULBRIGHT. No one said it had.

Mr. ANDERSON. The Senator from Alabama [Mr. SPARKMAN] made a statement, to which I referred a while ago, that the Atomic Energy Commission had been ordered to enter into a contract, for which specifications had never been drawn, and to make that contract with a corporation which had not been organized.

The Senator from Arkansas said that the President had ordered no such thing, and he said that the Senator from Alabama had created a false impression. I am trying to point out only what the RECORD shows.

Mr. FULBRIGHT. I did not say that everything the Senator from Alabama said was wrong; I said he created a false impression.

Mr. ANDERSON. I am trying to take every item and to show that in every single case he was correct

Mr. FULBRIGHT. I will confess that that particular item is correct. I think the Senator is correct in saying that there is not in existence a separate, new corporation. It is contemplated that one will be formed in case the contract is negotiated.

Mr. ANDERSON. That certainly would be true.

Mr. FULBRIGHT. I think that is as plain as can be.

Mr. ANDERSON. Finally, the Senator from Alabama said that the contract ordered entered into by the President, for which no specifications were drawn, with a company which had never been organized and is not yet in existence, was to be for power from a plant which has not yet been built.

I sometimes fly over the area, on my way back to New Mexico, traveling American Airlines through Memphis, where this plant is to be located if the contract ever goes through, and I know that the plant has not been started. Therefore I know the Senator from Alabama was right.

It is a swampy area near the Mississippi. Before plant construction can start the undergrowth must be cleared off and piling will have to be driven down into the swamplands to provide a foundation. It is a spot across the Mississippi from the Tennessee Valley Authority lines. It will take a transmission line spanning the broad Father of Waters to get the "juice" from the Arkansas plant over to where it is needed. It will cost $607,000 per year, according to the agreed-upon estimates of AEC, Budget Bureau, and Federal Power Commission, to get the "juice" out of the swamp, across the Mississippi, and up to the point where it is needed.

I know that the Senator from Alabama was right. The plant is not started.

Now, let me mention another item. There is a very serious question of its legality if the courts respect legislative history and the understanding between legislative and administrative officials, as the courts do.

The question of giving authority to the Atomic Energy Commission to make long-term contracts for electric power was before the Joint Committee on Atomic Energy last year. Hearings were held April 28 and June 10. At one point, when Representative HOLIFIELD, of California, was questioning Mr. Boyer, then the General Manager of the AEC, Mr. Boyer said, and I quote the testimony from the hearings on S. 4095:

> If you will notice the language we are proposing: "The Atomic Energy Commission is authorized in connection with construction and operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes * * *."
>
> In other words—

And this is still quoting Boyer—

> it is limited to the power requirements of those three installations. It is not wide open authority.

On page 43 of the same hearings, answering a question of Representative HINSHAW, of California, Mr. Boyer again testified:

> The proviso of the Supplemental Appropriations Act of 1953 is the proviso that gives us the authority to make this contract or make these contracts, and it is essentially the same language as this, except that as it will now be written it will limit it to Oak Ridge, Paducah, and Portsmouth.

Mr. Boyer's response was in reply to comment by Representative HINSHAW that the authority appeared to be a borderline one, and he would be against it. He had said, and I quote from the hearings:

> I do not think that the committee is ready to go that far, that they have been considering the power situation in the vicinity of Portsmouth and also in the Tennessee Valley, but I doubt that the committee is ready to give a carte blanche over the entire system as being presently operated by the Atomic Energy Commission, and to be unlimited as to date, the times in which such contracts can be entered into, and their termination, the cancellation costs or anything else.
>
> That is all I have to say. I personally would object to such legislation on that ground. * * *
>
> The committee has, or will, I presume by this action give approval to these contracts that have been entered into. As to future contracts and termination costs, I think we would be under very great criticism on the part of the Congress if we should enter into them in blank.

Let me digress there to say that I am going to send to the desk an amendment, which I shall ask to have printed and lie on the table. In it I try to cure what I think is the defect pointed out in the testimony. I do not think it was the intention of Congress, in fact, I am

sure it was not to give the Atomic Energy Commission the right to enter into these contracts in blank. It may be that I have gone too far in the amendment, but I am trying to say that proposed contracts should be sent to the joint committee for review.

Yesterday I tried to put in the RECORD several instances in which Representative HINSHAW, who was very, very careful about this matter, pointed out that the joint committee ought to have the power to review the contracts. He said, "If you give this authority as you are writing it in this law, this is the last contract you will ever see." When he said that I did not think he was much of a prophet. But he turned out to be a prophet, because along came another contract, proposals were made, negotiations were under way, and the Joint Committee on Atomic Energy had nothing to say about it, and apparently the Atomic Energy Commission has very little to say about it, because the Atomic Energy Commission has been ordered by higher authority to do something which a majority of its members did not want to do.

Mr. President, I send to the desk an amendment which I have proposed, and ask that it be printed and lie on the table.

The PRESIDING OFFICER. The amendment will be received, printed, and will lie on the table.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. May I ask whether the joint committee, of which the Senator is a member, has approved contracts negotiated between the TVA and the AEC?

Mr. ANDERSON. I cannot answer that qestion.

Mr. FULBRIGHT. Have the members of the committee ever raised the question whether the rate being charged the AEC was a fair rate or not?

Mr. ANDERSON. I think not.

Mr. FULBRIGHT. The contracts have always been accepted without question, so far as the rate is concerned, have they not?

Mr. ANDERSON. Yes; because there was not involved the question of starting out to establish a new facility. The authority for it was handled by the Appropriations Committee, and the Appropriations Committee, up until legislation was enacted a year ago, was the group which inquired into the contracts to see that things were proper. Then, for the first time the matter was brought to the attention of the joint committee by the proposal to give AEC blanket authority to enter into contracts.

Mr. FULBRIGHT. Does the Senator consider that the responsibility of the AEC is to TVA or to the Federal Government?

Mr. ANDERSON. The TVA is still a part of the Federal Government. I do not understand the Senator's question. Was the question, Is AEC's responsibility to the TVA or to the Federal Government?

Mr. FULBRIGHT. Yes. Is the joint committee supposed to look out for the TVA, or the Atomic Energy Commission?

Mr. ANDERSON. It is supposed to examine the acts of the Atomic Energy Commission. It is reporting steadily to the Congress what the Atomic Energy Commission does.

Mr. FULBRIGHT. Yet it never looked at any of the contracts which the AEC made with TVA.

Mr. ANDERSON. So far as I recall the joint committee did not; no.

Mr. FULBRIGHT. That is what I mean.

Mr. STENNIS. Mr. President, will the Senator from New Mexico yield?

Mr. ANDERSON. I yield to the Senator from Mississippi.

Mr. STENNIS. I certainly wish to commend the Senator from New Mexico for proposing the amendment he has offered to this very important bill. His point about the necessity for contracts having to be reported to the joint committee is indeed timely and wholesome, and I think it will bring about a great deal of good. But the most serious matter in connection with the amendment is what the Senator from Mississippi states is a complete lack of authority in the Atomic Energy Commission, under present law, to negotiate its contracts.

There is no semblance of claim that the electricity is to be used at Oak Ridge, Paducah, or Portland. There never has been, and that is the sole point of the authority. The Commission has to negotiate; that is the limit of its authority. That is as far as the Congress went. No one can provide any kind of authority or additional interpretation for section 164, on page 79, except the Congress of the United States. I think the Senator from New Mexico is eminently correct, and I expect to be heard further on the very point he has raised. I wish to commend the Senator for encompassing that question in his amendment.

Mr. ANDERSON. I thank the Senator from Mississippi. I refer now to page 958 of the hearings and to the letter which Dr. Smyth and Mr. Zuckert sent to Mr. Hughes, in which letter appear the following words:

> The present proposal would create a situation whereby the AEC would be contracting for power not 1 kilowatt of which would be used in connection with the Commission production activities.

Then the general manager of the Atomic Energy Commission said, as appears on page 959:

> Probably it is technically correct that no ampere ever produced at this plant will technically get into Oak Ridge or Paducah.

All I say is that on that basis I think there ought to be some sort of legislative protection, so that when a contract of this nature is being proposed it would have to be brought back to the Joint Committee on Atomic Energy, which stands as the guarantor to the Congress that things are all right. The joint committee should have an opportunity to look at the proposed contract. I do not think the joint committee ought to have a right to veto such a contract, and there is nothing in my proposed amendment which would give the joint committee such a veto right, because, obviously, the Atomic Energy Commission must be allowed to run its business.

I think the public interest is sufficiently great so that, with such legislation on the statute books, contracts should come to the joint committee for examination, and contracts should not be entered into until they are submitted to the joint committee.

Mr. STENNIS. Does the Senator not recall that when the question was first raised the General Accounting Office questioned the legality of approval of vouchers submitted under such contracts? How can the General Accounting Office approve the vouchers which might be made or attempted to be made under such contracts, without authority, unless there is a broadening of the legislation? I raise that point.

Mr. ANDERSON. I do not see how the General Accounting Office can, and I think there will be a need for subsequent legislation to handle the question.

Mr. FULBRIGHT. Why is subsequent legislation needed if the contract is illegal?

Mr. STENNIS. I say the General Accounting Office would have no authority to pay out the money unless there was authorization for such payment in the way of affirmative direction.

Mr. ANDERSON. I think one of the tragedies is going to be that the Atomic Energy Commission, under its general power, might be able to pay its power bill. I am not sure, once contracts are let, that it is going to be easy to get out from under them. There will be people buying bonds worth in the neighborhood of $100 million. They would be buying those bonds on the assurance that proper contracts were entered into. I am not sure the Commission will be able to get out from under the contracts if that day comes.

When House bill 4905 was reported by the joint committee, the joint committee advised the Congress, and I am reading from page 2 of Senate Report No. 676:

> This power is to be used for the operation of the gaseous diffusion plants at the three sites specified.

The three plants specified were Paducah, Portsmouth, and Oak Ridge.

The question today is whether the AEC, with honorable regard for its commitments to the legislative branch of Government, or even legally—for the courts construe laws on the basis of their legislative history—can enter into the Dixon-Yates contract for power which is not needed at Paducah, Portsmouth, or Oak Ridge.

The recent hearings of the joint committee make it completely clear that the power to be produced by Dixon-Yates—if they are ever able to organize a company, build a plant, and get a contract with the AEC—is not intended for any of the three installations, but is intended for replacement power. TVA is not to be relieved of supplying power at Paducah. None of the Arkansas power will go to any one of the three installations.

In explaining this proposal to the joint committee, in testimony which appears

UNIVERSITY OF MICHIGAN LIBRARIES

at page 946 of part II of the hearings, General Manager K. D. Nichols, of AEC, stated to the committee:

In view of the fact that the TVA needed the power in the Memphis area rather than the Paducah area, we have proceeded on the basis that there would be no contract cancellation for a like portion of the AEC–TVA Paducah contract, but that the Atomic Energy Commission would contract with sponsors for power needed by TVA for the load growth in the Memphis area on the basis of replacement power.

Mr. Nichols stated correctly what is being done when he explained that the AEC is contracting, not for power for Paducah, not for power for Oak Ridge, not for power for Portsmouth, but for power needed by TVA.

There has been no pretense that this power is needed by the Atomic Energy Commission for the operation of any one of the three plants; and, honorably and, I believe, legally, the Commission has no authority whatever to buy power except for operating the gaseous diffusion plants at the three sites specified.

Let me state for the record that should the proposed new Atomic Energy Act become law, thus reenacting this provision as to the long-term contracts, it will not change the original bargain or the meaning given the provision by its own language and the 1953 legislative history. I know of nothing that alters in any way the original intent of the provision, and, therefore, its reenactment will carry with it the same meaning as the one it previously had.

On this point of the legality of the proposal for AEC to enter into a contract, at the direction of the President, with a company that has not been organized, and is not yet in existence, for power from a plant not yet built, a letter in the hearings from the Acting Comptroller General of the United States, Mr. Frank Weitzel, is pertinent. The text of the letter, sent to Representative HOLIFIELD, appears at page 1061 in part II of the joint committee hearings of last month.

Mr. Weitzel questioned the legality of the AEC's making any contract to pay more for replacement power for TVA than it is paying under the Paducah contract with TVA. In the absence of an agreement for TVA to assume the excess costs, Mr. Weitzel says:

It would appear necessary for the President to invoke the extraordinary contracting authority of section 12 (b) of the Atomic Energy Act, or the AEC to resort to the First War Powers Act for authority to enter into such a contract as proposed by Dixon-Yates.

Mr. Weitzel added another sentence—a little off the present point, but well worth mentioning. He wrote:

It is suggested also that if an arrangement similar to the Dixon-Yates proposal is to be consummated, consideration be given to the feasibility of letting the contract to the lowest bidder after advertised bids.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield to me?

The PRESIDING OFFICER (Mr. PAYNE in the chair). Does the Senator from New Mexico yield to the Senator from Arkansas?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. In regard to the statement made a moment ago by the Senator from New Mexico—namely, that if the AEC thought it was being overcharged, it would renegotiate its contract or rate—let me inquire whether that is correct.

Mr. ANDERSON. Yes; I assume that would be a proper attitude for the AEC to take, if it was being overcharged.

Mr. FULBRIGHT. The Senator from New Mexico stated that is what the AEC would do, did he not?

Mr. ANDERSON. I said it would be a proper thing to do.

Mr. FULBRIGHT. Then, Mr. President, I ask unanimous consent to have printed at this point in the RECORD an excerpt from the AEC–TVA Paducah power contract of March 26, 1953.

There being no objection, the excerpt from the contract was ordered to be printed in the RECORD, as follows:

EXCERPT FROM AEC–TVA PADUCAH POWER CONTRACT, MARCH 26, 1953

1. Term of contract: The provisions of this agreement shall become effective as of July 1, 1954, and said Letter Contract of August 23, 1951, is hereby terminated as of July 1, 1954. This agreement shall continue in effect for an initial term expiring on January 1, 1966. Unless this agreement is canceled by Commission as provided for below, then on January 1, 1966, and on each January 1 thereafter through January 1, 1977, the term of this agreement shall be extended automatically for an additional year unless either party notifies the other that such extension shall not be effected, such notice to be delivered not less than 5 years prior to the date on which such extension would otherwise be effected. It is the intent of the parties that no such notice shall be delivered for the purpose of seeking a change in rates or other conditions because more attractive markets for power or more attractive sources of power may develop.

This agreement may be terminated by Commission, effective on any date not earlier than September 30, nor later than November 30, of any year during the initial term or its extension, upon not less than 51 months' advance written notice to Authority, accompanied by a statement of Commission's intent to reduce permanently below 1,500 megawatts its total use of power at the Paducah project.

Unless otherwise agreed, the contract demand hereunder shall be reduced to 500 megawatts for the last 12-month period to any termination or expiration of this agreement, and to 800 megawatts for the 12-month period immediately preceding said last 12-month period.

Mr. FULBRIGHT. Mr. President, I shall read to the Senator from New Mexico a sentence from the excerpt from the contract. After stating various provisions about termination and notice, the contract provides:

It is the intent of the parties that no such notice shall be delivered for the purpose of seeking a change in rates or other conditions because more attractive markets for power or more attractive sources of power may develop.

If that means anything—and that provision is included in the contract—it means to me that the AEC cannot cancel the contract because a more attractive rate is offered by someone else—in other words, if the AEC is overcharged.

Mr. ANDERSON. Mr. President, I am sure the Senator from Arkansas knows that a renegotiation between two contracting parties does not mean that one of the parties will cancel the contract and will look elsewhere for the commodity which is being supplied to it under the contract.

Mr. FULBRIGHT. However, does the Senator from New Mexico think that one who was a party to such a contract would be willing to renegotiate the contract, if the other party to the contract had no power of cancellation?

Mr. ANDERSON. At least, Mr. President, I would hope that one branch of the Government would permit another branch of the Government to do it in a fair fashion.

Mr. FULBRIGHT. We all hope so; but does the Senator from New Mexico think that all Government agencies deal fairly and equitably among themselves, with one another?

Mr. ANDERSON. It is "a consummation devoutly to be wished."

Mr. FULBRIGHT. Yes; but does the Senator from New Mexico think it has been achieved?

Mr. ANDERSON. No, I do not think so.

Mr. President, I regret that I have detained the Senate for so long, but I do not think the fault is wholly mine.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield once more—in regard to the matter of cancellation, that I discussed with him, so that at this point I may insert a letter into the RECORD?

Mr. ANDERSON. That is a very important matter, and I hope the Senator from Arkansas will insert the letter in the RECORD. I yield to him for that purpose.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert at this point in the RECORD a letter dated July 14, 1954, signed by E. H. Dixon, president of the Middle South Utilities, Inc., and by J. M. Barry, chairman of the Executive Committee of the Southern Co., stating the effect of the cancellation clause in the proposed contract which we discussed at some length yesterday; that is to say, the Senator from New Mexico and I did. I think the letter clarifies that particular matter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 14, 1954.

Hon. J. W. FULBRIGHT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR FULBRIGHT: This letter is in response to your request for an explanation of the cancellation provisions in our proposal to the Atomic Energy Commission under date of April 10, 1954.

The cancellation provisions which we have proposed might well be characterized as a "one way street." They can be made operative solely at the discretion of the Atomic Energy Commission. The precise wording of our proposal in this respect is as follows:

"(7) Termination:

"(a) After commencement of full-scale operation, termination will be allowed on 3 years' notice, during which period assignment may be made to another governmental agency, at contract rates, including all taxes and other adjustments.

"(b) Upon termination seller shall be entitled to and will absorb capacity at least as rapidly as load growth will permit, but in any event in the amount of at least 100,000

kilowatts in each year, absorbing associated proportions of costs. Buyer may assign any balance to another governmental agency at an increased price to be approved by FPC, such price to include recognition of any increased costs then encountered or foreseen by seller. To extent such capacity is not used by buyer or assignee, buyer will reimburse seller for pro rata proportion of base capacity charge, as adjusted, and taxes.

"(c) In event of partial termination above formula will be applied on a pro-rata basis.

"(d) In event buyer relinquishes right to capacity after termination, base capacity charge (including adjustments) will be thereafter reduced $1,500,000; proportionally in case of partial reductions.

"(e) Buyer will repay seller for any fair and reasonable cancellation charges payable by seller to a third party and costs, losses and other expenses incurred by seller by reason of cancellation."

As you will observe, the Government is free to use all of the electric power contracted for during the 3-year-notice period at the contract price. In other words, if the AEC requirements diminish or are eliminated, any other Government agency including TVA may use this power. In this event there would be no cost of cancellation since the Government would be receiving full value in the form of electric power and energy for the money it would be paying.

If no electric energy is required by the AEC, the TVA, or any other Government agency starting with the very first day that notice of cancellation is given (a completely unrealistic situation, for surely such a condition would be discernible to AEC far in advance of the event) the maximum payment required of the AEC (U. S. Government) would be $40 million over an 8-year period. This amount is arrived at as follows:

	Without call on unabsorbed capacity
Notice period:	
1st year	$7,275,000
2d year	7,275,000
3d year	7,275,000
Subtotal	21,825,000
After termination:	
1st year (⅚)	6,062,500
2d year (⅘)	4,850,000
3d year (⅗)	3,637,500
4th year (⅖)	2,425,000
5th year (⅕)	1,212,500
Subtotal	18,187,500
Total	40,012,500

It should be pointed out that the maximum amount of cancellation costs would occur only in the event of severe economic distress for otherwise some agency of the Government would certainly be able to use this electric power and thus avoid the cancellation charges. In the event of a situation where the Government could find no market for such electric power, presumably the sponsor companies would be similarly situated and would incur losses proportional to the amount of power for which they become responsible. Over the full cancellation period this could amount to over $18 million. A continuing absence of market for the power after the cancellation period could cost the sponsors $7,275,000 annually until a market for the power could be found.

If, during the cancellation period, the sponsors are able to absorb the power at a rate greater than 100,000 kilowatts per year, they have agreed to do so, and this would result in a comparable saving to the Government.

One further point is deserving of mention. The 3-year notice period was designed primarily to protect the consumers in the Memphis area of TVA. In view of the fact that 3 years are required to design and build a major electric-power station, it was felt that this should be the minimum notice of cancellation afforded the Atomic Energy Commission, since power was to be delivered to it through TVA and elimination of this power source in less than the time required by TVA to arrange for its replacement might be detrimental to the public-utility service rendered by that agency.

We should comment on the provisions in our proposal if electric power is required by the AEC beyond the initial 25-year contract period. In this case, also, the Government alone has the option for continuing the arrangement for two additional 5-year periods. At the end of the initial 25 years, the company will still have unamortized nearly 30 percent of its investment. Only the Government has the option of termination during the first 25 years or continuance of the arrangement after 25 years.

It is interesting to observe that other power contracts made by AEC, including the TVA contract at Paducah, contain similar cancellation provisions, though differing in detail. The cancellation provisions in our proposal were made at the insistence of AEC in order to give that agency a means of terminating its power obligations within a reasonable period of time in the event of a change in the need of AEC for power.

We shall be glad to furnish any additional information you may desire.

Very truly yours,

MIDDLE SOUTH UTILITIES, INC.,
By E. H. DIXON, *President.*
THE SOUTHERN CO.,
By J. M. BARRY, *Chairman,*
Executive Committee.

Mr. SPARKMAN. Mr. President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. I yield.

Mr. SPARKMAN. First, Mr. President, let me apologize to the Senator from New Mexico for keeping him on his feet any longer. He has been doing a magnificent job in presenting the matter to the Senate, and certainly no one is better qualified than he to do it.

During the last several days that this debate has been going on, the Senator from Arkansas [Mr. FULBRIGHT] has repeatedly raised the question of an imaginary overcharge on the part of the TVA to the Atomic Energy Commission. He seems to be rather obsessed with the idea that there is an overcharge. Let me ask the distinguished Senator from New Mexico, who for a long time has been a member of the Joint Committee on Atomic Energy, whether he ever heard any member of the Atomic Energy Commission or any member of the Joint Committee on Atomic Energy suggest or argue seriously that there was an overcharge on the part of the TVA to the Atomic Energy Commission.

Mr. ANDERSON. No. Earlier in the day I answered that question at some length, saying that I had never heard an accusation that there was an overcharge. I think that is a point which should be checked. I regret that it never occurred to me to check it. I never thought one branch of the Government would try to overcharge another branch of the Government, and I question seriously that such a situation exists. It might exist, and I think the matter should be checked. But certainly there was nothing in the testimony—before the committee—which comprises two large volumes—even to suggest the faintest possibility of an overcharge.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield once more to me? If he will, I promise him that the question I now wish to ask will be my last question of him today.

Mr. ANDERSON. Mr. President, I yield; but certainly I shall not hold the Senator from Arkansas to that promise, if some other question occurs to him.

Mr. FULBRIGHT. Mr. President, at this time I wish to read to the Senator from New Mexico from the CONGRESSIONAL RECORD for yesterday, at page 10377. According to yesterday's RECORD, at that point the Senator from New Mexico stated:

> and that the Government of the United States will underwrite all the risk, and will permit a group with an investment of $5 million to make profits of $75 million, and call that private enterprise.

Let me inquire whether the Official Reporter properly recorded the Senator's statement; and if so, will the Senator from New Mexico elaborate a little and give any justification for such a statement?

Mr. ANDERSON. Yes; I shall be glad to do so.

Dixon-Yates are going to put up $5 million of so-called venture capital. I do not think it is exactly venture capital, because one of the tests of venture capital is whether any risk is involved. This is like shooting fish in a rain barrel, I think. Nevertheless, let us call it venture capital. Dixon-Yates are guaranteed 9 percent on their money, which they say is a normal rate of return.

Mr. FULBRIGHT. With no contingencies? The Senator says "guaranteed."

Mr. ANDERSON. Let me finish my answer.

In the hearings the Senator from Ohio [Mr. BRICKER] said he questioned whether 9 percent was the usual return. The witness testifying said, "Oh, yes; that is the customary return." I have not the exact language before me, although I have read the hearings. The Senator from Ohio said, "They do not tell that to the State utility commissions which are regulating them." But if 9 percent is the customary and fair return, then they are entitled to it.

They will go on through 25 years of the contract, and when they get to the end of the contract they will have the possibility of completely owning a plant which will have been paid for entirely by Government purchases of power under a Government contract. The issuance of $95 million or $100 million worth of securities will have been made possible only because of that firm Government contract. Otherwise the sponsors could never have borrowed the money, and the testimony will show that they were unable to get the money until the guarantee was promised.

If the Senator from Arkansas wishes to go into the early history, he can check the facts for himself. I cannot lay my hands on the exact page, because I am a little tired after 5 hours, but the Senator will find that the original proposal ran into figures of several hundred million dollars. It was finally trimmed down to $100 million. How could they bring it down to $100 million? Because

UNIVERSITY OF MICHIGAN LIBRARIES

the Government was guaranteeing that it would purchase this electric power at prices which would completely amortize the plant and leave it entirely free from debt at the end of a 25-year period; and I assume the plant would not be completely worn out.

Someone may say, "But they will get a 25-year-old plant which is completely worn out." However, unfortunately, right next to them will be the plant of the Tennessee Valley Authority, which is being depreciated on a 40-year basis. So I assume the Dixon-Yates plant would have at least 15 years of life left. Actually there may be 40 or 50 years of life left, because all over the country there are generators which have been running for 50 years or more, and are still in good condition.

I did not mean to say that these people will certainly emerge with that kind of profit, because I do not think they will. But if things work out ideally—and I should have expressed it that way—they will have the possibility of taking back, in the final analysis, a $75 million profit on their $5 million investment.

Mr. FULBRIGHT. Does the Senator know that if the cost of the plant goes up to $117 million that would very materially affect the return of the $5 million?

Mr. ANDERSON. Yes; I do.

Mr. FULBRIGHT. Why does the Senator assume——

Mr. ANDERSON. Let me answer the question. If the cost goes up from our $107 million to just under $117 million, the Government of the United States will put up $4½ million of the extra $9 million, and the operators, Dixon-Yates, will put up $4½ million.

Mr. FULBRIGHT. If that should happen, the return on their investment of $5 million would be cut from 9 percent to 3.8, would it not?

Mr. ANDERSON. Not according to the proposal for a contract. We have to go by the proposal, which I placed in the RECORD—and I am glad I did place it in the RECORD. The operators will have an opportunity to pick up the extra $4½ million out of their increased rates as they go along. I may be in error. I read the proposal only once, but I believe that is what would happen.

Let me say to the Senator that I do not worry nearly as much about the possibility that these people will be able to take a profit—whatever it may be—at the end of the contract, as I do about the cancellation provisions. I am glad the Senator from Arkansas placed in the RECORD the letter which he submitted. I wish an opportunity to analyze it. However, I do not believe that that letter answers the point I made, or the question raised by the Senator from Colorado [Mr. JOHNSON] and others at the hearing, which was this: Suppose that the Government should decide not to use its power in one of these plants, and that thereupon it should cancel, and the contracting party should find another customer ready, willing, and able to buy all power for which the Government had contracted, at the rates for which the Government contracted. The sponsoring company, the private capital, the risk capital, would proceed to collect, in the case of the EEI and OVEC plants which are being built at a cost of $1 billion, as much as $400 million cancellation charges, and still sell every kilowatt of their power at the price they expected to charge the Government.

I know there has been argument about that point, but the Senator from Colorado [Mr. JOHNSON] asked the same question. He asked, "Suppose Du Pont should come in and build a plant"——

Mr. FULBRIGHT. Is this under the Dixon-Yates contract?

Mr. ANDERSON. There is no Dixon-Yates contract.

Mr. FULBRIGHT. I thought the Senator put it in the RECORD.

Mr. ANDERSON. I put the proposed contract in the RECORD.

Mr. FULBRIGHT. I mean according to that.

Mr. ANDERSON. The Senator will check me if this is not correct, but according to the Dixon-Yates proposal, as explained and amplified by the letter which the Senator from Arkansas placed in the RECORD, in case there are contract cancellations, the total contract cancellation cost against the Federal Government will be $40 million plus.

Mr. FULBRIGHT. Not more than that. That is the maximum.

Mr. ANDERSON. No; $40 million plus—not $40 million, but $40 million plus.

I am sorry to have to take a moment to look up that point, but I shall be glad to supply the reference if I can. I wrote down somewhere the figure $40 million plus, and I thought I could find it.

Yes; I refer to page 950 of the hearings, from which it will appear that if they enter into contracts for coal and things of that nature, which the sponsors must finally cancel, they shall get more than that. The language at the top of the page is as follows:

> For example, if they contracted for coal and there was no use made of this plant and you had to settle with the coal company, that would add to the $40 million. That is the meaning of the fair and reasonable expenses.

Reference is made earlier to "fair and reasonable expenses payable to third parties." We do not know what those fair and reasonable expenses would be, or how many millions of dollars would be involved. However, there would be involved $40 million plus.

I do not think it is clear as to whether or not, in case the Government decides to cancel and the power is sold to some buyer outside the Government, the operators will still be in a position to collect every penny of their $40 million cancellation charges, even though they sell every kilowatt of the power at the full price they expected to get from the Federal Government. There is nothing I have been able to find in the Dixon-Yates proposal which changes that in the slightest. If the Senator from Arkansas can find it, I shall be glad to have him show it to me.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. FULBRIGHT. Did I correctly understand the Senator to admit that the allegation of $75 million profit is subject to substantial qualification?

Mr. ANDERSON. Very definitely.

Mr. FULBRIGHT. The Senator does not make that assertion?

Mr. ANDERSON. Of course not.

Mr. FULBRIGHT. He simply picks the figure out of the air.

Mr. ANDERSON. No; I did not pick it out of the air.

Mr. FULBRIGHT. Where did the Senator get it?

Mr. ANDERSON. At this hour I will not go back over the subject. I suggest to the Senator that he read the RECORD tomorrow and find my answer. I have just finished telling him.

Mr. FULBRIGHT. Does the Senator yield the floor?

Mr. ANDERSON. Yes; I yield the floor.

Mr. FERGUSON obtained the floor.

Mr. FULBRIGHT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Michigan yield to the Senator from Arkansas?

Mr. FULBRIGHT. Mr. President, I wish to make one observation about the last statement of the Senator from New Mexico.

Mr. FERGUSON. I am glad to yield, provided I do not lose the floor.

Mr. FULBRIGHT. I wish only to say that the assertion about the effect of the cancellation clause is, I am quite confident, completely inaccurate. There is no intention whatever of signing a contract under which Dixon-Yates could get a $40 million windfall—in other words, get the $40 million and at the same time sell all their power at the full price. That is absurd on its face, and I do not think anyone thought to negative such an assumption, because it is such an absurdity that it never would have occurred to anyone that a rational person would make such a contract.

I ask that Senators examine the letter which I placed in the RECORD, which is signed by responsible parties, explaining what the cost of the cancellation would be. I think any reasonable person will say that if there were no loss to the private company, if it could sell all the power to its own customers, or if some other Government agency, such as TVA—and that is the most likely probability—were to take all the power, the cancellation would cost the Government not one cent.

FATE OF THE BILL PROHIBITING PICKETING OF THE WHITE HOUSE

During the delivery of Mr. ANDERSON'S speech,

Mr. DANIEL. I thank the Senator from New Mexico for yielding. I regret to interrupt the discussion on the atomic energy bill. However, I wish to address myself for a few minutes to the action of the Subcommittee on the Judiciary, of the Committee on the District of Columbia, which I understand has voted an indefinite postponement of the consideration of H. R. 9344, which would make picketing of the White House illegal.

I was unable to attend the hearing before the subcommittee yesterday, but I

have before me the following newspaper account:

MORSE STOPS WHITE HOUSE PICKET BILL

The House-passed bill to prohibit picketing of the White House was stopped cold in a Senate District Subcommittee yesterday by Senator WAYNE MORSE, Independent, of Oregon, who said it would infringe rights of free speech and petition.

MORSE, holding the proxy of Senator MATTHEW M. NEELY, Democrat, of West Virginia, voted down Subcommittee Chairman SAM W. REYNOLDS, Republican, of Nebraska.

Mr. President, I sincerely hope that the full committee will not permit this bill to be pigeonholed.

The President and the White House are entitled to at least as much respect and protection as any other official or building in the Nation's Capital, yet we find that picketing is prohibited on the sidewalks and buildings of the Capitol Grounds, the Supreme Court, the foreign embassies, and practically all other important public buildings except the White House.

The purpose of H. R. 9344 is to treat the White House exactly as the Congress has already treated the embassies, the Capitol Grounds, and the Supreme Court with respect to physical demonstrations and picketing.

The bill has passed the House. It was introduced and sponsored there by a member of the Texas delegation, Representative BRADY GENTRY, of Tyler. It was he who first called my attention to the need for this legislation. Representatives GENTRY came to Washington at a time when Communists and other sympathizers of the convicted Rosenberg spies were surrounding the White House in an attempt to influence the actions of the President in behalf of the Rosenbergs. This caused Representative GENTRY to inquire as to the status of the law and to discover that the White House had not been given the same protection against possible violence that had been given to other major public buildings and officials here in Washington.

The hearings before the subcommittee disclosed, according to the testimony of Chief of Police Robert V. Murray, that the police officers of the District of Columbia spent 5,000 man-hours, at a cost of about $10,000, in order to police the picketing on that occasion.

This bill does not refer to labor disputes or any possible legitimate cause for picketing. It merely prohibits such demonstrations on the sidewalks and streets surrounding the White House when done "for the purpose of influencing the actions of any court, officer or agency of the United States."

The Senator from Oregon [Mr. MORSE] is reported as saying that the bill would infringe the rights of free speech and petition. Would the Senator want to permit such pickets to parade in the gallery of the Senate, at our doors, or would he favor demonstrations of any nature in the gallery? Obviously, the prohibitions against such actions are in the same category and prohibit free speech and petition to the same extent. However, there are other peaceful and proper means which the people have for petition, contract, and persuasion of Members of the Congress and the White House.

Justice Holmes once said that freedom of speech does not mean the right to yell "fire" in a crowded theater. Neither does it mean the right physically to surround the White House, the courts, the Congress, or foreign embassies with a mob which might lead to violence.

In the recent attempted mass assassination in the House of Representatives we saw just what the ardor for a cause can lead to in the case of those who are misguided. There was evidence of the same thing in the attempted assassination of Mr. Truman at Blair House. What if such determination should seize a mob of picketers which is picketing the White House? What better opportunity would those of evil design want than that provided in such circumstances? As such picketings wear on through the weeks, there might come a time when passions become high and tempers wear thin. At such a time anything might happen. Therefore, reasonable precautions should be taken to remove the possibility of such an occurrence in a country where neither compulsion nor violence is a part of our Government. That is the purpose of H. R. 9344.

It is late in the session, and I hope that the full committee, when it meets again, will take up the bill, and not permit it to remain pigeonholed. I hope it will take favorable action on the bill so the Senate will be given an opportunity to vote on it before adjournment.

Mr. MORSE. Mr. President——

The PRESIDING OFFICER. The Senator from New Mexico has the floor.

Mr. MORSE. I am asking the Senator from New Mexico to yield for a few moments. It will not take long, because my reply to my good friend the Senator from Texas will be short; but I think, as a matter of personal privilege, I should be allowed to reply, and the speech I make should not be counted against me in connection with the measure pending before the Senate. I make that as a unanimous-consent request.

Mr. ANDERSON. Mr. President, I yield, and do not object to the unanimous-consent request.

The PRESIDING OFFICER. The Senator from Oregon is recognized.

Mr. MORSE. I am very glad the Senator from Texas has made his case before the Senate this afternoon in support of the picketing bill. The Senator from Texas and I are lawyers, and, as we said out in the cloakroom in a conversation earlier this afternoon, we can disagree with each other as lawyers and still go together to lunch afterward. We said that because of the reports which had been made to the effect that the difference between us was on a different plane than simply a professional difference of two men who hold different points of view on the issue now before the Senate.

My reply to the Senator from Texas can best be stated, I think, by the extemporaneous remarks I made in the committee yesterday, following a very brief hearing on the bill. I shall have something to say about future hearings on the bill in case the action of the subcommittee of yesterday should not stand. I fully expect, under the practices, policies, and procedures of the District of Columbia Committee, that the action will not stand.

I think the Representative from Texas [Mr. GENTRY], as I said following his remarks in the committee yesterday, made a very able presentation of the point of view of the proponents of the bill, as did the Senator from Texas this afternoon. I wish to pay a compliment which, in my judgment, is very deserved, to the new Senator from Nebraska [Mr. REYNOLDS], who sat for the first time in committee yesterday as the chairman of the committee. I thought he was exceedingly fair and professional in his conduct of the hearing, and he certainly presented his point of view in support of the bill in a very able manner. But, Mr. President, I disagree with the objectives of the bill, a majority of the committee disagree with the objectives of the bill, and, in accordance with the parliamentary rights of the majority of the committee, with instructions from the Senator from West Virginia [Mr. NEELY], whose proxy I held, we simply followed the ordinary course, when a majority disagrees with a bill, of asking for indefinite postponement, and that motion carried.

Mr. President, I now read from page 18 of the official transcript of the hearings. The following occurred as the hearing closed:

Senator REYNOLDS. I gathered Senator MORSE is opposed to the bill.

Senator MORSE. I made that very clear at the full committee meeting the other day.

Senator REYNOLDS. I did not happen to be a member of the committee at that time.

Senator MORSE. I will be happy to review briefly my point of view to the full committee.

I think the passage of the bill would be a great mistake as far as its symbolism to the rest of the world is concerned. I think that the right to picket in the United States is an essential part of freedom of speech and freedom to petition the Government. If we have not police departments—and we have one here that can do the job—if we have not police departments that can maintain order when American citizens petition their Government, why, then, let us get police departments that can.

There is always a risk of living in a democracy. There is always the risk of being free, and sometimes in a free country some wild-heads get out of hand now and then. But that is part of the risk you run when you live in a nonpolice state.

The reason why I asked Mr. Bryan the question as to whether or not he thought picketing could be maintained before the executive department of any police state was to bring out my point that of course it could not be. I do not propose to be a party to police-state methods in the United States.

I just do not know a President—I cannot imagine a President who would say, "Deny to Americans the right to walk in orderly fashion in front of the White House by way of orderly petition." I want it orderly. It can be kept orderly.

But you see, most of these picketing entourages defeat their own purpose. They hurt their own cause because most of them by sign and attitude demonstrate the weakness of their own case. Nevertheless, Mr. Chairman, in my judgment it is a very precious right—this right to petition your Government and to demonstrate by way of petition in an orderly fashion. I think it is part of being free. I think that the right of American citizens to walk in an orderly fashion before the executive department of

UNIVERSITY OF MICHIGAN LIBRARIES

this Government is a pretty important right of petition.

I am not worried about the danger of mob rule. The right to picket the White House symbolizes to the world that the President is just a citizen who sits in the White House. He is just a servant of the people. He is not our master. We have the right to petition him in an orderly fashion.

Well, now, let us take the Capitol grounds and the Supreme Court picketing restrictions. A distinction can be drawn and I will draw it, although I will not stand on the distinction. But as far as the Congress is concerned, we ought to be ashamed of ourselves that we hide behind a piece of legislation that prevents American citizens from petitioning us by walking in front of the Capitol Building in an orderly picket line. Such political cowardice. Of course it ought to be repealed. If people want in an orderly fashion to petition the Legislature of this country, they ought to petition it and be allowed to petition it.

Now, when you come to the Supreme Court you come to another phase of this system of government by checks and balances. I seriously question the propriety of a political petition before a judicial body that acts on the basis of the judicial record. I think there is quite a distinction between an attempt to politically petition a court and politically petition lawmakers, because the court's function is not a political function—it is a judicial function.

I would go along with the protection of the court from political interference just as I have been heard to say so many times on the floor of the Senate of the United States that political considerations should not ever be taken into account in judicial determinations. That is why, for example, I felt in the tidelands bill this year that the case ought to be decided on the law and not on political pressure. The case ought to be decided on the basis of constitutional principles.

As I said facetiously at one point in the course of that debate, of course, I believe in Supreme Court decisions even when they go against us. I believe they are just as much government by law when they are against us as they are when they are for us. But there were some who thought they were political decisions when they did not like the results.

I would recognize a distinction between protecting a court from political petition, but not the President and the Congress. They should be subjected to political petition through freedom of speech. And because I think there is this very important principle of the right to petition the political departments of our Government—the executive and legislative—I shall cast my vote against reporting out the bill.

Senator REYNOLDS. I am just as jealous as Senator MORSE is of the constitutional right to petition.

Then the Senator from Nebraska [Mr. REYNOLDS] made what I consider to be a very able argument in support of his position in favor of the bill. I shall not speak to that at this time, but the record of the hearing speaks eloquently for him, and undoubtedly he will speak for himself a little later, if he cares to do so.

I read further from the record of the committee hearing:

Senator MORSE. Mr. Chairman, will you permit a brief further comment?

Senator REYNOLDS. Certainly.

Senator MORSE. I want to point out three points, in contradistinction to the views expressed by the Senator from Nebraska.

No. 1: The right to picket is the right that has been sustained time and time again by the Supreme Court as a right that relates to the right to petition government, and the right to exercise freedom of speech, subject, of course, as the decisions make clear, to reasonable legislative regulations. There is no question about the fact that this right to picket is definitely connected by judicial decision with the right to petition and to freedom of speech.

Second, I would like to call the Senator's attention to the fact that in colonial days—in the times of our Constitutional Conventions—large numbers gathered at the seat of the Conventions and petitioned against the Constitution—that is, even before it came into being there was strong public demonstration against even adopting the Constitution. So that this right and this form of democratic demonstration really existed prior to the adoption of the Constitution.

You will find it in some of the judicial decisions—a review of this innate and democratic instinct on the part of the American people. If you are going to keep your government your servant and not your master, you must be able to petition your government.

The Senator spoke about the matter of labor picketing. Of course, some of the worst examples of picketing abuse are in the field of labor. I have had on more than one occasion something to say about it in a quasi-judicial capacity where a picketing line was an illegitimate picket line and represented what the Senator has in mind, namely, an abuse of the right to picket. But some of the worst riots in the history of this country have arisen over labor picketing. The Haymarket riot, for example, and one of the famous Los Angeles cases is another.

There is always, as I said earlier, the risk in a democracy, if we are to remain free, that some ill-advised groups will get out of hand. But we have our checks for those. It is one of the risks you have to run if you are going to be free.

If I recall the Omaha situation correctly that the Senator refers to, it was not a picketing situation. It was almost a lynch situation. It was a case of where they wanted to take the law into their own hands.

Senator REYNOLDS. I was simply referring to what a mob can do when it gets out of hand.

Senator MORSE. Surely. We take judicial notice of that. You get it, of course, in your lynch-law situations, too. But our courts have made it perfectly clear that under the police power of the State or the Federal Government there is a duty of the law-enforcement officers to see to it that the right of freedom of speech and the right of petition is carried on in a very orderly fashion.

I have always insisted on that, and one reason why I asked for the regulations to be put into the record of this hearing is that I think when you come to examine these regulations—I have never read them but I have read many others—I think you are going to find very reasonable checks already on the books that will guarantee adequate power on the part of the Police Department to maintain order. That we must have.

I do not want any picket line—labor picket line, political picket line, demonstration picket line—that is not subjected to reasonable police power check.

Now let me point out that you will find if you check cases, a considerable number of judicial decisions on the so-called political demonstration line. I refer to those political demonstration lines in the late thirties up and down the west coast. Some of them got into court and the courts held that they were primarily political demonstration lines against the shipment of scrap iron to Japan. The major cities on the west coast, port cities, had those lines. They taught a great lesson. It is too bad that the country as a whole did not heed them.

I remember in respect to one at Portland, Oreg., there were those who thought I ought to be fired from the University of Oregon because of the public position I took on it. I pointed out what the line was seeking to demonstrate was that much of the scrap iron was going to come back in the bodies of American boys. In the opinion of the reactionaries that made me some sort of a wild-eyed radical who ought to be dismissed from the State payroll, and we had a very interesting time over there. But time proved me right. That picket line, I think, performed a great educational service.

You see, in a democracy sometimes things have to be dramatized in order to get people to understand; and so long as it is done in an orderly fashion and so long as adequate police power exists to control it, I am not going to vote to take that form of public education away from the people; nor that basic right of petition and freedom of speech.

The last point I want to make is that I do not share the Senator from Nebraska's point of view as to the exercise of a judicial function on the part of the President of the United States in the Rosenberg case and similar cases. He is exercising an executive function if he exercises his power of pardon. He exercises an executive function which our constitutional fathers put in the Constitution as a check on the judiciary.

There is no question about the fact in my judgment that a study of the history of the pardon concept will show it is a political power. It is a case of where the people thought it was wise to give to their political leader the power to check a judiciary that, in the case of the Federal judiciary, is appointed for a lifetime and, therefore, is not subject to political check by direct check upon the individual himself wearing the robes.

You have your political check, it is true, through the legislative process.

So I would say that this right to petition the President of the United States on a pardon matter is simply carrying out the right to petition him to exercise a political power that he has in the Constitution.

There is nothing more I can add to my point of view, except detail for the record. I have laid down, I think, the basic principles on which I object to this bill.

Senator REYNOLDS. I think the Senator has made his position crystal clear. I hope that the chairman has made his position equally clear.

Senator MORSE. I have great respect for the Chair's point of view.

Senator REYNOLDS. Apparently our views are diametrically opposed to each other. I assume that you have Senator NEELY's proxy to vote as you vote.

Senator MORSE. That is right.

Senator REYNOLDS. Do you care to make a motion?

Senator MORSE. I simply move that the hearings be adjourned.

Senator REYNOLDS. The hearing is adjourned.

Should the subcommittee make a recommendation to the main committee?

Senator MORSE. I will move that the bill be indefinitely postponed.

Senator REYNOLDS. Let it be recorded there are 2 votes to indefinitely postpone the bill, and 1 vote "no." It will be so reported to the main committee, reserving the right of the chairman to bring in a minority report.

Senator MORSE. Oh, surely.

Senator REYNOLDS. Thank you, gentlemen.

(Whereupon, at 10:50 a. m. the hearing was adjourned.)

Mr. President, I have nothing more to add, at least at this time, except two very brief remarks.

First, I wish to point out the right to picket Buckingham Palace exists; and the Queen of England is not only the head of the state, but she is also the

head of the English church. I think that right, as it exists in England, is a demonstration of the source of the almost instinctive impulse of the American people to insist upon preservation of the freedom to speak and the freedom of petition. It is rather basic in American jurisprudence and it is rather basic in American political philosophy. In view of the time limitation this afternoon, when I am speaking on time which has been yielded to me by unanimous consent, it would be improper for me to take the time to discuss a series of cases which bear out the general observations which I made yesterday in the committee meeting.

The last point I wish to make is that in the committee yesterday we simply followed the parliamentary procedure which is typical of Senate committees. After there had been some hearing on the bill, a majority of the committee reached the conclusion that further consideration of the bill should be indefinitely postponed.

We heard really only three witnesses. We heard Representative GENTRY, of Texas, who spoke for the bill. Representative HIESTAND, of California, was unable to be present, and by unanimous consent, his statement was made a part of the record. It was only a one-page statement, supporting the testimony of Representative GENTRY.

The Assistant Corporation Counsel of the District of Columbia appeared to inform us that the Commissioners had no objection to the bill, but a reading of the record will disclose that his testimony was not what might be called strong advocacy. He pointed out that the Commissioners approved the bill, but there was not very much testimony.

The Chief of Police testified neither for nor against the bill, as he made clear in answer to a direct question which I put to him. He pointed out what the cost of supervising such picket lines is in terms of dollars and man-hours, but made it very clear in answer to a direct question which I put to him that he was neutral with regard to the bill, and that the District of Columbia Police Department could maintain order in any picket line stretched in front of the White House or elsewhere in the District of Columbia.

That was the case. Having heard it, I exercised my parliamentary right as a member of the committee to move the indefinite postponement of the bill. I think that is where it will rest. But if it does not, we shall have some hearings, or the committee will have to deny to me my right as a member of the committee to hearings on a bill which I think is fundamental in its relationship to what I consider to be some very precious rights.

If we are really to consider the bill, notwithstanding the indefinite postponement which was voted yesterday, I shall urge upon the committee that I be accorded the right—and I doubt if there is a member of the committee who would deny it to me—to insist upon some extensive hearings, because we shall have to make a full and detailed record of the whole history of freedom of speech and the right to petition. I shall wish to bring to Washington a group of outstanding leaders, a group of constitutional scholars, a group of people who share my point of view with regard to the bill. A very precious principle is at stake, and I certainly will desire full and fair hearings. I do not think there will be a single vote in the District of Columbia committee to deny me the right to such hearings.

Mr. REYNOLDS. Mr. President, I appreciate the suggestion of the Senator from Oregon that I reply to his argument, but I shall not do so at this time. Any argument I may have will be made before the committee in support of minority views which I propose to submit to the committee.

LEGISLATIVE PROGRAM

Mr. KNOWLAND. Mr. President, as previously announced, the Senate will meet on Saturday. We expect to hold evening sessions all this week. The unfinished business is Senate bill 3690, proposing amendments to the Atomic Energy Act.

When the pending bill is out of the way, we hope to schedule for consideration a number of other bills, with respect to some of which previous announcement has been made, although they will not necessarily be taken up in the order in which they are mentioned. They are Calendar No. 644, House bill 6287, a bill to extend and amend the Renegotiation Act of 1951.

Calendar No. 1315, Senate bill 2910, a bill providing for the creation of certain United States judgeships, and for other purposes.

Calendar No. 1720, Senate bill 3706, a bill to amend the Subversive Activities Control Act of 1950.

Calendar No. 1794, Senate bill 880, a bill to amend the license law of the District of Columbia.

Calendar No. 1797, Senate bill 2601, a bill to provide for Federal financial assistance to the States and Territories in the construction of public elementary and secondary school facilities.

Calendar No. 1774, House bill 7815, a bill to provide for the construction, maintenance, and operation of the Cougar Dam, in Oregon, and so forth.

In addition, there will be the social security extension bill, when it is finally reported from the Finance Committee, the foreign aid authorization bill, and the farm bill.

I am also hopeful that during the week we may have the conference report on the tax bill. The conferees have been in session today. Also, perhaps, this week we shall have the conference report on the housing bill.

In addition to the legislation which will be carried over from Friday to Saturday, we expect to have a call of the calendar for the consideration of bills to which there is no objection, beginning at the point where the previous call was concluded.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. KNOWLAND. I yield.

Mr. FULBRIGHT. When does the majority leader expect to reach a vote on the unfinished business?

Mr. KNOWLAND. When the debate has run out and the amendments have been disposed of, we expect to vote.

Mr. FULBRIGHT. I understand that; but when does the distinguished majority leader estimate such an eventuality might take place?

Mr. KNOWLAND. The distinguished Senator from Arkansas has been a Member of this body longer than has the Senator from California. I have seen times when I became a little despondent as to the possibility of reaching an early vote, and then, as if by some miracle, the procedures were hastened along. I am merely saying that whenever the debate is concluded, I hope all Senators will remain in attendance so that we may start voting on the amendments, on the third reading of the bill, and on the final passage of the bill itself.

Mr. GORE. Mr. President, will the Senator yield?

Mr. KNOWLAND. I yield to the Senator from Tennessee.

Mr. GORE. It had been my understanding that the distinguished majority leader expected the debate to continue until 9 o'clock tonight, and that if it were not concluded at that time, it would be resumed tomorrow.

Mr. KNOWLAND. That is correct.

Mr. GORE. I thank the majority leader.

ORDER FOR RECESS TO 10 O'CLOCK A. M. TOMORROW

Mr. KNOWLAND. Mr. President, I ask unanimous consent that when the Senate completes its labors this evening it stand in recess until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ADMISSION OF COMMUNIST CHINA TO THE UNITED NATIONS

Mr. LEHMAN. Mr. President, I ask unanimous consent that a statement I recorded for the American Friends Service Committee's radio program entitled "Our Friend in Washington," on the subject of seating Communist China in the United Nations, be printed in the body of the RECORD at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LEHMAN

In recent days the issue of the possible seating of Red China in the U. N. has been forcefully presented to the public, but in what I consider to be a misleading manner.

As far as I know, there has been no official announcement that any one of our allies is going to propose the admission of Red China into the U. N., as a unilateral undertaking. It is, of course, possible—and even likely—that such a proposal might be made as part of a Far Eastern agreement for the settlement of the Korean and Indochinese conflicts. I have no inside information on this, but Prime Minister Churchill might well have discussed this possibility with President Eisenhower during his recent visit here. This is the only explanation for the recent excitement of Senator KNOWLAND and his rash statement that if Red China is admitted to the U. N. he will urge and insist that the

UNIVERSITY OF MICHIGAN LIBRARIES

United States withdraw from the U. N. and resign its membership in that world organization.

As a result of this statement by Senator KNOWLAND, there has been a sharp division of opinion in the Senate. There has been support for Senator KNOWLAND'S position by some Republicans and by some Democrats, including the minority leader, Senator LYNDON JOHNSON. There has been strong opposition to Senator KNOWLAND'S position—that is, to his demand that the United States withdraw from the United Nations if Red China is admitted—on the part of numerous Democrats, including, I may say, myself, and by Senators FULBRIGHT, GILLETTE, and SPARKMAN, among others.

The great danger, in any public discussion of this issue, is in failing to perceive that there are really two issues involved. One is the question of whether the United States Government should agree to the admission of Red China into the United Nations. The second issue is whether the United States should withdraw from the United Nations if Red China is, in fact, admitted by formal action of the United Nations.

As far as I am concerned, as of the present moment, I am opposed to admitting Red China into the United Nations. I am strongly and unreservedly opposed to such a move unless and until Red China can prove that she is willing to accept the full obligations of U. N. membership, including a devotion to peace and a respect for the integrity and sovereignty of her neighbors. The Communist regime must show that it is willing to conduct itself on a civilized basis and willing to contribute to the establishment of security, justice, and world peace. Until such a time I will continue to oppose it and I think the United States Government should oppose it.

But the worst and most disastrous attitude we could possibly take is the attitude expressed by Senator KNOWLAND—namely, that if the United Nations should at some time agree to the admission of Red China over our protest, we will withdraw from the U. N.

To take that attitude is to assume the same rigid and inflexible posture that has long characterized Soviet Russia. To take that attitude is to foreclose all possibilities of peaceful settlement of the Far Eastern conflicts by negotiation and agreement. The implication of this attitude is that our only solution to the situation in the Far East is total war. That solution will never be accepted by the other nations of the free world. I do not think it will be acceptable to the American people.

Any proposal to withdraw from the U. N. is, in my judgment, nothing but madness. To do so would be to abdicate our role of world leadership, won at such great cost. It would, of course, seriously cripple the U. N., but it would cripple us even more. It would isolate us. It would leave us friendless and alone. We would be without allies and without the respect and confidence of the other free nations of the world.

The United Nations, despite any imperfections it may have, and despite the many disappointments we have experienced as a result of its shortcomings, is still the best hope of peace and security in the world. Under no circumstances should we consider abandoning our membership in this great organization. We would be forfeiting our world leadership and our strength.

THE PRESIDENT'S HIGHWAY PROGRAM

Mr. FERGUSON. Mr. President, it is seldom that I deliver two addresses in one day to this distinguished body. Today I am impelled to take the floor on two major subjects, one of which I have already discussed.

On behalf of the President of the United States, Vice President NIXON delivered one of the most important addresses ever given in America. In it, the Chief Executive clearly demonstrated the need for more and better highways for a growing America. I say that this is a most challenging and a thrilling thing for the President to do. It pleases me beyond measure that recognition of a long time problem has been given by the top leader in this country.

This is not a new situation which the President is demanding that we take action on at this time. It has been with us and it has been known to us but not until the President spoke out in a forthright and clear manner, were Americans generally made aware of the sever necessity for building the roads that we need for the cars that we now own and operate and will own and operate in the future. In fact, the President says that $50 billion within the next 10 years—in addition to current normal expenditures—will be only a good start on the highway system we need for a population of 200 million Americans.

Mr. President, I believe that in the past we have lacked imagination with respect to the real need of the American public for highways.

I believe that the President, in speaking out, has stimulated and will continue to stimulate the imagination of the American people to the point where they will go to work now in the building of needed highways.

Most certainly, the economic growth of the United States demands an integrated and cooperative approach to the highway problem by the Federal Government and the 48 State governments.

Despite substantial, and sometimes magnificient, efforts by local government to provide 1954 model highways for 1954 model traffic, all efforts are essentially limited and even haphazard until together all interested authorities can devise the grand plan proposed by the President. The American economy is a unified economy of many widely separated but interdependent areas, industries and crops. The highway net essential to their common development must be based on a unified, an integrated plan. For the development of the absolutely necessary highway pattern, the common thread of Federal interest is essential.

My record with respect to highway development is such that I can thoroughly endorse the President's program of $50 billion overall increase in what we now spend for highways throughout the United States. Earlier in this session I introduced a highway measure that would have provided $2,208,000,000 Federal contribution for assistance to the States in new highway construction. I addressed the Senate at the time the Federal highway-aid extension bill was under debate and pointed out extensively the need for more highway funds. I must admit that I did not go quite so far as the President, but I am now saying to my colleagues that I am wholeheartedly in accord with his proposal, and I intend to work for its adoption.

I know that the President's program will cause some concern to those who favor a reduction in Federal-aid payments to the States. In times past I also have favored the elimination, wherever possible, of such grant-in-aid programs. In the instant case, however, I am firmly of the opinion that the Federal Government has a national interest in our highway system for defense purposes. That interest cannot constitutionally be delegated to the States. Those who would argue against Federal participation, I believe, would not disagree with this principle, although they might not agree with respect to the amount of money to be spent for this purpose.

Not so many years ago we were told that the point of complete economic development had been reached and that there were no more frontiers to be opened. I believe that America is just starting, and will continue to have frontiers. It seems to me the President's proposal is ample demonstration that there are new horizons.

Because the people of this great Nation must continue pioneering, then we of the Congress must at all times keep pace with our ever increasing population. Americans have every right and should expect that their Government will do those things for them which are necessary and proper. In the field of highway construction we have traditionally assigned this responsibility to Government and the record of the past four decades shows that the various levels of Government have been able to meet this responsibility. But they have met the responsibility only in terms of the amount of money available to highway departments to do the job.

It has been a lack of money that has prevented the full development of our highway systems. As I stated, I believe we lacked imagination of what was going to be necessary in the future, rather than that we did not want to spend money for the highways.

There is no doubt in my mind that the building of highways affects every part of the Nation. No State can any longer build highways only to its border, and fail to connect a good highway with a good highway in another State. Those days are past. A highway system affects every hamlet in America. It affects the value of real estate along the highway and near the highway. It develops new horizons so far as the development and the building of small business are concerned. If we wish to help small business, here is one way in which we can actually help it. When I speak about small business, I mean a small business with a few employees, perhaps 25, although the new social security bill recognizes employers who employ as few as 4 people. That is the kind of business that will be promoted by the development of highways, and what makes America great is small business combined with big business. So by expanding and improving our highway system America can grow and be better able to defend itself.

It would be a sad thing indeed if in the event of an atomic attack we lost thousands of our citizens because we did not have the roads to permit them to speedily

evacuate under bombardment. It is a sad thing that thousands of our American citizens lose their lives every year because of the inadequacies of our highway system. That is a condition we can remedy. It is an outrage upon the heavily taxed motorist that he is not given the roads which are in good repair and in the best possible condition for his motoring pleasure. A large volume of our commercial goods are moved over highways by trucks, and we must have roads to keep the flow of commerce uninterrupted.

It would seem to me that every Member of Congress of both the House and Senate ought to study with extreme care the President's proposal. After such study there ought not to be a single vote against it in either House. I am told, and I read in the newspapers that certain things are national "musts." I am not sure in many instances that they are really vital requirements, but I am certain this highway construction program is in fact a "must."

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the address prepared by the President and delivered by the Vice President before the Conference of Governors at Bolton Landing, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF VICE PRESIDENT RICHARD NIXON TO THE GOVERNORS CONFERENCE, LAKE GEORGE, N. Y., JULY 12, 1954

Governor Thornton, distinguished Governors of the States of the Union, the distinguished First Ladies of the States of the Union, guests of the governors conference:

I want you to know, first of all, that it is a great privilege for me to have had the opportunity to attend this conference for the brief time that I have today. There are a number of reasons for this. I haven't the time to mention them all, but there are 2 or 3 that I think would be of interest to you.

One is that I have had the opportunity to see really very well this beautiful New York countryside. As we have sat here in the Sagamore Inn and looked out on the view from this window on Lake George I think that I can say without fear of contradiction that there is no view in the United States which excels this one.

Now, Governor Dewey, I know that you will agree with that. You will note that my language is very, very careful in that respect; and Governor Knight will agree with me that that is the highest praise that a Californian could pay to any other view in America.

And the second reason that I am very privileged to be here is that it has given me an opportunity to renew acquaintances with the governors of the States, many of whom I have met at previous conferences that have been held in Washington, and in other areas.

One regret I have is that we have not had the opportunity to have renewed acquaintances with the first ladies of the States, but I see them in front of me, rather than in back of me, as the governors are, and that in itself is a reward, you can be sure.

May I say, too, that I realize that for each of us who is here tonight, that certainly it is a great disappointment that the President of the United States, who was scheduled to address you, is unable to be here because of the death of a member of his family who was very close to him, and very dear to him.

I am here, therefore, as a substitute. But no one, as you know, can substitute for the President of the United States, and I wouldn't be so presumptuous as to indicate to you that I could.

But the President had a message that he particularly wanted to deliver to this conference. He was good enough to give me the notes that he had made for delivery of that message. Now, incidentally, I know that his appearance at the conference was advertised as being an informal speech by the President, and I know that all of you will concur from his previous appearances before your conferences that in making this informal, such as previously, the President is very, very effective. But, having seen these notes, as you will learn in just a few moments, I can tell you that the President follows the rule that the best informal speech is the one that is very well prepared. And fortunately, those notes are available for me to talk to you this evening. Unfortunately, of course, the personality, the anecdotes, the interpolations, which make the notes live, as only the President can make the notes live, I cannot, of course, effectively bring to you. But I would like to bring to you the message as it has been set down in the notes, and then if time permits, perhaps to add at the end a few remarks of my own:

"The 48 States are represented at this conference, and each of them—in area, in population, in wealth—is greater than many independent nations in the world today. Each of them is great in potential achievement, because joined with 47 others, they form the mightiest of temporal teams—the United States of America.

"Now, against that background, where is the United States going, and by what road? What are the purposes of the United States of America, for the building of a cooperative peace. The strengthening of America and her friends are overriding purposes that must have a sound economic base. How can we assure such a base?

"At home, the United States of America must be an example of national progress in its standard of living. Measured by the prosperity, the culture, the health of the free individual, America is the best market place for American products.

"Abroad, the spiral in the world's standard of living means a spiral in purchasing power. And this, of course, is to the advantage of every American producer, every sound American investment in better world living standards will earn rich returns for America. And in a period of crises, ignited by circumstances often beyond present control or immediate remedy, we must maintain a military dike on our defense perimeter. But behind it we must achieve the fullest possible productive strength, exploiting every asset, correcting every deficiency in our economic situation. We don't want a blueprint for a regimented economy, but we must have vision, comprehensive plans, and cooperation between the States and Federal Government.

"And the road we should take is outlined by the American philosophy of government. What is that philosophy? The President likes to think of it in these terms: It is rooted in individual rights and obligations—expressed in maximum opportunity for every individual to use rights and to discharge obligations—maintained by keeping close to the individual his control over his government—it is sparked by local initiative, encouraged and furthered by the Federal Government. Financed traditionally by demanding of visible, tangible, and profitable return on every dollar spent. A tax economy of enterprises, directly or indirectly, which are self-liquidating.

"Now, that philosophy, applied to public affairs, is the middle road between chaos on the one side, and regimentation on the other.

"It is significant that in the United States we talk of individual rights, we talk of States rights—but not of Federal rights, because the Federal Government is normally considered a depository of certain well-defined and limited obligations: For national security, for foreign affairs, for leadership within the community of 48 States.

"Now, in that light, what are the domestic jobs that must now be done to further the purposes of America? What is the prospect before us?

"First, on the bright side, we live in a dramatic age of technical revolution through atomic power, and we should recognize the fact that the pace is far faster than the simpler revolutions of the past. It was a very long generation from the Watt steam engine to a practical locomotive. It was less than 9 years from the atomic bomb to the launching of an atomic-powered submarine. We have seen a revolutionary increase in opportunity, comfort, leisure, and productivity of the individual.

"Thirty years ago, the machine economy was almost entirely limited to factories and transportation. Today it is in every area of living, even in the garden patches and on the front lawns.

"Look at the prospects in population. In 1870, the population of the United States was 38½ million people, and our population growth in the previous half century was one of the wonders of the world.

"In 1970, the population of the United States, it is estimated, will reach 200 million. It will grow in the next 16 years as much as the entire population of the United States was in 1870.

"So much for the credit side. On the dark side, as we look into the future, we see a shortage of 300,000 classrooms in the grade schools of the country, a shortage of 813,000 hospital beds, an annual increase of 250,000 disabled who require vocational rehabilitation. And we have also dislocations in our economy requiring undesirable Government intervention—everything from subsidies even to outright seizure and control, in the recent past.

"Also on the dark side, we have a transportation system which in many respects it is true is the best in the world, but far from the best that America can do for itself in an era when defensive and productive strength require the absolute best that we can have.

"Now all of these needs must be attended to, along with the other unlimited problems in which we have common interests and common responsibilities. And all of them require some measure of Federal-State cooperation. Some are insoluble, except in closest cooperation.

"For example, the top priority in our planning must be given to transportation, and to health and efficiency in industries to the national defense and the national economy. A Cabinet committee has just been established by the President to explore and to help formulate a comprehensive transportation policy for the Nation, taking into account the vital interests of carriers, shippers, the States and communities, the public at large. But more specifically, our highway net is inadequate locally, and obsolete as a national system.

"To start to meet this problem at this session of the Congress, we have increased by approximately $500 million the Federal moneys available to the States for road development. This seems like a very substantial sum. But the experts say that $5 billion a year for 10 years, in addition to all current, normal expenditures will pay off in economy growth; and when we have spent $50 billion in the next 10 years, we shall only have made a good start on the highways the country will need for a population of 200 million people.

"A $50-billion highway program in 10 years is a goal toward which we can—and we should—look.

"Now, let us look at the highway net of the United States as it is. What is wrong with it? It is obsolete, because in large part it

UNIVERSITY OF MICHIGAN LIBRARIES

just happened. It was governed in the beginning by terrain, existing Indian trails, cattle trails, arbitrary section lines. It was designed largely for local movement at low speeds of 1 or 2 horsepower. It has been adjusted, it is true, at intervals to meet metropolitan traffic gluts, transcontinental movement, and increased horsepower. But it has never been completely overhauled or planned to satisfy the needs 10 years ahead.

"At this point in his notes, the President had a personal anecdote illustrating the problem. Thirty-five years ago this month, the Secretary of War initiated a transcontinental truck convoy to prove that the gas engine had displaced the mule, even on our relatively primitive roads. A second lieutenant named Dwight Eisenhower went along as an observer. All-weather roads in the United States at that time totaled 300,000 miles. The autos and trucks numbered 7,600,000. That truck convoy left Washington on July 7. It arrived in San Francisco on September 5, 60 days and 6,000 breakdowns later.

"Today, all-weather mileage is approximately 1,800,000 as compared with 300,000 miles. But autos and trucks number more than 56 million, as compared with 7,600,000.

"It is obvious, then, that the increase in mileage has lagged behind the increase in vehicles. The road system, moreover, is fundamentally the same, either haphazard or completely arbitrary in its origin, designed for local movement, in an age of transcontinental travel.

"Now, what are the penalties of this obsolete net which we have today? Our first most apparent, an annual death toll comparable to the casualties of a bloody war, beyond calculation in dollar terms. It approaches 40,000 killed and exceeds 1.3 million injured annually.

"And second, the annual wastage of billions of hours in detours, traffic jams, and so on, measurable by any traffic engineer and amounting to billions of dollars in productive time.

"Third, all the civil suits that clog up our courts. It has been estimated that more than half have their origins on highways, roads, and streets.

"Nullification of efficiency in the production of goods by inefficiency in the transport of goods, is another result of this obsolete net that we have today.

"And finally, the appalling inadequacies to meet the demands of catastrophe or defense, should an atomic war come.

"These penalties warrant the expenditure of billions to correct them.

"Now, let us look at the highway net as it should be. The President believes that the requirements are these: a grand plan for a properly articulated system that solves the problems of speedy, safe, transcontinental travel—intercity communication—access highways—and farm-to-market movement—metropolitan area congestion—bottlenecks—and parking.

"Second, a financing proposal based on self-liquidation of each project, wherever that is possible, through tolls or the assured increase in gas tax revenue, and on Federal help where the national interest demands it.

"And third—and I would emphasize this, particularly at this conference, because I know how deeply the President believes in this principle: a cooperative alliance between the Federal Government and the States so that local government and the most efficient sort of government in the administration of funds, will be the manager of its own area.

"And the fourth, very probably, a program initiated by the Federal Government, with State cooperation, for the planning and construction of a modern State highway system, with the Federal Government functions, for example, being to advance funds or guarantee the obligations of localities or States which undertake to construct new, or modernize existing, highways."

And then I would like to read to you the last sentence from the President's notes, exactly as it appears in them, because it is an exhortation to the members of this conference:

"I hope that you will study the matter, and recommend to me the cooperative action you think the Federal Government and the 48 States should take to meet these requirements, so that I can submit positive proposals to the next session of the Congress."

And I know that in making this request to the Governors Conference, that the President believes it is essential that we have cooperation in this field. He believes that only with cooperation, and with the maximum of State and local initiative and control, can we have a program which will deal with the problem and deal with it effectively.

And now I trust that you will not consider me presumptuous if in the very few minutes remaining I add a footnote to the message of the President of the United States.

We have been discussing tonight a 50-billion-dollar highway program over 10 years. And it may seem difficult to attain, because of the cost. But I think all of us are aware today that we spend almost $50 billion every year for national defense. I don't think we could have any more striking evidence of what a great vista of progress we have in store for our country, if we can have peace.

Now, I don't propose to discuss this great problem in a very few minutes specifically, or to offer any new program to you here tonight. That is, of course, the prerogative of the President and the Secretary of State. But I do suggest that in considering the threat to the peace of the world, in considering why we spend the $50 billion to meet that threat, the threat which is presented by the Communist conspiracy, that we sometimes have a tendency to place primary and almost exclusive emphasis on the possibility of atomic war, and of armies marching across the border in the traditional pattern.

I think we should have in mind that there are two great factors today which indicate that the greatest danger we face in the future may not be traditional war or, for that matter, atomic war. And the first factor is the deterrent effect of the atomic weapon itself.

It is significant that even some military men say that the atomic weapon in the long run may turn out to be one of the greatest forces for peace in the world.

Why is this the case?

I thought I had it very eloquently and effectively explained to me by a man it was my privilege to meet on the trip that Mrs. Nixon and I took around the world last fall. He had been described to me before I left by a man who has definite opinions on men and subjects—General MacArthur. The man that he was talking to was General Slim, the Governor General of Australia, who served during the war in various commands.

And General MacArthur, before I went, said, "I urge you to have a conversation with General Slim"—as I had planned to do—"and I can tell you that in my opinion he is a hard-hitting, hard-bitten, hard-fighting man." I found that General Slim, the Governor General of Australia, was all of that, and that he was a man who was thinking very seriously of the grave problems confronting the world.

He developed this thesis that I have just mentioned, the thesis that the atomic bomb might turn out to be a force for peace rather than for war, and he pointed out that in the history of wars we find that a national leader does not start a war unless he thinks he can win it, or unless he thinks he can win more in the war than he will lose.

Now, how has a national leader to determine that he can or will win more than he will lose?

He does that when he feels that he has a clear advantage. In times past, that advantage could be obtained by increasing the quantity—increasing the quantity, for example, of men, of bows and arrows, of guns, of planes, of tanks—whatever the weapons happen to be at a particular time in our history. And once the quantitative advantage was obtained, a war could be risked with a reasonable chance of winning.

And then, General Slim pointed out, that now, for the first time in the world's history, we are approaching a period when numbers may no longer be decisive. Because once a nation has enough atomic and hydrogen weapons, and planes to deliver them, to destroy the power of its enemy, whether it has 10 times as much makes no difference.

We may soon reach that point in the world, he pointed out, when no world leader at that time may feel that he can risk war as an instrument of policy, because the result will be, at best, double suicide.

That is the first factor which militates against the theory that the great danger to us today is a war of any kind.

The second one is in examining the tactics of the only potential threat to the peace of the world. In 1917, what was communism? Nothing but a cellar conspiracy. The Communists did not control a government in the world. Today they control 800 million people, and a third of the globe.

How did they get this control? Secretary Dulles has pointed out that they have gained this control by armed attack across a border only in gaining two insignificant parts of Finland and Poland. All the rest—the great gains—have been obtained through the tactics of internal subversion revolution. For example, China was won to the Communist side by Chinese, Czechoslovakia by Czechs, Hungary by Hungarians.

And so it would seem that the major danger we face in the world today may be that kind of action.

Now, where do we face that danger? Primarily in the uncommitted areas of the world, in areas which unfortunately have no tradition of freedom, or in many instances very little tradition of freedom. Those areas primarily are in Asia and in Africa—Africa, the richest continent in the world, 95 percent of which is controlled in a colonial status.

These are the points of attack by the Communists today, the primary points of attack. Now, what is the danger? Revolution, we have decided. But a revolution is not possible unless people follow leaders who are won over to a cause.

What is the appeal? Why are people won to the Communist cause, particularly in these areas of the world?

I think, very simply stated, we must realize that people in Asia, these uncommitted areas, in Africa—people are on the march, they want to better their lives, they are dissatisfied with the status quo. There are some significant things which are characteristic of most all of them. Some of these nations have just recently acquired their independence, others are still in colonial status, all want independence, and they want to maintain it, if they already have it.

Second, most of these are peoples who have suffered the greatest humiliation that a people can suffer, and that is, being looked down upon by other peoples in the world.

Third, all are substandard in their standards of living.

Fourth, all have suffered grievously from war.

And so, what do they want? Independence. Equality. Economic progress—and peace.

They don't like the slavery, the cruelty of communism any more than we do. But they

will take it if it promises some progress toward the goals which they want, in opposition to those who offer only to leave them where they are. And all the defense pacts, the armies in the world, will be useless if the people are on the other side. We saw that, in reverse, in Guatemala.

Now, what do we do about this problem? We are doing a number of things. First, of course, we exposed the Communists, exposed the fact that while they say they are for all these things, in practice they produce the opposite.

And second, we are lining up the great moral power of the United States and the free nations, on the side of the aspirations of these people. And I thought the statement that Prime Minister Churchill and President Eisenhower issued at the conclusion of their conference, will have a great impact in those areas of the world in doing just that.

But, in order to give this kind of leadership, it means that we must have a sound base in America, a great example of freedom, of equality, of economic progress, for all the world to see.

Our economy must not be fat and static, but it has to be dynamic and expanding. And that is why it is so essential that the very best leadership in America, from both of our great major parties, from all segments of our Government, join together in making the American democracy sound and strong, and productive and free.

Mr. FERGUSON. The subject of the President's address has been noted by editors of newspapers throughout the country as being of great importance. In the New York Herald Tribune of this morning, the lead editorial, entitled "Eisenhower the Builder," starts out by saying:

President Eisenhower's "grand plan" for better roads has been stated only in broad outline. In brief, it advocates spending $50 billion over the next 10 years for the highways that America needs. This is probably 2 or 3 times the present rate of expenditure from all sources, but it is no more than has been proposed all along by experts of every variety.

Mr. President, that is true.

I ask unanimous consent that the editorial be inserted in the RECORD as part of my remarks.

There being no objection, the editorial war ordered to be printed in the RECORD, as follows:

EISENHOWER THE BUILDER

President Eisenhower's grand plan for better roads has been stated only in broad outline. In brief, it advocates spending $50 billion over the next 10 years for the highways that America needs. This is probably 2 or 3 times the present rate of expenditure from all sources, but it is no more than has been proposed all along by experts of every variety. The necessity exists. Automobiles are outstripping highways; transportation must be improved for economic growth, safety, comfort, and, not to be overlooked, the requirements of defense in an atomic age. Our swelling population is making increasing demands on the future as well as the present. And furthermore it is well to remember that a building program of this magnitude would have untold benefits for all business and personal prosperity. This, then, is a magnificently conceived plan in the national interest.

The details will come later. But the exposition before the Conference of Governors made it plain that this is by no means an airy lot of wishful thinking. The plan proceeds from the universally admitted point that the roads have to be built and also that they have to be paid for. Obviously there are both national and local responsibilities involved here, but the main thing is to get started on the highways and preferably with some decent regard as to nationwide planning. Forty-eight separate systems pose too many problems in engineering and finance; still, there are very few people who would consciously wish to leave everything to Washington.

What President Eisenhower proposes is a cooperative alliance between Federal and State governments, with fiscal administration left in local hands. The source of revenue would depend on the project—self-liquidating as far as feasible. Federal help, if necessary. It may be that we shall see a lot of agreement with the States on Government credit back of construction, much as in the case of the New York State Thruway. Certainly there will be continued reliance on the gasoline tax, even though many of the Governors would like to acquire this impost exclusively for their own.

The idea is plainly a judicious combination of tolls, taxes, and outright assistance, but with a heavy emphasis on cooperation. Who is to pay for what can be left to be worked out in detailed discussions? The fact is that everybody pays and that everybody wants first-class roads. And President Eisenhower has asserted himself vigorously on the instant need for $50 billion worth of progress. That is real leadership.

Mr. FERGUSON. Mr. President, the Washington Evening Star has an editorial on the same subject, which is headed "Our Highways and the Future." That is a good heading, because highways mean much to the future.

I was struck by the fact that my good friend Jim Berryman, of the Star, in one of his excellent cartoons, depicted the Vice President as reading the speech to the governors and suggested that, while he usually presides over the Senate, this time he was doing a master's job in giving the facts to the governors of the States of this great Nation.

I hope the governors will view the highway program in the light in which the President envisions it. Some of them will have to use imagination in contemplating the future of America. Some among them may think pioneering days are of the past and that the roads in use today are adequate for the future of America, but I do not consider that to be true.

Mr. President, I ask unanimous consent that the editorial appearing in the Washington Evening Star be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR HIGHWAYS AND THE FUTURE

As numerous governors have been quick to indicate, the President's grand plan for a vast program of highway improvement and expansion is more than a little bit controversial in terms of how the States are to figure in it. But what is not controversial about it is the fact that some such program—regardless of conflicting views as to methods of financing and directing it—is imperative for the future well-being of the Nation.

For General Eisenhower—speaking through Vice President NIXON to the governors' conference at Bolton Landing in New York—has not exaggerated in declaring that the present road network in the United States "is inadequate locally, and obsolete as a national system." Nor has he exaggerated in warning that this deficiency, as long as it exists, will continue to impose very severe penalties on the American people—penalties that include (1) serious economic losses resulting from inefficient transportation of goods that have been efficiently produced; (2) a terrible annual toll of dead and injured in highway accidents; and (3) "appalling inadequacies to meet the demands of catastrophe or defense should atomic war come."

It is true, of course, that the United States probably is far ahead of most other countries in road development. But that does not alter the fact that as a nation—with our unparalleled and ever-growing number of high-speed passenger automobiles and trucks—we still have a long way to go before we can even approach attainment of the kind of local, State, and interstate highway system that we need. And our problem in that sense is particularly pressing because our American population is increasing at a rate of about 25 million every decade—which means, if the present trend continues, that there will be 200 million of us by 1970, and perhaps almost as many as 300 million by 2000 A. D., which is fewer than 50 years from now, a brief span in the lifetime of human society.

Accordingly, having in mind such highly significant factors as this rapid population growth, the President has proposed a Federal-State cooperative program under which—in addition to current normal road expenditures—$50 billion would be laid out during the next 10 years on projects designed to make a good start on the network of highways that the Nation will sorely require in the relatively near future. As for financing the undertaking, he has suggested that each of the projects be put on a self-liquidating basis wherever possible—to be paid for through toll charges or the collection of gasoline taxes. Further, where necessary, he would advance Federal funds to support those parts of the plan that could not be carried out otherwise.

More than a few of the governors have taken a rather dim view of all this because of a fear that it would seriously impinge on States' rights. Nevertheless, although it lends itself to debate in that respect, there can be no doubt—in view of our expanding economy and fast-growing population—that something like the President's proposal needs to be put into effect in one way or another, and the sooner the better.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KNOWLAND. Mr. President, since this is an important bill and it is desired that ample opportunity be afforded to debate it, I had hoped that Senators who wished to discuss the bill or offer amendments would be prepared to carry on tonight. I did not expect the session to go beyond 9 o'clock. It is now only a quarter to 8. If other speeches on the bill could be made I should be glad to keep the Senate in session for that purpose. I certainly would not want any Senator to feel that he had been foreclosed from discussing this important subject. I was wondering whether any amendments were prepared to be offered and perhaps to be taken up. I fully realize that we cannot have a vote on final passage tonight, and I would not press for final passage or even for action of the

UNIVERSITY OF MICHIGAN LIBRARIES

amendment dealing with powerplants, but I was hopeful that if there were amendments, they might be offered at this time.

Mr. President, apparently there are no further speeches to be made at this time. I understand that a number of Senators on the other side of the aisle who had to be out of town today and will not be back until tomorrow are very anxious to vote on the proposed legislation and, perhaps, to speak on it. In view of the fact that the Senate will meet at 10 o'clock in the morning. I respectfully ask all Senators on both sides of the aisle, even though they may have other business to attend to, to be here promptly at 10 o'clock a. m. tomorrow, so we can have a quorum call just before the morning hour. If they will do that, we can then proceed with the debate.

I wish to express my appreciation to Senators on both sides of the aisle who have debated the bill today. I think the debate has been pertinent to the subject. If we do not lose too much time on quorum calls I think there will be ample opportunity for discussion and voting tomorrow. I ask the cooperation of all Senators in being present for the quorum calls.

The PRESIDING OFFICER. What is the pleasure of the Senate?

RECESS

Mr. KNOWLAND. Mr. President, if there are no amendments to be offered or other business to be transacted, I move that, pursuant to the order previously entered, the Senate stand in recess until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 7 o'clock and 49 minutes p. m.) the Senate took a recess, the recess being under the order previously entered, until tomorrow, Thursday, July 15, 1954, at 10 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate July 14 (legislative day of July 2), 1954:

DIPLOMATIC AND FOREIGN SERVICE

Francis A. Flood, of Oklahoma, for promotion from Foreign Service officer of class 2 to class 1.

William W. Walker, of North Carolina, for promotion from Foreign Service officer of class 3 to class 2.

The following-named Foreign Service officers for promotion from class 4 to class 3:

William Barnes, of Massachusetts.
Findley Burns, Jr., of Minnesota.
John E. Devine, of Illinois.
Harrison Lewis, of California.

The following-named Foreign Service officers for promotion from class 5 to class 4 and to be also consuls of the United States of America:

Frank J. Devine, of New York.
David H. Ernst, of Massachusetts.
Douglas N. Forman, Jr., of Ohio.
Harold G. Josif, of Ohio.

The following-named Foreign Service officers for promotion from class 6 to class 5:

Alan G. James, of the District of Columbia.
Abraham Katz, of New York.
Lawrence C. Mitchell, of California.
Jacob M. Myerson, of the District of Columbia.
Peter J. Peterson, of California.
Milton K. Wells, of Oklahoma, now a Foreign Service officer of class 2 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

The following-named persons, now Foreign Service Officers of class 3 and secretaries in the diplomatic service, to be also consuls general of the United States of America:

C. Vaughan Ferguson, Jr., of New York.
Paul Paddock, of Iowa.

The following-named persons, now Foreign Service officers of class 5 and secretaries in the diplomatic service, to be also consuls of the United States of America:

Thomas H. Murfin, of Washington.
Harry F. Pfeiffer, Jr., of Maryland.
DeWitt L. Stora, of California.

William O. Hall, of Oregon, for appointment as a Foreign Service officer of class 1, a consul, and a secretary in the diplomatic service of the United States of America.

The following-named persons for appointment as Foreign Service officers of class 2, consuls, and secretaries in the diplomatic service of the United States of America:

Alexander B. Daspit, of Louisiana.
Harvey Klemmer, of Maryland.

The following-named persons for appointment as Foreign Service officers of class 4, consuls, and secretaries in the diplomatic service of the United States of America:

John M. Bowie, of the District of Columbia.
Miss Edelen Fogarty, of New York.
Francis J. Galbraith, of South Dakota.
William F. Gray, of North Carolina.
Miss Jean M. Wilkowski, of Florida.

The following-named persons for appointment as Foreign Service officers of class 6, vice consuls of career, and secretaries in the diplomatic service of the United States of America:

Sam G. Armstrong, of Texas.
Daniel N. Arzac, Jr., of California.
Robert S. Barrett IV, of Virginia.
Melvin Croan, of Massachusetts.
Walker A. Diamanti, of Utah.
Richard W. Finch, of Ohio.
Martin B. Hickman, of Utah.
Edwin D. Ledbetter, of California.
S. Douglas Martin, of New York.
Calvin E. Mehlert, of California.
John E. Merriam, of California.
J. Theodore Papendorp, of New Jersey.
Harry A. Quinn, of California.
Charles E. Rushing, of Illinois.
Robert H. Wenzel, of Massachusetts.

The following-named Foreign Service staff officers to be consuls of the United States of America:

John L. Hagan, of Virginia.
Arthur V. Metcalfe, of California.
Nestor C. Ortiz, of Virginia.
Normand W. Redden, of New York.

The following-named Foreign Service Reserve officers to be secretaries in the diplomatic service of the United States of America:

Lucius D. Battle, of Florida.
Richard E. Funkhouser, of the District of Columbia.
John T. Hanson, of Maryland.
Donald D. Kennedy, of Oregon.

IN THE NAVY

The following-named women officers of the Navy for permanent promotion to the grade of lieutenant commander in the staff corps indicated, subject to qualification therefor as provided by law:

SUPPLY CORPS

Margaret E. Barton
Natalie T. Bell
Betty J. Brown

MEDICAL SERVICE CORPS

Frances Spear

IN THE NAVY

Harold W. Sill (Naval ROTC) to be ensign in the Navy, subject to qualification therefor as provided by law.

Frederick B. Griswold (Naval ROTC) to be ensign in the Navy as previously nominated and confirmed, to correct name, subject to qualification therefor as provided by law.

Carl H. Olander (Naval ROTC) to be second lieutenant in the Marine Corps, subject to qualification therefor as provided by law.

The following-named (ROTC) to be second lieutenants in the Marine Corps, subject to qualification therefor as provided by law:

Egbert Horton, Jr.
Frank J. Simmons
Charley H. Wheeler, Jr.

Harold D. Esterly, Jr. (Reserve officer) to be lieutenant in the Medical Corps in the Navy, subject to qualification therefor as provided by law.

Pauline E. Clarke (Reserve officer) to be lieutenant in the Medical Corps in the Navy, subject to qualification therefor as provided by law.

The following-named (civilian college graduates) to be lieutenants (junior grade) in the Dental Corps in the Navy, subject to qualification therefor as provided by law:

Albert A. Capozzoli, Jr.
Fenner P. Lindblom
Thomas R. Milliette

The following-named Reserve officers to be lieutenants (junior grade) in the Dental Corps in the Navy, subject to qualification therefor as provided by law:

James E. Ainley, Jr.	Harold W. Hodson
James R. Boyce	John K. Jennings, Jr.
Joseph N. Brouillette	Edward P. Klecinic
Paul B. Carrington	Bill C. Terry
Homer Clarke	James C. Toye
William E. Downey, Jr.	Robert A. Wooden
Roger H. Flagg	Julius Zuckerman
Richard D. Foster	

The following-named Reserve officers to be second lieutenants in the Marine Corps, subject to qualification therefor as provided by law:

Thomas E. Ackerman	Marcia J. Earles
Allen E. Alexander	Albert D. Eilers
Roi E. Andrews	Clifford Farley
John C. Archbold	Walter D. Fillmore
Michael S. Arcieri	Richard J. Fitzhenry
Richard F. Armstrong	John W. Foley
Richard J. Beach	Thomas P. Ganey
Pierre H. Begnaud	Francis X. Frey
Daniel G. Bishop	Paul W. Fuetterer
Dennis F. Boalch	Grady V. Gardner
George I. Bomgardner	Elmer T. Garrett, Jr.
Robert L. Bridges	John F. Gillespie
Wayne F. Burt	Roland N. Grattan
Ernest W. Buschhaus	Robert C. Green
Robert G. Bustos	Jack Haskins
Walter E. Byerley	Joseph C. Hedrick
Earnest S. Camp	Charles J. Hilbert
John W. Chinner	Joseph E. Hopkins
Charles W. Clarchick	James Jaross
John W. M. Clark	Thomas W. Jones
Layne H. Clark	John F. Joy
William G. Clark	Louis I. Kane
James R. W. Cochran	Donald E. Keller
Frederick M. Cole	Kenneth E. Kemp
Jack R. Collins	Gary D. Kent
John J. Collins	Thomas L. Lambert
Normand A. Cote	Walter R. Ledbetter, Jr.
James A. Crowley	
Billy R. Cummins	Richard A. Mankowski
Carl W. Delaughter, Jr.	Gene H. Martin
Herman C. Deutschlander	John P. McGovern
	William C. McGovern
Henry C. Dewey	William D. McGuire
Merritt W. Dinnage	Dennis J. Murphy
Joseph A. Donnelly	Leo P Murphy

Samuel O. Newlon
Patrick L. O'Connor
Cyril M. O'Hara
William D. Patterson
Edward R. Pierce
Albert E. Power
Henry J. Quevedo
Richard B. Quigley
John E. Redelfs
Richard G. Ritchie
Robert O. Ritts
Henry W. Roder
Joseph S. Rosenthal
Edwin K. Rushing
Patrick J. Ryan
Norman C. Sanderson
Patrick J. Saxton
Harry E. Smith, Jr.
Cleo P. Stapleton, Jr.
Richard O. Spencer
Thomas F. Tague
Kenneth G. Thompson
Bozzie F. Thornton, Jr.
Leon B. Turner
Charles M. Vanmanen
Warren L. Veek
John C. Watkins
Edwin G. Weatherford
Robert C. Wise
Clifford C. Wren, Jr.

The following-named to be ensigns in the line in the Navy, for limited duty only, classification deck, subject to qualification therefor as provided by law:

Archie G. Deryckere
Cecil F. Knight
Ralph S. Mason
Richard M. McClenahan
John J. McDermott
George H. McKinnon
George W. McMillin
Hugh A. Moore
Walter E. Richards
Kenneth R. Sawyer

The following-named to be ensigns in the line in the Navy, for limited duty only, classification ordnance, subject to qualification therefor as provided by law:

George Bernier, Jr.
Herman F. Coleman
Rodney W. Couser
Robert E. Daley
Clarence A. Devine
Henry J. Grothe
Max A. Harrell
James W. Holmes, Jr.
Loren H. Kinne
George R. Langford
Francis W. Lannom
John Mack
George W. Merkle
John H. Miller
John J. Muniz
Dighton "W" Peugh
John Popp, Jr.
Lewis M. Popplewell
Robert L. Schibel
Lewis W. Schnatterly
Albert L. Smith
William Soczek
Russell J. Sullivan
Charles E. Tate
John W. Welsch
Vincent F. Welsh
Henry P. Woodcock, Jr.

The following-named to be ensigns in the line in the Navy, for limited duty only, classification administration, subject to qualification therefor as provided by law:

Robert W. Bender
Francis V. Dugan
Gilbert J. Kaiser
Larrimar C. Sheffield

The following-named to be ensigns in the line in the Navy, for limited duty only, classification engineering, subject to qualification therefor as provided by law:

Giles B. Anderson
James F. Barkley
Kermont C. Brasted
John Bravence, Jr.
Philip P. Buchholz
James L. Chamberlain
Donald J. Clifford
Charles E. Cogswell
Charles H. Courtney
Louis A. Downey
Roger V. Eriksson
John N. Evosevich
John F. Gildea
Grant G. Gullickson
Walter F. Hamelrath
Harold S. Keith
Harold S. Kimbrough
Edward L. King
James L. Knepler
Eugene T. Knight
William F. Kopacka
Walter S. Kraus
James A. Mares
William J. O'Connell
Robert S. Patten
Julian L. Raines
William A. Springston
John J. Teuscher, Jr.
Earl R. Willmeroth
Edwin F. Woollard
Harold Zettle

Paul P. Connolly to be ensign in the line in the Navy, for limited duty only, classification hull, subject to qualification therefor as provided by law.

The following-named to be ensigns in the line in the Navy, for limited duty only, classification electronics, subject to qualification therefor as provided by law:

Gilbert H. Beckwith
Walter F. Behrle
Nestore G. Biasi
Joseph K. Booth
Frederick L. Bradshaw
Carl D. Bush
Don P. Carlson
Patrick J. Cusick
Roy K. Gadberry
Francis X. Hayes
Richard G. Higgins
Charles E. Horn
Stephen Jauregui, Jr.
Samuel F. Keller, Jr.
George M. Langford
Ernest I. Lissy
Cyrus McConnell, Jr.
John R. Moore
Percy J. Moore
Norbert W. O'Neill
Robert O. Otto
Thomas B. Rhodes
William C. Richardson
Henry C. Rodgers
John K. Rork
Richard K. Sedlak
Ray O. Thornton
Richard M. Wallace
Daniel E. Whaley, Jr.

The following-named to be ensigns in the line in the Navy, for limited duty only, classification aviation operations, subject to qualification therefor as provided by law:

Benjamin O. Bibb
Charles L. Brammeier
William G. Hunter

The following-named to be ensigns in the line in the Navy, for limited duty only, classification aviation ordnance, subject to qualification therefor as provided by law:

Frank O. Baty
John D. Frazier
Bowheart "H" Frentress, Jr.
Max C. Gunn, Jr.
John I. Keener
John L. McCracken, Jr.
David W. Offrell
Charles B. Rose
William A. Rose
John O. Yarwood
Vincent L. Zelones

The following-named to be ensigns in the line in the Navy, for limited duty only, classification aviation engineering, subject to qualification therefor as provided by law:

Melvin C. Premo
James D. Wallace, Jr.

The following-named to be ensigns in the line in the Navy, for limited duty only, classification aviation electronics, subject to qualification therefor as provided by law:

Morris D. Anthony
Jack "G" DeBoer
Thomas R. Legett, Jr.
Chester R. Smith
George W. Pearson

The following-named to be ensigns in the line in the Navy, for limited duty only, classification aerology, subject to qualification therefor as provided by law:

Norman E. Halladay
James S. Rose

The following-named to be ensigns in the Supply Corps in the Navy, for limited duty only, subject to qualification therefor as provided by law:

Francis X. Baglioni
John E. Brooks
Robert E. Cotton
Frank J. Dusenberry
Joseph B. Hanly
Robert W. Lawrence
Harold A. Rice
Ray H. Stevenson

The following-named to be ensigns in the Civil Engineer Corps in the Navy, for limited duty only, subject to qualification therefor as provided by law:

Lloyd H. Gibboney
Fred Moore, Jr.

IN THE MARINE CORPS

The following-named officers of the Marine Corps for temporary appointment to the grade of first lieutenant:

Max C. Aaron
Edwin M. Ackley
Wilson J. Acord
Carl C. Adams
Joseph B. Adams
Robert K. Adams
William J. Addis
Clarence L. Ainsworth

POSTMASTERS

The following-named persons to be postmasters:

ALABAMA

Wanda M. Shattuck, Brookwood, Ala., in place of A. S. Weaver, retired.

Martha J. Wyatt, Pike Road, Ala., in place of T. E. Bolling, transferred.

Charlie B. Edwards, Sycamore, Ala., in place of L. B. Ledbetter, retired.

ARKANSAS

John A. Fairly, Junction City, Ark., in place of M. P. Muse, removed.

CALIFORNIA

John D. Stephenson, Norwalk, Calif., in place of H. L. Fox, deceased.

COLORADO

George E. Hamblin, Akron, Colo., in place of E. I. Crutchfield, retired.

Ruby M. Colopy, Lake City, Colo., in place of Ethel Lewis, resigned.

George M. Price, Manitou Springs, Colo., in place of G. C. Flake, resigned.

William E. Baker, Morrison, Colo., in place of A. M. Durham, deceased.

CONNECTICUT

Burton W. Henry, Hazardville, Conn., in place of J. E. Lynch, deceased.

Calvin E. Kirchhoff, Quaker Hill, Conn., in place of H. S. McElyea, resigned.

FLORIDA

Delmer T. Warren, Fern Park, Fla., in place of E. L. Toof, deceased.

Chauncey L. Costin, Port St. Joe, Fla., in place of H. A. Drake, retired.

Louise M. Denton, Ruskin, Fla., in place of E. D. Mixon, removed.

GEORGIA

Frances Marion Clark, Blythe, Ga., in place of M. A. C. Byrne, retired.

IDAHO

Howard L. Jenkins, Naples, Idaho, in place of F. L. Mackey, retired.

ILLINOIS

Mary N. Ceyte, Bulpitt, Ill., in place of B. R. Gherardini, resigned.

Weldon A. Tranbarger, Franklin, Ill., in place of W. H. Neece, Jr., transferred.

INDIANA

David H. Jordan, Dunreith, Ind., in place of Odom Durham, resigned.

William F. Reineke, Mount Vernon, Ind., in place of M. W. Smith, deceased.

IOWA

Wendel T. Smith, Mount Pleasant, Iowa, in place of J. N. Hileman, deceased.

Charles R. Mayo, Pocahontas, Iowa, in place of V. F. McCartan, retired.

Loretta M. Steffens, Rowan, Iowa, in place of N. F. Hyde, retired.

Donald R. deGooyer, Sioux Center, Iowa, in place of Isaac Hoeven, retired.

KENTUCKY

Harry W. Holt, Coxs Creek, Ky., in place of J. E. Evans, transferred.

James O. Gibson, Hardinsburg, Ky., in place of M. H. Norton, retired.

James O. Harris, Wheelwright, Ky., in place of H. A. Stancil, resigned.

MAINE

William C. Lint, Mapleton, Maine, in place of H. M. Higgins, retired.

MASSACHUSETTS

Joseph A. Boudreau, Jr., Fiskdale, Mass., in place of M. H. Mallahy, retired.

MICHIGAN

Chester J. Orr, Standish, Mich., in place of A. M. Rokosz, removed.

Clarence L. Carlson, Whitehall, Mich., in place of F. E. Benjamin, resigned.

MINNESOTA

Leslie E. Torrison, Buffalo, Minn., in place of M. C. Hayes, removed.

Harold F. Otto, LeRoy, Minn., in place of J. C. Bert, deceased.

MISSISSIPPI

Delmer E. Edwards, West Point, Miss., in place of S. S. Burrous, deceased.

MISSOURI

Eugene M. Royce, Anderson, Mo., in place of G. C. Hayes, resigned.

Victor N. Remley, Liberty, Mo., in place of C. E. Yancey, Jr., deceased.

NEBRASKA

Reynold F. Nelson, Gordon, Nebr., in place of J. H. Holden, retired.

Russell M. Abrams, Stapleton, Nebr., in place of H. E. Callender, deceased.

NEW HAMPSHIRE

Carl Chase Blanchard, Farmington, N. H., in place of E. E. Lefavour, retired.

Frederick James Rowe, Portsmouth, N. H., in place of P. J. Hickey, deceased.

NEW JERSEY

Paul R. Cronce, Frenchtown, N. J., in place of C. S. Hoff, retired.

Harry H. Seylaz, Lincroft, N. J., in place of C. S. Toop, removed.

Theodore Lee Adams, Ocean City, N. J., in place of Leroy Jeffries, retired.

Abel V. Del Vecchio, Springfield, N. J., in place of O. F. Heinz, retired.

Bruno P. Zorn, Waldwick, N. J., in place of James McQuilken, Jr., resigned.

NEW YORK

Ida Mae Hopkins, Cincinnatus, N. Y., in place of L. H. Ingersoll, retired.

Ralph L. Marshall, Freeport, N. Y., in place of E. A. Rice, retired.

Doris J. Hammond, Millport, N. Y., in place of H. C. Fiala, resigned.

Berta L. Wixon, Trumansburg, N. Y., in place of M. E. Fausette, retired.

UNIVERSITY OF MICHIGAN LIBRARIES

Edna H. Purcell, Waterloo, N. Y., in place of J. F. Marshall, resigned.

NORTH DAKOTA

Mandrup C. Olufson, Enderlin, N. Dak., in place of J. G. Martin, transferred.

OHIO

John L. Bricker, Mount Sterling, Ohio, in place of Palmer Phillips, removed.

OKLAHOMA

Walter D. Barrett, Collinsville, Okla., in place of O. V. Stevens, retired.

Martin R. Jackson, Henryetta, Okla., in place of W. E. Ingram, resigned.

Myron M. Gastineau, Taloga, Okla., in place of J. L. Foster, deceased.

OREGON

Myrl A. Haygood, Philomath, Oreg., in place of M. R. Brown, removed.

PENNSYLVANIA

Lydia S. Love, Cheyney, Pa., in place of G. V. Proctor, removed.

John W. Beach, Fairfield, Pa., in place of G. M. Neely, retired.

John W. Reznor, Greenville, Pa., in place of F. W. Moser, retired.

Leonard Wayne Elder, Rochester Mills, Pa., in place of R. M. Henry, resigned.

Edward R. Kulick, Shamokin, Pa., in place of J. E. Staniszewski, retired.

C. Lyman Sturgis, Uniontown, Pa., in place of J. A. Reilly, removed.

Esther S. Neeld, Wrightstown, Pa., in place of J. E. Hilborn, resigned.

SOUTH CAROLINA

Raphael L. Morris, Clemson, S. C., in place of C. R. Goodman, resigned.

SOUTH DAKOTA

Casimir F. Kot, Stephan, S. Dak., in place of K. H. Holtzman, declined.

TENNESSEE

Josephine H. Vandergriff, Briceville, Tenn., in place of Lutie Davis, retired.

Len K. Mahler, Cookeville, Tenn., in place of F. P. Moore, retired.

Laverne M. Tabor, Crossville, Tenn., in place of H. E. Davenport, resigned.

LeRoy M. Cook, Gallatin, Tenn., in place of O. V. Smith, retired.

Charlene M. Reece, Jonesboro, Tenn., in place of E. R. McAmis, transferred.

VERMONT

Morris W. Depew, Dorset, Vt., in place of S. M. Matson, deceased.

VIRGINIA

William L. Pickhardt, Chester, Va., in place of M. H. Truby, deceased.

Beulah W. Davis, Concord, Va., in place of J. M. Cross, retired.

Marion L. Beeton, Lexington, Va., in place of F. C. Davis, retired.

Virginia C. Foskett, Lynnhaven, Va., in place of M. V. Mills, retired.

Richard F. Weaver, New Market, Va., in place of E. M. Bennick, removed.

Ralph T. Phillips, Parksley, Va., in place of H. T. Scarborough, retired.

Flora M. Branham, Pound, Va., in place of G. L. Robinson, retired.

WEST VIRGINIA

Lee P. Hornor, Bridgeport, W. Va., in place of M. K. Brown, resigned.

John L. McMahon, Follansbee, W. Va., in place of J. J. Walker, retired.

Sabinus M. McWhorter, Weston, W. Va., in place of L. S. Switzer, retired.

WISCONSIN

Clifford J. McKenzie, Centuria, Wis., in place of M. C. Hoey, transferred.

Virginia F. Waupochick, Keshena, Wis., in place of B. E. James, removed.

Amy J. Pofahl, Pleasant Prairie, Wis., in place of L. A. Pofahl, deceased.

Estelle W. Hill, Sarona, Wis., in place of H. A. Stromberg, transferred.

Herbert N. Hoskins, Shell Lake, Wis., in place of J. S. Kennedy, deceased.

Wallace L. Nelson, Siren, Wis., in place of J. S. Dodson, retired.

WYOMING

Evalee V. Arnwine, Linch, Wyo. Office established December 1, 1951.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 14 (legislative day of July 2), 1954:

William A. O'Brien to be United States marshal for the eastern district of Pennsylvania.

WITHDRAWALS

Executive nominations withdrawn from the Senate July 14 (legislative day of July 2), 1954:

POSTMASTERS

ALABAMA

Sara K. Lee, postmaster at Flat Rock, Ala.

ARKANSAS

Mrs. Jessie C. Brewer, postmaster at Higginson, Ark.

HOUSE OF REPRESENTATIVES

WEDNESDAY, JULY 14, 1954

The House met at 12 o'clock noon.

Rev. Father Joseph L. Teletchea, St. Patrick's Church, Washington, D. C., offered the following prayer:

O God, who at this critical moment of the world's history hast chosen to place such great burdens upon the minds and hearts of our Representatives, go before them, we beseech Thee, in all their doings with Thy gracious inspiration, and further them with Thy continual help, that their every prayer and work may begin from Thee, and by Thee be duly ended.

Let not ignorance draw them into devious paths, nor partiality sway their minds. Neither let respect of riches or persons pervert their judgment; but unite them to Thee effectually by the gift of Thine only grace, that they may be one in Thee and may never forsake the truth; that so in this life their judgment may in nowise be at variance with Thee; and in the life to come they may attain to everlasting rewards for deeds well done. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H. R. 5173. An act to provide that the excess of collections from the Federal unemployment tax over unemployment compensation administrative expenses shall be used to establish and maintain a $200 million reserve in the Federal unemployment account which will be available for advances to the States, to provide that the remainder of such excess shall be returned to the States, and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill; requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MILLIKIN, Mr. MARTIN, Mr. WILLIAMS, Mr. GEORGE, and Mr. BYRD to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the amendments of the House to a bill and concurrent resolution of the Senate of the following titles:

S. 1303. An act to provide for the expeditious naturalization of former citizens of the United States who have lost United States citizenship by voting in a political election or plebiscite held in occupied Japan; and

S. Con. Res. 79. Concurrent resolution to express the sense of the Senate on continuing the operation of a tin smelter at Texas City, Tex., and to investigate the need of a permanent domestic tin-smelting industry and the adequacy of our strategic stockpile of tin.

The message also announced that the Senate insists upon its amendment to the bill (H. R. 4854) entitled "An act to authorize the Secretary of the Interior to construct, operate, and maintain the irrigation works comprising the Foster Creek division of the Chief Joseph Dam project, Washington," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. CORDON, Mr. MILLIKIN, Mr. WATKINS, Mr. ANDERSON, and Mr. JACKSON to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 2900) entitled "An act to authorize the sale of certain land in Alaska to the Harding Lake Camp, Inc., of Fairbanks, Alaska, for use as a youth camp and related purposes"; requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. CORDON, Mr. WATKINS, Mr. KUCHEL, Mr. JACKSON, and Mr. LONG to be the conferees on the part of the Senate.

SPECIAL ORDERS GRANTED

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 3 hours tomorrow, after the business of the House is completed and following any special orders heretofore entered into, and that I may address the House for an hour today.

The SPEAKER. The Chair wishes to announce that any speeches over an hour in length must have the approval of all Members of the House.

The gentlewoman from Massachusetts asks unanimous consent that she may speak for 3 hours tomorrow afternoon. Is there objection?

Mr. MASON. Mr. Speaker, I will have to object.

The SPEAKER. The gentleman from Illinois objects.

Is there any other request the gentlewoman wishes to submit?

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent that I may be allowed to speak for 2 hours tomorrow afternoon.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent that I may speak for 1 hour this afternoon, following the legislative program and any special orders heretofore entered.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

SANTA MARGARITA RIVER PROJECT

Mr. MILLER of Nebraska. Mr. Speaker, I call up the conference report on the bill (H. R. 5731) to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from Santa Margarita River, Calif., and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 2111)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5731) to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from the Santa Margarita River, California, and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate numbered 1.

Amendment numbered 2: That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment as follows: In lieu of the language inserted by the Senate amendment insert the following:

"That the Secretary of the Interior, acting pursuant to the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388), and Acts amendatory thereof or supplementary thereto, as far as those laws are not inconsistent with the provisions of this Act, is authorized to construct, operate, and maintain such dam and other facilities as may be required to make available for irrigation, municipal, domestic, military, and other uses the yield of the reservoir created by De Luz Dam to be located immediately below the confluence of De Luz Creek with Santa Margarita River on Camp Joseph H. Pendleton, San Diego, California, for the Fallbrook Public Utility District and such other users as herein provided. The authority of the Secretary to construct said facilities is contingent upon a determination by him that—

"(a) the Fallbrook Public Utility District shall have entered into a contract under subsection (d), section 9, of the Reclamation Project Act of 1939 undertaking to repay to the United States of America appropriate portions, as determined by the Secretary of the actual costs of constructing, operating, and maintaining such dam and other facilities, together with interest as hereinafter provided; and under no circumstances shall the Department of the Navy be subject to any charges or costs except on the basis of its proportional use, if any, of such dam and other facilities, as determined pursuant to section 2 (b) of this Act;

'(b) the officer or agency of the State of California authorized by law to grant permits for the appropriation of water shall have granted such permits to the United States of America and shall have granted permits to the Fallbrook Public Utility District for rights to the use of water for storage and diversion as provided in this Act; including, as to the Fallbrook Public Utility District, approval of all requisite changes in points of diversion and storage, and purposes and places of use;

"(c) The Fallbrook Public Utility District shall have agreed that it will not assert against the United States of America any prior appropriative right it may have to water in excess of that quantity deliverable to it under the provisions of this Act, and will share in the use of the waters impounded by the De Luz Dam on the basis of equal priority and in accordance with the ratio prescribed in section 3 (a) of this Act; this agreement and waiver and the changes in points of diversion and storage, required by the preceding paragraph, shall become effective and binding only when the dam and other facilities herein provided for shall have been completed and put into operation: *Provided, however,* That the enactment of this legislation does not constitute a recognition of, or an admission that, the Fallbrook Public Utility District has any rights to the use of water in the Santa Margarita River, which rights, if any, exist only by virtue of the laws of the State of California; and

"(d) The De Luz Dam and other facilities herein authorized have economic and engineering feasibility.

"SEC. 2. (a) In the interest of comity between the United States of America and the State of California and consistent with the historic policy of the United States of America of Federal noninterference with State water law, the Secretary of the Navy shall promptly comply with the procedures for the acquisition of appropriative water rights required under the laws of the State of California as soon as he is satisfied, with the advice of the Attorney General of the United States, that such action will not adversely affect the rights of the United States of America under the laws of the State of California.

"(b) The Department of the Navy will not be subject to any charges or costs in connection with the De Luz Dam or its facilities, except upon completion and then shall be charged in reasonable proportion to its use of the facilities under regulations agreed upon by the Secretary of the Navy and Secretary of the Interior.

"SEC. 3. (a) The operation of the dam and other facilities herein provided shall be by the Secretary of the Interior, under regulations satisfactory to the Secretary of the Navy with respect to the Navy's share of the impounded water and National Security. In that operation, 60 per centum of the water impounded by De Luz Dam is hereby allotted to the Secretary of the Navy, 40 per centum of the water impounded by De Luz Dam is hereby allotted to the Fallbrook Public Utility District. The Department of the Navy and the Fallbrook Public Utility District will participate in the water impounded by De Luz Dam on the basis of equal priority and in accordance with the ratio prescribed in the preceding sentence: *Provided, however,* That at any time the Secretary of the Navy certifies that he does not have immediate need for any portion of the aforesaid 60 per centum of the water, the official agreed upon to administer the dam and facilities is empowered to enter into temporary contracts for the delivery of water subject, however, to the first right of the Secretary of the Navy to demand that water without charge and without obligation on the part of the United States of America upon 30 days' notice as set forth in any such contract with the approval of the Secretary of the Navy: *Provided further,* That all moneys paid in to the United States of America under any such contract shall be covered into the general fund of the Treasury, and shall not be applied against the indebtedness of the Fallbrook Public Utility District to the United States of America. In making any such temporary contracts for water not immediately needed by the Navy, the first right thereto, if otherwise consistent with the laws of the State of California, shall be given the Fallbrook Public Utility District.

"(b) The general repayment obligation of the Fallbrook Public Utility District (which shall include interest on the unamortized balance of construction costs of the project allocated to municipal and domestic waters at a rate equal to the average rate, which rate shall be certified by the Secretary of the Treasury, on the long-term loans of the United States outstanding on the date of this Act) to be undertaken pursuant to section 1 of this Act shall be spread in annual installments, which need not be equal, over a period of not more than 56 years, exclusive of a development period, or as near thereto as is consistent with the operation of a formula, mutually agreeable to the parties, under which the payments are varied in the light of factors pertinent to the irrigators' ability to pay. The development period shall begin in the year in which water for use by the district is first available, as announced by the Secretary, and shall end in the year in which the conservation storage space in De Luz Reservoir first fills but shall, in no event, exceed 17 years. During the development period water shall be delivered to the district under annual water rental notices at rates fixed by the Secretary and payable in advance, and any moneys collected in excess of operation and maintenance costs shall be credited to repayment of the capital costs chargeable to the district and the repayment period fixed herein shall be reduced proportionately. The Secretary may transfer to the district the care, operation, and maintenance of the facilities constructed by him under conditions satisfactory to him and to the district and, with respect to such of the facilities as are located within the boundaries of Camp Pendleton, satisfactory also to the Secretary of the Navy.

"(c) For the purposes of this Act the basis, measure, and limit of all rights of the United States of America pertaining to the use of water shall be the laws of the State of California: *Provided,* That nothing in this Act shall be construed as a grant or a relinquishment by the United States of America of any of its rights to the use of water which it acquired according to the laws of the State of California either as a result of its acquisition of the lands comprising Camp Joseph H. Pendleton and adjoining naval installations, and the rights to the use of water as a part of said acquisition, or through actual use or prescription or both since the date of that acquisition, if any, or to create any legal obligation to store any water in De Luz Reservoir, to the use of which it has such rights, or to require the division under this Act of water to which it has such rights.

UNIVERSITY OF MICHIGAN LIBRARIES

"(d) Unless otherwise agreed by the Secretary of the Navy, De Luz Dam as herein provided shall at all times be operated in a manner which will permit the free passage of all of the water to the use of which the United States of America is entitled according to the laws of the State of California either as a result of its acquisition of the lands comprising Camp Joseph H. Pendleton and adjoining naval installations, and the rights to the use of water as a part of said acquisitions, or through actual use or prescription or both since the date of that acquisition, if any, and will not be administered or operated in any way which will impair or deplete the quantities of water to the use of which the United States of America would be entitled under the laws of the State of California had that structure not been built.

"SEC. 4. After the construction of the De Luz Dam, the official operating the reservoir shall deliver water to the Fallbrook Public Utility District, pursuant to regulations issued by the Secretary of the Interior, as follows:

"(1) One thousand eight hundred acre-feet in any year until the reservoir attains an active content of sixty-three thousand acre-feet;

"(2) Not in excess of four thousand eight hundred acre-feet in any year after the reservoir attains an active content of sixty-three thousand acre-feet and until said reservoir attains an active content of ninety-eight thousand acre-feet; and

"(3) Not in excess of eight thousand acre-feet in any year after the reservoir attains an active content of ninety-eight thousand acre-feet and until the conservation storage space of the reservoir has been filled.

"SEC. 5. The Secretary of the Army through the Chief of Engineers, acting in accordance with section 7 of the Flood Control Act of 1944 (58 Stat. 887) is authorized to utilize for purposes of flood control such portion of the capacity of De Luz Reservoir as may be available therefor.

"SEC. 6. There are hereby authorized to be appropriated, out of any money in the Treasury of the United States not otherwise appropriated, $22,636,000, the current estimated construction cost of the Santa Margarita River project, plus or minus such amounts as may be indicated by the engineering cost indices for this type of construction, and, in addition thereto, such sums as may be required to operate and maintain the said project.

"SEC. 7. From time to time the Attorney General, the Secretary of the Interior, and the Secretary of the Navy shall report to the Congress concerning the conditions specified in section 1 of this Act, and the first report thereon shall be submitted to the Congress no later than one year from the date of enactment of this Act."

And the Senate agree to the same.

Amend the title so as to read: "An Act to authorize the Secretary of the Interior to construct facilities to provide water for irrigation, municipal, domestic, military, and other uses from the Santa Margarita River, California, and for other purposes."

That the House recede from its disagreement to the amendment of the Senate to the title of the bill, and agree to the same.

A. L. MILLER,
WESLEY A. D'EWART,
JOHN P. SAYLOR,
CLAIR ENGLE,
WAYNE N. ASPINALL,
Managers on the Part of the House.

EUGENE D. MILLIKIN,
ARTHUR V. WATKINS,
THOMAS H. KUCHEL,
JAMES E. MURRAY,
CLINTON P. ANDERSON,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5731) to authorize the Secretary of the Interior to construct, operate, and maintain certain facilities to provide water for irrigation and domestic use from the Santa Margarita River, Calif., and the joint utilization of a dam and reservoir and other waterwork facilities by the Department of the Interior and the Department of the Navy, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

Amendment No. 1: The House accepts the Senate amendment.

Amendment No. 2: The House recedes from its disagreement to the amendment of the Senate and agrees to the same with an amendment as heretofore set forth.

The managers for the House expressed concern at conferences on this bill lest the language of section 2 (a), coupled with the requirement set forth in section 1 (b), that prior to construction the State of California shall have granted a permit to the United States for rights to the use of water for storage and diversion as provided in the bill, would serve as a roadblock to proceeding with construction of the project. As a result of this concern, a letter was sent to the Attorney General asking what doubts the Justice Department might have concerning possible adverse effect on riparian rights, under California law, from action taken to obtain permits for the appropriation of flood flows which would be stored by the De Luz Dam. By letter dated June 22, 1954, the Attorney General furnished the conferees a 17-page memorandum on the matter, the conclusion of which follows:

"Loss to the United States of America of invaluable presently existing, long-exercised, riparian rights to the use of water in the Santa Margarita River will ensue if the requisite steps are taken to prosecute to completion appropriative rights in that stream to meet demands for water at Camp Pendleton, the United States Naval Hospital, and the United States Naval Ammunition Depot."

The managers for the House have carefully studied this memorandum and they wish to make it clear that they are not convinced by this memorandum that the riparian rights of the United States could be prejudiced under California law by prosecution to completion of appropriative rights to flood waters. With this understanding of their position and upon pointing out that the memorandum bears out their original concern with respect to the language in section 2 (a), the managers for the House agreed not to press further for changes in the language in section 2 (a) as it became evident that such action could only end in permanent disagreement.

The House agrees to the title change made by the Senate.

A. L. MILLER,
WESLEY A. D'EWART,
JOHN P. SAYLOR,
CLAIR ENGLE,
WAYNE N. ASPINALL,
Managers on the Part of the House.

Mr. MILLER of Nebraska. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to, and a motion to reconsider was laid on the table.

JAMES I. SMITH

Mr. GRAHAM. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 1673) for the relief of James I. Smith, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Line 7, strike out "act." and insert "act".
Line 9, strike out "have" and insert "has."

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Senate amendments were concurred in, and a motion to reconsider was laid on the table.

HATSUKO KUNIYOSHI DILLON

Mr. GRAHAM. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 5578) for the relief of Hatsuko Kuniyoshi Dillon with an amendment of the Senate thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 1, line 10, strike out all after "act." over to and including line 3 on page 2.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

DOES THE AMERICAN MEDICAL ASSOCIATION BLOCK MEDICAL ADVANCEMENT?

Mr. SIEMINSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. SIEMINSKI. Mr. Speaker, for insertion at this point in the RECORD, under unanimous consent, are the remarks of a brave and fearless man; grievously wounded in World War II, Mr. Joseph F. Burke returned to America from the battlefields of Europe determined to brighten the plight of the wounded.

Here is his story as told the other day, on July 9, 1954, to the Astoria chapter, of the Disabled American Veterans in Long Island City, N. Y. Mr. Burke, a constituent, is 2d national junior vice commander of the DAV.

The core of Mr. Burke's remarks would suggest that the American Medical Association do its best to keep its muzzle on when it passes through soldier terrain, lest it bite the hand—Uncle Sam's—that has helped it so often; and, as the AMA moves, to be very careful, lest it knock over signs which read "men at work," especially when the work is directed at brightening the

plight of the wounded, now and for the future:

AMA: AMERICAN MEDICAL ASSOCIATION OR AGAINST MEDICAL ADVANCEMENT

(Remarks by Joseph F. Burke, second national junior vice commander, Disabled American Veterans)

There are times when a man stands on a public platform and feels the need to speak out against an organization. His evaluation of that organization is necessarily tempered because of the realization that the people who make up the membership are not at fault. I am in that situation now as regards the American Medical Association. The American people, or all peoples of the world, for that matter, are indebted to those who follow the Hippocratic oath. Your speaker is certainly one of those. On January 2, 1944, I was wounded on the approaches to Cassino, Italy, while serving my country in time of war. The repair of the left arm wound by amputation was one of the easier operative procedures performed by these masters of the medical profession. With both arms and legs damaged to the extent of smashed bones, torn muscles, and severed nerves, and internal wounds showing a number of punctures of the stomach, liver, lungs, and spleen, it is a marvel to me today that the surgical team of Major Brinker and Captain Moore was able to repair such bodily damage in six exhaustive and intensive hours of surgery. It was their skill and God's will that permits me to address you tonight. I say this not because I am unique, as there are many in this room who know that this is a typical case history of thousands of former GI's. The debt of gratitude I owe these men I will never be able to repay.

And because of my strong feeling against the policies of the American Medical Association, the remarks I make tonight reflect only my own personal opinion, and is not to be construed as being the feeling of the national organization of the Disabled American Veterans.

Yet, as a veteran I must speak out against the American Medical Association, who professes to represent the thoughts of the entire medical profession. Their expressions of disagreement with the Veterans' Administration hospital program has been injurious to the entire veteran population. The American people, through its elected representatives, has brought for the finest medical program for veterans, only to suffer attacks on their efforts to care for the wars' disabled. As a result, we face a serious curtailment of the Disabled American Veterans' program for veterans. We find that by advocating the return of mental and tubercular patients to city, county, and State institutions under the guise of a reduced tax program, the AMA reveals an immature outlook, since there will be no savings, because these local governments will be charged with too big a burden and the veterans will then receive less than the best of care as intended by our laws. We demand an opportunity to monitor the care to be given our mental and tubercular patients in Veterans' Administration hospitals instead of in city, county, and State institutions which at best would be inefficiently administered, and without any control by the Federal Government. Again, where would the savings be in taxes? It would cost just as much for the maintenance and care of these veterans in these lower institutions because they are overcrowded now. This influx of a veteran population would make conditions chaotic, with the resultant loss of medical efficiency and proper care to the patient, both veteran and nonveteran.

The Disabled American Veterans will continue to fight any approach of this sort under the guise of tax reduction. We believe that the American people will willingly accept the care of the war disabled and the necessary hospitalization and care of the indigent war veterans as a part of the cost of war. Congress recognized this responsibility and provided for it by laws.

It is true in the technical sense that the majority of our hospitalized veterans are admitted for disabilities labeled nonservice connected. However, honest medical opinion will admit that a probable relationship of the postservice disease or debility exists with the veteran's service. So, with this aforementioned probable relationship who can say that those who experienced the anxiety attached with the hazards of war have not incurred that basic lowered threshold of fatigue and susceptibility which invites illness. Since medical opinion may be altered with the new policy of the AMA this theory may not stand a professional argument today.

One of the strong points made by the AMA against the hospitalization of veterans was that their investigation disclosed that a veteran earning $50,000 a year was found hospitalized for a nonservice connected condition. Now I ask you, how many veterans today are making $50,000 a year? The argument is unfounded on the surface, and in addition, it was later discovered that the veteran had been, in fact, treated for a service connected condition. A second point made by the AMA against hospitalization was that the Veterans' Administration hospitals harbor an army of alcoholics. Now all of us in this room know the strict rules by which the Veterans' Administration hospitals operate. It is an established fact that a veteran will receive an immediate disciplinary discharge and not be eligible for readmission for 90 days if he displays drunkenness on the ward. This charge simply cannot be true because the regulations do not permit prolonged hospitalization for such a condition. In passing, please let me call your attention to the often expressed opinion of the medical profession that alcoholism is a disease; very often the manifestation of a mental disorder. Does the AMA now say that a disease should not be treated?

The AMA arguments against nonservice-connected cases appears to revolve around the issue of ability to pay. Certainly we realize that group hospitalization or insurance plans are available. However, being mainly group policies, they are available to only those whose employment status serves as a prerequisite. The employer or union can insure that the group plans are the best available for the employees and union members. Yet this takes care of only a certain segment of the population. There are private plans available to anyone outside of a company or union, but these are usually so honeycombed with so many clarifying and delimiting clauses that the average policy is not sufficient to meet an individual's need. Ability to pay is a misnomer in many cases even with the above plans which have limitations. The average cost for an operation and hospitalization at prevailing rates, room and board, nursing care, averages $12 a day. Medicines, treatments, X-rays, and doctor's visits are all extra. A reasonable figure for 1 month's hospitalization under these conditions would amount to $870 a month. The average head of a family earns $3,500 per year. Where is the ability to pay?

The AMA makes the claim that veteran's hospitalization programs are nothing but socialized medicine. Today we face these continuous increasing cries from one agency or another, "the road to socialism." Crying socialism is no argument since it is an established policy in politics today to label your opponent with an unpopular title. Bipartisan legislation over the years in our State and Nation have caused such things to come into being; social security, Federal old-age benefits, employment compensation, compulsory disability insurance, and Federal aid to education. Is the AMA opposed to these advances and progresses? Then why do they feel that taking care of or insuring the proper health of the veteran segment of the population is another step toward socialism?

Let us look at how the AMA people have benefited under the Government aid. Under the GI bill, how many doctors have increased their knowledge in their chosen field? How many ex-GI's have become doctors under the GI bill? Millions of dollars which have been advanced in this country for medical research has helped the advance of medicine. Was this socialism? The generosity of the American people, through charitable drives, contributed a great deal of money to medical research on cancer, tuberculosis, heart disease, crippled children's research, and muscular dystrophies. Would the AMA prefer that these necessary monies be obtained through taxation rather than this support of medicine by the people? Let me give you the benefit of my own experience with the shortsightedness of the AMA.

In World War II, I was one of 50,000 amputees and like everyone of them, my amputation healed and I found myself ready for an artificial arm. I found that since the Civil War, no improvements had been made in the prosthetics devices field. Now mind you, the doctor's job is not finished with the sewing of a stump; he is also responsible for the fitting of the amputee with a suitable limb and insure the ability to obtain some use of the artificial limb. Imagine our dismay when we found that the artificial hand was not expected to perform any function other than to serve as a cosmetic device; to appear two-handed. A heavy cumbersome thing which served better hanging in the closet. The useful device was a heavy hook which was still operated by rubber bands and a heavy cable which proceeded to tear the sleeves out of our clothing. I know the leg amputee had only about three times as many heartaches trying to walk in the crude limbs which served no better than the old fashioned peg. This was certainly disheartening to the new born amputee. However, near the end of World War II, the plight of the amputee became evident and a newspaperman, a retired officer who was himself an amputee, and a few other interested people from all walks of life convinced the Government to form a committee on prosthetic research.

This committee was formed by and of members unrelated with the AMA, who failed to encourage the project and refused it help. With the support of Congresswoman EDITH NOURSE ROGERS, the Army and the Navy, the limb manufacturers, this research began. The difficulties were tremendous and each year was a greater struggle for necessary funds from the Congress for its operation. At no time did the AMA offer its help, and it would have been greatly welcomed, and would have been an invaluable aid; yet, what are the committee's results? Its research programs at the Army Prosthetic Research Laboratory, Northrop Aviation Corp., New York University, the University of Southen California, and the International Business Machines produced artificial aids to greet the amputee of the Korean conflict and all amputees which were far superior to any available to World War II at the close of the war. This work is still going on today, and as yet the AMA as an organization has not contributed one iota toward the program.

I charge that the AMA no longer stands for American Medical Association, but it means to me "against medical advancement." In the halls of Congress as of this moment, facts against the AMA are being brought out. We know that isolationism as regards to people means that the concern of these people is for the United States itself. But even those people who believe in such a "go it

UNIVERSITY OF MICHIGAN LIBRARIES

alone" theory, would not go along with the AMA theory of isolationism in medicine. Medical research in other countries beside our own has brought forth many new and constructive theories as regards, for instance, cancer. The AMA is now fighting the introduction into this country of such proven research. I point out to you in passing that Sir Alexander Fleming, an Englishman, was not an American but contributed greatly in the advance with penicillin which has benefited mankind. Sister Kenny, an Australian, whose treatment of polio although proven beneficial time and time again has yet to receive AMA approval. This hierarchy which speaks for the medical profession in the United States with its dangerous control of medical thinking has done more to retard medical advancement than any uneducated or illiterate segment of our population in their refusal to accept medical treatment over the years. We as veterans and especially in our consideration of disabled veterans, which is the only reason for the DAV to be in existence, that is our creed, that "our mission as a Disabled American Veterans organization is not fulfilled until all our country's wartime disabled, their widows, and their dependents, have been adequately cared for," recognize as one of our greatest adversaries those who speak for the AMA. The crucifix of the AMA's making bears not the figure of Christ, but the war's mangled veteran. Since the days of George Washington, it was recognized that the war's disabled became more susceptible to the ravages of disease. We feel that the Veterans' Administration program of care for the hospitalized veteran at times can be improved. On the basis of results today, we know that it is the finest medical program in the country. We have more than 6,300 doctors, 865 dentists, and 13,800 trained nurses. This program of care for the veteran is without parallel in any other nation in the world. The debt of honor has been assumed by the American people with little or no complaint. The veteran himself is a taxpayer and yet the AMA for reasons best known to itself continues to fight the well regulated program of the United States Government. It fights the administration of President Eisenhower on the health program which he has offered to the Nation. I charge the AMA as being against medical advancement because of their own self-centered interests and of dictating to this Nation what the policies of health and welfare should be from their conception and their conception alone. The DAV will continue to fight the AMA on the issues of disabled veterans, and I hope all the people of this Nation will fight those few who speak for the AMA, who resist the health and research programs necessary for the well-being of our country.

SPECIAL ORDER GRANTED

Mr. MADDEN asked and was given permission to address the House for 30 minutes on Wednesday, next following the legislative program of the day and any special orders heretofore entered.

AUTHORIZING THE SPEAKER TO RECOGNIZE MEMBERS ON MOTIONS TO SUSPEND THE RULES

Mr. HALLECK. Mr. Speaker, I ask unanimous consent that it shall be in order on Wednesday, July 21, for the Speaker to recognize Members for motions to suspend the rules.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

RULES FOR PROCEDURE ON REVIEW OF DECISIONS OF UNITED STATES TAX COURT

Mr. KEATING. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H. R. 1067) to authorize the Supreme Court of the United States to make and publish rules for procedure on review of decisions of the Tax Court of the United States, with a Senate amendment, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out all after the enacting clause and insert "That chapter 131 of title 28 of the United States Code be amended by adding at the end thereof a new section, as follows:

"'§ 2074. Rules for review of decisions of the Tax Court of the United States

"'The Supreme Court shall have the power to prescribe, and from time to time amend, uniform rules for the filing of petitions of notices of appeal, the preparation of records, and the practice, forms, and procedure in the several United States Courts of Appeals in proceedings for review of decisions of the Tax Court of the United States.

"'Such rules shall neither abridge, enlarge, nor modify the substantive rights of any litigant.

"'Such rules shall not take effect until they shall have been reported to Congress by the Chief Justice at or after the beginning of a regular session thereof but not later than the 1st day of May, and until the expiration of 90 days after they have been thus reported.'

"SEC. 2. The chapter analysis of chapter 131 of title 28 of the United States Code immediately preceding section 2071 is amended by adding at the end thereof the following:

"'2074. Rules for review of decisions of the Tax Court of the United States'."

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Senate amendment was agreed to, and a motion to reconsider was laid on the table.

REPORTS FROM COMMITTEE ON RULES

Mr. ALLEN of Illinois. Mr. Speaker, I ask unanimous consent that the Rules Committee may have until midnight tonight to file any rules.

The SPEAKER. Is there objection?

There was no objection.

TO AMEND THE ATOMIC ENERGY ACT OF 1946, AS AMENDED

Mr. ALLEN of Illinois, from the Committee on Rules, reported the following privileged resolution (H. Res. 630, Rept. No. 2214), which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 9757) to amend the Atomic Energy Act of 1946, as amended, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 4 hours, to be equally divided and controlled by the chairman and ranking minority member of the Joint Committee on Atomic Energy, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

SPECIAL COMMITTEE TO INVESTIGATE EXPENDITURES OF CANDIDATES FOR THE HOUSE OF REPRESENTATIVES

Mr. ALLEN of Illinois, from the Committee on Rules, reported the following privileged resolution (H. Res. 439, Rept. No. 2215), which was referred to the House Calendar and ordered to be printed:

Resolved, That a special committee of five Members be appointed by the Speaker of the House of Representatives to investigate and report to the House not later than January 3, 1955, with respect to the following matters:

1. The extent and nature of expenditures made by all candidates for the House of Representatives in connection with their campaign for nomination and election to such office.

2. The amounts subscribed, contributed, or expended, and the value of services rendered, and facilities made available (including personal services, use of advertising space, radio and television time, office space, moving-picture films, and automobile and other transportation facilities) by any individual, individuals, or group of individuals, committee, partnership, corporation, or labor union, to or on behalf of each such candidate in connection with any such campaign or for the purpose of influencing the votes cast or to be cast at any convention or election held in 1954 to which a candidate for the House of Representatives is to be nominated or elected.

3. The use of any other means or influence (including the promise or use of patronage) for the purpose of aiding or influencing the nomination or election of any such candidates.

4. The amounts, if any, raised, contributed, and expended by any individual, individuals, or group of individuals, committee, partnership, corporation, or labor union, including any political committee thereof, in connection with any such election, and the amounts received by any political committee from any corporation, labor union, individual, individuals, or group of individuals, committee, or partnership.

5. The violations, if any, of the following statutes of the United States:

(a) The Federal Corrupt Practices Act.

(b) The act of August 2, 1939, as amended, relating to pernicious political activities, commonly referred to as the Hatch Act.

(c) The provisions of section 304, Public Law 101, 80th Congress, chapter 120, 1st session, referred to as the Labor Management Relations Act, 1947.

(d) Any statute or legislative act of the United States, or of the State within which a candidate is seeking nomination or reelection to the House of Representatives, the violation of which Federal or State statute, or statutes, would affect the qualification of a Member of the House of Representatives within the meaning of article I, section 5, of the Constitution of the United States.

6. Such other matters relating to the election of Members of the House of Representatives in 1954, and the campaigns of candi-

dates in connection therewith, as the committee deems to be of public interest, and which in its opinion will aid the House of Representatives in enacting remedial legislation, or in deciding contests that may be instituted involving the right to a seat in the House of Representatives.

7. The committee is authorized to act upon its own motion and upon such information as in its judgment may be reasonable or reliable. Upon complaint being made to the committee under oath, by any person, candidate, or political committee, setting forth allegations as to facts which, under this resolution, it would be the duty of said committee to investigate, the committee shall investigate such charges as fully as though it were acting upon its own motion, unless, after a hearing upon such complaint, the committee shall find that the allegations in such complaint are immaterial or untrue. All hearings before the committee, and before any duly authorized subcommittee thereof, shall be public, and all orders and decisions of the committee, and of any such subcommittee shall be public.

For the purpose of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to hold such public hearings, to sit and act at such times and places during the sessions, recesses, and adjourned periods of the 83d Congress, to employ such attorneys, experts, clerical, and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such correspondence, books, papers, and documents, to administer such oaths, and to take such testimony as it deems advisable. Subpenas may be issued under the signature of the chairman of the committee or any subcommittee, or by any member designated by such chairman and may be served by any person designated by any such chairman or member.

8. The committee is authorized and directed to report promptly any and all violations of any Federal or State statutes in connection with the matters and things mentioned herein to the Attorney General of the United States in order that he may take such official action as may be proper.

9. Every person who, having been summoned as a witness by authority of said committee or any subcommittee thereof, willfully makes default, or who having appeared, refuses to answer any question pertinent to the investigation heretofore authorized, shall be held to the penalties prescribed by law.

That said committee is authorized and directed to file interim reports whenever in the judgment of the majority of the committee, or of a subcommittee conducting portions of said investigation, the public interest will be best served by the filing of said interim reports, and in no event shall the final report of said committee be filed later than January 3, 1955, as hereinabove provided.

AMENDING TITLE II OF THE CAREER COMPENSATION ACT OF 1949

Mr. LATHAM. Mr. Speaker, I call up House resolution (H. Res. 624) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3539) to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from New York is recognized for 1 hour.

Mr. LATHAM. Mr. Speaker, I yield 30 minutes to the gentleman from Virginia [Mr. SMITH].

I yield myself such time as I may require.

Mr. LATHAM. Mr. Speaker, I rise to urge the adoption of House Resolution 624 which will make in order the consideration of the bill (S. 3539) to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services.

House Resolution 624 provides for an open rule with 1 hour of general debate.

Mr. Speaker, this bill proposes to revise upward the scale for computing reenlistment bonuses paid under the Career Compensation Act. Under the proposed legislation, payments will be based upon the number of years for which a person reenlists, computed upon the grade in which an enlisted member is serving at the time his enlistment expires preceding his reenlistment.

First reenlistment bonuses would be greater than for the second and become progressively less for the third and fourth reenlistments. The reason for this is that the number of men reenlisting at the end of the first enlistment period is much smaller than after the second, third, and fourth. It is therefore important that the incentive for enlistment be highest at the end of the first enlistment period.

Mr. Speaker, according to the report on this bill, the maximum amount of reenlistment bonuses to which an individual would be entitled to under this bill would be $2,000. S. 3539 would raise the amount of bonuses to $560 more than is allowed under the present limitation.

The bill would also provide that no reenlistment bonuses would accrue after the completion of 20 years of service, notwithstanding the maximum bonus allowance.

Mr. Speaker, the bill attempts to revise the reenlistment bonus scale so that the individual who has advanced up in the services through promotion would receive a larger bonus for reenlistment than the individual who has not progressed in rank over the years.

This bill should receive the attention of the House membership for the simple reason that it is vital that the United States maintain a strong military force.

Mr. Speaker, I hope that the rule will be adopted by the House without delay and that we may proceed to the consideration of the bill.

Mr. SMITH of Virginia. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I have no objection to the consideration of this rule or to the bill which it makes in order. I know of no objection to the bill.

My purpose in taking this time is to say to the chairman of the committee that I think the minority is at least entitled to the courtesy of being informed as to what rules are to be called up so that we may know just what to expect and what is going to be done.

I did not know this rule was to be called up. Neither the rule nor the bill were available at the desk; we had to send for them and just succeeded in getting them.

I had been informed that another bill was to be called up.

I think I am easy to get along with and I am not going to complain unduly, but I take this moment to say that I shall insist from now on that we be given ample notice of what rules are going to be called up in the morning. I do not want to consume the time of the House by quorum calls but I shall certainly be forced to do that in order to keep ourselves on this side informed as to what is the program for the day.

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman from Illinois.

Mr. ARENDS. As was included in the whip notice put out at the beginning of the week certain bills were listed, including this one, should rules be granted. When I received notice that the Committee on Rules had kindly granted a rule I discussed it with the ranking member of the Armed Services Committee, the gentleman from Georgia [Mr. VINSON], and he agreed that it would be all right to call it up. So we thought there was no misunderstanding whatsoever and that the bill could be considered at this particular time.

Mr. SMITH of Virginia. I am quite modest about these things and I do not want to inject myself into things needlessly, but I do hope the leadership on the other side, and especially my chairman, will remember the fact that we have a minority on the Rules Committee, and that the rule is called up before the bill is called up.

I happen to be the ranking minority member of the Committee on Rules and would like the courtesy of being advised as to what is going to be called up mornings by way of rules.

Mr. ALLEN of Illinois. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield.

Mr. ALLEN of Illinois. I would say to the gentleman from Virginia that I am sorry about this. Frankly, I did not know what was coming up myself.

Mr. SMITH of Virginia. I hope that in the future the leadership on the majority side will inform the chairman of the Committee on Rules what it is expected to bring up on the floor the following day.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman from Indiana.

Mr. HALLECK. Certainly the gentleman does not undertake by reason of this particular circumstance today to mean that we have not been very, very diligent in informing the minority as to what

UNIVERSITY OF MICHIGAN LIBRARIES

was coming up. We try to get out as complete a whip notice as possible, but sometimes we are not able to be definite and cannot always put on the whip notice a precise time the bill will be called. Certainly that is something to be desired and I am sorry that the gentleman is discomforted by this particular operation. Possibly the Rules Committee should have been notified along with members of the legislative committee. However, the gentleman voted for the rule on yesterday or at least was present when a vote was taken and he might have been informed that these measures would be coming along for consideration.

Mr. SMITH of Virginia. I do not want to prolong this discussion. I just want to say that I think we are entitled to the courtesy of knowing what rules are going to be called up each morning before we are called upon to speak. We ought to know and have time, preferably the day before.

While I am on my feet I might mention what happened yesterday. Usually we have 10, 15, or 20 minutes in the morning before a rule is called up. I did not know that a rule was going to be immediately called up. I walked in here at 5 minutes past 12 yesterday. My chairman had called up a rule, it had been read and discussed in 5 minutes, at which time he was about to move the previous question on the rule. It is a very simple thing to give us a telephone call and say that today we are going to call up a certain rule. I hope that will be done in the future. While I am on my feet, may I inquire what is the program today?

Mr. ARENDS. I was about to inform the gentleman. After we complete this bill we want to call up the so-called tanker bill, which provides for 1 hour general debate.

Mr. SMITH of Virginia. And following consideration of the tanker bill?

Mr. ARENDS. I do not know how long these two will take and whether we will have time to go on with the next one or not.

Mr. SMITH of Virginia. The program for today will be improvised as we proceed?

Mr. ARENDS. Certainly we will let the gentleman know in ample time.

Mr. LATHAM. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. ARENDS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3539) to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill S. 3539, with Mr. HOLMES in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. ARENDS. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, the purpose of the proposed legislation is to revise upward the scale for computing reenlistment bonuses paid under the Career Compensation Act. Under the proposed legislation, payments will be based upon the number of years for which a person reenlists computed upon the grade in which an enlisted member is serving at the time his enlistment expires preceding his new reenlistment.

Likewise, since the first reenlistment rates are now running at a seriously low rate in comparison to second, third, and succeeding reenlistments, the amounts paid for reenlistments are greater for the first reenlistment and become progressively less for the second, third, and fourth reenlistments.

At present an individual who reenlists for a period of 2 years receives a bonus of $40; for 3 years, $90; for 4 years, $160; for five years, $250; and for 6 years, $360. These payments are made regardless of grade and regardless of whether or not it is a second, third, or fourth reenlistment. There is a present maximum bonus of $1,440 to any one individual.

Under the proposed legislation a person who, upon completing his first enlistment, reenlists for 2 to 6 years would receive 30 days' basic pay of his grade, times the number of years for which he reenlists, except that an E–1—that is, the lowest enlisted grade—would only receive two-thirds of a month's basic pay times the number of years for which he reenlists. Obviously, an individual who has not advanced beyond the grade of E–1 in his first enlistment has not satisfactorily progressed in the Armed Forces at least to the extent of entitlement to a higher reenlistment bonus. Upon the second reenlistment individuals receive 20 days' basic pay times the number of years of the reenlistment except that in this case no bonus is paid to individuals in the grades of E–1 or E–2—the two lowest enlisted grades. The third reenlistment entitles an individual to 10 days' basic pay times the number of years for which he reenlists, except that no bonus is paid to an individuad who is an E–3, E–2, or E–1. The fourth, and subsequent reenlistment entitles an individual to 5 days' basic pay times the number of years of the reenlistment contract except that no bonus is paid to E–3's, E–2's, or E–1's. The basic pay, of course, is determined by the grade in which serving at the time the present enlistment expires. The maximum amount of reenlistment bonuses to which an individual is entitled is $2,000, under the proposed legislation, an increase of $560 over the present limitation.

No reenlistment bonus accrues after the completion of 20 years of service, notwithstanding the maximum bonus allowance. In other words, an individual who reenlists in his 18th year for the fourth time will only be paid 2 years' reenlistment bonus, since all service beyond 20 years is noncreditable.

The new reenlistment bonus will not be applicable to anyone who is discharged more than 90 days preceding the date of enactment of the proposed legislation, and likewise will not be applicable to anyone who reenlists prior to the enactment of the proposed legislation. The Committee on Armed Services considered the feasibility of making the proposed legislation retroactive to include those who recently reenlisted and those discharged more than 90 days preceding the enactment of the legislation. The committee determined that such action was not feasible, since no cutoff date could be determined which would be fair to all persons involved.

The estimated annual cost is approximately $67,921,598 for fiscal year 1955.

The justification for the proposed legislation is to be found in the seriously declining reenlistment rates prevalent among all the services. It is estimated that a 5-percent increase in reenlistment rates would save the Government approximately $82 million in replacement costs. Thus, if the proposed legislation results in a 5-percent increase in reenlistment rates it will more than offset the annual cost of the proposed legislation.

Mr. VINSON. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the purpose of the bill S. 3539, is to increase the present reenlistment bonuses which are paid to individuals who reenlist in the Armed Forces.

Now the justification for this bill is simple. Our overall reenlistment rates have dropped from an average of 59 percent of those eligible during fiscal year 1950 to an average rate of only 31 percent in the first 6 months of fiscal year 1954. This is a staggering drop in reenlistment rates. It costs approximately $3,200 to obtain and train a replacement for a man who does not reenlist. Just think of that and you can easily understand why every reasonable effort should be expended in order to encourage men to reenlist.

Now that is all this bill does—it adds new inducements for enlisted men to make the services a career.

Not only does it save us the replacement cost, but it will also improve the overall capabilities of our Armed Forces if we can keep these men in the service who have been trained in the multitude of specialties that make up the requirements for our Armed Forces.

The cost of this bill, some $68 million a year, will be met if we can increase our reenlistment rates by 4½ percent over and above that which prevails today. Anything beyond that will result in substantial savings to the Government.

Now, I can assure you that the Committee on Armed Services weighed carefully the cost of the bill against the potential gain. We would not have reported the bill if we had concluded that the bill would not result in increasing our reenlistment rates, but we think that this bill will have the desired results.

Let us just take a look at what this bill does. Under present law when an individual reenlists it makes no difference what his rating is or whether it is the first, second, third, or fourth reenlistment or how many years of service he has. He gets $40 if he reenlists for 2 years, $90 if he reenlists for 3 years, $160 for a 4-year reenlistment, $250 for 5 years, and $360 if he reenlists for 6

years. The whole system will be changed under this bill. First of all, the amount of the reenlistment bonus will be determined by the rate or rank of the individual reenlisting, multiplied by the number of years for which he reenlists. And, secondly, the number of days' pay which he is given for each reenlistment, multiplied by the number of years of the reenlistment, decreases as the number of reenlistments increases. Now, let me give you some examples:

Let us say that a private first class in the Army is completing a 4-year enlistment and he wants to reenlist for 4 years. For pay purposes he has over 2 years of service but less than 4, so if he reenlists for 4 years he will receive the pay of a private first class with over 2 years of service, that is, $107 per month, multiplied by the 4 years for which he reenlists. That means he will receive $428. Under the old law he would have received only $160. Now, let us assume that that same man comes up for reenlistment again and by this time he is a sergeant and he wants to reenlist again for 4 years. He now has equity built up for retirement, so as a result, since it is his second reenlistment, he only gets 20 days' basic pay, or two-thirds of $168, which is $112, multiplied by the number of years for which he reenlists, which in this case would be 4 years times $112, or $448—a little more money because of his higher rating.

Now if that same man again reenlists for a third reenlistment and is a sergeant first-class, he will have over 10 years, but less than 12 years of service for pay purposes, but since it is his third reenlistment, he will receive only one-third of the pay of a sergeant first-class, or approximately $68, multiplied by the number of years for which he reenlists, or $272. The reason for this decrease is that he now has a greater equity built up toward retirement and the inducement can be lowered.

So you can see that the bulk of the money goes to the man who will reenlist for the first and second time. This is of fundamental importance because the largest group of potential reenlistees are those who complete their first enlistment, but this is also the lowest reenlistment rate for all of the services.

As a matter of fact, in fiscal 1954 only 20 percent of the individuals who completed their first enlistment who were eligible for reenlistment, actually did reenlist and the estimate for fiscal 1955 is only 10 percent—a fantastic drop from the even low rate which prevailed last year.

I repeat, Mr. Chairman, that this bill, while costly, will result in large savings to the Government if it can increase our reenlistment rate by as little as 5 percent. Anything beyond that will result in substantial savings to the Federal Government.

Now I would like to discuss for a moment just how we arrive at the cost of this bill.

The estimate of the $68 million cost for the reenlistment bonus bill is based upon the expectation that approximately 243,000 enlisted men will reenlist during fiscal 1955. This will result in an increased cost per individual under the proposed legislation of approximately $278.83. In other words, the average cost under existing law is $258 per man to reenlist versus the anticipated average new cost under the new bill of $536.93. Thus if the anticipated number of men who reenlist is realized, the cost will be 243,593 times the increased cost of $278.83 per man, or $67,922,000.

In other words, the new bill will cost $68 million, based on the anticipated rate of reenlistments, which does not reflect the results of any increased reenlistments. If the proposed bill results in a 5 percent increase in reenlistment rates—approximately 26,000 more reenlistments—then there will be a reduction in replacement costs of approximately $83 million. The reenlistment bonus cost for this group would be $6,600,000 under present law and an additional $7 million under the proposed legislation, or a total of approximately $13,800,000. Since it would cost $83 million to replace these 25,000 individuals, it is obvious that the difference between the $13,800,000 in reenlistment bonuses and the $83 million in replacement costs would result in approximately $69 million savings, or the annual cost of the proposed legislation.

The average replacement cost of $3,200 per individual includes the cost associated with the individual's first 6 months of service while in training and travel status. Included in the cost are pay and allowances, recruiting and travel expense, pay and allowances for overhead personnel chargeable to training, a prorated portion of maintenance and operations costs chargeable to training as well as other identifiable miscellaneous costs.

I believe this will clarify any questions that may arise concerning the costs of the bill.

I heartily endorse the enactment of S. 3539.

Mr. EBERHARTER. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield to the gentleman from Pennsylvania.

Mr. EBERHARTER. I should like to say to the gentleman from Georgia [Mr. VINSON] that it seems to me that one of the main reasons for the decline in enlistments is the low morale brought about by the taking away of the so-called fringe benefits which the enlisted personnel have been accustomed to. In other words they have had taken away the privileges of the PX, and such things as that, which has disturbed a great many of the enlisted personnel.

Mr. VINSON. The gentleman from Pennsylvania may be correct as to other reasons why men are not reenlisting. I have not been addressing myself to that phase of it but have merely stated the facts; there are only 31 percent reenlisting. There may be various reasons why they do not reenlist and no doubt the reasons suggested by the gentleman from Pennsylvania are some of them. We have tried to solve some of these problems of fringe benefits in previous bills reported by our committee.

Mr. EBERHARTER. I merely wanted to call that to the attention of the committee, because I think it is a serious matter. It is costing the Government a good bit of money because of the loss of these reenlistments.

Mr. VINSON. No doubt it has had some effect on the number of reenlistments. The distinguished gentleman from Illinois [Mr. ARENDS] explained in considerable detail the workings of this bill.

Mr. CUNNINGHAM. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield to the gentleman from Iowa.

Mr. CUNNINGHAM. I should like to ask the gentleman if this is not a correct statement: Upon the passage of this bill if there are no more reenlistments, then it will cost the Government not one penny; but if, on the other hand, this bill does induce a certain number to reenlist, it will do two things: First, it will save money; and, second, it will increase the standard of our service.

Mr. VINSON. The gentleman is correct. In that connection, it costs approximately $3,200 to train 1 recruit. If we can get more men to reenlist we can save money on the training program.

Mr. CUNNINGHAM. The difference between the $3,200 and what the bonus would be.

Mr. VINSON. It could be figured that way.

Mr. FORD. Mr. Chairman, will the gentleman yield?

Mr. VINSON. I yield to the gentleman from Michigan.

Mr. FORD. As chairman of the subcommittee on appropriations for the Department of the Army, I should like to say that we are very cognizant of the poor rate of reenlistments that has prevailed over the past several years. We, as a committee, are very much disturbed about the situation. We are very conscious of the added cost that it takes to train new men, in addition to which, it takes trained people out of combat units where they could be doing a better job for the overall defense effort. I am sure that I speak for the three members on our side of the subcommittee on appropriations for the Department of the Army in endorsing this proposed legislation. We are more than glad to see this immediate outlay for, in the long run, it will cost less and give us a better Army for this country.

Mr. VINSON. Mr. Chairman, in view of the statement by the distinguished gentleman from Michigan [Mr. FORD], I think there is no need for me to take any further time.

Mr. ARENDS. Mr. Chairman, I have no more requests for time.

Mr. VINSON. I have no more requests for time, Mr. Chairman.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That section 207 of the Career Compensation Act of 1949 (ch. 681, 63 Stat. 811), as amended (37 U. S. C. 238), is further amended by designating subsection "(e)" as subsection "(f)" and by inserting a new subsection (e), as follows:

"(e) This section does not apply to—

"(1) any person who originally enlists in a uniformed service after the date of enactment of this amendatory act;

"(2) any member of a uniformed service in active Federal service on the date of enactment of this amendatory act who elects

UNIVERSITY OF MICHIGAN LIBRARIES

to be covered by section 208 of this act and who is otherwise eligible for the benefits of that section;

"(3) any person who—

"(A) was discharged or released from active duty from a uniformed service not more than 90 days before the date of enactment of this amendatory act,

"(B) reenlists in that service within 90 days after the date of his discharge or release from active duty,

"(C) elects to be covered by section 208 of this act, and

"(D) is otherwise eligible for the benefits of that section; or

"(4) any person covered by clause (2) or (3) who at any time elects, or has elected, to be covered by section 208 of this act."

SEC. 2. The Career Compensation Act of 1949, as amended, is further amended by inserting the following new section at the end of title II:

"SEC. 208. (a) Subject to subsections (b) and (c) of this section, a member of a uniformed service who reenlists in the regular component of the service concerned within 90 days after the date of his discharge or release from active duty, and who is not covered by section 207 of this act, is entitled to a bonus computed according to the following table:

"Reenlistment involved [1]	(Column 1) Take	(Column 2) Multiply by
First	Monthly basic pay to which the member was entitled at the time of discharge.[2]	Number of years specified in reenlistment contract, or six, if none specified.[3]
Second	Two-thirds of the monthly basic pay to which the member was entitled at the time of discharge.[4]	Number of years specified in reenlistment contract, or six, if none specified.[3]
Third	One-third of the monthly basic pay to which the member was entitled at the time of discharge.[5]	Number of years specified in reenlistment contract, or six, if none specified.[3]
Fourth (and subsequent)	One-sixth of the monthly basic pay to which the member was entitled at the time of discharge.[4]	Number of years specified in reenlistment contract, or six, if none specified.[3]

[1] Any reenlistment when a bonus was not authorized is not counted.
[2] Two-thirds of the monthly basic pay in the case of a member in pay grade E-1 at the time of discharge.
[3] On the sixth anniversary of an indefinite reenlistment, and on each anniversary thereafter, the member is entitled to a bonus equal to one-third of the monthly basic pay to which he is entitled on that anniversary date.
[4] No bonus may be paid to a member in pay grade E-1 or E-2 at the time of discharge.
[5] No bonus may be paid to a member in pay grade E-1, E-2, or E-3 at the time of discharge.

"(b) No bonus may be paid to a member who reenlists—

"(1) during his prescribed period of basic recruit training; or

"(2) after completing a total of 20 years of active Federal service.

The bonus payable to a member who reenlists before completing a total of 20 years of active Federal service, but who will under that reenlistment complete more than 20 years of such service, is computed by using as a multiplier only that number of years which, when added to his previous service, totals 20 years.

"(c) The cumulative amount which may be paid to a member under this section, or under this section and any other provision of law authorizing reenlistment bonuses, may not exceed $2,000.

"(d) An officer of a uniformed service who reenlists in that active service within 90 days after his release from active duty as an officer is entitled to a bonus computed according to the table in subsection (a), if he served in an enlisted status in that service immediately before serving as an officer. For the purpose of this subsection, the monthly basic pay (or appropriate fraction if the member received a bonus for a prior reenlistment) of the grade in which the member is enlisted (computed in accordance with the cumulative years of service of the member) is to be used in column 1 of the table set forth under subsection (a) instead of the monthly basic pay to which he was entitled at the time of his release from active duty as an officer.

"(e) In this section, 'reenlistment' means—

"(1) an enlistment in a regular component of a uniformed service after compulsory or voluntary active duty in that service; or

"(2) a voluntary extension of an enlistment for 2 or more years.

"(f) Under such regulations as may be approved by the Secretary of Defense, or by the Secretary of the Treasury with respect to Coast Guard personnel, a member of a uniformed service who voluntarily, or because of his own misconduct, does not complete the term of enlistment for which he was paid a bonus under this section shall refund that percentage of the bonus that the unexpired part of his enlistment is of the total enlistment period for which the bonus was paid.

"(g) The Secretary concerned may prescribe regulations for the administration of this section in his Department."

Mr. McCORMACK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have only a few remarks to make on this bill, and those of a commendatory nature. I think the bill addresses itself to a very serious question, and that it is a decided step in the right direction in helping solve one of the problems confronting those who are members of our armed services.

I recall reading not long ago some remarks made by Secretary Talbott of the Air Force. I think the remarks he made were uttered in Texas, but that is immaterial. I was very much impressed by what he said in the course of his remarks to the effect that the reenlistments in the Air Force had declined from 60 percent to 30 percent. He also said that if we could get the reenlistments up to 80 percent in the Air Force, it would result in a saving to the Government each year of from $1.5 to $2 billions. That saving would come about if we could keep our trained men in the service and give them reasonable inducements to reenlist. These trained men feel they cannot reenlist, for any number of reasons, and there is the necessity for the Government to spend more money to train new men.

Secretary Talbott's observation made a very pointed impression upon my mind. I take these few minutes to call the attention of my colleagues to this very effective, informative, and impressive speech made by Secretary Talbott, which certainly is of great significance in connection with the bill that is before the Committee of the Whole at the present time.

This bill is far more important than its terms and provisions would indicate. Its significance cannot be underestimated. It is a decided step in the right direction, not only in keeping trained personnel in our armed services through offering them an inducement to reenlist, but also in conveying to them the fact that the Congress of the United States is considering not only the problems that confront them as members of the various branches of the armed services but the economic problems that confront the families of each of them. I congratulate the committee on reporting out this bill.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair Mr. HOLMES, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (S. 3539) to further amend title II of the Career Compensation Act of 1939, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services, pursuant to House Resolution 624, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the third reading of the bill.

The bill was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed, and a motion to reconsider was laid on the table.

AUTHORIZING CONSTRUCTION OF TANKERS

Mr. LATHAM. Mr. Speaker, I call up the resolution (H. Res. 625) providing for the consideration of S. 3458, a bill to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. LATHAM. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi [Mr. COLMER], and I now yield myself such time as I may require.

Mr. Speaker, I rise to urge the adoption of House Resolution 625, which will make

in order the consideration of the bill S. 3458, to authorize the long-term charter of tankers by the Secretary of the Navy and for other purposes.

House Resolution 625 provides for an open rule with 1 hour of general debate on the bill itself.

Mr. Speaker, S. 3458 proposes to authorize the Secretary of the Navy to charter on a time-charter basis for a period of 10 years from completion, 20 tankers each with a capacity of approximately 25,000 deadweight tons. These tankers would be capable of a sustained speed of not less than 18 knots and would be built in American shipyards within 2 years after the contract to charter.

As the Senate passed the bill, Mr. Speaker, S. 3458 would provide that upon being awarded a time charter, a private operator with whom such contract was made, would proceed with the construction of the vessel. Upon completion, the vessel would be operated for the United States Military Sea Transportation Service during the time-charter period in meeting the requirements of our Armed Forces for petroleum products. Upon expiration of the charter period, unless the charter were renewed, the vessel would revert to private use.

During the operation of the tanker for the Military Sea Transportation Service, under time charter, the private operator would pay the expenses of insurance, overhead, repairs, and maintenance of the ships as well as the wages of the crew and other expenses. The private operator would also absorb depreciation, interest and similar financial expenses of the investment in the tankers.

The House Committee on Armed Services, however, struck all after the enacting clause in the Senate bill because the committee disapproved of the fact that under the Senate plan after the 10-year charter period was over, the ships would not belong to the United States although two-thirds of their cost would have been amortized over the 10-year period through payments by the United States under the charter contract. The report brought out the fact that the House plan of direct construction of these tankers with appropriated funds will cost the United States $95,000 less per ship or a total of $19 million over a 10-year period.

Mr. Speaker, I feel that the House plan is a good one and that it makes sense from the point of view of practical business. There is no point in not actually owning these tankers after the Government pays about two-thirds of the cost involved in the amortization of these vessels. The House committee's plan seems to me to be a happy compromise and appears to be worthy of favorable action by the House. I hope that the rule will be adopted and that the bill itself will pass.

Mr. COLMER. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, as the gentleman from New York just explained, this bill authorizes the construction of a fleet of modern, fast, tanker ships of some 25,000-ton capacity. The bill has a twofold purpose. One is to give the Navy the necessary tankers to carry the fuel which is needed in the operation of our Navy to any and all parts of the world wherever it may be required. Unfortunately, with the rapid progress and advancement of science in all fields, including weapons, transportation, and so on, many types of equipment rapidly become obsolete. While the Navy now has a dozen tankers, mostly in mothballs, they do not have the modern tankers necessary to deal with present-day operations. Therefore, if an emergency should arise we would be caught with too little and too late, as we all know has happened in the past. Mr. Speaker, it will be noted that there is considerable difference in the bill as passed by the other body and the bill as reported out by the Armed Services Committee of the House.

Personally, I am of the opinion, from my knowledge of the subject, that the House bill is a great improvement over the Senate bill, in that under the House version of the bill the Navy will build and operate these tankers, rather than as provided under the Senate bill, having them under charter. In the long run, the Government will save money on this operation, and in my opinion it is a much better bill.

The second purpose of the bill, while it may be considered a minor purpose, is nevertheless a necessary purpose. That objective is to keep our shipyards alerted, and to keep the shipyard organization going to furnish employment so that if we should get into an emergency we would have an organization which could build the necessary ships.

Again, Mr. Speaker, and in this connection I hope that I can with propriety point out that this means that the Ingalls Shipbuilding Corp., situated in my hometown of Pascagoula, Miss., will have an opportunity to bid upon and construct some of these valuable ships. I mention this particular yard because of its valuable contribution to our defense effort in the past at a time when we needed good ships and needed them in a hurry. This yard met the test. It has not only built merchant ships, but it has built ships for our Navy. Because of the splendid labor supply and the high character of its ship construction, it enjoys an unexcelled rating with both the Merchant Marine and Navy Departments of our Government as well as private owners.

Mr. Speaker, while I stated a few moments ago the philosophy of the House bill is different from the bill passed by its companion body, I anticipate no difficulty in the two bodies getting together in conference on a bill which will be to the best interest of the country. Certainly this should be done speedily in order that the necessary appropriations can be included in the usual supplemental appropriation bill to be passed before the Congress adjourns. In view of the great need and necessity therefor, I feel confident that this will be accomplished.

Mr. Speaker, there is really no controversy over this rule. I anticipate none on the bill itself. I have no request for time on this side and I therefore yield back the remainder of my time in order that the gentleman from New York [Mr. LATHAM] may ask for the adoption of the rule.

While unquestionably much progress has been made in faster, more efficient and more deadly submarines, and while it is equally true that newer and more efficient methods have been developed in antisubmarine warfare, there seems to be no doubt left in the minds of our military strategists that there is still a great demand for speed as an additional method for our merchant shipping as heretofore. There was testimony before the Committee for the need for new, large, and fast tankers which should be immediately available as an important part of our national defense.

The bill which this resolution takes under consideration makes provision for such ships. In fact, it provides for a program of 20 tankers with a deadweight tonnage of 25,000 tons, a speed of not less than 18 knots when fully loaded, a length of approximately 600 feet, a beam not in excess of 84 feet, and a draft of not more than 32 feet fully loaded.

It is estimated that the overall cost will be $150 million.

Mr. Speaker, I should specifically like to commend the Committee on Armed Services for writing into the bill a provision requiring that these ships be built in the United States. Moreover, it is also commendable that there was testimony to the effect that these ships in line with the policy of keeping our shipyards in an ever-alerted position would be constructed in various sections of the country. This is fair and just. This means that these valuable ships will be built in yards on the Gulf of Mexico as well as on the east and possibly the west coast. It means valuable employment for our shipyards' workers in a slack period. It means a continuous supply of available shipbuilding personnel and labor generally.

Mr. LATHAM. Mr. Speaker, there being no further requests for time, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. ARENDS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill S. 3458, with Mr. LECOMPTE in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Illinois [Mr. ARENDS] will be recognized for 30 minutes, and the gentleman from Georgia [Mr. VINSON] will be recognized for 30 minutes.

The Chair recognizes the gentleman from Illinois [Mr. ARENDS].

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. AREND. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, S. 3458 would provide for the construction of 20 high-speed tankers which are urgently needed by the Military Sea Transportation Service.

The Senate version of the bill would have authorized the Secretary of the Navy to enter into 10-year charter agreements with private individuals who would have these tankers built and then operate them for the MSTS for 10 years at a rate not to exceed $5 per deadweight ton per month.

The House version, and I might say it was by a unanimous vote, struck all of the Senate language and inserted new language which would authorize the direct construction of these tankers in the traditional manner of naval construction.

The reason for the committee action was twofold. First, it will save money, at least $19 million in the first 10 years; and second, it will permit a distribution of the construction throughout the shipyards in the United States.

From the testimony received during the hearings on this measure, it was the opinion of the members that there was no evidence whatsoever that the best interests of the Government would be served by the charter plan. There is no doubt as to the need for the tankers. The only doubt which has existed has been the manner in which they would be provided.

It is true, and the committee took full cognizance of the fact, that the charter plan does not require an immediate appropriation of funds. Certainly this is important. But I felt, and all of the members of the committee felt, that this consideration was far outweighed by the ultimate cost to the Government.

During the 10-year charter period, the Government would spend some $300 million, amortize for the operator two-thirds of his investment in each tanker, and end up owning nothing. This does not seem like sound business to me.

Under the House plan, the tankers will be identical in design, will be operated in the same fashion as under the charter plan, and will be owned by the Navy immediately and forever.

The charter plan has all of the advantages, and more importantly, disadvantages, of any leasing arrangement. It must cost more in the long run and in this case, it does not ever have the advantage of ultimate ownership—under the charter plan, the owner of the charter takes his tanker, the cost of which has been two-thirds amortized, and proceeds to use it for an additional 10 years. It is not too much of a stretch of the actual facts to say that the operator gets a $7½ million tanker for $2½ million.

Mr. Chairman, I cannot help but feel that the House version of this bill is the right one.

Comparative cost per day

	Private	Government	Remarks
Subsistence	$90	$100	
Insurance (hull and machinery)	200	120	This is not actual insurance but rather the amount of repairs normally covered by insurance. No overhead is included.
Insurance (protection and indemnity)	75	45	This is insurance taken out through the Department of Commerce. No overhead or profit is included which explains lower cost.
War risk insurance	65	39	This insurance also is procured through the Department of Commerce. No overhead or profit is included.
Contractor's fixed fee	0	75	This is the fee paid per day to the Government's operator. Other expenses are reimbursed. In effect, this is a CPFF contract.
Interest	520	309	The difference here is explained by the fact that the private owner would pay 4 percent on money borrowed or invested while the Government would pay only 2⅜ percent for its borrowing.
Total	950	688	

$950−$688=$262×365=$95,630 per ship per year.

Mr. O'KONSKI. Mr. Chairman, will the gentleman yield?

Mr. AREND. I yield.

Mr. O'KONSKI. I want to compliment the gentleman for his clear and concise statement and to emphasize the fact that not only will this build up a reserve of first-class tankers, but the bill provides that they shall be built in the yards of this country and it will mean much to employment in the shipbuilding industry.

Mr. AREND. The gentleman is correct.

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. AREND. I yield to the gentleman from Mississippi.

Mr. COLMER. I want to commend the gentleman and the committee on the provision requiring these ships to be built in the yards of this country. If we are going to furnish the rest of the world with arms, housing, food, and everything else, we are going to have to put a little fat on the folks at home so we can provide the things for others.

Mr. AREND. I want to thank the gentleman for his statement and say that I think we have taken a very practical approach to this whole problem.

Mr. VINSON. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, MSTS was created by a directive of the Secretary of Defense in 1949 under authority granted to him by the National Security Act. It performs all of the sea transportation for the Army, Navy, Air Force, and Marines. MSTS operates 53 Government-owned T–2 tankers. It also has under lease 4 supertankers, giving it a total fleet today of 57 tankers. All of the Government-owned tankers are small, slow, and over half their useful life is gone. It has in reserve 12 tankers, but 8 of these are minor types, 2 are Liberty ships converted to distilling ships, and the remaining 2 ships, built early in World War II, are badly damaged and not capable of speeds in excess of 12 knots.

So you can see we have virtually no reserve fleet.

When the 20 tankers authorized by this bill are built, MSTS will take 37 of its 53 Government-owned tankers out of operation and place them in reserve. That will give them a reserve fleet of 49 tankers. The 16 remaining plus the new 20 will give them an operating fleet of 36. I am not now counting the 4 tankers that are under a 5-year lease.

Thirty-seven T–2 tankers can be replaced by 20 of the new ones because each of the new ones carries almost twice the cargo of the T–2 even though its complement is approximately the same and uses only one-third more fuel. Understand that under both the Senate and the House versions of the bill, the tankers which would be built are identical. Also, the objectives of the two versions are the same, that is, to build up our tanker reserve and to stimulate, protect, and preserve our shipbuilding industry.

Let us look at the differences between the House and Senate versions. Under the Senate bill, the Secretary of the Navy would be authorized to enter into charter agreements for a period of 10 years—the commercial life of one of these tankers is about 20 years. Under this plan, the successful bidders would build 20 tankers and operate them for MSTS at about $5 per deadweight ton per month—deadweight tonnage is the total lifting capacity of a ship, which includes everything in the ship but not the weight of the ship itself.

Let us see what this charter plan means from a money standpoint: the tonnage of the ship is 25,000 which, multiplied by $5 per ton, is $125,000 per month for 1 tanker. Twelve times $125,000 is $1,500,000 for 1 year for 1 tanker. Multiply this by 10 years and you get $15 million paid out by the Government for each ship. For 20 ships, this means the Government would pay out $300 million for a mere service. It would never own a single ship.

When the Armed Services Committee figured out these costs, there was only one answer: Build the ships in traditional Navy fashion and operate them in the regular way with merchant seamen. Under the House bill, therefore, the Navy, through the Maritime Commission, would build these 20 tankers at a cost of about $7½ million each or a total of $150 million. This will mean that not only will the Government own the tankers right from the beginning, but will save $95,000 each year on each tanker or a total of $19 million during the first 10 years of ownership. This saving represents almost three new tankers itself.

The Senate version, to my mind, has three major weaknesses. First, it will cost the Government $300 million in 10 years and not a single ship will be owned; second, it would encourage successful charterers to place 1 or 2 of their older ships under foreign flag to

operate in competition with our merchant fleet; and three, it would give no assurance at all that the construction of the ships would be spread throughout the country so as to stimulate the shipbuilding industry.

Simple arithmetic, good business, and common sense dictate the acceptance of the House version.

Mr. ARENDS. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. GAVIN].

Mr. GAVIN. Mr. Chairman, in my opinion, one of the most vital requirements for our national defense is a modern fleet of fast tankers. The bill S. 3458 would partially meet this urgent requirement.

Our present American tanker fleet, private- and Government-owned, is comprised principally of tankers built in World War II, which have sustained sea speeds of 14½ knots.

This is an age of speed. We are building faster automobiles, faster airplanes, and faster ships. Generally speaking, the tankers which are being built throughout the world are larger and faster than those which were built during 1942–45.

Our modern airplanes and ships require more oil than did those of 10 years ago. In the event of another national emergency, our worldwide commitments will require that we support our fleet and our Air Force in the four corners of the world. At the present time, American operators are faced with competition from foreign operators who have larger, faster tankers. Thus, larger, faster tankers are needed to compete with foreign competition.

With the improvements being made in submarines, it is obvious that our present tankers of 14½-knot speeds are much too slow. What is needed is a fleet of faster tankers with speeds of 18 knots or better, which would be capable of delivering oil to our military quickly and safely. In time of war, speed is one of the best defenses against a submarine. The 20 fast tankers contemplated under S. 3458 would, in my opinion, be a step in the right direction. These fast tankers would be a valuable addition to our American tanker fleet during peacetime. In time of war, the faster tankers would be available for use in hazardous areas, while the slower 14½-knot tankers could be used in areas where the threat of submarines was not so great.

We must not hesitate any longer to begin to modernize our fleet with these fast tankers. I, therefore, am in favor of S. 3458.

Mr. VINSON. Mr. Chairman, I yield such time as he may desire to the gentleman from Virginia [Mr. HARDY].

Mr. HARDY. Mr. Chairman, I want to express complete agreement with other members of the committee that this action is needed now. In my opinion, we have an unusually good bill and it is one that deserves the unanimous support of the Members of this House.

Mr. ARENDS. Mr. Chairman, I yield such time as he may desire to the gentleman from Maryland [Mr. DEVEREUX].

Mr. DEVEREUX. Mr. Chairman, I want to associate myself with those who have spoken in favor of the pending bill. It was my pleasure to sit in and to listen to the witnesses in many of the committee hearings because we are vitally concerned with the entire program.

I urge its immediate passage.

Mr. ARENDS. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. HOFFMAN].

Mr. HOFFMAN of Michigan. Mr. Chairman, I do not want my friends over here to hurry me, either. I was going to ask permission to speak out of order, but I guess I will not.

It is all right to build these tankers. I think we need them and, confining myself to an argument in favor of the bill, I suggest that we should make some provision to, in some way, have the ships manned. I know this is a mechanical age and we do not need very much manual labor any more. War has changed, they tell me, so they have this push-button war and they will not need any private soldiers after a while, to carry on a war which will be a welcome thought to some of our farmers as well as to the parents, wives, and children.

REFORMATION? REAL OR SYNTHETIC

After years of deliberation, on May 17 last, the Supreme Court solemnly and unanimously announced that segregation was illegal. Discrimination because of race, creed, or color in educational, amusement, and social programs, is unlawful.

But neither the Congress nor the courts have had the inclination, or perhaps the courage, to ban discrimination in man's most necessary activity.

Ever since Adam and Eve were expelled from the Garden of Eden, man—yellow, black, or white—unless he was the recipient of charity or a thief, was forced to work if he would eat, have clothing, and shelter to keep him comfortable.

Nevertheless, notwithstanding, since the enactment of the Hobbs amendment to the Anti-Racketeering Act of 1934 which was made necessary by a decision of the Supreme Court declaring organized extortion by labor unions to be a legitimate, legal practice, some unions and more recently the Teamsters Union, headed by Dave Beck, have throughout the Nation, sometimes by force and violence or by fear, sometimes by economic pressure, forced men—yes, and women—yellow, black, or white, Catholic, Jew, or Protestant, to pay tribute to the union if they would work.

Millions, perhaps billions, have been collected from businessmen and the Government itself, from individuals who either wanted to work to earn a livelihood or to carry on a recognized, legitimate business.

The average armed robber is a merciful gentleman compared to the collectors of the Teamsters Union.

The robber merely asks you to stand and deliver on a particular occasion.

The racketeering union officials compel you to pay their demands periodically, either from week to week or from month to month.

This form of extortion has been nationwide and while, here and there, individuals have been arrested and convicted by able, courageous, law-enforcing officials, the practice as a whole has not been successfully opposed.

Early in 1953 special subcommittees of the House Committee on Education and Labor and of the Committee on Government Operations held joint hearings and made a start—a very, very slight one—in an effort to call public attention to the vicious practices above referred to.

A few racketeering officials apparently had influence enough to kill off those investigations which had resulted in the indictment of a few individuals, most of whom have, for some unforeseen and unexplained reason, been acquitted or had the charges against them dropped.

More recently the House Committee on Government Operations authorized a special subcommittee to reenter the racketeering field.

Ten days ago preliminary investigation made by me personally indicated that the teamsters had either reformed or put on a cease-extortion program. It is my hope that, if the former was not the real reason for their more recent policy, the latter situation will be permanent.

What do I mean? I cite four examples of reformation or the effect of threatened law enforcement:

First. The Teamsters Union, working out of South Bend and Hammond, Ind., recently put on a drive to organize the small Michigan dairies which purchase milk, sell it to individuals or corporations who in turn, using their own equipment, sell it to whomever wants to buy.

Independent businessmen in order to obtain dairy products were forced by union representatives to pay a monthly tribute to the union in order to continue in business.

However, after an inquiry into that situation was started, the union apparently called off its collecting officers.

Second. Another illustration of repentance or of the effect of threatened law enforcement: In Pennsylvania, truckers attempting to unload poultry hauled in from Southern States were denied that right unless tribute was paid to union officials. Recently that practice has been at least temporarily discontinued.

Third. Within the last 2 weeks drivers of truckloads of produce from Georgia to Minnesota were advised that the drive to collect an unloading fee or to force the drivers into a union was off and that, for the time being, there would be no more collections for the right to deliver merchandise there.

I have now been advised that the union officials are harassing nonunion drivers by making complaints to representatives of the Interstate Commerce Commission, charging violations of traffic regulations.

Fourth. A letter from a statewide truck owners organization in Ohio, where nonunion drivers from other States as well as from Ohio were previously forced to pay tribute for the privilege of driving on State and Federal highways and for the exercise of their right to unload merchandise, carries this concluding paragraph:

We find a slackening of this extortion racket from reports all over the country and all credit must be given to you people for

UNIVERSITY OF MICHIGAN LIBRARIES

this pleasant development. Hope you continue.

This organization had previously filed with us affidavits by truckdrivers and businessmen, showing that the Teamsters Union operating in Ohio had compelled, by force or threat of force, nonunion drivers to make cash payments before they were permitted to unload their cargo—a practice which, under the Hobbs amendment, is characterized as extortion or robbery.

It would be egotistical to agree with the conclusion of the Ohio letter that the racketeering of the teamsters has been lessened because of anticipated congressional investigations and it is my hope, as I am sure it is that of all law-abiding citizens, that the teamsters and, for that matter, all other unions, have seen the inequity, the unlawful aspect, of the practice, without authority of law, through the power of organized labor, of levying tribute upon individuals in order that they may exercise their right to work or engage in business.

Ever since 1937, I have been wondering when the Congress and the Supreme Court would get around to protect the right of the woman or the man who is forced to earn a livelihood by manual labor to find and work at a job of his own choosing without being robbed—as defined by the Hobbs Antiracketeering Act—each month of a part of his wage. When is discrimination against him to end?

Apparently, the force of public opinion created by the publicity given by the press to the illegal activities of a few gangsters, as disclosed by the committee, has forced them temporarily to discontinue the practice—this either because they have recognized the enormity of their offense or because they fear what might happen.

If workers in mass-production industries are to be protected, unions are a necessity, but, to be effective, their officers must live within the law.

Mr. ARENDS. Mr. Chairman, I yield 5 minutes to the gentleman from Washington [Mr. TOLLEFSON].

Mr. TOLLEFSON. Mr. Chairman, the Committee on Armed Services is perhaps the most powerful committee in Congress. It is composed of outstanding Members of Congress. The gentleman from Georgia [Mr. VINSON] is one of its most powerful members and one of the most powerful Members of Congress. He is a great gentleman and his name will live long after him.

One would be almost foolish, indeed, to oppose that committee with respect to this House version of the tanker bill which the Armed Services Committee adopted under the leadership of the gentleman from Georgia [Mr. VINSON]. But I would not be worth my salt and I would not be justified in being a Member of this Congress if I did not get up and express my views with respect to this bill.

I agree with the objectives of the bill. We need some new tankers and we need them desperately. The National Security Council has so indicated. Representatives of the armed services have come before our committee and so indicated. I am convinced that we need some new tankers; there is no question about it. Also we need the construction work that would follow as a result of deciding to build these tankers. Our shipyards are in a deplorable and desperate situation, and unless we do something to alleviate that situation we will endanger our defense program. So I am in accord with the objectives of this bill. But I differ with the Committee on Armed Services with respect to how these tankers should be built.

Under the House version, the Government will build the tankers. Under the Senate version, the tankers would be built by private enterprise. Let me say that the bill before the House today is not the Administration bill. It is not the bill supported by the Secretary of Commerce. It is not the bill supported by the Secretary of the Navy.

I am disturbed because over the years and between wars the Congress of the United States neglects its private American merchant marine. We have done so traditionally, and we are in the midst of doing so again. Every time we have done it we have found ourselves in trouble whenever an emergency broke cut.

We do not have, when emergencies come upon us, the merchant ships, the merchant fleet, to carry the men and materials to the war fronts. Congress has on many occasions said that it was the policy of Congress to have a strong, privately owned merchant fleet to carry the cargoes of this country in times of peace and to serve as an auxiliary in times of war. But Congress fails to fully effectuate that policy.

Under this bill what are we doing? We are making possible a Government-owned and Government-operated merchant fleet. We have one in the course of making now in the Military Sea Transport Service. Of course, many persons will agree that we should have a nucleus Military Sea Transport Service fleet. But the Military Sea Transport Service now consists of 295 vessels, 232 of them owned by the American Government. In the course of time, if Congress continues to neglect the private American merchant marine, we are going to have a completely Government-owned and Government-operated merchant marine, which is in the course of being now and growing rapidly through the MSTS operations. A Government-owned merchant fleet will cost us much more over the years because we will pay all the costs. If we have a private fleet all the costs except subsidy are paid for by private enterprise.

This bill will present some problems. If we need tankers and if we are going to build them in American shipyards in order to give them work, we are going to have a problem, because this bill will require an appropriation before the end of this year; and there is some doubt that it will be forthcoming in the sum of some $150 million. Is that not correct?

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. TOLLEFSON. I yield.

Mr. VINSON. Of course, the gentleman is correct. But under the charter plan you would have to do that each year under an appropriation bill and no one would know anything about it. So the way to do anything is to do it directly and not by subterfuge. The gentleman knows that it would ultimately cost a great deal more to have these tankers built by charterers than it will cost for the Government to do it in the manner that we propose.

Mr. TOLLEFSON. I would take strong issue with the gentleman on that. I would say that quite the contrary is true. The program as provided in this bill will inevitably cost the Federal Government more. We have had testimony in our committee concerning the Military Sea Transportation Service operations for many weeks, and no representative of the MSTS, and that includes Admiral Denebrink, and no representative of the Defense Department, disputes the fact that private operators can build and operate these vessels cheaper than the Government can.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. VINSON. Mr. Chairman, I yield 2 minutes to the gentleman from Washington.

Let me state what the Department said. The Department said they could operate these ships, and the admiral so testified, at $95,000 per ship per year less than they could under the charter. So in the 10 years you would save $19 million. You would save $1,900,000 a year by the Government's operating them instead of doing it under charter operation.

Mr. TOLLEFSON. May I ask the gentleman a question there?

Mr. VINSON. Yes.

Mr. TOLLEFSON. Was that Admiral Denebrink's testimony?

Mr. VINSON. Absolutely, that is his testimony. I will put it in the RECORD. He draws the comparison.

Mr. TOLLEFSON. Let me comment on that. According to the bookkeeping of the MSTS, it would be cheaper for MSTS to take one of their ships and run it from the United States to Korea, deliver its cargo, sink the ship, send the men back home to the United States by some other vessel, and buy a new one when they got back than to return the original vessel. That is so simply because of the kind of bookkeeping MSTS does. And what I say about its bookkeeping methods is no reflection on Admiral Denebrink who is a very efficient and able officer.

According to their bookkeeping, they do not take into consideration the original investment of $150 million, they do not take into consideration depreciation, they do not take into consideration the fact that they pay no taxes, they do not take into consideration the fact that they pay no insurance. Nor do they consider as part of their costs the cost of using Navy personnel in operating some of their vessels. In the long run, in the 10-year period or the 20-year period, those costs are going to be paid by Congress, by the American people, in some other form.

Mr. VINSON. If we do pay for it we own it. Under the charter plan, we will pay an exorbitant price for it and will own nothing.

Mr. TOLLEFSON. I dislike to disagree with the gentleman. On the basis

of testimony taken over many weeks in our committee, I must say that the MSTS cannot possibly compete with private operation in the operation of these vessels. In the final analysis the House bill will not only cost more than the Senate bill, but it is entirely possible that we will have to wait until next year before any appropriations are made. If so, we will not start any tanker construction this year.

Mr. VINSON. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, so the figures will be before the Committee correctly, here is the table that was prepared by the Admiral. It is estimated it will cost the charterer $950 per day to operate one of these tankers, and it will cost the Government $688 a day, a difference of $260. That per year would be $95,630 cheaper for the Government to operate them, and these figures apply to each tanker.

Now, I want to get this across to you: These tankers are 25,000 tons. We pay $5 a ton per month. That is $125,000 for the tanker per month. For 12 months that would be $1,500,000 that the tanker would cost for serving the Government during that period of time. There are 20 tankers involved. It would cost the Government during the 10-year period $300 million, and at the end of the 10-year period the Government would have nothing whatsoever. That is the whole story.

Mr. FULTON. Mr. Chairman, will the chairman yield?

Mr. VINSON. I yield.

Mr. FULTON. What is the difference between the method of building these ships and other ordinary ships, because if the gentleman's argument holds for these particular tankers, why does not the gentleman's argument hold for every kind of ship?

Mr. VINSON. It does hold for everything related to the Navy. Never before in the history of this Government have Navy ships, ships built and designed for the Navy, ever been operated on a charter basis.

Mr. FULTON. Would not your argument then aply to all private shipping?

Mr. VINSON. No, not at all.

Mr. ARENDS. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. ALLEN].

Mr. ALLEN of California. Mr. Chairman, I would like to take a little time to go into the question of a privately owned and operated merchant marine or the proposal now before us. I will start off by saying there is no question in my mind, or in the mind of any informed person I know, but what we need a tanker program of some kind. We need these tankers quickly. The shipyards need the work. I believe the tanker tonnage that we are now short is approximately 1,250,000 tons. Any program which will get tankers building and under way immediately has a great deal of virtue. I do think, however, these two different approaches should be compared. I have great respect for the opinions of the gentleman from Georgia and the information that he has although, I must say, I cannot be in complete agreement. For the past 3 months, I have been holding hearings as chairman of a subcommittee on the Military Sea Transportation Service in its relationship to the merchant marine. I say quite frankly I doubt that anyone can make a fair comparison of the costs. I will give one example. In the transportation of men in troopships, the privately operated lines conduct the entire operation of solicitation, handling of dockside facilities and of all things other than and including the running of the ship. The MSTS on a similar operation gives the cost of the passengers carried, but only while they are on the ship and all of the other costs are borne by other branches of the services. The cost of the uniformed personnel involved in military sea transport operations is not added to the cost of the transportation, and possibly rightly so, but the costs, I think, are definitely not comparable.

In this program, the initial outlay for tankers by the Government under the administration proposal would be no outlay at all. Under the proposal of the House committee, the outlay would be approximately $150 million. Under the other program, we would pay part of that $150 million back through charter hire, covering depreciation over a period of years. I would disagee with the gentleman from Georgia because I think, probably, the depreciation which would be included in charter hire would come closer to a 20-year depreciation than the figure which he mentioned. In other words, in my opinion we would write off approximately $7,500,000 a year instead of a cost of $150 million now. As to what we end up with, I think we end up about the same in either case. To me, it is not particularly important that the Government should own the ships. I think it is far more important to have merchant ships sailing and in condition and in operation than it is for the Government to own them. I think this bill reported by the committee would have been improved had it provided in some way for an alternative program under which we could use either the direct approach of this committee bill or the approach in the bill of the other body using the private funds that could be brought in.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

Mr. ALLEN of California. I yield.

Mr. VINSON. In regard to the suggestion that the gentleman has just made, I would say that that should be left to the Committee on Merchant Marine and Fisheries, if the ships are to be used for that purpose. What we are charged with is the responsibility for building Navy ships and these are Navy ships.

Mr. ALLEN of California. I would quite agree with the gentleman except for the fact that in time of war the merchant marine is a military auxiliary under the terms of the Merchant Marine Act of 1936. In time of war, the merchant marine carries the cargo and the supplies of the military forces. Admiral Denebrink only said within the last week that he thought the chief reliance for the carriage of cargo would have to be put on the berth liner service operated by the merchant marine. He pointed out to us that in the past 3 months the percentage of cargo which he has assigned to berth liners has been increased from 52 percent to over 70 percent of the total, which I think is a step in the right direction, and builds up the military potential in this country in far better shape than the Government operation.

Mr. VINSON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. The time of the gentleman has expired.

Mr. VINSON. Mr. Chairman, I yield the gentleman 2 additional minutes.

The gentleman loses sight of the fact that these are specially designed, high-speed tankers. These tankers are being built to meet certain military requirements on account of the submarine menace.

Mr. ALLEN of California. With all deference to the gentleman, the merchant-marine type of tanker which has been built recently is larger and faster and just as well built to take military cargoes as the one proposed.

Mr. VINSON. I am willing to agree that they are 32,000 ton, but they are not otherwise as acceptable.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. ALLEN of California. I yield to the gentleman from New York.

Mr. ROONEY. I wonder how academic all this discussion is. The instant bill would authorize construction of 20 tankers at a cost of $150,000,000. At the present time a majority of the Committee on Appropriations is reluctant to even appropriate 3 whale boats for our merchant marine.

Mr. ALLEN of California. Commenting on that, I think a great deal of effort has yet to be made to indicate to some members of the Committee on Appropriations that the need is greater than they think.

Mr. ROONEY. May I say to the gentleman I have done my best.

Mr. ALLEN of California. I would be glad to assist the gentleman in that effort.

The CHAIRMAN. The time of the gentleman from California has again expired.

Mr. SEELY-BROWN. Mr. Chairman, I ask unanimous consent that the gentleman from New Jersey [Mr. WOLVERTON] may extend his remarks at this point.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. WOLVERTON. Mr. Chairman, the bill now under consideration is one of tremendous importance, first, to our national defense; and, second, to the shipbuilding industry.

The bill (S. 3458) authorizes the President to undertake the construction of not to exceed 20 tankers. The tankers are to be approximately 25,000 deadweight tons each, shall have a speed of not less than 18 knots, and shall be constructed in private shipyards within the continental United States. Furthermore, the tankers shall be, so far as practicable, of materials and equipment produced or manufactured in the United States. An appropriation not to exceed $150 million is authorized.

As of December 31, 1953, there was in our national defense reserve fleet a total

UNIVERSITY OF MICHIGAN LIBRARIES

of only 12 tankers; 8 of these are of minor types, 2 are Liberty ships converted to distilling ships, and the remaining 2 ships, built early in the war, are badly damaged and are not capable of speeds in excess of 12 knots. Thus, for all practicable purposes, we have no tanker reserve. The program proposed by the bill now under consideration provides a partial means to meet this need.

This deficiency in numbers is only one aspect of the overall problem. Most of the tankers presently in the United States-flag fleet have a sustained speed of only 14½ knots or less.

While the great strides we have taken in antisubmarine warfare are encouraging, there is no substitute for speed, insofar as decreasing the vulnerability of merchant shipping is concerned. There is an urgent need for new, large, and fast tankers to be immediately available in support of our national defense in the event of war.

CONSTRUCTION IN AMERICAN SHIPYARDS

Equally important with need of these tankers from the standpoint of national security is the need for ship construction that now exists in our American shipyards.

There is no denying the fact that our shipyards are facing a serious situation as a result of lack of work. Management and men are insistent, and rightfully so, that there be a program of ship construction started at once. Unless such is done, many yards will be compelled to close down, with resultant unemployment to thousands of shipworkers.

It is just as important to keep a competent shipworkers force ready and able to form a working nucleus ready for expansion in time of emergency as to keep our Armed Forces in a state of readiness to respond immediately. The same reasons justify both. A shipbuilder cannot be made overnight. They are skilled workers. It takes years of apprenticeship and additional years to attain the necessary skill in the numerous and varied trades that are required in the construction of ships.

Time and again we have seen emergencies break upon us that have required ships. Often we have not had them to adequately measure up to the need. This has necessitated our entering upon a hurry-up program that has caused us to spend millions of dollars preparing a sufficient number of men to do the work of shipbuilding and thereby causing extended delay in obtaining the necessary ships. However, if a sufficient working force can be kept busy at all times we are then ready at a moment's notice to expand and begin the building of ships. This can be accomplished by a program that keeps our shipyards busy with work. The pending bill will provide such a work program. Therefore, it is vital to our welfare and should have the support of every Member of Congress. It will mean strengthening our national security and, what is exceedingly important at this time, will provide work for many shipyard workers who now face unemployment.

Mr. ARENDS. Mr. Chairman, I yield such time as he may desire to the gentleman from Michigan [Mr. SHAFER].

Mr. SHAFER. Mr. Chairman, I would like to add a few remarks on the need for the tankers which would be provided by this bill.

As a result of our efforts during World War II, the size of the American tanker fleet reached an all-time high in 1945, at which time over 50 percent of worldwide tanker tonnage was under the American flag.

At the present time, however, the tanker tonnage under the American flag constitutes only about 25 percent of the world's tanker tonnage.

Since 1945 the world tanker tonnage has increased almost 10 million deadweight tons, and this increase resulted from postwar construction the majority of which is registered under foreign flags. During this same period the tonnage under American flags has been reduced about 33 percent. This reduction has been brought about by sales to foreign operators and by transfers from American to foreign-flag registry. However, construction in foreign countries is in full swing while our American shipyards are being operated on a limited scale. In addition, only about 5 percent of the tankers which were being built in American shipyards in 1953 were destined for American registry.

The majority of our American tanker fleet consists of ships which were built during World War II. These ships are of 16,500 deadweight tons and 14½ knots speed. The present trend in tankers which are being built today is toward larger, faster tankers such as are envisioned under S. 3458.

The overall situation is that the tanker fleets of foreign countries are expanding and being modernized while our American fleet is not keeping pace with the rest of the world and is facing block obsolescence within the next 10 years.

Furthermore, the present American tanker fleet, private and Government-owned, built and under construction, is about 1½ million deadweight tons short of meeting our initial minimum requirements in the event of a national emergency. This shortage is equivalent to approximately 90 of our present World War II built tankers.

Not only do we need more modern fast tankers to supplement our fleet, but we need them to assist in overcoming the present plight of our American shipyards.

The 20 tankers contemplated under this bill will not be a cure-all for the present plight of our merchant fleet. It will, however, be a step in the right direction to modernize the fleet, reduce the threat of block obsolescence, and stimulate our shipbuilding industry.

I believe our national interest requires that we build these tankers immediately. I intend to vote favorably on S. 3458 and I urge all of my colleagues to do likewise.

Mr. ARENDS. Mr. Chairman, I yield the remainder of the time on this side to the gentleman from Massachusetts [Mr. WIGGLESWORTH].

Mr. WIGGLESWORTH. Mr. Chairman, I rise in support of this legislation and urge its adoption.

Mr. ALLEN of California. Mr. Chairman, will the gentleman yield?

Mr. WIGGLESWORTH. I yield briefly to the gentleman from California.

Mr. ALLEN of California. I would like to make the comment, Mr. Chairman, that if the Senate bill were eventually adopted it would be well to add to it a simple amendment to restrict the transfer of any tanker involved to another flag.

Mr. WIGGLESWORTH. Mr. Chairman, I urge the adoption of this bill because it has been repeatedly testified by officials of the Navy Department and the Department of Defense that the most critical shortage in the entire marine picture is in reserve tanker capacity.

It has been testified that we have insufficient tankers today to meet the initial mobilization impact in case of getting into trouble.

As the distinguished gentleman from Georgia [Mr. VINSON] has pointed out, there are practically no tankers at all in our reserve fleet at this time, and there is urgent and immediate need for faster and more modern tankers.

I urge the adoption of this legislation also because of the plight at the present time of our ship construction industry.

I suppose that this industry is perhaps the most distressed industry in the entire Nation at this time.

Not a single commercial contract for construction, I am advised, has been placed in the last 18 months. As of January first next there will be only two commercial ships under construction on all the ways in this broad land of ours.

The unemployment situation among our skilled workers essential to national defense is becoming tragic.

As Admiral Leggett, head of the Bureau of Ships, has pointed out:

> The current and prospective scarcity of commercial ship construction constitutes a serious threat to our national security.

If things continue as they are now we simply are not going to have the mobilization base in terms of ship construction that is essential.

To allow essential shipyards to fold up at this time is contrary to our entire national defense policy.

Mr. Chairman, I am one who has believed that the administration proposal approved by the Senate is far more acceptable than the proposal of the House which is now before us.

I agree very largely with the sentiments expressed by the able gentleman from Washington, the chairman of the Committee on Merchant Marine and Fisheries, Mr. TOLLEFSON.

It seems to me if we can secure 20 tankers through private financing, for which we simply have to pay charter hire over a period of years without any immediate appropriation, that that is something we should be grateful for.

I believe it will cost less money, that it will assure action at this session of the Congress, that it will stimulate private enterprise, and that it will contribute immediately to the result which I am sure we all have at heart.

I am going to vote to send this bill to conference in the fervent hope that matters can be so adjusted there that this Congress will enact into law a bill which will bring about the construction which is so vital from the standpoint of national defense.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. WIGGLESWORTH. I yield to my colleague from Massachusetts.

Mr. BATES. The thing that has concerned me about this particular bill, and which I discussed at least in the committee, was whether or not this particular bill would cause tankers to be constructed. The hour is late in this particular session; I do not know what the Appropriations Committee of this House is going to do, or what the views may be of the Appropriations Committee of the Senate.

And regardless of what has been said here today I think the other proposal perhaps would be cheaper than this.

Mr. Chairman, I ask unanimous consent to extend my remarks following the remarks of the gentleman from Massachusetts [Mr. WIGGLESWORTH].

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. WIGGLESWORTH. May I say in conclusion, Mr. Chairman, that it seems to me that there is no objection which has been raised to the Senate proposal that cannot be met by a reasonable modification in the language of the Senate bill.

Mr. VINSON. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. If there are no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Navy or such officer as he shall designate is authorized to enter into contracts upon such terms as the Secretary of the Navy shall determine to be in the best interests of the Government for the time charter to the Navy of not to exceed 20 tankers not now in being for periods of not more than 10 years to commence upon tender of the tankers for service after completion of construction. In awarding such contracts the Secretary of the Navy shall give preference to operators who are exclusively engaged in the operation of American flagships.

SEC. 2. (a) Each tanker shall be not less than 25,000 nor more than 32,000 deadweight tons, shall have a speed of not less than 18 knots, and shall be constructed in a shipyard situated within the continental United States for operation under United States registry, such construction to be, so far as practicable, of materials and equipment produced or manufactured in the United States and shall be awarded on a competitive basis to the lowest responsible bidder, who can and will construct the said tankers within the period of 2 years as specified in subsection (d) of section 2.

(b) The hire stipulated with respect to any vessel in any charter party entered into under this act shall not exceed an average rate for the life of the charter party of $5 per deadweight ton per month: *Provided,* That such average rate will not result in the recovery of more than two-thirds of the construction cost of the ships.

(c) Any contractor shall agree as part of the contract entered into under the provisions of this act that the vessel or vessels contracted for shall remain under United States registry for 10 years after the period during which such vessel or vessels are under charter to the Navy unless the Secretary of the Navy determines at any time during such 10 years that a transfer of the registry of such vessel or vessels to a foreign country would not be inimical to the national defense, and the Secretary of Commerce likewise determines said transfer to be in the national interest.

(d) Any contract to charter entered into under the provisions of this act shall require that, except for delays not the fault of the owner, including delays excusable under the force majeure clause of the applicable construction contract, the vessel or vessels contracted for shall be tendered to the Navy for service within 2 years after the date of such contract to charter.

With the following committee amendment:

Page 1, strike out all after the enacting clause and insert: "That the President is hereby authorized to undertake the construction of not to exceed 20 tankers. The tankers shall be of approximately 25,000 deadweight tons each, shall have a speed of not less than 18 knots, and shall be constructed in private shipyards within the continental United States. The construction of the tankers shall be, so far as practicable, of materials and equipment produced or manufactured in the United States.

"SEC. 2. There is hereby authorized to be appropriated not to exceed $150 million for the construction of the foregoing vessels."

The CHAIRMAN. The question is on the committee amendment.

The committee amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. LECOMPTE, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, pursuant to House Resolution 625 he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time and passed.

The title was amended so as to read: "An act to authorize the construction of tankers."

A motion to reconsider was laid on the table.

AMENDMENT OF THE TARIFF ACT OF 1930 RE CRUDE SILICON CARBIDE

Mr. REED of New York. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H. R. 8628) to amend the Tariff Act of 1930 to insure that crude silicon carbide imported into the United States will continue to be exempt from duty.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York [Mr. REED]?

Mr. COOPER. Mr. Speaker, reserving the right to object, and I shall not object, this bill was reported favorably by unanimous vote of the Committee on Ways and Means and there are no objections on this side of the aisle.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That paragraph 1672 of the Tariff Act of 1930, as amended, is amended by inserting "crude silicon carbide," after "corundum ore."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. REED of New York. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. REED of New York. Mr. Speaker, H. R. 8628 is intended to assure that crude silicon carbide shall continue to be exempt from duty when imported into the United States whether it is used as an abrasive or refractory material or in metallurgy.

Silicon carbide is a manmade mineral, produced by fusing sand and coke in an electric furnace. Originally developed over a half century ago as an abrasive material, it has attained preeminence in our industrial economy as the basic material for grinding wheels, abrasive paper and cloth, and so forth, for work on hard and brittle nonferrous metals and ceramics. In war time, silicon carbide becomes even more important because it can be substituted to a considerable extent for industrial diamonds. The supply of diamond bort—produced in Africa—is never adequate in war time, and it must be severely rationed. Silicon carbide has filled the gap. It follows that a large and dependable supply of silicon carbide is necessary not only for our industrial economy but also for national defense.

The Tariff Act of 1930 now provides that "crude artificial abrasives" shall be exempt from duty, and inasmuch as crude silicon carbide has been considered as an artificial abrasive, it has been on the free list. Silicon carbide, made by fusing sand and coke in an electric furnace, has been used chiefly as an abrasive material in the manufacture of grinding wheels, abrasive paper, abrasive cloth, and so forth. In recent years, however, silicon carbide has become increasingly important in a nonabrasive use as a refractory material and in metallurgy.

Because the duty-free status of silicon carbide results from its listing as a crude artificial abrasive, the increasing use of silicon carbide for purposes other than the manufacture of abrasive products raises a doubt as to whether it should still be entitled to classification under Tariff paragraph 1672 and enjoy the resulting duty-free treatment. It is estimated that nonabrasive uses accounted for at least 40 percent of the total quantity of silicon carbide imported and consumed in the years 1952 and 1953.

The United States abrasive, steel, and refractory industries are almost entirely dependent on Canada for their supply of silicon carbide and there is only one

UNIVERSITY OF MICHIGAN LIBRARIES

domestic producer of silicon carbide in commercial quantities. Statistics on United States production of crude silicon carbide are not separately reported. However, statistics are reported on production in the United States and Canada combined. These statistics are to be found in the committee report accompanying this legislation, House Report 2209. In recent years imports have supplied about two-thirds of the total United States consumption of crude silicon carbide.

All of Canada's production of silicon carbide is accounted for by 6 branch plants of 5 United States companies. One of these five companies is the only domestic producer. Petroleum-coke and high-grade silica sand which are two major raw materials used in the manufacture of crude silicon carbide are imported duty free from the United States by Canada.

It is my belief that it will be in the interest of our national industrial economy and our national security to assure the continued duty-free entry of silicon carbide.

AMENDMENT TO SECTION 208 (5) OF THE TARIFF ACT OF 1930

Mr. REED of New York. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H. R. 9248) to amend section 308 (5) of the Tariff Act of 1930, as amended.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 308 (5) of the Tariff Act of 1930, as amended (U. S. C. 19: 1308 (5)), is further amended to read as follows:

"(5) Automobiles, motorcycles, bicycles, airplanes, airships, balloons, boats, racing shells, and similar vehicles and craft, and the usual equipment of the foregoing; and in case of all of the foregoing the collectors of customs may, under such regulations as the Secretary of the Treasury may prescribe, defer the exaction of a bond for not to exceed 90 days with respect to such items which are brought temporarily into the United States by nonresidents for the purpose of taking part in races or other specific contests for other than a money purse, but unless such vehicle or craft is exported or the bond is given within the period of such deferment, it shall be subject to forfeiture.

With the following committee amendment:

Page 1, line 8, after the word "foregoing:", strike out the balance of line 8 and all of lines 9, 10 and 11, and on page 2 strike out lines 1 to 6 inclusive and insert the following: "all the foregoing which are brought temporarily into the United States by nonresidents for the purpose of taking part in races or other specific contests; and, in the case of vehicles and craft entered under this subdivision to take part in races or other specific contests for other than money purses, collectors of customs, under such regulations as the Secretary of the Treasury may prescribe, may defer the exaction of a bond for not to exceed 90 days after the date of importation, but unless such vehicle or craft is exported or the bond is given within the period of such deferment, such vehicle or craft shall be subject to forfeiture."

The committee amendment was agreed to.

Mr. REED of New York. Mr. Speaker, H. R. 9248 will liberalize section 308 of the Tariff Act of 1930 which prescribes conditions under which articles may be imported duty free under bond on a temporary basis. This liberalization will exempt amateur sportsmen who wish to bring their yachts, automobiles, or other craft or vehicles into the United States for participation in races or other contests, when they remain in the country for not more than 90 days, from the requirement that such persons execute a bond to guarantee the exportation of the craft or vehicle.

As presently in force, section 308 (5) permits the entry without payment of duty, under bond for exportation within a period not to exceed 3 years, of vehicles and craft which are brought into the United States by nonresidents for the purpose of taking part in races or specific contests. H. R. 9248 in the case of such vehicles or craft which are brought in by nonresidents to take part in races or specific contests for other than a money purse, would permit the bond requirement to be deferred for 90 days, under such regulations as the Secretary of the Treasury may provide.

Provision is made for the forfeiture of such vehicles or craft if not exported within the period of deferment or if appropriate bond is not filed in lieu of exportation within the period of deferment.

The amendment adopted by your committee is clarifying in nature and restores certain restrictive language contained in present law which was inadvertently deleted in the introduced version of H. R. 9248.

H. R. 9248 was reported to the House by the unanimous vote of the Committee on Ways and Means.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SPECIAL ORDER GRANTED

Mr. PHILLIPS. Mr. Speaker, I have a reservation of time for this afternoon, but I also have an appointment at the Pentagon. Therefore, I ask unanimous consent to vacate my time for this afternoon and request permission to address the House for 45 minutes on tomorrow and 45 minutes on Monday.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

PROVIDE FOR TRANSFER OF HAY AND PASTURE SEEDS

Mr. NICHOLSON. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 616 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. NICHOLSON. Mr. Speaker, I yield 30 minutes to the gentleman from Virginia [Mr. SMITH] and yield myself such time as I may require.

Mr. Speaker, I rise to urge the adoption of House Resolution 616 which will make in order the consideration of the bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies. House Resolution 616 provides for an open rule with 1 hour of general debate on the bill itself.

S. 2987 would authorize and direct the Commodity Credit Corporation to transfer up to 900,000 pounds of hay and pasture seeds to 3 land-administering agencies of the Federal Government.

Appropriations in the amount of $145,000 to the receiving agencies would be authorized to be applied on costs of transporting and planting of the seeds. An appropriation would also be authorized to reimburse the Commodity Credit Corporation for its investment in the seeds transferred pursuant to this act. This cost would be approximately $335,600.

The receiving agencies could only use the seeds transferred for the seeding of grazing land administered by them, and it has been estimated that about 110,000 acres of additional rangeland would thus be seeded. The three receiving agencies, the Forest Service, the Fish and Wildlife Service, and the Bureau of Land Management would, with the cooperation of the range users, be able to do a tremendously important job in building up our range resources.

The ranges of this Nation are subject to deterioration through drought, depletion, noxious range plant invasion, poisonous weed infestation and fire. It appears to me that it is just as vital to take care of our range resources, to maintain and improve and expand them as it is to conserve our forest and mineral resources. This Nation is tremendously wealthy in natural resources and in the conservation of these resources lies the source of our future as a nation. I hope that the rule will be adopted and that the bill itself will pass.

Mr. SMITH of Virginia. Mr. Speaker, I know of no opposition to the rule or the bill which it makes in order. I do not desire to use any more time.

Mr. NICHOLSON. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. WOLCOTT. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies.

The SPEAKER. The question is on the motion offered by the gentleman from Michigan.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill S. 2987, with Mr. Bow in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. WOLCOTT. Mr. Chairman, I yield 5 minutes to the gentleman from Oregon [Mr. ELLSWORTH].

Mr. ELLSWORTH. Mr. Chairman, this bill S. 2987 is an identical bill to H. R. 8431 which I introduced in the House in March of this year. The bill is very simple in principle and even very simple in wording. It merely provides to take something that the Government of the United States already owns, namely some seed now deteriorating in warehouses, under the ownership of the Government through the Commodity Credit Corporation and place this seed on the rangelands and other lands owned by the United States which themselves are either deteriorating or are not up to maximum use.

In other words, we would take some seed which we have in surplus in warehouses and put it on some land the Government owns, so that the seed itself is used and the land is improved or in some cases actually saved by the prevention of erosion.

Mr. Chairman, it seems hardly necessary for me to take the 5 minutes allowed me by the gentleman from Michigan [Mr. WOLCOTT]. The bill actually needs little or no explanation.

The mechanics as provided in the bill for the carrying out of the program are simply these. The Commodity Credit Corporation is authorized and directed to transfer to certain agencies surplus hay and pasture seeds acquired under the price-support program. These agencies are the Forest Service, Department of Agriculture, which under the bill would receive not to exceed 485,000 pounds; the Fish and Wildlife Service in the Department of the Interior which would be allowed to use 163,000 pounds; the Bureau of Land Management of the Interior Department, not to exceed 250,000 pounds.

The kinds and quantities of seeds transferred within such maximum quantities, subject to determination of availability and surplus supply by the Commodity Credit Corporation, shall be determined by such agencies, but shall not exceed quantities which may be utilized for the purposes specified.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. ELLSWORTH. I yield to the gentleman from West Virginia.

Mr. BAILEY. I should like to inquire of the distinguished gentleman from Oregon whether the provisions of the bill are broad enough to provide for distribution to the Forest Service of the Department of Agriculture for these upstream development projects of which we have launched some 60, or which will be under construction soon. There is considerable reseeding of lands in those river valleys. Would it be broad enough to be made available to the Department of Agriculture for that purpose?

Mr. ELLSWORTH. I would think that under the wording of the bill the Forest Service would have the right, within its judgment, to place the seeds on any lands under its ownership in the Forest Service.

Mr. BAILEY. In this particular instance the Government would not actually control the land. It is a cooperative undertaking between the Government and local communities, people residing in that particular section of the valley, to build the necessary holding dams to control the flow of water and to reseed for reforestation. It is a general program of rehabilitation of the watersheds. I wondered if it would be available for that purpose.

Mr. ELLSWORTH. The program would apply to those lands actually owned by the United States Government. As I read the language of the bill, I would not think there would be any authority in this bill to allow the Forest Service to put seeds on privately owned land. The seed is put on land owned by the Government and administered by either the Fish and Wildlife Service, the Bureau of Land Management, or the Forest Service.

Mr. TALLE. Mr. Chairman, will the gentleman yield?

Mr. ELLSWORTH. I yield to the gentleman from Iowa.

Mr. TALLE. May I say to the distinguished gentleman from Oregon that I am very much in favor of this bill. At the time it was being considered in committee I attempted to summarize briefly what the bill provides, and these were my words:

> Why not transfer something the Government already has in one agency, which does not need it and will not use it, to three other agencies that do need it and intend to use it? Is that not the heart of it?
>
> Mr. JOY. I think that was intent of the bill.

Then I stated that of course there must be proper accounting, so that there need be no question raised about anything being done contrary to good accounting practice. Is it not the gentleman's understanding that proper accounting will be made and should be made?

Mr. ELLSWORTH. I thank the gentleman from Iowa for his remarks. Yes, I think we need have no slightest doubt regarding the proper accounting of the program that is provided for under this bill, because the seeds are taken from one agency and used and distributed by another. I think it is absolutely mandatory that both agencies account for their action as provided for in the bill. I think we need have no worry about the manner of accounting.

Mr. SPENCE. Mr. Chairman, I have no requests for time on this side. The bill was reported unanimously by the committee. I think it is a good bill and ought to be passed.

Mr. WOLCOTT. Mr. Chairman, I yield such time as he may desire to the gentleman from Idaho [Mr. BUDGE].

Mr. BUDGE. Mr. Chairman, there can certainly be no more valid use for the surplus commodities held by the Commodity Credit Corporation than the preservation of the natural resources of the United States. I sincerely hope the bill will be adopted.

Mr. WOLCOTT. Mr. Chairman, I yield 2 minutes to the gentleman from Minnesota [Mr. H. CARL ANDERSEN].

Mr. H. CARL ANDERSEN. Mr. Chairman, in answer to the question propounded by the gentleman from West Virginia [Mr. BAILEY], it would seem to me that if he wants these pilot plant projects eligible to receive any of this seed, he should put in an amendment which, I think, should be satisfactory to the authors of the bill on line 7, page 1, to include the words "Soil Conservation Service" following the words "to the Forest Service" because otherwise I do not think there is any authority in this bill to give the Commodity Credit Corporation the right to turn over to the Soil Conservation Service, which operates the so-called watershed pilot plant protection program, any of this particular seed. I do not see the gentleman from West Virginia on the floor, but may I point out to the gentleman from Oregon [Mr. ELLSWORTH] that that would be the answer to the question.

Mr. WOLCOTT. Mr. Chairman, I yield such time as he may desire to the gentleman from Oregon [Mr. COON].

Mr. COON. Mr. Chairman, I wish to support S. 2987, which would provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to the Forest Service, the Fish and Wildlife Service and the Bureau of Land Management for range improvement and conservation programs.

This legislation would serve three purposes. It would improve the carrying capacity of the range on our public lands, and thus provide better feed for our stockmen and sportsmen, and therefore a supply of meat at a reasonable cost to the consuming public.

It would also take out of the Government's hands the seeds which are appropriate for use on the range, and therefore would prevent these seeds from further depressing the market. I am told that the seeds removed from stock by this procedure would include alfalfa, Ladino clover, bromegrass, wheat grass, and tall fescue, to a total of 900,000 pounds.

Finally, this bill would remove these seed stocks from the warehouse where they are deteriorating, a useless burden on the Government's hands, and turn them to a useful purpose.

Therefore, in the interest of the livestock industry, the sportsmen, and the consuming public, in the interest of the seed industry of America, and in the interest of relieving the Government of some of the burden of these surplus seeds, I believe this is good legislation, and should be passed.

UNIVERSITY OF MICHIGAN LIBRARIES

I understand that as of April 30, 1954, the Commodity Credit Corporation owned 77.4 million pounds of hay and pasture seeds acquired under 1950, 1951, and 1952 price support programs. These seeds, acquired at a cost of $37.3 million after a reserve for losses in the amount of $10.3 million, were carried at a net book value of $27 million. As of that date the records show 24.7 million pounds of hay and pasture seeds had been disposed of at a loss of approximately $5.3 million. The Commodity Credit Corporation discontinued its hay and pasture seed price support operations with the 1952 crops.

Cooperation between the agencies concerned and the users of the land will be required in order to put this program into effect. I think that this is appropriate, in that those who stand to benefit from this program will assist in carrying it out. I understand that for years the grazing land administering agencies and the users have cooperated in range-improvement programs.

Sound soil conservation practices require that our rangelands be maintained and improved. The seed transfers provided in this bill will permit an expansion of our present range improvement programs.

I hope the House will act favorably upon S. 2987.

Mr. METCALF. Mr. Chairman, the members of the committee have brought us today a piece of constructive and worthwhile legislation that represents the proper approach to the question of reseeding the range. The American people own thousands of acres of rangeland that are chiefly administered by the Forest Service and the Bureau of Land Management. The Commodity Credit Corporation also owns thousands of pounds of hay and pasture seed, of which 900,000 pounds is of the type suited for range reseeding. As a prudent landlord our Government is now using the seed to develop its property.

As pointed out in the report the estimated cost of the seeding will be about $6 per acre or an estimated $660,000. The authorized appropriation takes care of but a fraction of this amount. The users of the range will cooperate in carrying out the reseeding program. Again this type of cooperation is the best type of owner-user relationship. The grazing users who cooperate have the benefit of a better range upon which to graze their sheep and cattle and under present administrative procedures they can have the advantage of the increased grazing capacity in their grazing leases.

In the 77th Congress a thorough report on grazing problems was prepared and published under the tile "The Western Range," Senate Document No. 199, and therein the Forest Service estimated that the carrying capacity of the western rangelands as a whole had fallen from an original capacity of 22.5 million animal units to about 10.8 million animal units, or a reduction of more than one-half.

The Forest Service has aggressively pushed a range reseeding program. It is estimated that such a complete program on the national forests alone, would cost $100 million. In recent years the Government has just made a beginning by investing some $3.5 million in reseeding national forest ranges. Another $16.9 million has been spent in range improvement in development of waterholes, drift fences, and other range improvements. At the same time more than $3 million has been privately spent in range improvement and revegetation.

This cooperative approach with the Government assuming its obligation as a landlord in providing the seed for reseeding operations is much to be preferred to the approach suggested by H. R. 6787 and S. 2548 now before the Agriculture Committee. There the permittee is the one who makes the range improvement including the undertaking of range reseeding and elimination of noxious weeds. Then to provide for incentive and encouragement in the range improvement the permittee gains a right to be compensated for any loss suffered when the grazing permit is withdrawn. In effect such an approach gives the permittee an interest in the land itself. An interest that he can require the Government or a subsequent permittee to compensate him for when the permit is withdrawn.

The method of range improvement adopted today is much better and places the responsibility for range reseeding and range improvement squarely upon the shoulders of the Government who is the landlord. Yet those who wish to cooperate, whether they be grazing-permit holders or State fish and game commissions, can do so. And both mutually benefit.

Mr. WOLCOTT. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That the Commodity Credit Corporation is hereby authorized and directed to transfer to the following agencies, free on board transportation conveyance at point of storage, surplus hay and pasture seeds acquired under the price-support program, as follows: To the Forest Service, Department of Agriculture, not to exceed 485,000 pounds; to the Fish and Wildlife Service, Interior Department, not to exceed 163,000 pounds; to the Bureau of Land Management, Interior Department, not to exceed 252,000 pounds. The kinds and quantities of seeds transferred within such maximum quantities, subject to determination of availability and surplus supply by the Commodity Credit Corporation, shall be determined by such agencies, but shall not exceed quantities which may be utilized for the purpose specified in section 2 of this act with funds made available under this act and funds available for such purposes out of appropriations to such agencies for the fiscal year 1954.

Committee amendment:

Page 2, line 10, strike out "1954" and insert "1955."

The amendment was agreed to.

The Clerk read as follows:

SEC. 2. The seeds transferred pursuant to this act shall be used by the transferee agencies only for the purpose of seeding grazing lands administered by them. To defray costs of transporting and seeding, there is hereby authorized to be appropriated the following sums: To the Forest Service, not to exceed $95,000; Fish and Wildlife Service, not to exceed $25,000; and to the Bureau of Land Management, not to exceed $25,000.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to reimburse the Commodity Credit Corporation for its investment in the seeds transferred pursuant to this act.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. Bow, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies, pursuant to House Resolution 616, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the third reading of the bill.

The bill was ordered to be read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed, and a motion to reconsider was laid on the table.

COMMITTEE ON APPROPRIATIONS

Mr. TABER. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight Friday night to file a report.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. CANNON. Mr. Speaker, reserving the right to object. When will the bill be submitted to the full committee?

Mr. TABER. There will be a meeting of the full committee on Friday morning. There is a possibility that the House may not be in session on Friday, and I felt that we should get this permission today.

Mr. CANNON. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CANNON reserved all points of order on the bill.

THE LATE HONORABLE BENNETT CHAMP CLARK

Mr. CANNON. Mr. Speaker, I ask unanimous consent to address the House.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

The was no objection.

Mr. CANNON. Mr. Speaker, it is with the deepest regret that I announce the unexpected death of Judge Bennett Champ Clark, in Gloucester, Mass., last evening.

Judge Clark first came to this floor as a lad of 3 and was immediately on intimate terms with the leadership of the House on both sides of the aisle and

was as faithful in his attendance on the session of the House as any of his father's contemporaries.

His long attendance here, and his presence at every party conference and caucus in which his distinguished father participated, gave him a practical working knowledge of House rules to be secured in no other way. And it was inevitable when his father succeeded to the Speakership, and the great Parliamentarian, Asher Crosby Hinds, was simultaneously elected to membership in the House in the 62d Congress, that Bennett should become his father's Parliamentarian. He retained that position until he resigned to leave with the first American Expeditionary Force for France in the First World War.

When mustered out of the service at the close of the war, he entered the practice of law in St. Louis and became one of the noted trial lawyers of the Missouri bar.

He served 3 terms as United States Senator from Missouri, the first time briefly when appointed to the vacancy caused by the resignation of Senator Harry B. Hawes, and 2 full terms to which he was elected in 1932 and 1938 respectively.

On his retirement from the Senate in 1945, he was immediately appointed by his friend and former senatorial colleague, President Truman, to the bench of the United States Court of Appeals in the District of Columbia where he was serving at the time of his death.

As Judge Stephens, the presiding judge of the court, well said, in his tribute this morning, "He devoted his life to the service of his country." He was one of the first to volunteer in the First World War, and served successively as captain, lieutenant colonel, and colonel on the General Staff.

He was one of the moving spirits in the organization of the American Legion, was chairman of the Paris caucus and an incorporator and one of the 17 charter members, and served as national commander.

Like his father he was widely considered a presidential possibility and was a colorful figure at recent national conventions. He dies at the prime of life and at the zenith of his career.

He was a distinguished son of a distinguished father—and a beloved son of Missouri.

Mr. RAYBURN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman from Texas.

Mr. RAYBURN. I wish to join with the gentleman from Missouri in expressing my deep regret at the passing of Bennett Champ Clark. When I came here his very distinguished father was Speaker of the House of Representatives. He was a young man around here, and afterward became Parliamentarian of this House, in which position he distinguished himself.

I never knew a more lovable man than Champ Clark, his father. He had a big, kind, fine heart that went along with a big, fine brain. His son Bennett inherited those fine and noble qualities. As the gentleman said, his life was practically all devoted to public service, in which capacity he distinguished himself. He was a great American.

He was a fine citizen and I deeply regret his passing.

To his lovely wife and his boys I extend my deepest and most sincere sympathy.

Mr. HALLECK. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman from Indiana.

Mr. HALLECK. It was one of the privileges of my life to know the beloved Bennett Champ Clark. His youngsters and mine are exactly the same age. They were frequently at our home and our youngsters were at his home. By reason of that and many other things I came to know Judge Clark very, very well. He certainly was a lovable, fine, great American, whom we shall all miss.

Mr. CANNON. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks at this point in the RECORD on the life, character, and public service of the late Judge Clark.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

PROGRAM FOR JULY 15

Mr. HALLECK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. Mr. Speaker, tomorrow, in order that everyone may be informed, if rules are granted we might call up for consideration the bill (H. R. 8658) to amend title 18 of the United States Code, to provide for punishment of persons who jump bail.

The Foreign Affairs Committee has reported a resolution dealing with the matter of admission of Red China to the United Nations.

Also there is a resolution for the creation of a Special Elections Committee such as is usually provided for as we come to the close of each Congress.

We might also call up the bill (H. R. 236) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan project in Colorado.

There is no definite determination as to when we will call any of these bills, but I announce the possibility of their being called up in order that the Members may have as much notice as possible.

FIFTIETH ANNIVERSARY OF CONTROLLED FLIGHT

Mr. SCHENCK. Mr. Speaker, by direction of the Committee on House Administration, I offer a privileged resolution (H. Res. 429) authorizing the printing as a House document of the proceedings at Kitty Hawk, N. C., and at Washington, D. C., celebrating the 50th anniversary year of controlled-powered flight, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That the proceedings conducted at Kitty Hawk, N. C., on December 15, 16, and 17, 1953, and at Washington, D. C., on December 17, 1953, celebrating the fiftieth anniversary of controlled-powered flight, by Wilbur and Orville Wright shall be printed as a House document.

With the following committee amendment:

Line 1, strike out "Kitty" and insert "Kill."
Line 2, strike out "Hawk" and insert "Devil Hills."

The committee amendment was agreed to.

The resolution was agreed to.

The title of the resolution was amended so as to read: "Authorizing the printing as a House document of the proceedings at Kill Devil Hills, N. C., and at Washington, D. C., celebrating the 50th anniversary year of controlled-powered flight."

ADDITIONAL COPIES OF SENATE DOCUMENT NO. 87

Mr. SCHENCK. Mr. Speaker, by direction of the Committee on House Administration, I offer a privileged resolution (S. Con. Res. 80) to print additional copies of Senate Document No. 87, Review of the United Nations Charter—A Collection of Documents, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Committee on Foreign Relations 1,000 additional copies of Senate Document 87, 83d Congress, 2d session, Review of the United Nations Charter—A Collection of Documents.

With the following committee amendments:

Lines 2 and 3, strike out the following: "for the use of the Committee on Foreign Relations one" and in lieu thereof insert the word "three."

Line 6, after the word "Documents", insert a semicolon and the following: "1,000 copies for the use of the Committee on Foreign Relations and 2,000 copies for the use of the Members of the House of Representatives."

Estimated cost of printing approximately $4,724.07.

The committee amendments were agreed to.

The resolution was concurred in.

ADDITIONAL COPIES OF PLEDGE OF ALLEGIANCE TO THE FLAG

Mr. SCHENCK. Mr. Speaker, by direction of the Committee on House Administration, I offer a privileged resolution (H. Con. Res. 241) providing for printing as a House document the pledge of allegiance to the flag, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved by the House of Representatives (the Senate concurring), That there be printed as a House document the pledge of allegiance to the flag, as designated in section 7 of the joint resolution approved June 22, 1942 (36 U. S. C., sec. 172), as amended (Public Law 396, 83d Cong., ch. 297, 2d ses.;

UNIVERSITY OF MICHIGAN LIBRARIES

H. J. Res. 243, approved June 14, 1954); and that there be printed 681,000 additional copies, of which 437,000 shall be for the use of the House; and 144,000 copies shall be for the use of the Senate, and that there be included thereon the following history of the pledge:

Author of the pledge was Francis Bellamy, born at Mount Morris, N. Y., lived 1855 to 1931. Original pledge first publicly used in 1892, was changed slightly by First and Second National Flag Conferences in 1923 and 1924, was officially designated as Pledge of Allegiance to the Flag by Public Law 287, 79th Congress, approved December 28, 1945. On June 14, 1954, Flag Day, it was amended by Public Law 396 to include the words "under God."

The SPEAKER. The question is on the resolution.

The resolution was agreed to, and a motion to reconsider was laid on the table.

HATE PROPAGANDA

Mr. JAVITS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. JAVITS. Mr. Speaker, I have been deeply concerned, and I think other Members should be deeply concerned, about the fact that while the country is under grave preoccupation with internal security, Communist infiltration, subversion, aggression, and other similar activities, and our people feel very deeply anti-Communist, a group of ultrarightists is seeking to exploit this feeling by sending a very large amount of hate propaganda through the mails which is anti-religious, anti-Catholic, anti-Protestant, and anti-Jewish.

I am today introducing a resolution of inquiry to ascertain from the Postmaster General the extent of the hate propaganda, anti-religious, anti-Catholic, anti-Protestant, and anti-Jewish, which is going through the mails, not only from domestic sources but from outside the country as well. I have already introduced a resolution to have the House Committee on Post Office and Civil Service investigate the situation. My resolution today specifically names the following 10 publications as examples upon which detailed information is requested:

First. Common Sense, allegedly published twice monthly at Union, N. J.

Second. Pamphlet entitled "The Criminals" attributed to Editor Einar Aberg, Norrviken, Sweden, allegedly published in 1950.

Third. A single sheet entitled "Communism" by the same editor as in item 2 carrying pictures, bearing the date "February 1954."

Fourth. A single sheet headed "Stop Invasion," allegedly issued by the Committee To Save the McCarran Act, Tulsa, Okla., or Los Angeles, Calif.

Fifth. A periodical publication Williams Intelligence Summary, allegedly published at Santa Ana, Calif.

Sixth. A single sheet headed "Open Letter to Congress," allegedly published by West Virginia, Anti-Communist League, Huntington, W. Va.

Seventh. The Cross and the Flag, allegedly published monthly at Los Angeles, Calif.

Eighth. A single sheet headed "The Kiss of Death," allegedly issued by the Citizens Protective Association, St. Louis, Mo.

Ninth. A periodical publication called the "Western Voice," allegedly published in Inglewood, Calif.

Tenth. The American Nationalist, allegedly published at Inglewood, Calif.

The deep concern of the country with internal security and Communist infiltration, subversion, and aggression, should not be permitted to divert us so as to afford a cover for hate propaganda distributed or transmitted through the mails. To prevent such exploitation of the deeply anti-Communist feelings of the people by ultrarightists in an equally vital question of internal security.

VACATING SPECIAL ORDER

Mr. ABERNETHY. Mr. Speaker, I ask unanimous consent that the special order I have for today be vacated.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

RED CHINA'S ADMISSION TO THE UNITED NATIONS

The SPEAKER. Under special order heretofore entered, the gentleman from West Virginia [Mr. BYRD] is recognized for 15 minutes.

Mr. BYRD. Mr. Speaker, while the air is filled with pious pretensions of peace, and hyprocrisy parades in the name of diplomacy, aggressive tyranny stalks the free peoples of the world. At the very moment that spokesmen for some of the major powers of the West are championing the cause of Red China's admission to the United Nations, Asia is aflame with new Communist assaults, and the menacing Red tide sweeps on.

Where will it all stop? When can the world hope for respite? What is the answer to this organized violence in our times?

Certainly appeasement is not the answer. We know from bitter experience that appeasement only begets greater demands. The appetites of the tyrant are insatiable. Country after country, people after people have been literally gobbled up by the maws of Soviet imperialism since the end of World War II. These feasts of aggression have only whetted the appetite of the Reds. Asia is next on the Red menu.

How long is it going to take the West to fully comprehend that the key center of all Communist aggression is Moscow? Are we going to be taken in again by the taffy that the way to handle Red aggression is to idly sit by hoping that time will conjure up a rift between the Chinese Reds and Moscow? This is a variation of the devilishly dangerous theme that the Chinese Reds were harmless agrarians and the thing to do was let them alone and they would develop into an Asiatic block against Moscow? Does anyone in his right senses believe this after Korea and Indochina? And where will the blows fall tomorrow?

At the cost of painful disillusionment, we have come to the realization that wishing for peace isn't enough. Peace does not come by wishing for it, and let us once and for all come to the understanding that the absence of shooting does not in itself constitute peace. Where there is a denial of justice for a whole people there is no peace. There can be war without bombs raining from the skies. It is war when the pressures of totalitarian powers are applied to weaker peoples; when the threat of force, actual or implied, is utilized to place outsiders who are not wanted into the ruling places of power in the administration of a sovereign state; when the use of subversion in the form of fifth columns are used to undermine a national regime. This is war that is just as ugly as wholesale killing, for it deprives nations of their independence, condemns whole peoples to enslavement, destroys hope, and reduces men to a state of animality.

So we come to the place, Mr. Speaker, where we must be aware that the Communists are now at war actually with our kind of world. This has to be a premise for a sound, intelligent, and effective foreign policy of the United States. If others, in their materialistic greed, think they can treat safely with the bear, that is their risk and their responsibility. As for ourselves, we have the problem of becoming acquainted with the true nature of the enemy, estimating his capabilities for war, and guiding ourselves accordingly.

No dear cherishing of peace should blind us to the grim realization that this is the century of brutal aggression. Trying to cope with the enemy by traditional sportsmen's rules is like trying to measure the infinite by the finite. Our failures to date in the realm of foreign affairs have been due to our sheer inability to understand communism in action. There were some of us here in this Chamber, Mr. Speaker, and the record will show it clearly, who warned that the Geneva Conference was nothing but a pitfall for the United States; that no good could possibly come of it; that it was a mistake ever to have assented to the meeting in the first place. And the sorry spectacle of that conference only proves the correctness of our claims. I say this in no vainglorious spirit. There is no pride or sense of accomplishment in saying in these days, "I told you so." No one expects Mr. Dulles to be a superman. He is trying his utmost to achieve peace in our time, and for his attempts, all Americans are appreciative. But, having said this, Mr. Speaker, I submit that we should have learned from experience, we should all know and realize, down to the fourth-grade scholar, that peace as we understand it is not in the Communist lexicon, and that the Reds have only contempt

for us when we allow them to use the forum of a peace conference at Geneva for the furtherance of their aggressive aims. Because of the recognition, homage and prestige which the Reds realized at Geneva, their premier, Chou En-lai, has moved on to a triumphant diplomatic tour, thereby swelling the gains made at Geneva. This was all foreseen, Mr. Speaker. The pages of the CONGRESSIONAL RECORD attest to the fact that some of us called the shots in advance. We can devoutly wish we had been wrong and that some good had come of it all, but Geneva is a diplomatic debacle.

So, too, Mr. Speaker, were the fallacies of the proposed easing of East-West trade restrictions pointed out. Those of us who were against any dropping of the barriers on so-called strategic goods going to countries behind the Iron Curtain made the case that anything which helped to stabilize Soviet control over captive states was a net and substantial gain for Moscow. It is regrettable that London is enkindled with the false hope that the way to deal with the Soviets is to carry hostages to Moscow. Trade purchased at this price will return to haunt the British. It is not without a small measure of satisfaction that I have noted that our own Foreign Operations Administration at long last has made a realistic reappraisal of its own trade policies and has refused to ride on the British trade special to Moscow. Mr. Stassen has read and heeded, for the moment at least, the stop-look-and-listen sign. He might go even further and take a serious look into the offshore procurement program with an eye to strengthening our own economic situation instead of penalizing American business firms that sorely need orders and find themselves faced with the inequitable competition of low-wage foreign companies.

Mr. Speaker, I must confess, having lived through these years of Communist aggression, I must confess to an enveloping sense of unreality that many of us in the Congress, nay all of us, find it necessary at this day and hour, to get up here and confront the necessity of making out a case against Red China as an enemy of the peace. How far have we strayed from reality? What evil influence is at work that such a preposterous proposition as admitting Red China to the United Nations is even a subject for serious debate? Talk about arming a burglar to rob your house. Here is a gang of international brigands who are responsible for the slaughter of thousands of American boys; who are branded as aggressors by the United Nations itself; who at every turn and upon every occasion aid and abet aggression; yet, this is the gang that is proposed for admittance to the very international organization that was avowedly established to perfect collective security and punish the breakers of the peace. Mr. Speaker, one feels a sense of lightheadedness at the very effrontery of the suggestion, and yet we know it is a seriously advanced proposal.

When I was younger and going to school, studying civics and trying to learn history, we were taught that foreign policy was something designed to protect the honor of the Nation and advance its legitimate national interests. Are we to believe in our day, Mr. Speaker, that national honor is a casualty of the times? That this prime consideration has been scrapped? That expediency takes precedence over honor?

I have said before and I say again, and I hope to repeat it over and over, that what is morally wrong can never be politically right. Each and every grave of our honored war dead is a monumental protest against Red China's case for U. N. admission. Just as surely as Munich brought on the ultimate attack on Poland, and the appeasement of Hitler insured World War II, so too would Red China in the United Nations spell doom to freedom and peace in this age, for it would be a signal for new and greater Communist aggression. It would be dismal and conclusive evidence that Western civilization had lost the will to survive before the threat of Communist imperialism. We are fighting to save the freedom; yes to save the lives of our children. Another decade of such monstrous folly, and all will be lost. America has never faced a greater moral or political trial. Upon our actions in this crisis, depends the shape of the world in the future.

MILITARY AND NAVAL CONSTRUCTION ACT

Mr. AREND submitted a conference report and statement on the bill (H. R. 9242) to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the RECORD, or to revise and extend remarks was granted to:

Mr. CURTIS of Missouri and to include additional matter.

Mr. RADWAN in two instances and to include additional matter.

Mr. GRANT and to include several poems.

Mr. CORBETT.

Mr. WOLVERTON.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 1303. An act to provide for the expeditious naturalization of former citizens of the United States who have lost United States citizenship by voting in a political election or plebiscite held in occupied Japan; and

S. 3480. An act to amend section 24 of the Federal Reserve Act, as amended.

BILLS PRESENTED TO THE PRESIDENT

Mr. LECOMPTE, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H. R. 5158. An act for the relief of Sgt. Welch Sanders; and

H. R. 5433. An act for the relief of the estates of Opal Perkins, and Kenneth Ross, deceased.

ADJOURNMENT

Mr. HALLECK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 9 minutes p. m.) the House adjourned until tomorrow, Thursday, July 15, 1954, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

1734. Under clause 2 of rule XXIV, a letter from the Assistant Secretary of the Interior, transmitting one copy each of certain bills passed by the Municipal Council of St. Thomas and St. John, pursuant to section 16 of the Organic Act of the Virgin Islands of the United States approved June 22, 1936, was taken from the Speaker's table and referred to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ALLEN of Illinois: Committee on Rules. House Resolution 630. Resolution for the consideration of H. R. 9757, a bill to amend the Atomic Energy Act of 1946, as amended, and for other purposes; without amendment (Rept. No. 2214). Referred to the House Calendar.

Mr. ALLEN of Illinois: Committee on Rules. House Resolution 439. Resolution providing for the appointment of a special committee of the House of Representatives to investigate the campaign expenditures of the various candidates for the House of Representatives, and for other purposes; without amendment (Rept. No. 2215). Referred to the House Calendar.

Mr. SCHENCK: Committee on House Administration. House Resolution 429. Resolution authorizing the printing as a House document of the proceedings at Kitty Hawk, N. C., and at Washington, D. C., celebrating the 50th anniversary year of controlled-powered flight; with amendment (Rept. No. 2234). Ordered to be printed.

Mr. SCHENCK: Committee on House Administration. Senate Concurrent Resolution 80. Concurrent resolution to print additional copies of Senate Document 87, Review of the United Nations Charter—A Collection of Documents; with amendment (Rept. No. 2235). Ordered to be printed.

Mr. SCHENCK: Committee of conference. House Concurrent Resolution 241. Concurrent resolution providing for printing as a House document the pledge of allegiance to the flag (Rept. No. 2236). Ordered to be printed.

Mr. ARENDS: Committee of conference. H. R. 9242. A bill to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes (Rept. No. 2237). Ordered to be printed.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. S. 2380. An act to amend the Mineral Leasing Act of February 25, 1920, as amended; without amendment (Rept. No. 2238). Referred to the Committee of the Whole House on the State of the Union.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. S. 2381. An act to amend section 27 of the Mineral Leasing Act of February 25, 1920, as amended, in order to promote the development of oil and gas on the public domain; without amendment (Rept. No. 2239). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. S. 2864. An act to approve an amendatory repayment contract negotiated with the North Unit irrigation district, to authorize construction of Haystack Reservoir on the Deschutes Federal reclamation project, and for other purposes; without amendment (Rept. No. 2240). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 2843. A bill to authorize the Secretary of the Interior to investigate and report to the Congress on the conservation, development, and utilization of the water resources of Hawaii; with amendment (Rept. No. 2241). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 8006. A bill to safeguard the rights of certain landowners in Wisconsin whose title to property has been brought into question by reason of errors in the original survey and grant; with amendment (Rept. No. 2242). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 1254. A bill to provide authorization for certain uses of public lands; with amendment (Rept. No. 2243). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of Nebraska: Committee on Interior and Insular Affairs. H. R. 8384. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Talent division of the Rogue River Basin reclamation project, Oregon; with amendment (Rept. No. 2244). Referred to the Committee of the Whole House on the State of the Union.

Mr. ALLEN of Illinois: Committee on Rules. House Resolution 633. Resolution for consideration of H. R. 8658, a bill to amend title 18, United States Code, to provide for the punishment of persons who jump bail; without amendment (Rept. No. 2245). Referred to the House Calendar.

Mr. ALLEN of Illinois: Committee on Rules. House Resolution 634. Resolution for consideration of House Resolution 627, resolution reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations; without amendment (Rept. No. 2246). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. GRAHAM: Committee on the Judiciary. S. 233. An act for the relief of Jeno Csepio; without amendment (Rept. No. 2216). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 431. An act for the relief of Joseph Di Pasquale; without amendment (Rept. No. 2217). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 670. An act for the relief of John Doyle Mociair; without amendment (Rept. No. 2218). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 946. An act for the relief of Mona Lisbet Kofoed Nicolaisen, Leif Martin Borglum Nicolaisen, and Ian Alan Kofoed Nicolaisen; without amendment (Rept. No. 2219). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 914. An act for the relief of Mark Vainer; without amendment (Rept. No. 2220). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 992. An act for the relief of Apostolos Savvas Vassiliadis; without amendment (Rept. No. 2221). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1158. An act for the relief of Stayka Petrovich (Stajka Petrovic); without amendment (Rept. 2222). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1321. An act for the relief of Michajlo Dzieczko; without amendment (Rept. No. 2223). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1520. An act for the relief of Andre Styka; without amendment (Rept. No. 2224). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1609. An act for the relief of Mrs. Robert Lee Slaughter, nee Elisa Ortiz Orat; without amendment (Rept. No. 2225). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1858. An act for the relief of Sister Antonella Marie Gutterres (Thereza Maria Gutterres); without amendment (Rept. No. 2226). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1883. An act for the relief of Dr. Takeo Takano; without amendment (Rept. No. 2227). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1889. An act for the relief of Margot Goldschmidt; without amendment. (Rept. No. 2228). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 1902. An act for the relief of Theresa Elizabeth Leventer; without amendment (Rept. No. 2229). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 2067. An act for the relief of Anthony Benito Estella, Natividad Estella, Antonio Juan Estella, and Virginia Araceli Estella; without amendment (Rept. No. 2230). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 2222. An act for the relief of Lucia Mezilgoglou; without amendment (Rept. No. 2231). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 2287. An act for the relief of George Scheer, Magda Scheer, Marie Scheer, Thomas Scheer, and Judith Scheer; without amendment (Rept. No. 2232). Referred to the Committee of the Whole House.

Mr. GRAHAM: Committee on the Judiciary. S. 3433. An act for the relief of Andreja Glusic; without amendment (Rept. No. 2233). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. AUCHINCLOSS:

H. R. 9901. A bill to authorize Federal participation in the cost of protecting the shores of privately owned real property as well as the shores of publicly owned real property; to the Committee on Public Works.

By Mr. BARTLETT:

H. R. 9902. A bill to consolidate, revise, and reenact the townsite laws applicable in Alaska; to the Committee on Interior and Insular Affairs.

By Mr. FOGARTY:

H. R. 9903. A bill to authorize, under regulations of the Civil Service Commission, the withholding, upon request, from compensation of Federal employees amounts for the payment of certain life and hospitalization insurance and credit union savings deposits; to the Committee on Post Office and Civil Service.

By Mr. McCONNELL:

H. R. 9904. A bill to amend section 9 (c) (3) of the National Labor Relations Act, relating to elections during economic strikes; to the Committee on Education and Labor.

By Mr. SAYLOR:

H. R. 9905. A bill to provide for programs of public facilities construction which will stimulate employment in areas having a substantial surplus of labor, and for other purposes; to the Committee on Public Works.

By Mr. CRETELLA:

H. R. 9909. A bill to prohibit payment of annuities to officers and employees of the United States convicted of certain offenses, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BISHOP:

H. Res. 631. Resolution to provide expenses for the special committee authorized by House Resolution 439; to the Committee on House Administration.

By Mr. JAVITS:

H. Res. 632. Resolution of inquiry to the Postmaster General regarding transmittal of hate propaganda through the mails; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DEVEREUX:

H. R. 9906. A bill for the relief of Edoardo Maria Filippo Baldassare Perrone di San Martino; to the Committee on the Judiciary.

By Mr. MUMMA:

H. R. 9907. A bill for the relief of Dr. Carlos Recio and his wife, Francisca Marco Palomero de Recio; to the Committee on the Judiciary.

By Mr. PHILBIN:

H. R. 9908. A bill for the relief of Rev. Canon John Malinowski; to the Committee on the Judiciary.

By Mr. GRAHAM:

H. Con. Res. 254. Concurrent resolution favoring the granting of the status of permanent residence to certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

1099. By Mrs. CHURCH: Petition of the city council of the city of Chicago at a meeting held June 30, 1954, urging the Congress of the United States to favorably consider the city of Chicago as a site for the erection of a Marine Corps memorial; to the Committee on House Administration.

1100. By the SPEAKER: Petition of the county clerk, Cook County, Chicago, Ill., relative to being in accord with a petition of the Polish American Congress to extend sympathy and the hand of friendship to the Polish Nation, etc.; to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Public Opinion in 29th District of Pennsylvania

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 14, 1954

Mr. CORBETT. Mr. Speaker, during my years of service in the Congress, I have regularly conducted polls of public thinking on vital national issues in my congressional district. These polls have been in the form of a printed questionnaire, requiring simple yes-and-no answers, mailed to registered voters, regardless of political affiliation, in my district.

Responses to these questionnaires have always been excellent. The tabulated results, which virtually constitute a referendum of the district, have proved of enormous value to myself and to my colleagues in the House.

My congressional district is probably as representative and contains as many varied interest groups as any in the Nation. It has the wealthy, the poor, and the middle class. It has a high concentration of labor, white-collar workers, small business, large industries and some of the finest farm areas found anywhere. It includes a thickly populated section of Pittsburgh, extends to the rural areas, and takes in many large and small towns in northern Allegheny County.

In this session of Congress, I conducted two polls, one in January, immediately after President Eisenhower's state of the Union message; the second has just now been completed. I am including herewith the percentage tabulation results of both polls. I hope they will prove as interesting and informative to other Members as they have to myself.

The results follow:

JANUARY 1954 TABULATION RESULTS

1. Is it better to balance the budget in yearly stages, rather than all at once? Yes, 92 percent; no, 8 percent.
2. The social-security deduction has been increased from 1½ percent to 2 percent. Should this increase be allowed to stand? Yes, 79 percent; no, 21 percent.
3. Do you favor the 10-percent cut in personal income taxes even if it increases the deficit? Yes, 53 percent; no, 47 percent.
4. Should we used our atomic weapons to stop future aggression? Yes, 82 percent; no, 18 percent.
5. Canada seems determined to build the St. Lawrence Seaway. Should we join in the project? Yes, 77 percent; no, 23 percent.
6. Do you agree that postal rates should be increased? Yes, 53 percent; no, 47 percent.
7. Should persons 18 to 21 be given the right to vote? Yes, 55 percent; no, 45 percent.
8. Should the Federal gasoline tax of 2 cents per gallon be maintained to aid the highway program? Yes, 87 percent; no, 13 percent.
9. Are you in favor of statehood for Hawaii? Yes, 84 percent; no, 16 percent.
10. Eisenhower's resolve is for a "sounder and safer America." Do you think he is making satisfactory headway? Yes, 90 percent; no, 10 percent.

JULY 1954 TABULATION RESULTS

1. Should any future United States action to stop Red aggression in Asia be limited to air and naval power? Yes, 58 percent; no, 42 percent.
2. Should we encourage the rearmament of West Germany regardless of French objections? Yes, 91 percent; no, 9 percent.
3. Should the Government continue to build low-rent public-housing projects? Yes, 47 percent; no, 53 percent.
4. Who do you think is wrong in the Army-McCarthy controversy? Army, 22 percent; McCarthy, 27 percent; both, 51 percent. (Check one.)
5. Should Senator MCCARTHY's power to investigate Communist activity be terminated? Yes, 50 percent plus; no, 50 percent minus.
6. Would you vote for a 5 to 10 percent salary increase for postal employees? Yes, 68 percent; no, 32 percent.
7. Do you believe there is any danger of a serious depression during the next few years? Yes, 32 percent; no, 68 percent.
8. Would you vote for a reduction of farm price supports? Yes, 85 percent; no, 15 percent.
9. Do you agree that our foreign affairs are being conducted about as well as circumstances permit? Yes, 63 percent; no, 37 percent.
10. Do you believe that war with Russia is an eventual certainty? Yes, 41 percent; no, 59 percent.
11. Do you favor reducing income taxes by lowering percentage rates rather than by increasing personal exemptions? Yes, 59 percent; no, 41 percent.
12. Do you agree that President Eisenhower has been doing a satisfactory job? Yes, 81 percent; no, 19 percent.

The Late Grantland Rice

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 14, 1954

Mr. GRANT. Mr. Speaker—

When the Great Scorer comes
To mark against your name,
He'll write not "won" or "lost,"
But how you played the game.

These words were inspired and left to posterity many years ago by a man who will ever be dear to the hearts of all true sportsmen. In this brief but incisive passage, the dean of American sportswriters captured the real and eloquent spirit of the game of life, whatever the aspirations or rewards might be. It testifies to the American way, the godly way, the way of all true champions.

Yesterday the creator of these words passed on to meet the Great Scorer. While at work in his midtown Manhattan office, Mr. Grantland Rice suffered a fatal heart attack. Today the entire sports world—the "has-beens," the "also-rans," the "immortals," the "champions"—and those countless others who have found pleasure and inspiration in Mr. Rice's work mourn his passing. His death marks the end of a glorious career of sports reporting which had its beginning in 1901 on the Nashville (Tenn.) News at $5 a week. In the last half century no personality surely has contributed so untiringly and influentially to the grandeur of American sports. He typifies an era in sports unparalleled in its impact on American life and institutions. In fact, Mr. Grantland Rice is an institution in himself.

Yet I submit that this grand old man has been much more to his fellow man than a reporter of athletic events. His life's work has transcended the ordinary barriers of human endeavor; it has left a legacy in which we all, however varied our pursuits, might find gratification and peace of mind.

I know of no more fitting epitaph to the memory of this man than that found in his immortal verse, Beyond All Things. In these thoughts you see the man and those attributes which will always be held in deep reverence. Mr. Rice wrote:

He played the game—
What finer epitaph can stand?
Or who can earn a fairer fame
When Time at last has called his hand?
Regardless of the mocking roar,
Regardless of the final score,
To fight it out, ram blow for blow,
Until your time has come to go
On out beyond all praise or blame,
Beyond the twilight's purple glow,
Where Fate can write against your name
This closing line for friend or foe:
He played the game.
He played the game—
What more is there that one can say?
What other word might add acclaim
To this lone phrase that rules the fray?
Regardless of the breaks of chance,
Regardless of all circumstance,
To rise above the whims of Fate,
Where dreams at times are desolate,
Where failure seems your final aim
And disappointment is your mate,
Where Life can write in words of flame
This closing line above the gate:
He played the game.

Most assuredly Mr. Grantland Rice played the game.

My Position on Four Record Votes

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 14, 1954

Mr. RADWAN. Mr. Speaker, on Thursday, July 8, 1954, I was not present, and I take this opportunity to state my position on four record votes which took place on that particular day:

On rollcall No. 97, if present, I would have voted "aye."

On rollcall No. 98, if present, I would have voted "nay."

UNIVERSITY OF MICHIGAN LIBRARIES

On rollcall No. 99, if present, I would have voted "aye."

On rollcall No. 100, if present, I would have voted "aye."

Firing Awards Review Banned by World Court

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 14, 1954

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting into the RECORD today a news item from the Washington Evening Star of July 13, 1954, which should be of deep concern to the United States Government and its people. I do this as one who has felt that the United States should be a member of the United Nations and do whatever it can to perfect the organization so that it will more nearly be what its creators hoped it would be.

The article states that the World Court has ruled that the 11 Americans dismissed from the United Nations employment for refusing to answer questions before duly constituted United States investigative agencies in regard to alleged subversive activities were entitled to the $170,000 compensation awards made to them by the United Nations Administrative tribunal and that the United Nations General Assembly had no right to consider and possibly reject the awards made.

The first serious question raised is what sort of an organization is the United Nations where creatures of it are not subject to its basic authorities. In other words, how can an organization function intelligently if it has committees, tribunals, or other organizations it establishes over which it has no control. Just where do the United States delegates to the United Nations go to correct abuse and usurpation of authorities of these subsidiary organizations?

I believe it is imperative that the United States find out right now what the procedures are.

The second serious question has to do with the substantive merits of the case. Relying upon the fifth amendment to prevent self-incrimination is certainly a civic right which all Americans want to see preserved. But relying upon the fifth amendment to prevent self-incrimination has nothing to do with the rights or duties of an employee in any specific job. Certainly the failure to testify before duly constituted authorities upon the basic subject of loyalty to one's own society and government is cause in itself for removal from a job where the government is the employer. Loyalty to one's employer is certainly an essential and basic feature of any contract for employment.

Certainly a person disloyal to a member nation of the U. N. or to the U. N. itself is grounds for removal from employment by the U. N. It is time that we all recognized a very basic fact of life. The Comintern when it was established under the aegis of Soviet Russia back in the early twenties is in itself a united nations. Those societies where the political government was not controlled by the Communist Party were to be infiltrated until the political government became dominated by the Communist Party. Until such time, however, that particular society or country was represented on the Comintern by members of the Communist Party from that country. This is a complete united nations organization. The Comintern's name may be changed to Cominform, or something else, but its essential structure and operation remains the same and it is in direct competition to the United Nations.

Obviously, any person working for the Comintern or in cooperation with it cannot be loyal to the United Nations. There can be no basis for paying a disloyal employee termination pay or any other sort of pay. As a matter of contract law, wages previously paid might well be recovered because the wages were paid supposedly for honest loyal work.

The same issues involved in the Hiss pension case are involved here. I certainly hope we move ahead to meet the challenge presented to us by the decision of the World Court. I am considering possible legislation which might help to protect the United States Government to a certain degree in this matter. Essentially, however, I think the executive department must act.

FIRING AWARDS REVIEW BANNED BY WORLD COURT

THE HAGUE, NETHERLANDS, July 13.—The World Court ruled today the U. N. General Assembly has no right to review compensation awards made to 11 Americans dismissed from United Nations jobs after United States inquiries into alleged subversive activities.

The ruling, a 9-to-3 decision, rejected a United States claim that the Assembly had the power to reconsider and possibly reject compensation awards made by the U. N. administrative tribunal.

The 11 Americans, dismissed by the U. N. Secretary General after refusing to answer questions before United States investigative agencies, had been awarded more than $170,000 in compensation by the tribunal.

The court said the "U. N. General Assembly has no right on any grounds to refuse to give effect to awards of compensation." The judges who opposed the majority opinion were from the United States, Brazil, and Chile.

President Eisenhower Says: "No One Lost Yesterday Except the American People"

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 14, 1954

Mr. WOLVERTON. Mr. Speaker, the action of the House, in recommitting to the Committee on Interstate and Foreign Commerce, the bill offered by the administration to fulfill President Eisenhower's plan to provide wider and better coverage of health insurance for our people was a great surprise to observers and Members alike.

It is unconceivable upon any justifiable basis that such action should be taken. The last word on that subject has not been said. Wait until the people find out and understand what was done to them by the action of the House. When they do they will speak in terms that will not be misunderstood. The full effect of their resentment may be felt by some at the elections next fall. If such does occur it will be well for any adversely affected thereby to remember their action in the House yesterday. The words of Abraham Lincoln ring as true today as when he uttered them:

You can fool some of the people all of the time, some of the people some of the time, but not all the people all the time.

Woe unto those who are unwilling to provide the means that will enable our people to meet the burden of cost incident to necessary medical and hospital care. Today, the burden of providing such in any long-term illness is so great that it means financial disaster to many families, or a mortgaging of their future.

It is no wonder that President Eisenhower reacted bitterly today to the defeat of his health reinsurance program in the House of Representatives. We are informed by the press that at his conference with them today, he told them this was only a temporary defeat and he would carry the program forward as long as he was in office. This is the fighting spirit of a true soldier who is fighting the cause of the people. This is the spirit that brings final victory. To such a one a setback such as yesterday is never more than a temporary defeat.

It was kind of the President to further say that he did not believe the Congressmen who voted against the proposal could really have understood it. It was characteristic of the charitable disposition that he has toward all. This may be the explanation.

The words of President Eisenhower at the close of his press conference will burn like fire into the minds of the people of this Nation. They were memorable words, unforgettable words, and, words the truth of which cannot be denied, words that will linger with our people, namely, "No one lost yesterday except the American people."

I hope the time is not long until the wrong done is rectified.

As part of my remarks, I include an editorial appearing in today's issue, July 14, 1954, of the News, published in Washington, D. C. It is an editorial that in a few words states the issue. It reads as follows:

HEALTH REINSURANCE

Although Congress has defeated the health reinsurance bill, the Eisenhower administration must not figuratively throw up its hands and say, "Well, so much for that."

People need insurance against calamitous illnesses and disabilities.

They need good insurance—at a price they can afford to pay.

The bill the House defeated aimed to bring that about by setting up a system of Government reinsurance for companies and groups (like Blue Cross) willing to try sell-

ing policies more liberal than those now on the market.

The American Medical Association disapproved of this bill. Apparently that carried some weight in Congress. But the AMA's attitude should not determine the issue, because it would not affect physicians except to enable more of their patients to pay their bills.

If doctors prefer that the number of charity patients not be reduced, they have the right to say so, but prospective patients—who outnumber doctors considerably—should be heard as well.

Aside from the AMA's role, it appears that the bill lost because, as Republican Leader HALLECK said, it was too conservative for many House liberals, and too liberal for many conservatives. And then, of course, there was much of the usual election-year politicking.

The national problems that fathered the reinsurance bill still exist.

They must be solved.

That's why the administration should keep plugging.

Progress in Civil Defense

EXTENSION OF REMARKS
OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 14, 1954

Mr. RADWAN. Mr. Speaker, the recent decision to establish the Continental Air Defense Command represents a major step in the long struggle to achieve an adequate defense against any possible attack on the United States. The establishment of this command is, I am sure, most gratifying to the many loyal Americans who have been working to improve our national civil-defense program. It indicates that our military leaders—perhaps for the first time—view with some degree of optimism the problem of defending this Nation against a possible superweapon attack. More than anything else, I believe that it is evidence of the worthwhile nature of civil-defense work itself.

The apathy with which civil defense has been regarded by the public in recent years is notorious. Despite this general indifference, however, many of our civic-minded citizens have worked relentlessly to prepare our communities to withstand the devastating effects of modern superweapons; and the job that they have accomplished is remarkable. To be sure, the task is yet unfinished, but we have come a long way.

Since the passage of the Federal Civil Defense Act in January 1951, two parallel movements to strengthen our home defenses have been under way; and as a result considerable progress has been achieved.

In August 1951 the first of these movements was inaugurated with the establishment of the Lincoln Laboratory at the Massachusetts Institute of Technology. This program, officially designated "Project Lincoln," has the mission of conducting research and development work on air defense problems, and is sponsored jointly by the Army, Navy, and Air Force. Its contract is administered by the Air Force.

Also in 1951, the Federal Civil Defense Administration, the National Security Resources Board, and the Department of Defense jointly organized "Project East River" for the purpose of studying civil defense needs. This project was carried out by a group of more than 100 scientists, educators, and businessmen under the sponsorship of Associated Universities, Inc. Its 10-volume report was completed during the summer of 1952. In December 1952, the Secretary of Defense appointed the seven-man group known as the Kelly committee to advise the Department of Defense on continental air-defense problems.

Partly as a result of these two movements—one dealing with military measures, and the other with nonmilitary measures for continental defense—the civil defense program of the United States has been given added significance in our military strategic planning. Civil defense is now recognized as a vital link in our defensive armor.

The progressive military thinking reflected in the newly formulated Continental Air Defense Command has been virtually matched on the civilian side. In the Congress, several bills designed to strengthen civil defense have been introduced during this session, and the creation of a joint congressional committee on civil defense has been proposed. The Federal Civil Defense Administration is currently shifting its headquarters from Washington, D. C., to an area less likely to be a primary target for the enemy, and many industrial organizations are reported to be taking similar precautions. Several large companies, for example, have formulated disaster plans including provisions for alternate headquarters, lines of succession, and emergency supplies and equipment.

These recent developments, it seems to me, should be most encouraging to our State and local civil defense groups throughout the country. It is they who have thus far borne the greatest burden in the struggle for adequate civil defense. And it is principally because of their remarkable effort that the objectives of civil defense now seem possible of attainment. These workers richly deserve the praise and support of us all.

The battle is not yet won. The danger has not abated. But one important phase of the battle has been won, and that phase is what might be termed the struggle to get started. I am confident, Mr. Speaker, that the wheels now rolling will not be slowed by the apathy of the past; no longer will there be a feeling of hopelessness. I feel sure that we can look forward to steadily increasing support for civil defense, and that the gains already won will be more than matched by an aroused American citizenry.

SENATE

THURSDAY, JULY 15, 1954

(Legislative day of Friday, July 2, 1954)

The Senate met at 10 o'clock a. m., on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

O God, our life and our light, to this moment dedicated to the unseen and eternal, we turn from the deceitful world where truth so often eludes us along tangled paths. Here at this altar of faith we would seek the truth about ourselves, knowing that Thou canst not use us to change the crooked things that blight the earth unless our own hearts are homes of sincerity, integrity, and purity. Create in us clean hearts, O God, and renew a right spirit within us. Because so much of our span of life is gone, and so little left, may we redeem the residue by intensity of living, toiling in this new day in the sense of the eternal. Prosper, we pray Thee, the councils of the nations' leaders whose decisions will shape the tomorrows. Bless all sincere efforts of those who speak for the nations, that there may be found a more excellent way than hatred and suspicion and exploitation, and when, in sharing all, Thy sundered children shall gain all; and Thine shall be the kingdom and the power and the glory. Amen.

THE JOURNAL

On request of Mr. KNOWLAND, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, July 14, 1954, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Tribbe, one of his secretaries, and he announced that on today, July 15, 1954, the President had approved and signed the following acts:

S. 381. An act for the relief of Donald Grant;

S. 579. An act for the relief of Wong You Henn;

S. 676. An act for the relief of Eftychios Mourginakis;

S. 1508. An act for the relief of Borivoje Vulich;

S. 1999. An act to provide for the recovery, care, and disposition of the remains of members of the uniformed services and certain other personnel, and for other purposes;

S. 2198. An act for the relief of (Sister) Jane Stanislaus Riederer;

S. 2369. An act for the relief of Karl Ullstein;

S. 2370. An act to authorize the sale of certain vessels to Brazil for use in the coastwise trade of Brazil; and

S. 2728. An act to authorize the collection of indebtedness of military and civilian personnel resulting from erroneous payments, and for other purposes.

UNIVERSITY OF MICHIGAN LIBRARIES

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading clerk, announced that the House had passed the bill (S. 2987) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the bill (S. 3458) to authorize the long-term time charter of tankers by the Secretary of the Navy, and for other purposes, with amendments, in which it requested the concurrence of the Senate.

The message further announced that the House had agreed to the concurrent resolution (S. Con. Res. 80) to print additional copies of Senate Document 87, Review of the United Nations Charter—A Collection of Documents, with amendments, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 8628. An act to amend the Tariff Act of 1930 to insure that crude silicon carbide imported into the United States will continue to be exempt from duty; and

H. R. 9248. An act to amend section 308 (5) of the Tariff Act of 1930, as amended.

The message further announced that the House had agreed to a concurrent resolution (H. Con. Res. 241) providing for printing as a House document the pledge of allegiance to the flag, in which it requested the concurrence of the Senate.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. KNOWLAND, and by unanimous consent, the Committee on Armed Services, and the Subcommittee on Business and Commerce of the Committee on the District of Columbia, were authorized to meet during the session of the Senate today.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. KNOWLAND. Mr. President, I ask unanimous consent that immediately following the quorum call and a brief executive session, there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. KNOWLAND. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KNOWLAND. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to consider executive business.

EXECUTIVE MESSAGE REFERRED

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States submitting sundry nominations, which was referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. SALTONSTALL, from the Committee on Armed Services:

Lt. Gen. Horace Logan McBride, and Lt. Gen. Andrew Davis Bruce, Army of the United States (major generals, U. S. Army), to be lieutenant generals on the retired list;

Lt. Gen. Robert Wells Harper (major general, Regular Air Force), United States Air Force, to be placed on the retired list in the grade of lieutenant general;

Lt. Gen. Charles Trovilla Myers 37A (major general, Regular Air Force), United States Air Force, to be commander, Air Training Command, with the rank of lieutenant general, and to be lieutenant general in the United States Air Force;

Maj. Gen. Glenn Oscar Barcus 87A, Regular Air Force, to be commander in chief, United States Northeast Command, with the rank of lieutenant general, and to be lieutenant general in the United States Air Force; and

Charles E. Cook, Jr., and sundry other persons, for appointment in the Regular Air Force.

By Mr. CARLSON, from the Committee on Post Office and Civil Service:

Seventy-nine postmasters.

The PRESIDENT pro tempore. If there be no further reports of committees, the clerk will state the nominations on the Executive Calendar.

DEPARTMENT OF COMMERCE

The Chief Clerk read the nomination of James C. Worthy, of Illinois, to be Assisant Secretary of Commerce.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

COAST AND GEODETIC SURVEY

The Chief Clerk proceeded to read sundry nominations in the Coast and Geodetic Survey.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the nominations in the Coast and Geodetic Survey be confirmed en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are confirmed en bloc.

Mr. KNOWLAND. Mr. President, I ask that the President be immediately notified of all nominations this day confirmed.

The PRESIDENT pro tempore. Without objection, the President will be immediately notified.

LEGISLATIVE SESSION

Mr. KNOWLAND. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

The PRESIDENT pro tempore. Morning business is now in order.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

AMENDMENT OF REVISED STATUTES RELATING TO VERIFICATION UNDER OATH OF CERTAIN CERTIFICATES OF INSPECTION

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to amend section 4421 of the Revised Statutes, in order to remove the requirement as to verifying under oath certain certificates of inspection, and for other purposes (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

AMENDMENT OF SECTION 5240 OF THE REVISED STATUTES RELATING TO THE EXAMINATION OF NATIONAL BANKS

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to amend section 5240 of the Revised Statutes, as amended, relating to the examination of national banks (with accompanying papers); to the Committee on Banking and Currency.

HANS KUZURA

A letter from the Secretary of the Army, transmitting a draft of proposed legislation for the relief of Hans Kuzura (with an accompanying paper); to the Committee on the Judiciary.

PERMANENT APPOINTMENTS IN THE NAVY AND MARINE CORPS

A letter from the Secretary of the Navy, transmitting a draft of proposed legislation to authorize permanent appointments in the United States Navy and in the United States Marine Corps (with an accompanying paper); to the Committee on Armed Services.

PETITION

The PRESIDENT pro tempore laid before the Senate a resolution adopted by the Hawaii Statehood Commission, Honolulu, T. H., favoring prompt enactment of legislation to grant statehood to the Territory of Hawaii, which was ordered to lie on the table.

AGRICULTURAL ACT OF 1954—REPORT OF COMMITTEE ON AGRICULTURE AND FORESTRY (REPT. NO. 1810)

Mr. AIKEN, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 3052) to encourage a stable, prosperous, and free agriculture, and for other purposes, reported it with an amendment, and submitted a report thereon, which report was ordered

to be printed, including supplemental, minority, and separate views.

CHANGE OF NAME OF GAVINS POINT RESERVOIR TO LEWIS AND CLARK LAKE—REPORT OF COMMITTEE ON PUBLIC WORKS

Mr. CASE, from the Committee on Public Works, to which was referred the bill (S. 3744) to change the name of Gavins Point Reservoir back of Gavins Point Dam to Lewis and Clark Lake, reported it favorably, without amendment, and submitted a report (No. 1811) thereon.

ADDITIONAL FUNDS FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE—REPORT OF A COMMITTEE

Mr. BRICKER, from the Committee on Interstate and Foreign Commerce, to which was referred the resolution (S. Res. 276) providing additional funds for the Committee on Interstate and Foreign Commerce, reported it favorably, without amendment, and it was placed on the calendar.

ADDITIONAL FUNDS FOR COMMITTEE ON APPROPRIATIONS—REPORT OF A COMMITTEE

Mr. BRIDGES, from the Committee on Appropriations, reported an original resolution (S. Res. 279), which was placed on the calendar, as follows:

Resolved, That the Committee on Appropriations hereby is authorized to expend from the contingent fund of the Senate, during the 83d Congress, $10,000, in addition to the amount, and for the same purposes, specified in section 134 (a) of the Legislative Reorganization Act, approved August 2, 1946, Senate Resolution 121, agreed to June 24, 1953; Senate Resolution 153, agreed to July 28, 1953; and Senate Resolution 243, agreed to May 27, 1954.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JOHNSON of Texas (for himself and Mr. DANIEL):

S. 3750. A bill to direct the Secretary of the Air Force to convey certain property located in proximity to San Antonio, Bexar County, Tex., to the State of Texas; to the Committee on Armed Services.

(See the remarks of Mr. JOHNSON of Texas when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSON of Colorado:

S. 3751. A bill for the relief of Bart Kryger; to the Committee on the Judiciary.

By Mr. CARLSON:

S. 3752. A bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing Alcove Springs, located in Marshall County, Kans., as a national monument;

S. 3753. A bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing Fort Hays as a national monument;

S. 3754. A bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing Fort Dodge as a national monument; and

S. 3755. A bill to provide that the Secretary of the Interior shall investigate and report to the Congress as to the advisability of establishing the Shawnee Mission as a national monument; to the Committee on Interior and Insular Affairs.

By Mr. SYMINGTON (for Mr. HENNINGS):

S. 3756. A bill for the relief of Howard Carl Kaiser; to the Committee on the Judiciary.

By Mr. ERVIN:

S. 3757. A bill for the relief of Gerasimos Athanase Haberis; to the Committee on the Judiciary.

By Mr. DIRKSEN (by request):

S. 3758. A bill to limit the acquisition and use by agencies of the Federal Government of equipment for reproducing documents, drawings, papers, and so forth, on sensitized materials; to the Committee on Rules and Administration.

By Mr. McCARRAN (for himself and Mr. BRICKER):

S. 3759. A bill to provide permanent certificates for local service air carriers; to the Committee on Interstate and Foreign Commerce.

By Mr. HENDRICKSON (for himself, Mr. LANGER, Mr. KEFAUVER, and Mr. HENNINGS):

S. J. Res. 177. Joint resolution to give the consent of the Congress to interstate compacts or agreements dealing with the cooperative supervison of juvenile probationers and parolees, the return of runaway juveniles, the return of juvenile-delinquent escapees, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. HENDRICKSON when he introduced the above joint resolution, which appear under a separate heading.)

CONVEYANCE OF CERTAIN PROPERTY TO STATE OF TEXAS

Mr. JOHNSON of Texas. Mr. President, on behalf of myself and my colleague, the junior Senator from Texas [Mr. DANIEL], I introduce for appropriate reference a bill directing the Secretary of the Air Force to convey to the State of Texas certain property located in the vicinity of San Antonio, Tex.

This land consists of approximately 218 acres, formerly designated as Martindale Auxiliary Field. During World War II it was used as an auxiliary to Randolph Field. In view of its present training mission and the changeover in aircraft, Randolph Air Force Base has no further need of this auxiliary field.

It is proposed to use this land as a permanent station for the Concentrated Air Section of the 36th Infantry Division, the 112th Armored Cavalry Regiment, the XLI Corps Artillery, and the 8th Field Artillery Group, Texas National Guard.

The Concentrated Air Section at present utilizes leased civilian facilities at Hurt Airport in San Antonio. It is proposed to move the section from the leased field to Martindale.

At present, Martindale Auxiliary Field is on license to the State of Texas by authority of the Secretary of the Air Force. This license was made effective January 29, 1954, with the understanding that the Texas National Guard should make an agreement with the Texas Wing, Civil Air Patrol, for co-use of the facilities. This agreement is now in effect. If title to the real property is acquired by the State of Texas, the agreement will remain in effect.

The bill fully protects the rights of the United States.

Martindale Field would continue to be used for military purposes.

All mineral rights would be reserved to the United States.

It is provided that title shall revert to the United States if the State of Texas should cease to use the property primarily for training of the National Guard and the Air National Guard and for other military purposes.

In the event of war or national emergency, the United States would have the right to reenter the property and make use of it, including improvements made by the State of Texas, for the duration of the state of war or emergency.

Transfer of this land to the State of Texas will better enable the Texas National Guard to perform its proper role in the American preparedness program. I hope that early and favorable action will be taken upon the bill.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3750) to direct the Secretary of the Air Force to convey certain property located in proximity to San Antonio, Bexar County, Tex., to the State of Texas, introduced by Mr. JOHNSON of Texas (for himself and Mr. DANIEL), was received, read twice by its title, and referred to the Committee on Armed Services.

GRANTING CONSENT OF CONGRESS TO INTERSTATE COMPACTS RELATING TO JUVENILE DELINQUENCY CASES

Mr. HENDRICKSON. Mr. President, on behalf of myself, the Senator from North Dakota [Mr. LANGER], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Missouri [Mr. HENNINGS], I introduce for appropriate reference a joint resolution to give the consent of the Congress to interstate compacts or agreements dealing with the cooperative supervision of juvenile probationers and parolees, the return of runaway juveniles, the return of juvenile escapees, and for other purposes.

This joint resolution is one of a number of legislative proposals which will be introduced by members of the Subcommittee on Juvenile Delinquency, during the remainder of the session.

The joint resolution (S. J. Res. 177) to give the consent of the Congress to interstate compacts or agreements, dealing with the cooperative supervision of juvenile probationers and parolees, the return of runaway juveniles, the return of juvenile delinquent escapees, and for other purposes, introduced by Mr. HENDRICKSON (for himself, Mr. LANGER, Mr. KEFAUVER, and Mr. HENNINGS), was received, read twice by its title, and referred to the Committee on the Judiciary.

UNIVERSITY OF MICHIGAN LIBRARIES

AMENDMENT OF CIVIL AERONAUTICS ACT OF 1938—AMENDMENT

Mr. WELKER submitted an amendment intended to be proposed by him to the bill (H. R. 7395) to amend the definition of "airman" in the Civil Aeronautics Act of 1938, and for other purposes, which was ordered to lie on the table and to be printed.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

Mr. ANDERSON submitted an amendment intended to be proposed by him to the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes, which was ordered to lie on the table and to be printed.

Mr. BRICKER submitted an amendment intended to be proposed by him to Senate bill 3690, supra, which was ordered to lie on the table and to be printed.

HOUSE BILLS REFERRED

The following bills were each read twice by their titles, and referred to the Committee on Finance:

H. R. 8628. An act to amend the Tariff Act of 1930 to insure that crude silicon carbide imported into the United States will continue to be exempt from duty; and

H. R. 9248. An act to amend section 308 (5) of the Tariff Act of 1930, as amended.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 241) providing for printing as a House document the pledge of allegiance to the flag, was referred to the Committee on Rules and Administration, as follows:

Resolved by the House of Representatives (the Senate concurring), That there be printed as a House document the pledge of allegiance to the flag, as designated in section 7 of the joint resolution approved June 22, 1942 (36 U. S. C., sec. 172), as amended (Public Law 396, 83d Cong., ch. 297, 2d sess.; H. J. Res. 243, approved June 14, 1954); and that there be printed 681,000 additional copies, of which 437,000 shall be for the use of the House; and 144,000 copies shall be for the use of the Senate, and that there be included thereon the following history of the pledge.

Author of the pledge was Francis Bellamy, born at Mount Morris, N. Y., lived 1855 to 1931. Original pledge first publicly used in 1892, was changed slightly by First and Second National Flag Conferences, in 1923 and 1924, was officially designated as "Pledge of Allegiance to the Fag" by Public Law 287, 79th Congress, approved December 28, 1945. On June 14, 1954, Flag Day, it was amended by Public Law 396, to include the words "under God."

NOTICE OF HEARING ON NOMINATION OF UNITED STATES ATTORNEY FOR WESTERN DISTRICT OF OKLAHOMA

Mr. LANGER. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Thursday, July 22, 1954, at 10 a. m., in room 424, Senate Office Building, upon the nomination of Paul W. Cress, of Oklahoma, to be United States attorney for the western district of Oklahoma, vice Robert E. Shelton, resigned. At the indicated time and place all persons interested in the nomination may make such representations as may be pertinent. The subcommittee consists of myself, chairman, the Senator from New Jersey [Mr. HENDRICKSON], and the Senator from Missouri [Mr. HENNINGS].

THE PRESIDENT'S SPEECH AT KASSON, MINN.

Mr. HUMPHREY. Mr. President, on June 28 an attack was made on the Senate floor by the chairman of the Committee on Agriculture and Forestry [Mr. AIKEN] against one of America's greatly respected agricultural spokesmen, Mr. M. W. Thatcher, general manager of the Farmers Union Grain Terminal Association of St. Paul.

Bill Thatcher has been and is today one of the real champions of equality for agriculture, a fighter for what he believes is right but always a respectful and courteous fighter. He has testified before many committees of the Congress. His views have always been respected even by those who might disagree with his conclusions. Several Members of this body have been invited on various occasions to speak before the membership of the great Midwest Grain Terminal Association, at its annual conference meeting. The chairman of the Senate Committee on Agriculture and Forestry has been among those extended that privilege and courtesy.

I regret the intemperateness of the accusations against Mr. Thatcher and the organizations he serves, and the intemperate accusations, including charges of trickery and libel of the President's words. I know Bill Thatcher. Many of you know him. He is a fighter, but he has never had to resort to trickery or libel. He says what he believes, and he stands by his word.

If there has been any trickery, Mr. President, it has been the attempt of the Republican Party to create one impression out in the great agricultural Midwest during campaigning season; then repudiate it in the Congress.

Name calling will not change a thing in the minds of Midwest farmers who heard the President at Kasson, nor can it expunge the headlines of Republican newspapers supporting the President's candidacy at that time.

The remarks of the Senator from Vermont cannot be allowed to stand unchallenged. The record should be made complete and clear. For that reason, Mr. President, I ask unanimous consent to have printed at this point in the RECORD a copy of a letter sent to the Senator from Vermont by Mr. Thatcher on July 9.

I may say that I have already mentioned this matter to the Senator from Vermont, as a matter of senatorial courtesy, and I asked him whether he had received the letter from Mr. Thatcher. He told me he had received it. I mentioned to the Senator that I intended to place it in the RECORD, and he had no objection to my doing so.

Therefore, I ask unanimous consent that the letter be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARMERS UNION GRAIN TERMINAL ASSOCIATION,
St. Paul, Minn., July 9, 1954.

The Honorable GEORGE D. AIKEN,
Senate Office Building,
Washington, D. C.

DEAR GEORGE: I had answered your letter of June 14 on June 24 after I had made a thorough investigation of the serious complaint you made to me about a tape recording of President Eisenhower's voice which I used at the last annual meeting of the Farmers Union Grain Terminal Association, as a part of my address at that convention.

Because I was so disturbed about what you had written to me and the serious statements you had made, I felt that it was proper for me to delay sending my reply of June 24 to you until I had fully covered your letter of June 14 with my board of directors of GTA, which met on June 28.

The GTA board of directors were disturbed at your serious charge. I then read to them my reply of June 24. The board unanimously approved my reply and were shocked at the tone of your letter. Before we mailed out the letter, you had appeared on the floor of the United States Senate and made very serious and unwarranted charges against the Farmers Union Grain Terminal Association.

I tried to call a special meeting of our board of directors to go over the speech on the Senate floor, but was unable to get a quorum. I outlined over the long-distance telephone to our executive committee what I had in mind to write additionally to you, and they approved it.

It is regrettable that you hastened to the floor of the Senate to make this speech before you received a report on my investigation of the question of this tape recording of remarks made by General Eisenhower in his speech at Kasson, Minn., but you did proceed with the speech.

I want to quote two paragraphs from your letter of June 14:

"Referring also to your letter of May 24, in which you state that 'the tape recording of President Eisenhower's Kasson speech, which was referred to in Al Stedman's article, was borrowed from the Columbia Broadcasting System and was used on station WCCO in Minneapolis by Cedric Adams, the most popular newscaster in the whole Northwest.' Apparently you have been misled by someone in your organization if you believe that the recording used over your radio stations and at the annual convention was the same that was used on WCCO. I am advised that the recording you used was a 'dubbing' of the recording used over WCCO. It appears that the recording you used was made especially for your organization on order of Mr. Luther Weaver, head of the agency handling your advertising. It seems that Mr. Weaver ordered certain sentences and phrases deleted from President Eisenhower's Kasson speech, thus giving the listeners an erroneous picture of the President's position on farm supports.

"I am very sorry that your organization saw fit to use this misleading recording."

I find, upon investigation, that I was in error when I wrote you on May 24 as follows:

"The tape recording of President Eisenhower's Kasson speech, which was referred to in Al Stedman's article, was borrowed from the Columbia Broadcasting System and was used on station WCCO in Minneapolis by Cedric Adams, the most popular newscaster in the whole Northwest. He and everyone around him are strong Eisenhower men. After the tape recording was played back at our stockholders' meeting, and after

I was through speaking, Al Stedman came backstage and complained bitterly about this tape recording. I explained to him just exactly how I procured it, from whom, and thought that that would end it."

It had always been in my mind that we used the very same tape recording of Eisenhower's Kasson speech, just as I referred to in the paragraph above, but when coming to make a full investigation of this, there are two tape recordings that I listened to in full. One was my address before the stockholders of GTA, December 1953, in which I used the Eisenhower tape recording, which is also objected to by you and the St. Paul writer, Al Stedman. I find that in my speech I made no reference at all to the Columbia Broadcasting System, station WCCO of Minneapolis, or Cedric Adams, the commentator. All I said with reference to this was, "Would you like to hear the voice of General Eisenhower?" The crowd applauded. I said, "Turn it on." And, that's all I said.

I had the tape recording of my speech and the full tape recording of Mr. Eisenhower's Kasson speech, which I'll be perfectly pleased to play over to you and anyone else who cares to listen to them, and that will end that, because you can't change the voices.

As I have previously written to you, I heard the popular newscaster, Cedric Adams, in his appearance on WCCO radio station in Minneapolis, Minn., in which he had a tape recording, in part quoting what General Eisenhower had stated in his campaign speech at Kasson, Minn. I asked the director of our public relations, Mr. Gordon Roth, whom you know well, to get a copy of that tape recording, which I wanted to use as a part of my annual address at the GTA stockholders' meeting here in St. Paul in December of 1953.

Today, I had here in my office, within the last hour, Mr. Luther Weaver, the head of the agency handling our advertising, and Mr. Gordon Roth, the head of our public relations department. I read the 2 paragraphs of your letter of June 14, quoted above, to Mr. Weaver and Mr. Roth.

This is the history that was given by them to me: Mr. Luther Weaver, on the simple instructions from Mr. Roth to procure a copy of the tape used by Cedric Adams, attempted to do just that. He called Mr. James Gorman, in charge of radio station WCCO, and stated that he wanted a copy of that tape. Following that call, Mr. Jack Houston, an assistant to Mr. Gorman, called and stated that they could not find a copy of that tape recording. Mr. Weaver then asked them if they had a copy of the Kasson speech, and they said they had a recording of the Kasson speech. Mr. Houston stated that he remembered writing the script for Mr. Adams' broadcast and having made the tape recording that Mr. Adams used. Mr. Houston asked Mr. Weaver if he would give him some indication of what part of the speech was wanted. Mr. Weaver said, "Yes, he would." Mr. Weaver said he clipped from the Farmers Union Herald the statement, which we have used for a long time in the Herald, "The Golden Promise," being a part of the statement made by General Eisenhower in his Kasson speech. Mr. Weaver sent that to Mr. Jack Houston as a "tracer" as to what we wanted.

Mr. Luther Weaver had no instructions from Mr. Roth to "doctor" anything. Mr. Luther Weaver had no interest, as head of an advertising agency, to "doctor" anything. Mr. Weaver never has heard the tape, even to this day.

Mr. Roth assumed that the tape we used was the same one used by Mr. Adams. I assumed the tape we used was the same tape used by Mr. Adams. We find that Mr. Jack Houston, who made the tape for Mr. Adams, did the same thing in making the tape for us. They are checking all of Mr. Adams' broadcasts to finally find the one that he used at some particular hour in 1953, in which he used the tape recording.

I want to repeat again the tape recording we have are the words of General Eisenhower. They are not, of course, all of his speech. Neither did Mr. Weaver have any interest in it, nor did he suggest any doctoring. Nor did Mr. Roth have any notion of doctoring. And, of course, you know I did not, and I still believe there is no doctoring. Of course, the tape picks up the important stuff out of the Kasson speech, and of course, is taken out of context.

Now, this is what candidate Eisenhower said a little later at his speech at Brookings, S. Dak. I notice in your Senate speech you try to push this off as unimportant. Well, the people who heard it locally and over the radio thought they were listening to something that was important. And, this is the full quote from Mr. Eisenhower's speech at Brookings, S. Dak., where he gives his own interpretation of what he said at Kasson, Minn.:

"At Kasson, in Minnesota, some weeks back, later in Omaha and in a number of so-called back platform speeches I have tried to make my position clear.

"The Republican Party is pledged to the sustaining of the 90-percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100-percent parity, with the guaranty in the price supports of 90 percent."

The same day he spoke at Fargo with more interpretation:

"We are accused of wanting to abolish the farm program and the price supports. Well, some things are so false you don't know the right words to use, at least in polite society, for condemning them. I went to Kasson, Minn., and on behalf of Republican leaders and with the concurrence of the great men of the party, at least all that could be reached in time, I stated exactly what we meant to do, and the present 90-percent parity price in the farm program was sustained and supported completely."

Now, so that you can feel that I'm perfectly fair about this with you, I will give you practically all of what Mr. Eisenhower said at Kasson, out of which we built our context of "the golden promise."

"And here and now, without any 'ifs' or 'buts,' I say to you that I stand behind—and the Republican Party stands behind—the price-support laws now on the books. This includes the amendment to the basic farm act, passed by votes of both parties in Congress, to continue through 1954 the price supports on basic commodities at 90 percent of parity.

"These price supports are only fair to the farmer to underwrite the exceptional risk he is now taking. They are a moral and legal commitment which must be upheld.

"We have now at least 2 years to plan ahead. We must use this valuable time to develop sound means and methods of maintaining and expanding both security and opportunity in agriculture. We must mobilize all of the brains in agriculture—farmers, your farm organization leaders, your farmwise legislators, your agricultural specialists, and research workers—all of them to join us in building and improving our long-range farm policies and programs.

"Our goal will be sound, farmer-run programs that safeguard agriculture—but do not regiment you, do not put the Federal Government in charge of your farms.

"We must, by using good, old-fashioned horsesense, figure out sound methods of maintaining agriculture's freedom to shift patterns or production without losing basic protection to which agriculture is entitled.

"We must realize that no formula developed at any time is infallible. Conditions change. What counts is being prepared to do the right thing at the right time. To do this the Republicans will use the wisdom of farmers.

"I firmly believe that agriculture is entitled to a fair, full share of the national income and it must be a policy of Government to help agriculture achieve this goal in ways that minimize Government control and protect the farmers' independence. All I know of farmers convinces me that they would rather earn their fair share than to have it as a Government handout.

"And a fair share is not merely 90 percent of parity—it is full parity."

Now, you have the whole works so far as these three farm speeches are concerned, and you have my statement about how the tape recording was built.

I would suggest that you open up a dictionary and see the definition of "doctoring" and also the definition of "deleting."

Your statement that we libeled the President is false. Whoever made the statement to you that we had used this tape recording on our GTA radio program made a false statement. It has never been used on our radio program. It was never used but once, and that by myself as a part of my address to some 2,000 people at the St. Paul Auditorium at the stockholders' meeting of GTA in December 1953.

Your statement that this was a master of trickery is false, and I don't think you seriously mean that I am a master of trickery, and I resent it as you would if I had said it about you.

As I have written to you, I have left it to others to speak disparagingly about a President during all the years that I have been before the public. Even when it seemed everybody was riding President Hoover, I either said something favorable about him, or said nothing.

I have never said anything about you except that you were a great statesman. I have said that I disagree with you in this farm program, and I disagree with you more deeply than I have ever recorded. I may be wrong, and you may be wrong. Time will tell. But, the program that you and Secretary Benson are advocating and fighting for today, I will fight as courageously and militantly as God will give me the strength to do.

This ends my correspondence with you with reference to this unfortunate situation. Of course, your speech will be answered, and we will try to get somebody in the Senate to put our reply in the CONGRESSIONAL RECORD, where it can stand as an answer to your statements which I think were unfortunately made.

Sincerely yours,

M. W. THATCHER,
General Manager.

Mr. MURRAY. Mr. President, I have just received a copy of the Farmers Union Herald of July 5, 1954, which contains an editorial discussing at some length the matter just referred to by the Senator from Minnesota [Mr. HUMPHREY]. The editorial goes into the subject in great detail. I ask unanimous consent to have the editorial printed in the body of the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAR WARN'T NO GOLD TO TARNISH—SENATOR AIKEN AND THE GOLDEN PROMISE

A short, stocky, white-haired New Englander sits as chairman of the United States Senate Committee on Agriculture. He comes from the rocky hills of Vermont where he once presided as governor and, before that, as a banker.

The Senator is GEORGE D. AIKEN.

Twice he has come to St. Paul at the invitation of M. W. Thatcher, general manager

UNIVERSITY OF MICHIGAN LIBRARIES

of the Farmers Union Grain Terminal Association. Twice he has expounded his views on farm price supports, views that were his own and not those of Thatcher, nor of GTA, nor of the majority of farm people who heard every argument he could muster. He spoke these two times to the largest farm audiences he has ever addressed. The audiences were composed of the stockholders, delegates and visitors at the annual dinners of Farmers Union Grain Terminal Association in St. Paul.

All this was before there was an Eisenhower in the Aiken, Farm Bureau downward flexing, farm price-support camp.

Coming from a section of the country where politicians promise farmers cheap feed and city people cheap food, AIKEN never has liked the full parity concept of price supports. He is an author of the 1948 price flexing law which has been held in abeyance ever since then by extensions of mandatory 90-percent supports on wheat, corn and the other basic commodities.

To AIKEN, the golden promise of parity to agriculture made by candidate Eisenhower at Kasson, Minn., and other places here in the Northwest has been a thorn of no mean proportions. The irritation caused by this thorn now has broken out in a rash.

To an astounded Senate, on June 29, Senator AIKEN "exposed" the thorn, named those who had planted it in his flesh, and called for atonement for the alleged heresy.

The inflexible little Senator in his speech turned his verbal guns on his former host, M. W. Thatcher, and fired a vituperative charge that use of the golden promise was a "masterpiece of trickery."

Mr. AIKEN's speech was not spontaneous; it was calculated. The Senator had help, not alone from his flexing associates in high places but also, obviously, from a more remote nest of flexing intrigue in Minnesota. Maybe AIKEN doesn't know it but there are only a small minority of farmers in Minnesota who are taken in by the parity-through-flexing salesmen.

Mr. AIKEN started his speech by saying: "One of the choicest bits of false propaganda going the rounds today is the charge that, during the campaign of 1952, President Eisenhower, at Kasson, Minn., promised the farmers that he was for 90 percent support prices for basic agricultural commodities and, eventually, for 100 percent of parity.

"It is time that this libel on the President's words is brought into the open," he continued.

Then followed a description of what the Democratic Party had claimed that the candidate, Eisenhower, had said at Kasson. Mr. AIKEN wanted it understood that the Democratic Party had claimed Ike hadn't promised anything and that, therefore, he should have been defeated.

Being a good Texas Democrat, Senator DANIEL rose to object to the criticism of his party. But Senator AIKEN gallantly assured the Texan he had meant no slur. The Democrats were fine people. They had not claimed, during the campaign or immediately thereafter, that Ike had promised parity. They had just claimed that he had promised nothing more than flexing.

"It is only the sheerest hypocrisy that prompts opponents of the President's farm program today to charge that he promised high rigid supports during his campaign. The Democrats promised to continue high, rigid supports. The Republicans campaigned for flexible supports." Thus spoke the author of flexing.

A Senator's speech delivered in the Senate becomes part of a permanent public record. It is printed in the CONGRESSIONAL RECORD. People can pick it up and use it. Sometimes speeches are made and printed in the RECORD just for that purpose.

* * * * *

In the December 8, 1952 issue, just a month after the election of Eisenhower, the Farmers Union Herald started publishing what it called the golden promise. The words of that promise are taken from the Kasson speech. Together and without adornment they constitute a firm pledge to agriculture, one that most all farmers expected to be fulfilled by the President.

On December 16, 1953, 1 year later, a tape of the golden promise taken from the original recording of the Eisenhower speech at Kasson was played for stockholders, delegates, and visitors at the annual GTA stockholders' meeting in St. Paul. The tape, as played, was furnished at its request to GTA by WCCO, a CBS radio station in Minneapolis. This is the way the incident was reported in the Herald of December 28, 1953:

"A hushed audience of nearly 3,000 farm folk listened to the golden promise from the lips of the President himself at the annual GTA session in St. Paul.

"The promise was made by General Eisenhower when he was campaigning for President in the fall of 1952. In the course of his speech he promised to continue 90 percent supports on the basic crops through 1954 and ended the statement with his promise to work for full parity for farmers.

"The original radio recording of the Eisenhower promise was played to the GTA audience toward the end of the address by M. W. Thatcher, GTA general manager. Mr. Thatcher had reviewed the price support issue from beginning to end and had finally led to the Eisenhower golden promise. He then said, 'I want all of you to hear it in the President's own words.'

"Many who missed the golden promise, which was buried in a half-hour speech, will never forget it after hearing it all by itself."

Listening also, back in the wings of the theater section of the St. Paul auditorium, was a newspaper writer sent to the GTA session to cover it for the St. Paul Pioneer Press and Dispatch. This writer was Al Stedman, a former employee of the United States Department of Agriculture, and a consistent propagandist for the downward farm price flexing philosophy of the Farm Bureau leadership.

As Thatcher left the platform, Stedman met him backstage. Stedman's face was a livid red. He was infuriated. He berated Thatcher for having played the recording of the golden promise. Though presumably sent by his papers to report what transpired at the GTA session, Stedman now became a fierce partisan. He stomped out of the meeting place with an I'll-fix-you air.

A short time later he wrote an editorial for his paper called The Voice of Ike. This editorial presented the full text of what Ike had said at Kasson about price supports and what had been played at the GTA session as the golden promise. The editorial was a thinly veiled accusation of trickery against Thatcher.

And then, in February 1954, the Minnesota Farm Bureau News, official organ of the FB in that State and generally considered a vicious, scandal mongering, red-smearing foe of Thatcher, GTA, and the Farmers Union, reprinted the whole Stedman editorial and added its own comment.

This Farm Bureau commentary, replete with words such as "hoax," "perpetrate," "doctoring" and "expose," typical of irresponsible yellow journalism, was the forerunner to circulation of the Stedman editorial in sections of Minnesota.

While Stedman obviously was interested chiefly in defending Ike, those who circulated his editorial had another aim. This aim was to discredit GTA and its general manager as they have been trying to do for many years.

Country editors didn't take too well to the Stedman editorial. Too many of them had carefully read or heard what Eisenhower had said at Kasson. Too many were familiar with what the record had been since. So the effort to use Stedman against GTA flopped.

Isn't it a remarkable coincidence that, now, some of the words and phrases used by AIKEN in his June 29 speech are the same as or similar to those used in the February blast in the Farm Bureau News?

The Herald reported all of the references directly related to agriculture made by both Eisenhower and Stevenson at Kasson, Minn., on September 6, in its issue of September 8.

The Herald pointed out editorially that Eisenhower had pledged to continue through 1954 the 90-percent supports on basic commodities. It pointed out also that Ike had pledged himself in these words: "A fair share is not merely 90 percent of parity, but full parity."

In its issue of October 20, 1952, the last issue before the general election, the Herald presented the farm planks and policies of not only the Republican and Democratic Parties, but also the Farmers Union, the Grange, and the Farm Bureau. It published biographical sketches of both Eisenhower and Stevenson. These were prepared, at the invitation of the editor, by people selected by the headquarters of both parties in the Twin Cities. And, further, the Herald presented in the same issue the voting record on farm issues of all Northwest Congressmen.

All these facts were presented for the information of the tens of thousands of farm families who buy their supplies cooperatively through the Farmers Union Central Exchange and who market their grain cooperatively through Farmers Union Grain Terminal Association. There was not the slightest effort on the part of the Herald to influence voting. The Herald said, editorially, regarding the election:

"We are sitting back and letting the Republicans and Democrats tell how they think our readers should vote, and why."

Farmers who had turned thumbs down on the Republicans in 1948, now turned to Ike. The vote tabulation here in the Northwest shows a tremendous switch. Was it because farmers believed that Eisenhower had made a golden promise to agriculture? Or did they help vote Ike in, believing he had promised nothing more than flexible price supports that could turn him into a subsistence farmer instead of the business farmer he had been on the road to achieving?

Let's examine the facts. Let's go right into the record of what was said and what has been done. Let's see what the partisan backers of Eisenhower claimed he said at Kasson and other Northwest places. Let's see what the Senators and Congressmen who helped campaign for Mr. Eisenhower have to say now.

Then those who want facts instead of politics can decide whether AIKEN and his informers are being truthful to farmers and the general public or are engaged in a dishonest drive to fool American agriculture into a disastrous program.

On September 6, 1952, General Eisenhower and Governor Stevenson both came to Kasson, Minn., to deliver their keynote campaign speeches on agriculture. It was an historical event, wherein nearly 100,000 persons saw and heard both candidates for President on the same platform the same day—just a few hours apart.

Eisenhower read his speech. Advance copies were handed out to the press just before the speech.

This is the full text of what Eisenhower said regarding price supports:

"And here and now, without any 'ifs' or 'buts,' I say to you that I stand behind—and the Republican Party stands behind—the price-support laws now on the books. This includes the amendment to the basic Farm Act, passed by votes of both parties in Congress, to continue through 1954 the price supports on basic commodities at 90 percent of parity.

"These price supports are only fair to the farmer to underwrite the exceptional risk he is now taking. They are a moral and legal commitment which must be upheld.

"We have now at least 2 years to plan ahead. We must use this valuable time to develop sound means and methods of maintaining and expanding both security and opportunity in agriculture. We must mobilize all of the brains in agriculture—farmers, your farm organization leaders, your farmwise legislators, your agricultural specialists and research workers—all of them to join us in building and improving our long-range farm policies and programs.

"Our goal will be sound, farmer-run programs that safeguard agriculture, but do not regiment you—do not put the Federal Government in charge of your farms.

"We must, by using good, old-fashioned horsesense, figure out sound methods of maintaining agriculture's freedom to shift patterns or production without losing basic protection to which agriculture is entitled.

"We must realize that no formula developed at any time is infallible; conditions change. What counts is being prepared to do the right thing at the right time. To do this the Republicans will use the wisdom of farmers.

"I firmly believe that agriculture is entitled to a fair, full share of the national income, and it must be a policy of Government to help agriculture achieve this goal in ways that minimize Government control and protect the farmers' independence. All I know of farmers convinces me that they would rather earn their fair share than to have it as a Government handout.

"And a fair share is not merely 90 percent of parity—it is full parity."

Now, that is a statement to which Thatcher and his associates at GTA, as well as other prominent leaders in the Central Exchange and the Farmers Union, fully subscribed. The entire statement, to them, constituted a promise which, if carried out, would stabilize American agriculture, protect farm prices, and preserve farmers' freedom of action.

But the kernel of the statement, as all fair people recognize, is the specific promise to retain 90-percent supports through 1954—the statement that 90 percent was not a fair share and the inference that Ike would seek full parity. That is the underlined portion, known far and wide as the golden promise.

Nowhere in Eisenhower's Kasson speech was there any mention of the free market or even of "in the market place" as contained in the Republican platform.

One month after the Kasson speech, Ike spoke in Brookings, S. Dak. The date was October 4, 1952. This speech, according to AIKEN, was extemporaneous. AIKEN now poo poohs the Brookings speech because of this, inferring that, when Eisenhower spoke extemporaneously, he didn't know what he was saying.

We believe the opposite. We firmly believe that, when Ike spoke extemporaneously, as at Brookings, he was saying exactly what he believed he had said before and intended to say afterwards. And we have no doubt that he firmly intended to carry out the promise he made so positively at Brookings. This is what he said at Brookings, as reported verbatim by the Sioux Falls, S. Dak., Argus Leader, a Republican paper.

"At Kasson, in Minnesota, some weeks back, later in Omaha and in a number of so-called back platform speeches I have tried to make my position clear.

"The Republican party is pledged to the sustaining of the 90-percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100-percent parity, with the guaranty in the price supports of 90 percent."

That is a full and complete statement, just as Ike made it at Brookings, S. Dak., a month after his Kasson speech, and getting closer to the day of election.

Is there any reference to "in the market place" or to flexible support prices for farmers in this statement?

What would an ordinary person of sound mind believe was the promise that was being made to him?

The same day, October 4, Mr. Eisenhower made a speech in Fargo, N. Dak. This also was extemporaneous. But the full text was published in the Fargo Forum, another Republican paper, in its Sunday morning edition, October 5.

Let's take the full statement of Mr. Eisenhower on supports and see what he had to say, just a few hours after he had spoken in South Dakota.

Let's remember these are farm States and that, as Ike had said at Brookings, "quite naturally in a great region such as this there is more of a special interest in agriculture than there is in some of our other economic forms of life."

This is what the candidate told the Fargo audience:

"We are accused of wanting to abolish the farm program and the price supports. Well, some things are so false you don't know the right words to use, at least in polite society, for condemning them. I went to Kasson, Minn., and on behalf of Republican leaders and with the concurrence of the great men of the party, at least all that could be reached in time, I stated exactly what we meant to do, and the present 90-percent parity price in the farm program was sustained and supported completely."

At Kasson, Minn., the candidate for the Presidency was making a major farm address written for him and incorporating his ideas. It was carefully prepared, make no mistake about that.

But at Brookings and at Fargo the candidate was putting his own interpretation on the Kasson speech. Was Eisenhower less qualified then to interpret his own meaning than is AIKEN now?

The Eisenhower press went further than the Farmers Union Herald in its headlines.

The September 8 issue of Farmers Union Herald said: "100,000 cheer as Ike and Adlai plow under farm price flexing."

But the Minneapolis Star proclaimed in an 8-column streamer head across page 1: "Eisenhower Calls for 100-Percent of Parity."

The Sioux Falls Argus Leader told its readers: "General assures crowd he stands for full parity."

Harold S. Milner, Associated Press staff reporter covering the Brookings speech, reported:

"Dwight D. Eisenhower told a South Dakota audience today (October 4) he wanted to make it clear that he promised full acceptance of the present 90 percent of parity program. He said he also wanted it understood that he would work for full parity when the present 90-percent program ends in 1954."

The Associated Press had sent Don Whitehead, one of its top correspondents, to Kasson to report the speech there. This is how Whitehead quoted the President in the dispatch he filed from Kasson to Associated Press newspapers all over the United States:

"I firmly believe that agriculture is entitled to a fair, full share of the national income," Eisenhower said, "and a fair share is not merely 90 percent of parity—but full parity."

Even Stedman, who was at Kasson and heard Eisenhower's speech, filed a dispatch to his paper, commenting:

"The more farmers thought over General Eisenhower's unqualified backing for 2 years of 90 percent of parity farm supports, with full parity as his general aim, the more they were impressed. The great question about General Ike's stand on parity had been answered by him to their general satisfaction."

The Eisenhower administration was installed on January 20, 1953. On February 11, less than a month thereafter, Ike's new Secretary of Agriculture, Ezra Taft Benson, made his maiden address in St. Paul, Minn.

The golden promise, as carried in the Herald, had been commonly accepted as the President's campaign promise to agriculture. It had not been challenged.

But Benson, on February 11, less than a month after the new administration had taken over, made it crystal clear that he held a low estimate of 90 percent price supports, to say nothing of full parity supports.

Benson told farmers they had been robbed of their character, initiative, and independence by the farm program of the last decade. He urged them to set their sights above the dollar mark and return to the free market.

The Benson speech found little backing. Even the St. Paul audience gave it a cool reception. And, in the following days, Republican Senators and Congressmen who had worked hard to elect Eisenhower repudiated the Benson philosophy.

For whatever his reasons, Benson had implied that he intended to return agriculture to the chaos of the 1920's when farmers were at the mercy of big city commodity speculators in human hunger.

Was this what Ike had promised at Kasson?

The late Senator Robert Taft who then was the administration leader in the Senate sharply rebuked Benson. Congress would decide the program, not Benson, he said in a public statement.

Republican Senator MILTON YOUNG, of North Dakota, called for Benson's removal as Secretary. There is no need of going into Senator YOUNG's long fight against Benson's reversal and, eventually, the President's own reversal of the pledge made at Kasson. His record has been spread on the front pages of all Northwest newspapers.

Senator WILLIAM LANGER, North Dakota's senior Republican Senator, has fought tooth and nail to get performance on the pledge made at Kasson.

Senator MUNDT, of South Dakota, a stanch Republican, criticized the switch announced by Benson and called for performance on the pledges made at Kasson and Brookings.

Of all Minnesota's 9 Members of the House, only 1 backs Benson's turnabout and he is from the city of Minneapolis. Congressman H. CARL ANDERSEN, from Minnesota's Seventh District, has denounced Benson.

In a recent editorial the Sioux Falls, S. Dak., Argus Leader, stated:

"Representative ANDERSEN favors a price-support law guaranteeing farmers 90 percent of parity. In this, he is in agreement with the stand taken by Dwight D. Eisenhower at Kasson, Minn., and Brookings, S. Dak., during the 1952 presidential campaign."

In the Northwest no Senator has given more faithful service to Eisenhower during the campaign and afterward, than EDWARD THYE, Minnesota's senior Senator. But THYE, who sat on the platform as Benson spoke in St. Paul a year and a half ago, now has challenged the President and the Republican Party to make the most of it if they think his stand on 90 percent supports is disloyalty.

Recent abusive statements by Vice President Nixon, Benson, and Aiken, directed at all Republican Members of the House and Senate who oppose flexible farm support prices at this time, have angered THYE.

But strong-arm tactics have made THYE more defiant than ever. In a speech prepared for delivery in the Senate and reported in the press last week THYE charged the administration statements "do violence both to truth and to sound public policy."

By the time you read this you very likely will have heard over the GTA radio network a transcribed talk by Senator THYE made expressly for GTA to use. If you have, you will know how strongly THYE feels about preserving farm income and preventing a farm depression. He doesn't sound like a man

UNIVERSITY OF MICHIGAN LIBRARIES

who thought the use of the golden promise was a masterpiece of trickery.

AIKEN, who is chairman of the Senate Committee on Agriculture, the majority of which are Republicans, could not get his own committee to endorse the administration's and his program of flexible supports. His committee voted for extension of 90 per percent supports.

The chairman of the House Committee on Agriculture is CLIFFORD HOPE, of Kansas. A majority of this committee are Republicans. HOPE, one of the foremost authorities on agriculture in Congress, led his committee in an overwhelming vote for extension of 90 percent.

Do the Republicans on these committees believe that Eisenhower was talking about flexible support prices or a free market when he spoke at Kasson, Brookings, Fargo, and other places in this part of the country? Obviously they don't.

Perhaps AIKEN has been led to believe that Eisenhower was promising what he, as President, is now attempting to force through Congress when he spoke at Kasson, Brookings, and Fargo in 1952. If so, he should study the record we have presented. He should take the word of his associates who campaigned for the President in this part of the country. They will tell him that Ike did not promise the Aiken program to the Northwest in 1952. He promised "full parity, with a guaranty in the price supports of 90 percent."

Truly honest men will admit their errors. Will Mr. AIKEN?

The PRESIDENT pro tempore. If there is no further morning business, the Chair lays before the Senate the unfinished business.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. PASTORE. Mr. President, Senate bill 3690 and its companion bill in the House represent the first major revision of the Atomic Energy Act of 1946—the so-called McMahon Act. As such, these bills, if written into law, cannot help but have a major influence upon the future of our atomic energy program, and thereby on the future of our Nation and the world.

In urging the passage of this measure, I do so because I have a deep and solemn conviction that it will increase the contributions which atomic energy can make to the security and well-being of the United States and of the free world.

The Joint Committee on Atomic Energy, which was charged with the responsibility of considering this bill, gave it the most scrupulous kind of study. During the present session of the Congress, the committee has held more than 70 meetings, both in executive and public session, devoted specifically to the question of amending the Atomic Energy Act of 1946. Witnesses from every phase of our society were heard. Many hours were devoted in refining the manifold provisions of the bill. In short, no charge can be made that this bill is the product of hasty action.

I would be the last to claim that the bill now before the Senate is a perfect legislative answer to the ever-changing problems of atomic energy, and surely I would be completely surprised if every Member of this body found himself in agreement with every last word and phrase of the bill which has been commended for your approval.

In fact, I myself have been constrained to enter a dissenting point of view concerning one of the legislative recommendations contained in this bill, and others on the joint committee have also filed their individual views. Yet, the fact that the members of the joint committee have come into accord on the broad features of this proposed legislation is, in my opinion, its greatest compliment.

Throughout the entire deliberations on this bill, the members of the joint committee have demonstrated an exemplary spirit of nonpartisanship—the kind of nonpartisanship for which the committee has striven from its very outset.

The fact, however, that the Senate now has before it a major revision of the McMahon Act should in no sense be taken as reflecting on the wisdom of our original law. Indeed, the Nation owes the late Senator Brien McMahon, one of the greatest statesmen of our time, and sponsor of the organic legislation, a debt of gratitude which it can never fully repay. The legislation which bears his name was superbly adapted to meet the problems of atomic energy which existed at the time when it was written into law, in 1946. That law, however, was written at the very beginning of the atomic age—at a time when it was simply impossible to predict with complete accuracy the subsequent nature of atomic progress, both here and abroad, or the rate at which that progress would take place. It was, therefore, right and prudent that the basic law should point out in its findings and declaration that any legislation will necessarily be subject to revision from time to time.

Eight years ago, our Nation was the sole possessor of atomic weapons. Today, both the British and the Soviet Union have mastered the art of producing fission weapons—so-called ordinary atomic bombs; and the Soviets have also achieved a thermonuclear explosion. When the original law was written, atomic bombs were conceived of as exclusively strategic weapons. Today, we know that atomic bombs can be used tactically, in conjunction with the operations of ground forces.

In fact, today the defense planning of the NATO alliance relies heavily on offsetting the numerical superiority of the Red Army through the tactical weapons now found in our national atomic stockpile.

Eight years ago, the prospect of useful atomic power—power which would be used in lighting cities and turning the wheels of factories—appeared far in the future. There appeared little need for supplementing the atomic power development program of the Commission and its contractors with the resources, manpower, and moneys of private enterprise. Today, however, the goal of useful atomic power is in sight; in all probability, it will be a reality within the next decade. We are now at the point where we can speed up the tempo of peacetime power development by enlisting the help of private industry.

In 1946, we knew of only two nations, besides ourselves, which had large-scale atomic-energy programs—Britain and Canada. Not until the first atomic explosion of 1949 did we truly appreciate the priority which the Kremlin had assigned to atomic energy and the early date at which the Soviet program got underway. Today, almost two dozen nations are vigorously working in the field of atomic energy.

In view of the situation confronting our lawmakers in 1946, it was only prudent to make our atomic-energy program a governmental monopoly, and to subject the control and dissemination of classified atomic information to the strictest possible safeguards. Moreover, prudence still requires that we tread warily in relaxing the provisions of the original law.

The evolution of atomic progress over the last 8 years clearly does not mean, in my opinion, that we should now abandon our controls over sensitive atomic data, or be indiscriminant in the exchange of atomic data or materials with other nations, or permit private participation in atomic development without close governmental supervision. But to my way of thinking, also, changing perspectives in atomic energy now suggest that the time has come to revise our original law, wherever the practical experience of almost a decade has shown that revision would speed desirable developments, both on the peacetime and military sides.

The members of the joint committee have not been alone in believing that a revision of the organic law is now desirable. Earlier in this session, the President submitted to the Congress a series of recommendations for amending the Atomic Energy Act of 1946. Toward the objective of strengthening the defense and economy of the United States and the free world, the President proposed amendments which would permit increased cooperation with our allies in peacetime and military uses of atomic energy, improved procedures for controlling atomic-energy information, and the encouragement of increased private participation in the development of peacetime atomic power here in the United States.

The bill which now is before this body would permit realization of the three objectives outlined in the President's message of February 17 to the Congress. The bill, however, does more than this. It revises the original law in all areas in which 8 years of working and living with the McMahon Act have made the members of the joint committee conclude that revisions would now be desirable.

At this point, let me make one fact plain: Frequently, this measure has been described as an atomic power bill. It has been suggested that the passage or rejection of this bill by the Congress will determine whether useful atomic power—which is not here today, but which will be here some day—will be generated by private utilities or by public-power corporations. In this manner, it has been argued that the fate of this legislation would have a profound bearing on the issue of public power versus private power. I respect the sincerity of those who read the legislation in this fashion. However, I must observe in all honesty

that I believe they misinterpret both the intention and the practical consequence of this bill.

In saying this, I speak as one who believes that the Tennessee Valley Authority, the Rural Electrification Administration, and the great public-power projects in the Pacific Northwest have contributed enormously to the economic well-being of our Nation. If I believed for one moment that the legislation now before the Senate would in any way shut the door on allowing public-power corporations to assume their rightful role in bringing to the American people the future benefits of peacetime atomic power, I would at this very moment be resisting this bill with all the power at my command.

The truth of the matter, however, is that this legislation does not prejudge the question of whether atomic power some day will be generated primarily by privately owned utilities or by public-power corporations. It does not prejudge this question for a simple reason: Useful atomic power, as a commercially attractive proposition, is not here today, nor will it be a reality for another 5 or 10 years. The problem of the here and now is not putting down the ground rules for an atomic power industry. The problem we face today is not that of deciding who will play the primary role in generating and distributing atomic power. Several years from now, we will no doubt face the problem of setting forth an atomic power policy for our Nation—and it will not be a simple problem to decide.

As of 1954, however, the Congress is not confronted with this problem. As of this year, the problem faced by the Congress is entirely different. It is a problem of devising ways and means of encouraging an attack on the scientific and engineering problems which must be solved before power from the atom can be competitive with electricity secured from conventional fuels.

Our problem today consists of deciding what type of legislation will bring about the most efficient, and the most rapid, technological progress over the next several years—so that economic atomic power will become a reality as soon as possible.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. GORE. The able Senator is making a very challenging and provocative address. I find very interesting his statement that the bill does not attempt in any way to prejudge those problems which he says are not now present, but will arise in the future. Some people have thought—I confess I have been one of them—that we should write in preferences now. I appreciate the attention the Senator has given to this subject. I judge from his remarks that he thinks it is not necessary to do so now. Does he think it would be inadvisable to do so now?

Mr. PASTORE. The best way to answer the question of the distinguished Senator from Tennessee is this: We must look at the problem in its entirety. Under the bill there are two distinct phases of licensing procedure. Private industry cannot embark upon this venture until the time comes to apply for a license. One section of the bill provides for research and development. That will be the first phase. We must determine whether or not this venture is to be of practicable use before we reach the second phase, which has to do with the licensing of certain private concerns in the building of reactors once the practicability has been established.

Therefore the Senator will see that we are a long way from deciding who is to distribute this power once we make it competitive with the power which is being generated by conventional fuels. Therefore, all we are concerned with at the present time is not who is to get the power but, Are we to have this power? Unless we take the first step, we shall never get to the second step. The tone of my speech is that we had better take the first step promptly unless we expect to lose the race to the Soviet Union.

Only a short while ago—and I point it out because I think it is most important—we read in the press a release from London to the effect that the Soviet Union has already built a reactor to produce 5,000 kilowatts. Does the Senator realize what this will mean in our relationships with the other peoples of the world, if Soviet Russia can go to those people before we do and say to them, "You have not the oil; you have not the coal; you have not the hydroelectric resources to generate the power you need so desperately to raise the standard of living of your people. We will give it to you. What is that capitalistic nation across the ocean doing for you? We will give you the power."

That is how important it is. This plan dwarfs the Marshall plan. It dwarfs the point 4 program. It is the only living challenge this country has today to prove to the world that we are magnanimous, and that we are willing to help the downtrodden people of the world. It would be the greatest boon to our foreign policy ever imagined by the American people.

Does that answer the Senator's question?

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I find the Senator's answer eloquent, forceful, and persuasive. I agree with him in his estimate of the importance of this development. I believe he has at least tentatively convinced me that it may not be necessary to write into the act a preference clause, though I should like to explore that question further.

I should like to know the Senator's opinion as to the advisability or inadvisability of doing so. Specifically, would writing into this bill the preferences which permeate the power policy and power laws of the Federal Government in anyway hinder the first step which the Senator says is so necessary? I agree with the Senator's estimate of the necessity and importance of the first step.

Mr. PASTORE. Let me answer the Senator's question in this way. First of all, I do not believe that kind of provision would have the effectiveness the Senator imagines it would. Personally, I would not be opposed to it. However, let me say that I think it would be rather innocuous. We debated it to and fro in committee. Some Members thought it would be a safeguard which would spell out and further the policy, already inaugurated by Congress and the Government as a whole, that certain phases of our economy, because of their very nature, should receive certain preferences. If we were to write such a provision into law, while I believe it would have no real effect, on the other hand, I do not believe it would disturb the act to any considerable extent. Therefore, I have reached the conclusion that if it is to be an element which might drive certain Senators away from this proposed legislation, I would be willing to compromise on that point in order to save the body of the entire bill. If we fail with respect to the body of the bill, I am afraid we will have failed in one of the greatest responsibilities of our time. As I have said before we undertake this program, we must go through the research and development stage.

Of course, some persons envision a stampede. That will not happen. First of all, when we speak about this program, we are speaking in terms of billions of dollars. There will not be too many people, who must answer to their stockholders, who can get into this field by investing large sums of money in the beginning, because it is only a research program, without their running the risk that if it is a losing fight they will lose the money and they will have to answer to their stockholders, because the rates to their customers will have to go up. Have I made myself clear?

In other words, there will be no stampede. Some people seem to be running away with the idea that everyone in the United States will be knocking at our door to participate in the program. It will be an expensive program. It is not possible to produce, in the beginning, atomic energy for power, at a guess, for less than five times what it costs to produce electricity from conventional fuels. Until it is possible to get to the refinement where production is brought down to a competitive level, a great deal of money will have to be invested. It is my opinion that a great many people will want to stand by and wait and see someone else do it before they participate in the program. Everybody likes a sure thing. By no means is this a sure thing.

When I say a sure thing, I mean in terms of time. The time will come when we will be able to get atomic energy from the atom on a competitive basis with electricity being produced from conventional fuels. However, it will not be tomorrow. It will not be next year. It may not be for 5 years. The best estimate I have been able to gather fnom those who have testified before our committee—and by no means were they certain, and gave only a speculation—is at least a dozen years.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. MANSFIELD. I was very much interested in the statement made by the

UNIVERSITY OF MICHIGAN LIBRARIES

distinguished Senator from Rhode Island relative to the announcement in the press a few weeks ago that the Soviet Union had built a 5,000-kilowatt reactor plant. Is it safe to assume that that is a correct statement?

Mr. PASTORE. Does the Senator inquire whether we may assume it is a correct statement?

Mr. MANSFIELD. Yes.

Mr. PASTORE. We have every reason to believe it is a correct statement. As a matter of fact, we have no evidence to prove that it is not a correct statement.

Mr. MANSFIELD. Very well.

Mr. PASTORE. Until such evidence is forthcoming, we must assume that it is correct. Let me add the reason why I say that. If it is true that the Soviet Union has the answer to the atomic bomb—and we know it has—and if it is true that it has had a thermonuclear explosion—and we know it has—then by what stretch of the imagination can we assume that they have not ventured into the field of producing atomic energy for industrial purposes?

Mr. MANSFIELD. The Senator is anticipating my thought.

The point I wanted to make is this: It would be a false assumption on the part of the American people to think that the Soviet Union does not have scientists who are capable of keeping pace with us in the atomic, hydrogen, and other thermonuclear fields, and perhaps, in certain aspects is not ahead of us in such development. Is that correct?

Mr. PASTORE. That is a possibility. As an American I do not want to concede it, and I hope I shall not have to concede it. However, I wish to say to the distinguished Senator from Montana that unless we get underway with this proposed legislation, precisely what the Senator has suggested is very apt to happen, if it has not already happened.

Mr. MANSFIELD. I wish to say further to the Senator from Rhode Island that the possible use of the Russian reactor plant and its future development in winning the minds and hearts of the people living in underdeveloped areas of the world, especially in those areas where the people do not have access to hydroelectric development for industrial and security purposes, is a very important factor. I certainly hope that in that particular line of endeavor we will do everything we possibly can to seek the same objective and to use it for the purpose for which the Senator from Rhode Island has so succinctly pointed out.

Mr. PASTORE. I thank the Senator from Montana. I appreciate his contribution to this discussion. It is a very important matter, and nothing during this session that will come before us will weigh heavier on what our destinies may be than the measure we are discussing today. It is almost a crying shame that while we are discussing this bill only a corporal's guard of Senators are in the Chamber. It is true that most Senators will read in the RECORD what we say, but I dare say that we could take every piece of legislation we have discussed in the Senate since January and put it into one basket, and take this proposed legislation and put it into another basket, and by far this measure would outweigh anything we have considered or done in the Senate this year.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I concur completely in the Senator's statement.

If the Senator will yield for that purpose, I shall suggest the absence of a quorum, and insist upon a live quorum before the Senator proceeds.

Mr. President, I ask unanimous consent that the Senator from Rhode Island may yield so that I may suggest the absence of a quorum, without his losing his right to the floor.

Mr. PASTORE. I yield for that purpose, provided I do not lose the floor.

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. REYNOLDS in the chair). Is there objection? The Chair hears none, and the Secretary will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHOEPPEL. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. Without losing my right to the floor, I yield.

Mr. SCHOEPPEL. Mr. President, I have been very much interested in the measure which is before the Senate, and I am interested in the debate and discussion by the distinguished Senator from Rhode Island who is now holding the floor. I know the Senator regrets that at this early hour in the morning this Chamber is not filled, and I, too, regret it, but I am sure the Senator will agree, in view of the fact that many Members of the Senate who are absent are not privileged to serve on this most important committee of which the Senator is a member, that they place reliance, on the judgment and good faith of Senators who serve on the committee. Many Members who are absent from the Senate, are on other committees or are in conferences. I am sure the Senator appreciates that fact and does not mean, by the statement which he made a while ago, that there is not a corporal's guard present, to indicate a complete lack of interest. It is unfortunate that there are not more Senators present. I ask the Senator if it is not true that many Senators are necessarily generally engaged in other activities, but they have trust and confidence in Senators who are serving on the important committee which reported this bill, one of whom is the Senator from Rhode Island?

Mr. PASTORE. The Senator is correct. All I am trying to do is to emphasize in the best way I can the importance of the measure which is before the Senate today. I know there are many justifiable reasons which compel a Senator to be absent from his seat. The only point I desire to make, and I make it as emphatically as I can, is that no measure has come before the Senate which is more important than is the pending bill.

To continue, Mr. President, the question we face today is this: How shall we develop atomic power most expeditiously? By having the Atomic Energy Commission and its contractors made solely responsible for this task, as they are today? Or, on the other hand, will we now achieve greater progress if our governmental development effort is supplemented by efforts on the part of private industry, using private funds?

I would be the first to express my admiration for the job the Atomic Energy Commission and its contractors have already done in the field of power reactors. Of necessity, however, the Commission has been forced to give top priority to military applications of the atom. The day when we can let up in the military field is not yet in sight. As a result, the resources of the Atomic Energy Commission—resources measured not only in money but, more important, in manpower and skills—are now simply inadequate, standing by themselves, to press the development of peacetime power with the priority it deserves.

If we are now to explore every fruitful approach to cheap atomic power, we must have a team effort—an effort involving both governmental and private work on atomic development. This legislation would not end our governmental efforts in this respect. It would simply supplement this effort with such help as can be garnered from the skills, the know-how, and the competitive drives of private industry.

It has been argued—with complete sincerity, I am sure—that permitting private participation in atomic-power development, along the lines envisaged in this bill, might pave the way for an "atomic giveaway." It has been suggested that, if the bill becomes law, private enterprise might be able to capitalize unfairly on the $12 billion investment which the American people have so far made in atomic energy. Were this the case, I would now find myself compelled to urge the Senate to reject the proposed legislation.

The complete facts, however, are quite otherwise. S. 3690 does not invite private industry to share in the development of atomic power in return for windfall profits. Instead, it invites private industry to assume a share of the responsibility for atomic-power development during a period when the chances for large profits are small—during a period when risks are great, a period in which modest returns, or no returns at all, on money invested constitute the most likely prospect.

It is true that our national atomic enterprise represents a $12 billion public investment. However, by far the largest portion of this money has gone toward construction of plants producing atomic weapons and weapons material. Far less than $1 billion has been spent, or is now authorized, for projects related to atomic-power development. In addition, it appears that we will have to spend at least another billion dollars for research and development purposes before we can achieve reactors capable of competing widely with conventionally derived electricity.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I wish to dissociate myself from those who have made the extravagant charges to which the able Senator from Rhode Island has referred. I wonder if certain vested interests in the development would not follow. I wonder whether the Senator thinks that research development would in any way be impaired, and whether the development of peacetime uses of atomic energy would in any way be impeded, if certain safeguards in the public interest should be written into the bill.

Mr. PASTORE. The Senator from Tennessee has hit upon the crux of the whole problem. It is necessary to have proper safeguards in the bill in order to avoid monopoly, in order to avoid a violation of the antitrust laws; in order to avoid the possibility of exclusiveness on the part of a few. I shall cover that point in my speech as I proceed.

I rejoiced in being able to make this analogy: This is no more a giveaway on the part of the Government to private industry than there was a giveaway on the part of Benjamin Franklin to Thomas Edison. Benjamin Franklin, in 1752, discovered the relationship between lightning and electricity. But not until 1879 did Thomas Edison put electricity into a glass bottle and say to mankind, "Now you have light." That is the challenge of cur day. There is a long road to travel between the start of the program under the bill and the day when a uranium slug can be put into a machine and it can be said "Now we have power as cheap as it can be made with coal or with oil."

Have I answered the Senator's question?

Mr. GORE. The able Senator from Rhode Island has provided eloquent and provocative answers to the several questions I have propounded to him. I wish to submit one further question, if I may. Will the Senator yield for that purpose?

Mr. PASTORE. I yield.

Mr. GORE. I agree with the answers which the Senator has given, but the answers have not yet removed from my mind the question whether it is necessary or is not necessary, whether it is advisable or inadvisable, to place certain additional safeguards in the bill for the public interest, and to have public bodies recognize, as the able Senator has pointed out, that though the major part of our expenditures in the atomic field have not been upon peacetime developments, yet a very large sum has been expended, and larger sums of public money will be expended, upon basic research and upon development and promotion.

It seems to me that the atom, with the uses of the atom which have been developed almost entirely by public funds, is as much a resource owned by all the people of the country as is the power of the flowing streams.

Mr. PASTORE. The Senator from Tennessee is precisely correct. I do not question the fact that the $12 billion invested by the people of the United States in the revelation of the power of the atom is public property, belonging to every single taxpayer of this great Nation. I do not dispute that for one moment. I do not dispute the fact that the Government itself, for a long time to come, will have to remain in this field. That is a good position. I do not even dispute the fact that it is necessary to have proper safeguards. I think they have been provided in the proposed legislation.

But, as I have already said, this is a voluminous measure. It deals with a very complex, intricate, and delicate problem. If it needs further refinement, this is the place to do it. But to hang onto a weak spot, to destroy the whole virtue of the Atomic Energy Act, would be, to me, foolish and disastrous, so far as the future destiny of this great Nation is concerned.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. GORE. It does not appear that there is any wide gulf between the views of the junior Senator from Rhode Island and those of the junior Senator from Tennessee. We seem to be seeing the matter on a rather parallel basis. But there is yet one element of question in my mind, and it is this, if I may state it perhaps somewhat awkwardly: Over a period of years of development, there comes to be a know-how, which I think the industries who make their own expenditures are entitled to have. But it should be remembered also that, basically, private industry will be using a resource owned and developed by the people of the United States. I would not deny to private industry the opportunity to share in this development; but neither would I deny to the United States of America, to the people of America, the opportunity of utilizing the benefits of the skills, the devotion, and the energy of private industry. I do not wish in any way to exclude; I wish to encourage. I join with the Senator from Rhode Island in that view.

But, realizing the value of the first start, the value of the initiative and the vested interests which develop from such research, I wonder if more safeguards should not be thrown around this natural resource for the benefit of those who do not have vast funds or research organizations, as we enter upon the threshhold of the unknown and glorious future.

Mr. PASTORE. The Senator from Tennessee is precisely correct. Let me remind him that it would be foolish for us to assume that in the beginning small corporations could get into the research and development field, because it is a highly expensive field. True enough, now that the Federal Government will have opened the door to all to participate in the program, legislation now proposed shall be enacted into law, we must be very careful not to allow a handful of people who have been in the program from the beginning to use the liberty, the privilege, and the opportunity afforded them as a license to shut out all others from participating in the program through the medium of exclusiveness. I think the provisions of the bill take care of that particular premise. In that respect, possibly the bill does not go as far as I should like to have it go, but we have heard from many. We have heard from all phases of our society, from persons who understand the problem. Many of them thought we should not go as far as we have gone, because we might destroy initiative on the part of those who had the possibility of participating. But that has not happened. The program as we have submitted it to the Senate, in my humble opinion, is a reasonable one. It embraces adequate safeguards. It promotes the equality of opportunity for participation in the program. Adequate safeguards are provided as against antitrust proceedings and monopoly proceedings. I think there has been made adequate provision for the protection even of patent and licensing rights. I think all those safeguards are contained in the bill.

Now, if in the good judgment of this legislative body it is felt those safeguards should be strengthened, I think there will be found a friendly ear on the part of many of the members of the joint committee, especially the Senator from Rhode Island. I agree with everything the Senator from Tennessee has said to the effect that there would not be the opportunity which exists today if the American people had not invested $12 billion in the project in the beginning. But let us not fool ourselves. The project we are talking about is not like anything that has preceded it; it is a completely new field. It has its fundamental basis and premise in the work the Government has already done, but the field which is before us has to be explored completely. We must consider some of the problems being presented, or we may find ourselves taking a risk, which I may summarize.

Let us assume for a moment that the $12 billion which was invested by the people of the United States belongs to the people, that we should not turn the development over to private enterprise at this time, that the United States Government should remain in the field. So next year the $12 billion becomes $13 billion. In 1956 the $13 billion becomes $14 billion. In 1957 the $14 billion becomes $15 billion. In the meantime we will be producing reactors. Are we going to give the investment away when it has become $16 billion, or allow individuals and firms to come into the field when the investment is only $12 billion? That is the question before the American people. Is the American Government going to maintain a monopoly in this field forever? When is private industry going to come into the field? Are we to permit that now, when the investment of the people is $12 billion, or will we do it when the field is old, and when many more billions of dollars of investment have been made by the American taxpayers? Should the enterprise then be given away? It is an unfortunate choice which we have to make. Are we to follow the argument of those who say that here is a $12 billion investment, that it belongs to the American people, and we cannot give it away? But unless we assume the American Government is going to be engaged in the monopoly forever, the time to make the decision will have to come, and I say the time is now, July 15, 1954.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield to the Senator from Tennessee.

Mr. GORE. I concur in the able Senator's statement that now is the time to act. I do not concede, however, that we are giving away anything. I understood we propose to enact legislation which would authorize the Atomic Energy Commission to license and control the use of this resource which belongs to the American people. I believe the Senator from Rhode Island will agree that is correct.

Mr. PASTORE. That is precisely in the bill.

Mr. GORE. I am heartened by the assurance the Senator gives. In fact, I am always heartened when I find I am on the same side of a question with the Senator from Rhode Island, because I have great faith in and respect for his judgment. I am heartened by his assurance that small business in the United States is given adequate protection in the proposed legislation—small business of the country which does not have the resources necessary to engage in atomic power research, which does not have the financial capacity to build up a vested interest in the use of our nuclear natural resources. I am not sure the safeguards are sufficient in that regard, but if the Senator from Rhode Island thinks they are, that impels me to look again.

I should like to have the Senator from Rhode Island go one step further and indicate to the Senate whether he thinks the safeguards are sufficient to insure that the municipal power systems, the rural electric cooperative systems, and the public power systems, will likewise have the benefits of the future development of the power to be generated from this source.

Mr. PASTORE. I cannot quote the law verbatim, and must rely on my recollection, but the law specifically provides that the field of power development is open to private and public enterprise. In other words, it does not preclude municipalities which are manufacturing electricity. It does not preclude public power projects. It does not preclude anyone. It opens the door to all on an equal basis and says, "Come and get it. Qualify under the standards of this legislation. Give a certification which will afford to the Nation proper protection. If you do all that, then we will license you to get into the field." No one is precluded.

Mr. GORE. I am not sure that leaving the door open to all is adequate protection when the steps to the door are so high and so difficult to negotiate that only a few can climb to the doorway. Proper safeguards may not be provided. Here is a resource owned by all the people. Small private and public institutions and bodies should have more protection than merely that of keeping the door open.

Mr. PASTORE. The only phase of the argument made by the distinguished Senator from Tennessee with which I disagree is that the restriction, if there is any, is not found in the restrictive features of the bill. The only restriction is with regard to the choice of the individual who has to make the choice. In other words, if a company feels that it does not have the money to invest in order to participate in the program, there is nothing we can do about it. We cannot take it by the nape of the neck and make it enter this field. But we have not placed any roadblocks in the bill. We have simplified the procedure as best we can. We have not shown preferences.

On the other hand, there are no prejudices; there are no discriminations; all can participate. The choice will have to be made by the person who expects to participate. The only restrictions are imposed by himself; the restrictions are not in the law. The law encourages participation, but whether or not a person will yield to the encouragement and accept the invitation will depend upon his own resources and his own willingness to take part in the program. Do I make myself plain?

Mr. JOHNSON of Colorado. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield to the Senator from Colorado.

Mr. JOHNSON of Colorado. I have been interested in the statement being made by the Senator from Rhode Island. Like the Senator from Tennessee, I have the utmost confidence in him. I always feel safer, too, when I am on his side.

In reporting the bill, the Senator from Rhode Island will recall that, as one of the members of the joint committee, I held reservations on the power problem. My reservations deal specifically and implicitly with the points raised in the questions which the Senator from Tennessee has asked. We know that a county or a city might build a plant in competition with private enterprise, but is there any reservation in the authority which is given to private power companies that they shall in any way or in any degree give any preference to municipalities, REA's, and other public users of power in the purchase of power from them when they construct a plant?

Mr. PASTORE. No; in the bill it is not reduced to specific terms, for the reason that in the bill what we are dealing with primarly is the fuel by means of which we expect to have heat generated, with the heat to be used to turn the turbines and the generators. Therefore, insofar as the distribution element is concerned, that is already covered in the law and is already controlled.

Mr. JOHNSON of Colorado. In what way?

Mr. PASTORE. Under existing law. If under existing law a preference is to be given—for instance, if the power is to be given first to the REA's or to municipalities—the bill does not make any change. In this case we are dealing with the fuel to generate the power, but once the power is generated, the present policy of the United States Government will still apply. In this respect, the bill is dealing with the heat to turn the generators which will be used to make the electricity.

Mr. JOHNSON of Colorado. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. JOHNSON of Colorado. In the field of reclamation, we talk about hydraulic power, and in the reclamation laws we have a reservation which gives preference to public utilities, communities, and REA's, in connection with obtaining power.

But by means of this measure we propose to turn over to private power companies the right and opportunity to build powerplants, and the bill does not contain a reservation of any sort regarding service to the communities or the REA's or any other public users of power.

Mr. PASTORE. Let me say to the distinguished Senator from Colorado that if I thought for a moment that the fear he now entertains might result in causing him to vote against the bill, it would be easy for me to yield by way of compromise, and I would be perfectly willing to have such a provision written into the bill. However, I have been pointing out that I do not think the matter is as important as the distinguished Senator from Colorado regards it, because we are talking about research and development and the perfection of a reactor to the point that, one day, atomic energy can be used as a fuel, to compete with conventional fuels.

If the Senator from Colorado feels that such an added protection can properly be included in the bill, and if he believes that such a change will better carry out the spirit of the law already enacted by Congress, I shall not object; and I feel that the other members of the committee will yield on that point, because—speaking for myself—I think no harm would be done by making such an addition to the bill.

Mr. JOHNSON of Colorado. I feel that such a reservation should be included somewhere in the bill, so as to protect the public users of power. I do not know how the provision can be written, but I retained a reservation on that point in connection with reporting the bill. I admit that I have not done my full duty by way of offering a provision designed to accomplish what I am discussing.

Mr. PASTORE. That is precisely the point. We talked about it in the committee; but it was hard to write such a provision, for the simple reason that the matter was not related to us in the way that the Senator from Colorado has presented it today.

Of course, what we are interested in is getting into the research and development stage, in order to permit licensing for the building of reactors. Let me point out that there are two stages. First of all, we must get into research and development, which is a new field. That work has to be done in order to establish the practicability of the use of atomic energy for the generation of power. That is the first stage. Once that is done, licenses to build reactors must be issued.

If the Senator from Colorado feels the bill should contain a provision that, everything else being equal, the issuance of licenses for the construction of reactors, should they become limited—because that is the only point about which we might have a fear—should be on a basis of giving a preference to the sec-

tions of the country that are subject to the situation which has been explained by the Senator from Colorado, so that they would have a preference over other sections of the country, then I shall be willing to agree that he has made a reasonable suggestion, because we have already written into the law a preference to the effect that, where everything else is equal, the Commission, in the granting of the licenses, shall give consideration to the areas of the country where the costs of electric power are high.

Do I make myself clear?

Mr. JOHNSON of Colorado. Yes; the Senator from Rhode Island makes himself very clear. But I still have a feeling that there should be somewhere in the bill a preference reservation, by means of which the Commission perhaps should be directed to see to it that communities and organizations such as REA's are not foreclosed, but are given preference. I think the bill might be amended by means of providing a direction to the Commission on that point.

I must admit that I am not certain how such a provision should be worded; but I feel very strongly that such a direction should be given.

Mr. PASTORE. In reply, Mr. President, let me say that the Senator from Colorado has a valid point, that has been raised before; he is not alone in that point of view, for there are many others who have argued in the way he has. The committee went all over that subject, and finally decided that the question was not so important as the Senator from Colorado regards it.

However, if the Senator from Colorado feels that the law should be amended in that respect, I state again that, although I see no great advantage to be gained by the inclusion of such a provision in this bill, I still see no harm in placing it in the bill.

In conclusion, Mr. President, let me say that if passage of the bill depends on the inclusion of such a provision, I would concede on that point.

Mr. DOUGLAS. Mr. President, will the Senator from Rhode Island yield to me?

Mr. PASTORE. I yield.

Mr. DOUGLAS. Will the Senator from Rhode Island please turn to page 15 of the report which is now before us? I invite his attention to the last sentence before chapter 6, at the top of the page—which, for the sake of the RECORD, I shall now read, beginning in line 4:

> This section will permit the Commission to dispose of that utilizable energy it produces in the course of its own operations, but does not permit the Commission to enter the power-producing business without further congressional authorization to construct or operate such commercial facilities.

I presume that sentence refers to uranium and plutonium. As I understand from the report and from the text of the bill, under the present act the Commission has the power to produce uranium and plutonium and then to release them to private users. However, this measure does not give the Commission the power to use uranium and plutonium itself, for the direct production of power.

Does the Senator from Rhode Island think that is a wise limitation; or does he believe that in the bill specific authorization should be granted for the Commission to produce uranium and plutonium—recognizing always that Congress, through its power to appropriate, will be able to control the degree to which the Commission actually produces them?

In other words, why should not the bill contain such an authorization, but also provide control, through the appropriative process, over the degree to which the Commission may exercise the power?

I am very frank to say that I do not want to see the Government develop all the power which could be generated from uranium and plutonium. I should like to see the major portion of such power developed by private industry, but I would not want at this time to foreclose the Government from the authority to generate power from uranium and plutonium.

Mr. PASTORE. Let me say to the distinguished Senator, first, that the sentence which he has read has no bearing on our continuation of the TVA.

Mr. DOUGLAS. I recognize that. This is a basic and fundamental question, which has nothing to do with TVA.

Mr. PASTORE. I cannot answer the Senator in two words. If he will allow me an opportunity to answer——

Mr. DOUGLAS. I have never said that it did refer to TVA.

Mr. PASTORE. First, all title to such material, because of its special nature, must remain in the Government. Certain private industries which come in under the licensing phase of the act will be permitted to use the materials for a fee, except, perhaps, in the case of medical research, in which possibly the use will be free. Also, in the case of a university, there might be no fee. That would be discretionary with the Commission. This is a limitation not on the United States Government but on the Commission. I think the Senator will agree with me that we do not want anything in the act to be construed as meaning that we are putting the Commission itself into the electric-light business or the power-generating business. If we had not put this provision into the bill we would not have had the debate on the Dixon-Yates contract which took place yesterday. We are trying to avoid that. We are trying to keep the Federal Government out of the power-producing business.

In certain localities where current is sold under the supervision of State agencies, we want to continue such supervision by those agencies, but we admit that in the manufacture of this special material certain electric power may be generated in Commission establishments. We say that it may sell such power, but we do not desire to create the impression that we want to put the Commission into the business of manufacting power. If we ever come to the time when it may be desirable to allow the United States Government to build a plant to generate current, that question, of course, will have to be decided by Congress.

Mr. DOUGLAS. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. DOUGLAS. Will the Senator from Rhode Island answer this further question: Is it not true that the capital which will be required to utilize these materials in order to develop power will be so great that in practice the leasing authority which is granted by the Atomic Energy Commission will amount to a local monopoly? Therefore, what will happen will be that the Atomic Energy Commission will be farming out to local monopolies the development of power from these materials. Let the record be perfectly clear. I am not opposed to the Federal Government leasing this energy to private groups, but why should the Commission be foreclosed from developing this power itself?

It seems to me that when the Senator from Rhode Island says that the bill merely forecloses the Commission, but does not foreclose the Government, he is indulging in some very able word juggling, because when we close the door to the Commission, in most parts of the country we are closing the door to the Government.

Mr. PASTORE. There is a distinction, and I hope I can make it clear to the Senator. In this bill what we are concerned with is the development and research which are involved, so that one day we can reach the point of building a reactor for the production of current. The bill would not preclude the Government from that activity.

The Senator is talking about the sale of electricity. The bill has nothing to do with the sale of electricity. The bill has nothing to do with electricity, or its distribution. The bill deals with the research and development phase, which will lead one day to the establishment of practicability. Once that is established, then we reach the stage of licensing for the purpose of building a reactor. The Government can do all that. The Government can do everything that industry is given authority to do under the bill. The point which has been raised by the Senator—and I wish to emphasize it because I think it is important—is this: He has gone a step further. He says, "After reactors have been built, after they become conventional, after their use becomes widespread, then what? How about the electricity which will have to be sold to the consuming public?"

When we reach that stage, we shall have to decide the question. That is not the problem at the moment.

Mr. DOUGLAS. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. DOUGLAS. It is extremely important to understand what we are doing now. What I am afraid the bill does, according to the report of the majority, and as I read the text, is to close the door to the Government. Evidently some doubt arose in the mind of the Senator from Mexico [Mr. ANDERSON], judging from the very able speech he delivered yesterday. In the absence of future legislation, the only recourse that will be open to the Atomic Energy Commission will be to lease these materials—I assume

UNIVERSITY OF MICHIGAN LIBRARIES

they are plutonium and uranium—to private industry.

I repeat that I am not opposed to the leasing of such materials to private industry, but I do not want to see the door closed against their use by the Federal Government.

Congress, through its power of appropriation to the Atomic Energy Commission, can at any time either approve or disapprove of a particular project for this purpose. Why should the authorization be shut off in the fundamental legislation? We can control the actual application at a later date, either through appropriation or the failure to appropriate.

Mr. PASTORE. That is exactly so; and the bill is clear in that respect. All we are saying to the Commission in the bill is, "When you are ready to build a powerplant for the production of electric current in competition with private and public utilities, you must come to the Congress and state your case. We must pass upon the question, and when we come to pass upon it we shall decide whether or not you should do it."

But we do not want anything in this program to be construed as a license from the Congress to the Commission to go ahead and build all the powerplants it wishes, all over the country, to the exclusion of such action by others.

Mr. DOUGLAS. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. DOUGLAS. No one is proposing that. No one is proposing that the Commission be given a "hunting license" without any restrictions. As the Senator from Rhode Island knows, there are two hurdles to take. The first is the authorization. The second is the appropriation. The language of the authorization bill is such that, in the opinion of the majority of the joint committee, it would not permit the Commission to enter the power-producing business.

Mr. PASTORE. Except for the power which is necessary for its own operations. That is important.

Mr. DOUGLAS. It would not permit the development of electrical power for industrial or commercial use. This energy must be leased to private holders, or perhaps to one or two regions of the country where there are regional public power authorities. In other portions of the country, the bill would not permit any alternative or any experimentation. Take the region from which the Senator from Rhode Islands comes, the New England States. I believe they have the highest regional power rates in the Nation, rates which have held back the industrial development of that area. Under the terms of the pending bill it would not be possible for the Atomic Energy Commission to establish a pilot plant for the distribution of power in that region.

Mr. PASTORE. A pilot plant in order to prove the effectiveness and practicability of a reactor could be built, but the Commission could not build a power plant anywhere in the country to compete with already established public utility companies. We say, "When you get into that, you get into the basic philosophy of whether the Government will be in the electrical business, or whether private enterprise will conduct it. At that time you will have to come back to Congress."

Mr. DOUGLAS. They must always come back to Congress in conection with appropriation bills. The battle for the TVA was not fought only when the TVA Act was passed. It is being fought every year, when it is a question of whether a dam shall be built or whether a steam plant shall be built. At such times Congress exercises continuing control as to the degree to which TVA shall be permitted to operate. Therefore, there is some advantage in having fundamental language written into the law on that point.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. ANDERSON. I ask the Senator whether he does not agree with me that the bill does not permit the Atomic Energy Commission to generate electric energy as such for even its own operations, except in a pilot plant. Would the Senator not agree that if at Oak Ridge, for example, the Atomic Energy Commission required additional current for its gaseous diffusion plant, it could not take plutonium or uranium, or anything else, and generate current, except as a byproduct? In other words, it cannot set up a plant to generate current as current; it can only produce it as a byproduct. Is that correct?

Mr. PASTORE. That is correct.

Mr. ANDERSON. I do not say that is bad; it does bother me, however.

Mr. PASTORE. We are getting down to the philosophy of the subject. It is natural that people should disagree. I myself am not very steadfast in my views on this point, but I believe that, this field being of such tremendous size, we must somehow encourage the Government to remain in it, in order to help certain phases of our society that cannot be left to depend solely on public utilities. However, the fact still remains that that is not the question before us now.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. DOUGLAS. Let us keep the door open so that the question can be settled in the future without throwing several hurdles in the way.

Mr. PASTORE. I am afraid that if we were to write that kind of provision in the act—and I can see the import and power of the argument made by the distinguished Senator from Illinois—we would not meet the situation. We did not want to create such a situation that the Commissioners could branch off and start getting into the electrical business. We did not want them to do that. If at any time they thought they would like to do it, we wanted them to come back to Congress for permission.

Mr. DOUGLAS. I do not believe the present Commissioners will branch off and get into the power generation field. We can always control them in that regard. The Senator seems to have some doubt in his mind. I wonder whether he would not come a little closer and agree that this language should be changed.

Mr. PASTORE. The Senator from Illinois has a way of twisting words. I have no doubt on the subject. I am merely giving the Senator from Illinois the benefit of the power of the argument he makes. Certainly there is no doubt in my mind. I am saying the Senator is making a good argument, but I am still not convinced by it.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. HICKENLOOPER. I suggest that the Senator from Illinois is approaching the matter from a collateral road. The Department of Agriculture spends millions of dollars in developing new fertilizers and new kinds of materials for the benefit of the farmers of America. By the same token, the fact that it does extend these governmental services does not mean that the Department of Agriculture will go into the sale of commercial fertilizers. The Bureau of Standards every year tests hundreds of electrical and scientific devices, and carries on extensive experimentation in scientific fields. There is nothing in the law which permits the Bureau of Standards or the Government, through the Bureau of Standards, to enter the manufacturing field.

What is confusing here is that which is not quite understood. It is that if it were not for the weapons end of atomic energy, and if it were not for the necessity that this country do as much as it can to safeguard against the use of atomic weapons in the world, or to protect the peace of the world through the weapons end of this undertaking, the whole atomic field would be thrown wide open to the genius and competition of the American people.

It is the weapons end which justifies, at least in my mind, the maintenance of monopolistic control on the part of the Government as to what will be done with the source material and with the generating capacity which comes from atomic energy. There is the point of confusion.

The Government did not go into the field of atomic energy for the purpose of producing power, or anything else. It went into it for the purpose of developing weapons; and in that connection great scientific fields were opened up for exploration.

It was the purpose of the original act, as is stated in it, that atomic energy ultimately should be used to foster competition in the private enterprise system. That is what we are trying to do now.

We are only using the licensing device, for licensing the source materials, and collecting a fee for its use, because we have believed consistently that control over the source materials which are usable in the production of weapons of destruction, and the utility and dissipation of those source materials, must, in the interest of world peace and our own security, be held closely within the Government; and we use the Atomic Energy Commission as the device for holding it. We are trying to find a way to open up that field to free competition. We are trying our best to do that. The only way we know of at the present time, while safeguarding the weapons end, is to use the licensing device; and we have

made it clear repeatedly and consistently that the atomic energy program does not contemplate putting the Federal Government, at least at this time, into the production of competitive commercial power.

We want to give the American system a chance to show what it can do in that regard. If, as, and when Congress ever believes it is desirable for the American Government, through the Commission or otherwise, to enter the field of production of commercially competitive power, Congress should have the right to authorize it.

The Senator from Illinois referred in his opening remarks to this provision in the bill. All it says is that in connection with experimentation and research and development, which is a part of the job of the Commission, in the interest of national safety, if the reactors produce power as an incident to their major purpose, namely, of safeguarding the national security, and if that power is salable, there is no use letting it run down the drain or letting it go up in the air, or wasting it otherwise, and the Commission is authorized to sell such incidental, byproduct power.

However, we make it clear that we do not, by this section, intend to open up atomic energy as a commercial competitor in the field of electricity through this development.

Mr. PASTORE. In addition to what the distinguished Senator from Iowa has stated, it is a fact that by far the largest portion of the source material which we use must be imported from other countries of the world.

Mr. HICKENLOOPER. It is essential as the Senator from Rhode Island knows because we discused it many times, that the Federal Government, in the interest of national security—not in the interest of the production of commercial power—through, its duly authorized agency, the Atomic Energy Commission, shall have control and keep hold of this material at all times, at least for the reasonable foreseeable future, so that it can command it when the national interest dictates. That is the only reason for the licensing device and the only reason for the Government monopoly, namely, national security. Otherwise, I am sure the whole purpose of the act has been to turn this great discovery and development over to American enterprise, to the genius of the competitive system, and to the stimulus afforded by private industry. However, national security is still the overridding and controlling interest.

Mr. ANDERSON and Mr. KEFAUVER addressed the Chair.

Mr. PASTORE. I yield first to the Senator from New Mexico; then I shall yield to the Senator from Tennessee.

Mr. ANDERSON. I appreciate the courtesy of the Senator from Rhode Island. I desire to assure him that I am very much interested in what he is saying, and I should like to say that he has spent a great deal more time on this bill and in the hearings than I was able to spend. I congratulate him upon his fidelity to the work of the committee.

I wish he would permit me to insert in the RECORD at this point, because it has some bearing on the discussion, I believe, a statement by the chairman of the Atomic Energy Commission made in the course of the hearings, which appears on page 596 and goes to the end of the first paragraph on page 597. In that statement Chairman Strauss mentions the very section of the bill which we are discussing, and describes its purpose in terms similar to those expressed by the Senator from Iowa.

Mr. President, I ask unanimous consent to insert in the RECORD at this point, the statement to which I have referred.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A significant feature of the bill is its assurance that once the practical value of any type of power reactor or related activity has been demonstrated, any qualified person may apply for and receive a license to engage in that use, subject, of course, to the overriding considerations of safety, security, and the availability of fissionable material.

Now I should like to emphasize the fact that under the bill the Commission will not be in the business of selling atomic power, except by product power resulting from its production and research and development activities. This byproduct power will be interruptible power, at least in the early days of any project; it will be high in cost; and it will be comparatively small in amount.

Further, the Commission will not be impinging on the regulatory authority of other agencies over utility company operations. The bill makes it clear that the regulatory authority, including the rate-making authority, of Federal, State, and local agencies over generation, sale, and distribution of electric energy by utility companies is not intended to be affected by the bill or by the fact that the energy may be derived from nuclear rather than conventional sources.

This means as a practical matter that utilities seeking Commission licenses for the construction or operation of reactors will have to assure themselves that their proposals concerning distribution of the power, their financing, and their rate structure meet the requirements and standards of the regulating agencies.

This is as it should be. The Commission has no special competence in the field of electric energy distribution and seeks no responsibility in that field. Its functions should be limited, as the bill contemplates, to those areas in which the Commission does have special competence or responsibility. These areas include the review of design criteria, the supervision of construction, and decisions on the technical qualifications of applicants to operate nuclear plants, on health and safety standards, and on security safeguards.

Finally, as we understand it, the bill makes no distinction between the rights of private groups and the rights of public groups to participate in the development of peacetime industrial applications of atomic energy and to own and operate atomic energy facilities.

Mr. ANDERSON. Finally, I may say to the Senator from Rhode Island that, while I agree that that is the purpose of the bill, and while I said on yesterday I was afraid it barred the development of electric energy as electric energy, I am not quite sure I want to do that completely at this time. For example, the reactor to which reference has been made would generate approximately 60,000 kilowatts. It was announced this morning that the North American Aviation Co. would generate a very small amount of electric energy and would expend approximately $10 million. We shall never have a test as to whether electric energy derived from atomic power is cheap and usable until we spend $200 million in continuing experiments. The private companies cannot do that.

I was very happy to hear the statement made by the able Senator from Iowa yesterday with reference to this point, but I think we ought finally to try to place in the bill a provision that if the Atomic Energy Commission should decide to attempt a large-scale plant which would generate electric energy solely for the purpose of electric energy and not for the purpose of the development of a particular type of weapon, it could do so, because the spending of $200 million, or whatever the sum might be, might then prove the feasibility of certain types of reactors which the Senator from Illinois has said could easily change the whole economic picture in the New England States. The New England section has been faced with severe competition. Electric energy at low rates would be of tremendous importance to the whole eastern seaboard.

Therefore, while I completely agree with what the Senator from Rhode Island has said about what the bill does, it strikes me that it might be well to leave a loophole somewhere in the bill so that at some later date the Atomic Energy Commission could try to build a reactor for the production of current. A reactor which developed as little as 10,000 kilowatts would not be nearly so efficient, because of the very nature of the material used, as would a reactor which could develop from 250,000 to 500,000 kilowatts. I would not want to bar that possibility. The Atomic Energy Commission would probably have to come to the Congress for an appropriation, and that might be a sufficient entering wedge. I hope we will not tie this down in the bill, but that the provision will be so written that, if some day we wanted to make a large scale experiment as to the commercial value of nuclear energy, we could still do it without doing violence to the act.

I thank the Senator from Rhode Island for permitting me to make that statement.

Mr. PASTORE. I am very glad the Senator has made that statement. Whether what he has suggested should be done at this time I am not prepared to say, because what he has suggested, I think, has to do with a stage of development that really comes after the two procedures spelled out in the bill. I agree with him on the point that we should show our good faith in the future prospects of the whole matter by possibly building a powerplant from A to Z to prove to the rest of the world that it can be done. I think we ought to particularize on that. I do not believe it should be made subject to a loophole in the law; but that we should say in very clear terms that that is our intention. However, it does not seem to me to be a pressing problem at this time. As times goes on it can be done by special legislation. I think it deserves serious consideration.

Mr. MONRONEY. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. MONRONEY. I have been very much interested in the wonderfully informative discussion which the Senator from Rhode Island has given us from the wealth of his experience on the Joint Committee. I wish he would amplify for me the right which he says exists in the Atomic Energy Commission to build reactors of sufficient size to furnish usable power for their own operations at Oak Ridge or Paducah or other plants. Did I correctly understand the Senator to say that if the time comes when they consider it feasible and practicable they can generate power from the by-products of atomic energy or from the other processes which their engineers learn, and they can then generate power to be used in the creation of additional atomic energy?

Mr. PASTORE. I am sorry if I created that impression. The Senator has reference to section 44 of the bill relating to byproduct energy, which I now read:

> If energy which may be utilized is produced in the production of special nuclear material at production or experimental utilization facilities owned by the United States—

In other words, if it is a byproduct—

> such energy may be used by the Commission, or transferred to other Government agencies, or sold to publicly or privately owned utilities or users at reasonable and nondiscriminatory prices. If the energy produced is electric energy, the price shall be subject to regulation by the appropriate agency, State or Federal, having jurisdiction.

In other words, the small byproduct energy which might result from the manufacture of this special nuclear material.

Mr. MONRONEY. I am somewhat disappointed at the misunderstanding I had of the Senator's statement, because it would seem to me that with this process moving as rapidly as it can possibly move, in the direction of the discovery of new techniques for using byproducts, which may be in the plant itself, in refining uranium and plutonium, the energy might be used to supply a substantial part of the power used by the Commission itself in its own plant to manufacture more atomic energy for a more widely diversified use of it throughout the country.

I agree that we certainly do not want to put the Government in business. We do not want the Atomic Energy Commission to establish competitive plants to serve private customers, but we are dealing with an unknown market, and the progress made in discovery may lead us to the time when it would be foolhardy and almost criminal negligence not to utilize such products as may be found in the plant with which to generate electric energy to be used by the same Commission in the same plant to create additional atomic energy.

Mr. PASTORE. I agree with the Senator completely, and that is precisely what section 44 provides. It says that—

> If energy which may be utilized is produced in the production of special nuclear material at production or experimental utilization facilities owned by the United States, such energy may be used by the Commission.

It says so.

Mr. MONRONEY. But I understood the Senator to say that the plants are going to be very small-sized experimental pilot plants where the generation might be insignificant, and that it is more or less dump power from a small operation. What I am talking about is whether the Atomic Energy Commission, in its development, can supply itself with power, if it finds in the subsequent engineering processes the way to do it, and may thus relieve the strain on other power resources.

Mr. PASTORE. The answer is "Yes," if the power which is generated is a by-product in the manufacture of special nuclear material. But there is nothing in this bill that gives the Commission authority tomorrow, let us say, to go to one of its plants and say, "From now on we will do everything here on our own." The bill does not go that far. There is no authorization which allows the Commission to set up its own powerplant tomorrow. But if it generated power in the production of special nuclear material, it could use the byproducts of such electricity in its own plant, sell it to a Government agency, or, under proper restrictions, sell it to public or private utilities.

Mr. MONRONEY. I thank the Senator.

Mr. JOHNSON of Colorado. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. JOHNSON of Colorado. I assume the Senator from Rhode Island is more or less familiar with the Colorado plateau, which is an important source of uranium in the United States. It is located in the southwest corner of Colorado, the northwest corner of New Mexico, the northeast corner of Arizona, and the southeast part of Utah. It is called the Colorado plateau. In that region there is a movement by the REA's and by the producers of uranium to build a powerplant, using uranium as fuel, because electricity is needed there, and the electricity which it is now necessary to bring into that area costs a large sum of money, since it has to be transported long distances. So it is said that what should be done is to build an atomic powerplant in that immediate area, which would serve the REA's and the mills, and would enable the necessary refinement for the development of uranium. Under the bill, such a powerplant would be prohibited, would it not?

Mr. PASTORE. It is not that it would be prohibited; that preference is not made.

Mr. JOHNSON of Colorado. No. The bill would take the place of the present law. Under the present law, the Atomic Energy Commission has the authority to build such a powerplant. But under the bill, they are denied that authority.

Mr. PASTORE. Under the present law, the Commission, at the present moment, can only experiment in the building of a reactor or the manufacture of special nuclear material for military purposes. Under the present law the Commission cannot enter upon peacetime pursuits in the atomic energy field, except upon an experimental basis. I do not believe there is anything in the law which allows the Commission to build a powerplant anywhere.

Mr. JOHNSON of Colorado. I am sure there is, because the Commission has built one, and has done so legally. There is no reason why it should not. But under the bill, the Commission would be prohibited from doing that very thing.

All of us are familiar with the fact that, so far, the use of uranium has been probably 99.9 percent for military purposes. That is probably true, but the Commission has recognized and realized that there are great power potentials in uranium. Private power companies have recognized that fact and are anxious to get into that field. The mining and processing of uranium, and everything else connected with uranium, require vast amounts of power. Why should not the Atomic Energy Commission have the authority to build on the Colorado Plateau such a powerplant as I have described? The plateau is isolated; it is arid; it is in the wide-open spaces. The area is a desert, and a powerplant is very urgently needed here. Why should the Commission be prohibited from developing such a plant?

Mr. PASTORE. Because it involves the question of whether the Atomic Energy Commission should be allowed to enter into the electricity business or the power business. That is a fundamental question which must be decided.

The Senator from Colorado says that under the present law the Commission could build such a plant. I refer the Senator to page 44 of the committee report, in the lower left-hand corner of the page, under the title "Byproduct Power."

Mr. JOHNSON of Colorado. I am not talking about byproduct power.

Mr. PASTORE. That is the only section which might conceivably apply. Apart from that, I do not see any other authorization.

Mr. JOHNSON of Colorado. I am saying that under the present law the Commission has complete authority to build such a powerplant as I have described; but under the bill it would not have that authority. Somewhere in the bill that authority is denied.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield to the Senator from Tennessee.

Mr. GORE. I have greatly profited by the debate between the able Senator from Rhode Island and his colleagues. At this time I wish to express a reservation as to the foreclosing of authority for the Atomic Energy Commission to enter directly into this field. I point out that the Commission may be able to enter, in an indirect way, if certain precedents are allowed to stand.

The senior Senator from Illinois pointed out that if the Commission should be authorized to enter upon a program of building a power-generating plant Congress always would have control of that program by exercising its control over appropriations.

I wish to point out to the senior Senator from Illinois, and also to the junior Senator from Rhode Island and the junior Senator from New Mexico, that this might be done by contract, over

which, under the bill, Congress would not retain control. There is no provision in the bill requiring the Commission to return to the joint committee or to Congress for surveillance and review of contracts into which it may enter.

A statement was made that the Commission was limited to the building of powerplants in connection with experimentation and development. The vice chairman of the committee thought that was a limitation. Let me turn to page 79 of the bill, and read those same words. I do not wish to provoke the Senator from Rhode Island into a discussion of the proposed Dixon-Yates contract; I only cite this as an instance. Unless Congress is careful, the Commission may do by contract that over which Congress would have no control; whereas if Congress permitted the Commission to build directly, Congress could exercise control through appropriations. By stretching the words, "In connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations," the Commission is now proposing to enter into a contract with a plant wholly unrelated to either of these three specified production facilities. Again, I say I do not wish to provoke the Senator from Rhode Island into a discussion of that question. We had a long discussion yesterday, and shall have another. I merely wish to point out the danger of closing the door on direct operations, over which Congress can exercise control annually, but of leaving the door wide open for contractual obligations, by which we could be bound and committed to subsidy contracts over a long period of years.

I believe that argues persuasively for a provision or an amendment to the bill requiring a report to the joint committee and an exercise of some surveillance by that committee before the Commission enters into subsidy contracts. I wish to point out that particular feature and that danger, and also to express a reservation about the foreclosing of authority of the Commission to proceed in this field under the constant annual control of the Congress.

Mr. PASTORE. The distinguished Senator suggested that he was hesitant or reluctant at this time to engage me in a discussion of the Dixon-Yates contract with reference to section 164, which is identical with section 12 (d) of the present law.

Mr. GORE. Yes.

Mr. PASTORE. Let me say to the distinguished Senator that I have always felt that the Dixon-Yates arrangements were outside the purview of the law and what the intent of Congress was when it enacted section 12 (d) of the law, a provision similar to section 164 of the pending bill. Congress enacted that law last year to implement several existing contracts and other contracts which were being negotiated at that time for power at the atomic-energy establishments. Hearings were held. The report clearly showed that all that was sought to be accomplished was the implementation of those contracts, so that the Commission would have the authority, and no question would be raised on the part of persons who might invest in the public utilities concerned. But it was never intended, by the language used at that time, that Congress would allow the Federal Government to set up, by virtue of a 25-year contract, a public utility company which was not then in being, and which would sell to the TVA, through the AEC, current which was not at all necessary or required under the provisions of that section. As a lawyer I say the contract is a violation of the language and the intent of that section, so I have no qualms about that.

Section 164 is identical with section 12 (d) of the McMahon Act. This provision was passed by the Congress on July 17, 1953. It was enacted in order to guarantee adequate electric-power supplies for the AEC plants at Oak Ridge, Paducah, and Portsmouth. The committee report on the bill at that time stated that the provision was needed to permit AEC to enter into contracts with TVA, Electric Energy, Inc., and the Ohio Valley Electric Co.

From AEC testimony before the Joint Committee on April 28, 1953, it is clear that the only intention in enacting this provision was to provide authorization for AEC to enter into those specific contracts. The provision has made it possible for the Government to avoid an investment in additional power-generating facilities of $1 billion. Instead, a guaranty against unreasonable loss was given to the private companies and to TVA.

All of our atomic-plant investment is predicated on a long-term need for atomic-weapon production. No one seriously expected last year—and no one has seriously proposed this year—that there is a foreseeable likelihood that these atomic plants will be shut down for many, many years to come.

But the fact is that section 12 (d) of the present law, and section 164 of the proposed bill, was intended by the Congress to enable the AEC to enter into three specific contracts. All of these contracts are now in effect. AEC has firm electric power commitments to meet all of its principal needs. None of the suppliers, including TVA, can under any circumstances default on its contractual obligation.

AEC will not lose a day of production anywhere if the Dixon-Yates contract is thrown away. This entire debate has absolutely nothing to do with the AEC, nothing to do with our defense program, and is not remotely related to the intent of the Congress in enacting the statutory provision under which it is proposed that the contract be executed.

This entire discussion is a discredit to all involved in it, the Congress included. If anyone wishes to support or to oppose TVA expansion in the Memphis area, it should be done honestly, openly, and without recourse to political subterfuge, distortion of existing law, or plunging into the self-contradictory welter of electric utility statistics by which anything can be proven or disproven at the whim and will of the speaker.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GORE. I confess that had I known that by making an inquiry I could have brought forth such a lucid, logical, unanswerable statement of fact and law as the able Senator from Rhode Island has given, I would have submitted it long ago. My only reluctance in broaching the subject grew out of the fact that I did not want to interrupt the able and fine address which the Senator from Rhode Island is making. Again I wish to say that I agree with every word of the statement which the Senator has made with respect to the proposed Dixon-Yates contract. I realize that I participated in the passage of the bill and in the debate on the passage of the bill; but I shall go into that matter later.

I agree with what the Senator has said, but I come back to the main point for which I brought the question up. By indirection, by an illegal stretching of the meaning of the section of the statute to which the Senator made reference, it is proposed to bind the Government to a 25-year contract, over which Congress would have no control, but, through the appropriation process, would have a large obligation, namely, to appropriate sufficient money to meet the commitments incurred under the contract.

If that precedent is allowed to stand, then I point out to the able senior Senator from Colorado [Mr. JOHNSON] that we may lose control of the development of the atom for power production and that, by indirection, subsidy contracts may be made committing the Government far beyond the expectations or wishes of Congress. I think we need to write into the bill a requirement that contracts shall be referred to the joint committee, on which the Senator serves so ably, for its review and consideration.

Mr. PASTORE. I think possibly the Senator from Tennessee in his enthusiasm is going a little further than he should. After all, we are faced with the necessity of producing special nuclear materials for atomic weapons. In doing so, of course, the Government requires a vast amount of electric power. For that reason, if a plant is not close to the TVA or is in another part of the country, it might be necessary to enter into an arrangement with a public utility, which in all probability, because of the tremendous load, would have to expand.

If we expected the Commission to come to Congress every year to justify such procedure, we could never have the operations, intents, and purposes of the Commission, as spelled out in the law, carried out effectively and in a business-like way.

For that reason, I disagree with the Senator from Tennessee if he maintains that the Commission should not have authority to engage in such contracts for a period of 25 years. I do say that because of the long term of the contracts, possibly Congress should be apprised of the conditions. I think we have copies of the contracts on file; there has been excellent liaison between the Commission and the Joint Committee and the Congress.

But I agree that there will be distortion of the meaning of section 12-b and section 164, by entering into the Dixon-Yates contract, because although it may be argued that the current thus produced will go to the main grid, and then

UNIVERSITY OF MICHIGAN LIBRARIES

to here and to there, yet, fundamentally, under the Dixon-Yates contract the credit of the Federal Government will be used to make possible a profit for the benefit of a private group, not for the benefit of the Atomic Energy Commission. Whether that should be done as a matter of policy is another question. Whether it is permitted under the law or whether it would defeat the intention of Congress in connection with the law is another question. I say there is no legal authority for it, and I have already said that 100 times, at least.

Mr. GORE. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. GORE. I agree with the Senator from Rhode Island. I think we are also very near agreement with respect to having the long-term contracts come to the joint committee. I think there should be an interim period—whether it should be 30, 60, or 90 days, I do not know; but I believe that before a contract, and particularly a long-term contract, became effective, the joint committee, an agent of the Congress, should have an opportunity to review the contract, but not to veto it. There is a constitutional division of powers, and Congress is not given a veto power over an administrative function, except by means of the legislative function.

I do not believe that the chairman of the joint committee should have the power to veto a contract; but I believe that before the contract goes into effect, there should be an interim period during which the joint committee could examine and review the long-term commitments and implications; and if legislation were necessary, Congress then would have time to proceed, before the contract became effective and before the commitments became in fact accomplished.

Mr. PASTORE. Of course, the Senator from Tennessee has had more experience than have I with the legislative function in that connection, because he was on the Appropriations Committee of the House of Representatives. However, I think it is usually true that when there is a long-term contract which obligates the Commission and the Government over a long period of time, an appropriation is requested in that connection.

On the other hand, I regard it as regrettable that the President should have said, in effect, "I urge"—or "order" or "direct"—the Atomic Energy Commission to sign the Dixon-Yates contract, because I want to determine what we are going to do about TVA. I think there they exposed their hand. The President did not say, "I direct the Atomic Energy Commission to sign the Dixon-Yates contract because we need the electric power, and this is the only way by means of which we can obtain it, and a national emergency exists, and we need the additional electric power at once." Neither did the President say, "This is the most effective way to obtain the needed additional power." On the contrary, he said, "I am ordering this and allowing it because I wish to see how far we are going to go with creeping or crawling socialism." He gave the direction for the determination of the philosophy. There I think a serious mistake was made, and I think irreparable harm was done. I regret, more than anything else, that irreparable harm was done to the passage of this most important bill—one of the most important ever to come before the Congress. Yet great harm was done to it when the President allowed that situation to exist.

Mr. MONRONEY. Mr. President, will the Senator from Rhode Island yield to me?

Mr. PASTORE. I yield.

Mr. MONRONEY. I appre[illegible]te the damage that has been done, and I agree completely regarding the damage that has been done to the reputation and standing of the Atomic Energy Commission and to the confidence the country has had in the Commission, particularly when calls from the Bureau of the Budget result in the Commission's becoming a dummy, in connection with a contract to replace electric energy in the TVA system, and with all the other gimmicks that have been written into the bill, which I consider to be a glaring example of special privilege.

But bad as the contract is, and despite all the damage that has been done to the good standing of the Atomic Energy Commission, I should like to know whether Congress could possibly have assurance that today an independent commission means anything. If a call from the White House will destroy the independence of an assumedly independent commission, which I understand the Atomic Energy Commission is, then this matter goes far beyond the Dixon-Yates contract and far beyond the loss of Government funds; it involves the very integrity of the system of independent commissions, as in the case of the Interstate Commerce Commission, the Federal Communications Commission, the Atomic Energy Commission, and other commissions. If this pattern is followed in the future—in short, when a call from the President or a call from the Bureau of the Budget will reverse the views of at least three members of the Atomic Energy Commission, who had been opposed to the contract, and had felt the Commission had no authority to enter into it; if a call from the White House will make what is urged in that call the action of the Atomic Energy Commission—then what confidence can we have that that Commission or any other assumedly independent commission will not be, instead of independent, merely an adjunct to the Bureau of the Budget and the President? Does not the Senator from Rhode Island think that is the great danger that is involved?

Mr. PASTORE. Now the Senator from Oklahoma is dealing with the independence of the minds of individuals and with the integrity and self-expression on the part of an individual who is appointed to a commission. I do not see how we could write into a law any provision which would say to any individual, "Any time you are asked by the President of the United States to do something, do not do it." We could not write such a law.

Mr. MONRONEY. However, will the Senator from Rhode Island, who has been so clear in his explanation of this measure, tell us his idea of the standing of the Atomic Energy Commission—whether it is independent or whether it is merely a puppet on the end of a string, or on the end of a telephone line, leading to the Bureau of the Budget or the President?

Mr. PASTORE. The only answer I can make is that that matter comes right to our own doorstep. When the Senate confirms nominations, let us be sure that the Senate confirms the nominations of men who will stand up and be counted and will express their own minds and consciences and hearts. That is the only answer. Nothing that we can write into this measure will cover that problem. Although I admit there is a problem, as stated by the distinguished Senator from Oklahoma, I do not think any provision we could write into this measure would correct that situation.

Mr. MONRONEY. Perhaps I oversimplify it; but I would expect to have the Commission have independence similar to that which I would expect on the part of the Federal Communications Commission. It would be a very great and very dangerous surrender of power if the Bureau of the Budget or the President could telephone the members of the Federal Communications Commission and could tell them who should be granted licenses for television or radio or who should not be granted such licenses, and could lay down the conditions under which the licenses should be issued. In such circumstances, I think the Committee on Interstate and Foreign Commerce would make an investigation of such dictation by the executive branch, in demanding or ordering an independent agency to do this or do that.

Certainly I think there is a line of demarcation. I may be wrong; but it seems to me that the President has the right to give certain orders to members of the Cabinet and to the agencies of the executive branch of the Government. A clear line of Presidential authority runs through the Cabinet. That is why we have made certain agencies Cabinet offices.

But when Congress creates an independent agency, it does not put it on the end of that chain of command; and when that chain of command is used—whether for good purpose or for bad—in the case of such a commission, I think great violence is done to the proper concept of the structure of government.

Mr. PASTORE. I thank the Senator.

Mr. GORE. Mr. President, will the Senator yield at this point?

Mr. PASTORE. I yield. I hope we shall not get into the Dixon-Yates controversy this afternoon. I have more than 30 pages left of my speech. I have not covered half of it yet.

Mr. GORE. I do not intend to distract the Senator's attention to the Dixon-Yates controversy. The Senator has already made a forceful statement of his opinion with respect to the authority, the probity, and the wisdom of that contract. What I wish to point out to the Senator from Rhode Island, and also to

the junior Senator from Oklahoma, is this:

In the case in which the Commission made the decision to proceed with the crash program in connection with the H-bomb, there was a division of sentiment, a division of opinion, within the Commission. As I recall, the Commission stood 2 to 3 against proceeding with the program.

It was related on the floor of the Senate recently that the then President of the United States ordered the Commission to proceed. What do the hearings show in that regard? The hearings show that in the case of the H-bomb decision the Atomic Energy Commission voted unanimously to submit the question to the President. Of course, under the basic Atomic Energy Act, and also under the terms of the pending bill, the President is granted specific authority to give direction to the Commission with respect to weapons. Each Commissioner who desired to submit his individual views to the President for his guidance and assistance did so, but unanimously the Commission voted to refer the decision to the President of the United States. Those are not the circumstances in this case.

The Senator raised a question as to the integrity, probity, and character of those whose nominations are confirmed by the Senate. Let us realize that we are discussing membership on a commission of persons whose nominations must be confirmed by the Senate. In addition, membership on such a commission requires the lifting of one's hand and the taking of an oath of office.

I have been appalled that members of the Commission should have yielded to direction in the Dixon-Yates case. If such be a precedent, then I agree with the junior Senator from Oklahoma that the integrity and independence of all other so-called independent commissions are at stake.

Of course, there are powers in the executive. Under certain conditions members of the Commission may be removed by the President. Under certain conditions members may be dismissed from other commissions for contumacy, but neither of those circumstances excuses members of the Commission from the performance of their sworn duty, as their consciences dictate, in the public interest.

Mr. PASTORE. I hope we shall not pursue the Dixon-Yates colloquy any further. In conclusion in that connection, lest I be misunderstood, I answer the question only in hypothetical fashion. In my own personal experience I have never found five more patriotic, devoted, able, conscientious individuals than the present 5 members of the Atomic Energy Commission. I do not know enough about the facts to justify my standing here today and indicating any person. I have found the members of the Atomic Energy Commission to be very honorable men. Possibly they have disagreed with others. They have a right to their viewpoint, as I have a right to mine. When we disagree we stand up as honorable men and say so. We state our position and are counted.

I wish to leave the RECORD on this subject with the final statement that, so far as I am concerned, we are indebted to the five men who presently serve on the Atomic Energy Commission. I think they are patriotic, devoted Americans.

Mr. GORE. I concur in that statement.

Mr. PASTORE. I now return to my manuscript.

We, therefore, face this choice: Shall we ask the American taxpayer to assume the entire burden of financing power research and development during the pioneering years ahead, or shall we attempt to create a legislative environment in which private industry will be willing to take up a share of these development costs?

Speaking for myself, I find no difficulty in answering these questions. To me, the equitable solution lies in inviting private industry into atomic-power development today in return for the possibility of fair rewards tomorrow.

Whether or not this bill becomes the law of the land at the present time, I would, myself, regard it as highly unlikely that the task of developing atomic power will remain a governmental monopoly for an indefinite period to come. This being the case, I want free enterprise, under properly controlled conditions, to assume its fair share of atomic developmental costs today. I respectfully suggest that now is the time. I do not wish to deny private participation in this field until such time as profits are assured. In fact, it is precisely because of my solicitude for the taxpayers' dollars, it is precisely because of my determination that there should be no atomic giveaway, that I now urge the Senate to permit private participation in atomic power under the terms outlined in the bill.

It is probably the case that, during the immediate future, relatively few companies would accept the invitation offered by this legislation. Accordingly we face the danger of restrictive patent practices. However, the legislation addresses itself to this possibility, as I shall discuss fully during the course of my remarks.

Having described the broad purpose of the proposed legislation, I should now like to direct attention to certain provisions of the bill which I feel need to be particularized. The bill, in its declaration, states that "the development, use, and control of atomic energy shall be directed so as to promote world peace, improve the general welfare, increase the standard of living, and strengthen free competition in private enterprise."

This declaration, in and of itself, is not enough. Affirmative controls must appear within the purview of the bill. Therefore, section 105 provides that nothing contained in the act, including the provisions which vest title to all special nuclear material in the United States, shall relieve anyone from the operation of the antitrust laws. The Sherman Act, the Clayton Act, and the Federal Trade Commission Act are specifically enumerated. Under this provision any future industry created under the terms of the bill would be subject to these laws on an equal basis with the other industries of the United States.

Indeed this section goes a step further. Since it would be inconsistent and dangerous for the Atomic Energy Commission to grant a license permitting certain atomic industrial activity only to have the Justice Department bring a subsequent action against that industry under the antitrust statutes, it is provided under section 105–b that precedent to the issuance of any industrial license the Atomic Energy Commission must notify the Attorney General of the proposed license and supply the pertinent surrounding facts of the license application and issuance. Before the expiration of 90 days, the Attorney General is required to advise the Atomic Energy Commission if the proposed issuance would create a situation inconsistent with the antitrust laws. Obviously, the mere giving of such advice would not estop or bar a later action by the Attorney General if monopolistic practice or restraint of trade were later to arise.

But in fact, what this provision does do is to lock the barn door before the horse is stolen, and I might add that these procedures are identical with those contained in the Federal Property and Administration Services Act. And for the assurance of the members of this body, I can say that the Justice Department has testified before the Joint Committee on Atomic Energy that arrangements such as these are adequate and workable.

Turning now to the subject of compulsory licensing of patents, as provided in section 152 of the bill: Originally the bill made no exception as to our usual concept of patent rights. But after considerable debate it was deemed advisable by a vast majority of the members of the Committee that a system of compulsory licensing of patents should be inserted in the law in order to avoid the possibility that the purposes of the program might be defeated if any patent holder was determined to exclude others from using his idea. For that reason, we have written into the law a procedure by which we prevent the few from achieving a restrictive patent position in this new field.

There are two compulsory licensing mechanisms relating to patents under the provisions of this section:

First. The Atomic Energy Commission can cause any atomic patent to be declared affected with the public interest and made subject thereafter to compulsory licensing by legitimate users.

Second. Even if the Atomic Energy Commission fails to make such a declaration, any lawful applicant can, on his own initiative, petition the Atomic Energy Commission for a compulsory license to the patent right of another patentee.

This compulsory provision is not designed solely to circumvent the preference of the prior contractor. It was conceived out of the knowledge that this proposed atomic industry is new and the national interest demands its rapid growth. Such growth requires the participation of as many individuals and corporations as possible, and the opportunity for a patent license is added

UNIVERSITY OF MICHIGAN LIBRARIES

incentive to cause a multiplicity of endeavor.

This compulsory licensing provision affects every patent applied for or issued before September 1, 1959, and lasts for the life of that patent.

Now turning to the subject of licensing of private activities in the atomic industry, here again such activities are regulated through two mechanisms:

First. All title to special nuclear material—the industrial fuel—will be vested in the United States Government, and the industrial participant will be licensed to use it.

Second. Through a system of licensing, production and utilization facilities will be permitted to operate.

Sections 53, 63, 103, and 104 provide the adequate safeguards. These sections recite the statutory conditions which must be met before licenses will issue and which must be maintained during the life of the license. Some of these conditions are:

First. Facilities may be used only in the interest of common defense and security;

Second. Facilities must be used so as to protect the health and safety of the public and not damage personal property;

Third. Special nuclear material is available only on such terms that no user or possessor can construct an atomic weapon;

Fourth. No license is alienable except with the express consent of the Commission.

In order to insure compliance with all of the provisions in the act, and for protecting the public and the national interest, the Commission is authorized to require licensees to keep records and to make reports to the Commission. AEC is authorized to make inspection of a licensee's activities. As a matter of fact, a very important statutory program instituted by this bill is the establishment of an Inspection Division within the Commission as an aid in seeing that all obligations of a licensee under this act are fulfilled.

I should now like to turn to the sections of the bill which are of vital importance to our very existence and, indeed, to the continuation of civilization as we know it.

I refer to those portions of the bill that have to do with atomic cooperation with other nations, both in the peacetime and in the military fields.

On February 17 of this year, President Eisenhower sent a message to the Congress outlining cooperation with other nations in the field of atomic energy. The President states, in order of importance, the following: "First, increasing cooperation with our allies in certain atomic energy matters."

I commend the President for his recognition of the fact that this is the day of jets, rapid communication, atomic bombs, and now the devastatingly destructive hydrogen bomb. I commend him also for his recognition of the priority which we must give the matter of cooperation with our friends across the seas.

I shall attempt to outline the problems of the bill, as it concerns international cooperation, in three phases:

First. Does this bill enable our Government to deal cooperatively and bilaterally with other nations in peacetime atomic energy fields?

Second. Does this bill enable our military to exchange with NATO, and regional defense organizations, the information concerning atomic weapons that is needed in our defense plans?

Third. Does this bill implement the President's proposal of December 8, for establishing an international atomic pool?

On the first question, I should like to point out that we are not alone in this world in possessing atomic energy. Neither are we alone in developing peacetime atomic power. Twenty other countries now have aggressive atomic programs in being.

Let us examine what is perhaps the most dramatic appeal of atomic energy to the people of the world. I refer to the possibility of producing power from the nonfossil fuel, uranium. We all know that electrical power is essential to modern industry, both here and abroad. Indeed, I might point out that the Atomic Energy Commisison, in testifying before the Joint Committee, stated that the expansion of power-generating capacity to meet the demands for electric power is mounting rapidly—in fact, even more rapidly in other countries than in the United States.

The Atomic Energy Commission also testified that Italy, Portugal, Greece, Norway, Sweden, Finland, Algeria, and Pakistan, can meet less than one-half their present demand for power from the fuel sources within their own boundaries. Hydroelectric power is also limited in many areas, and so these power-poor nations of the world, faced with the demands of industrilization, can look now only to the field of atomic energy for the power vital to their well-being.

These nations know that our country has spent vast sums on the atom, and that this investment has served to protect all the free nations in their struggle against atheistic communism. But they also recognize that, concurrent with this atomic military strength, the United States has developed technological and scientific information which form the basis for the generation of nuclear power. They, therefore, look to us, the most powerful nation in western civilization, to extend a helping hand.

These considerations entered into the committee's decision to create means whereby the United States could assist its friends in the development of peacetime power, but they were not the only considerations. The United States has for the last 10 years received major portions of its uranium from overseas sources. This country owes a deep and abiding debt of gratitude to these nations, all of whom recognize that uranium was vital to the protection of freedom in the world. We have an obligation to these nations—and particularly, to Belgium—that we should begin now sending back information and techniques which we have developed and which will help them develop nuclear power in their countries.

In the main, the international provisions of the bill, permitting bilateral cooperation with other nations in the peacetime development of atomic energy, are adequate and do permit us to meet our legal and moral obligations. Both the Atomic Energy Commission and the Department of State have testified to this fact, and I endorse these provisions of the bill. In writing the provision that enable this needed cooperation—that is, section 144a—the committee approached the problem with judicious caution but with recognition at the same time that flexibility of action must be afforded those who will implement the cooperation. The section dealing with cooperation on peacetime uses of atomic energy specifically limits the kinds of information that may be communicated to another nation. The section is limited to information concerning—

First. Refining, purification, and subsequent treatment of source material;

Second. Reactor development;

Third. Production of special nuclear material;

Fourth. Health and safety;

Fifth. Industrial and other applications of atomic energy for peaceful purposes; and

Sixth. Research and development relating to the foregoing. But the section adds this provision:

> No such cooperation shall involve communication of restricted data relating to the design or fabrication of atomic weapons.

Further, any information communicated to another nation must be transmitted pursuant to an agreement for cooperation entered into in accordance with section 123 of the bill. The conditions surrounding any agreement for cooperation include:

First. The terms, conditions, duration, nature, and scope of the cooperation;

Second. A guaranty by the cooperating party that security safeguards and standards as set forth in the agreement for cooperation will be maintained;

Third. A guaranty by the cooperating party that any material to be transferred pursuant to any such agreement will not be used for atomic weapons, or for research on or development of atomic weapons, or for any other military purpose; and

Fourth. A guaranty by the cooperating party that any material or any restricted data to be transferred pursuant to the agreement for cooperation will not be transferred to unauthorized persons or beyond the jurisdiction of the cooperating party, except as specified in the agreement.

The procedure that any such agreement for cooperation must take is:

First. It must be approved by the Commission, or, in the case of the transfer of restricted data for the development of military plans pursuant to section 144b., the Department of Defense.

Second. The President must approve the agreement for cooperation. He must also make a determination in writing

that the performance of the agreement for cooperation will promote and will not constitute an unreasonable risk to the common defense and security.

Third. The proposed agreement for cooperation, together with the Presidential approval and determination must lie before the Joint Committee for 30 days while Congress is in session.

Insofar as bilateral agreements with another nation are concerned—and I am limiting this observation to bilateral agreements—the provisions of this section provide adequate safeguards to the security and cooperation in the peacetime fields for the benefit of our allies. Later I shall discuss the subject of dealing with a group of nations.

On the question of the second problem with which this bill deals in the international area. Does it enable our military to exchange with NATO and regional defense organizations to which we are a party information concerning atomic weapons that is needed in our defense plans? My answer is in the affirmative.

The bill before us will permit the Department of Defense, under comprehensive and rigorous security safeguards, to transfer to a regional defense organization of which we are a member, such as NATO, or to another nation, restricted data involved in the tactical use of atomic weapons. The information which is permitted to be exchanged must be necessary to the development of defense plans, the training of personnel in the employment of and defense against atomic weapons, and the evaluation of the capabilities of potential enemies in the employment of atomic weapons against us. I should like briefly to point out why this exchange of information on weapons is necessary. Let me direct attention to the report of the joint committee, on page 2, where it declared:

When the organic law was enacted, atomic bombs were regarded by most as strategic weapons. Tactical applications of the military atom were but dimly perceived. Still less was it recognized that the time would soon come when tactical atomic weapons could profoundly, perhaps even decisively, affect the operations of the ground forces defending Western Europe. With our Nation the sole possessor of atomic weapons, and with these weapons husbanded for a strategic counterblow against an aggressor, there was no need for acquainting friendly nations with information concerning the effects and military employment of tactical atomic weapons. Today, however, we are engaged with our allies in a common endeavor, involving common planning and combined forces, to dam the tide of Red military power and prevent it from engulfing free Europe.

America's preponderance in atomic weapons can offset the numerical superiority of the Communist forces, and serve emphatic notice on the Soviet dictators that any attempt to occupy free Europe or to push further anywhere into the free world, would be foredoomed to failure. Yet, so long as our law prohibits us from giving our partners in these joint efforts for common defense such atomic information as is required for realistic military planning, our own national security suffers.

There, in a nutshell, is the reason why we must cooperate in the field of military application with our allies. The joint committee did not approach this subject with casualness. Much time, both in public and executive hearings, was devoted to the defense of the necessity for such exchange. After hearing the testimony of the Undersecretary of Defense, of the Chairman of the Joint Chiefs of Staff, Admiral Radford, and of other high military officials, the Committee decided that it would be vital to hear firsthand the remarks of General Gruenther. Through his able and distinguished representative and deputy, General Schuyler, the committee was informed fully of the defense planning for Europe which General Gruenther is so ably conducting. Let me quote briefly from the remarks of General Schuyler, and if I ever commended anything of importance to the attention of the Members of the Senate, I recommend and commend the statement made by General Schuyler, from which I now quote:

We consider that, in any future major conflict, nuclear weapons will be used both in the strategic and in the tactical role. The advent of these weapons provides both sides with tremendous destructive power on D-day. Hence, no longer, as has been the case in most wars of the past, can we expect a short breathing space after the initial aggression, while both sides complete their full war mobilization. In fact, the aggressor's opening atomic campaign conceivably might, if not adequately countered, itself prove to be decisive in a matter of days.

The very existence of a large atomic threat against us obliges us to plan, ourselves, on utilizing atomic weapons and requires that we adapt our military machine to these conditions.

During the first 2 years of NATO, our plans for the defense of Western Europe were based largely upon the use of conventional weapons. We made every effort to obtain from the various NATO nations the level of forces which we felt would be requisite to an adequate conventional defense. As you know, existing circumstances have made it impossible for those countries, including the United States, to meet the large force requirements which this approach called for.

General Schuyler clearly pointed out the role of atomic weapons in the defense of the free world.

It must be clear to all of us that nuclear weapons will, and should, be used in the defense of Western Europe in a future major war. The alternatives would be: Either not to defend Western Europe at all, or to accept the great risk of sacrificing a large portion of our admittedly insufficient conventional forces in what might well be a futile attempt to prevent the over-running of our NATO allies and the destruction of Western European civilization.

Since we expect nuclear weapons to be used by both sides in Europe in any future war we need to make additional progress in the matter of closely integrating the strategy, tactics, and techniques of utilizing atomic weapons in close support of conventional air-ground operations.

General Schuyler also pointed out to the committee:

We at SHAPE are giving this matter our earnest attention. As you know, we have had organized for some time under United States auspices, courses of instruction for selected allied personnel who hold key command and staff jobs in the NATO complex. We have also prepared, in draft form, ready for issue within the next few days, a directive covering in some detail the planning and operational responsibilities of all commanders, both ground and air, for the employment of nuclear weapons. But thus far, in our school instruction, in our field training and in our war planning, we are seriously impeded by United States policy restrictions concerning release of atomic information.

I add this rejoinder: How foolish can we get?

These compelling reasons presented by General Schuyler and which represented the views of the Defense Department, National Security Council, Joint Chiefs of Staff, and the President were, to members of the committee, compelling, and we therefore were moved to amend the act, so that the information needed to meet these purposes will be made available to our allies.

Let me turn now to section 144b of the bill, which concerns itself with this matter. This section permits cooperation with a nation or regional defense organization with respect to restricted data that is necessary to, first, the development of defense plants. Who could quarrel with that? Second, the training of personnel in the employment of and defense against atomic weapons. Again, who could quarrel with that? Third, the evaluation of the capabilities of potential enemies in the employment of atomic weapons. Who, in the name of heaven, could quarrel with that? The section, however, provides that no important information concerning the design or fabrication of important parts of atomic weapons can be so communicated. There is the safeguard. It limits such cooperation to the communication of restricted data in the above three categories and states that it shall not include communication of restricted data relating to the design or fabrication of atomic weapons except with regard to the external characteristics, including size, weight, and shape, yields and effects, and systems employed in the delivery or use thereof, but not including—I emphasize this—any data in these categories unless, in the joint judgment of the Atomic Energy Commission and the Department of Defense, such data will not reveal important information concerning the design or fabrication of the nuclear components of an atomic weapon.

Fundamentally, what are we doing? We are merely imparting or communicating the data, which we must do, in order properly to formulate our plans, to train personnel, and to train our allies in the means of protection against aggression against us through the use of atomic weapons by an enemy.

Thus, the bill makes permissive the kind of cooperation which would include the transfer of that information which will permit our allies to participate in planning the defense of the free world in any atomic attack from Russia, and to know the effects of any weapons that will be available for use by the United States in helping those other nations join in defending the free world against any such attack.

UNIVERSITY OF MICHIGAN LIBRARIES

While section 144b permits the communication of this needed information to our allies who are joined with us in this great common defense against the onslaught of the Kremlin, it must, however, be carried out under necessary security safeguards. These are the same safeguards which apply to the communication of information on the nonmilitary application of atomic energy and which I have outlined in detail previously in my remarks.

I should point out for the benefit of my colleagues that the section on the exchange of military atomic information has the full support of the Department of Defense, of the Atomic Energy Commission, of the Joint Chiefs of Staff, of the Supreme Commander in Europe, of the National Security Council, and, indeed, of the President of the United States. How far do we have to go?

I turn now to the third international question involved in this legislation. This, to me, is the crux of the remarks which I am making today, because I think that, by far, it is the most important part, and concerns the most important feature of the bill which is before the Senate for consideration.

Does the bill as it is now written carry out the spirit and the purpose for America's participation in a peacetime international atomic energy pool, as expressed by the President of the United States? My answer, I regret to say, is in the negative. It does not. I repeat: It does not.

I do not mean to take up the time of the Senate now to chide the spokesmen for the administration. But I challenge them to take the baton now held by the President and show some initiative. I want to go on a peace offensive—not with a short spurt or a sprint, not with a barrage of words, not with a burden of trappings and fearsome hesitancy—but an offensive with real direction, staying power, and unconditional support.

I want to tell Senators what I expect S. 3690 to do, and I urge the Senate of the United States to live up to the heritage of this great Nation.

President Eisenhower, when he made that magnificent address before the General Assembly of the United Nations last December, gave the free peoples of the world a taste of that old leadership and encouragement which started with the Boston Tea Party and carried on through the Declaration of Independence, the Bill of Rights, the Monroe Doctrine, the Proclamation of Emancipation, and the Atlantic Charter.

He made the first concrete suggestion since the Baruch plan for a pattern among nations of living with the atom.

The President, out of his vast experience, and obviously from deep and searching thought—and, yes, prayer—came forward with an idea that was both great and realistic. He offered a staging area for an offensive for peace. He proposed, in effect, that since we cannot agree with the Russians on the removal of the atom as a threat to peace, then let us get together with all freedom-minded nations to develop the atom as a building block of peace.

Perhaps he was tired of inaction. Perhaps his military judgment told him to get out of the trenches. Perhaps he was inspired. Whatever his motivation, he has offered us a possible way upward.

In S. 3690, we have the first concrete opportunity to back the President's words with action. We are challenged to prove our mettle. We have a course laid out for us—at least the first leg of the course. Are we going to move?

I say we must move. I say we must respond to the silent pleadings of the rest of the free world showing real evidence that our resources are undiminished in terms of faith, courage, and vision.

The step we must take now, firmly, unfalteringly, with clear and unmistakable confidence in the Nation, our people, their ambitions and aspirations, and their determination, is to see that the bill now before the Senate adequately supports the President's plan for a constructive approach to the problem of the atom.

We must amend Senate bill 3690; and because I was so determined about the most important phase of the proposed legislation, I did not dissent, but went along with the other phases of the bill. But here on the floor of the Senate in good conscience I could not do so, and what I present is the only amendment which I propose to this measure. But I say the bill must be amended.

Without diluting the necessary safeguards in the international cooperation section of the bill, we must make it positive. We cannot sidestep the obligations of leadership. We must show some initiative and mount an offensive for peace.

I have proposed only one amendment to S. 3690. The arguments for my amendment have been placed in the RECORD, as well as being attached to Report No. 1699, starting on page 100. I have urged that the words "group of nations" be inserted in the appropriate international activities sections of the bill. I would also strike the so-called International Atomic Pool provision of section 124, which seems to me to be only "eyewash." My amendment is directed at giving true and realistic implementation to the ideas proposed by the President in his speech to the United Nations last December.

Perhaps the need for my amendment can best be explained by recounting the history of this great idea for an international atomic pool, its history since the President's December speech. That proposal was promptly hailed throughout the world as the first genuine show of atomic leadership in a world grown weary with talk of war and preparation for war. It came as a refreshing breeze on the brows of men throughout the free and neutral world. It restored much of the prestige we had lost as a nation during recent years through our continuous emphasis on weapons and military defenses.

But the most striking result was the Soviet reaction. At first, the Soviet delegate to the United Nations reacted mechanically, pooh-poohed the proposal, and cast aspersions on it. Within 48 hours, this initial attitude was reversed. The Kremlin immediately sensed that this new idea had caught the imagination of peoples everywhere. The Kremlin could not afford to appear to be standing in the way of any constructive step toward peace. The United States had seized the initiative, and the Soviets had to change their tune abruptly or risk a serious loss of face.

Of course the Soviets did not accept the plan; and the fact that they did not accept the plan is all the more reason why we should accept it. Instead, they temporized. They began a campaign to study it to death. Conferences were arranged; notes were exchanged. Mr. Molotov enticed the earnest and well-meaning Mr. Dulles into conversation in Berlin and kept them going at Geneva. Until now, more than 6 months later, the Soviets fervently wring their hands and hope that the idea is approaching its death in dusty file drawers, forgotten for lack of American courage to push it.

And where have the spokesmen and advisers of American foreign policy been all these months? What have they done to keep this idea alive? The Voice of America gave the international atomic pool plan a big buildup at first, but as time passed there was little that could be said in defense of the seeming procrastination, the failure to follow through. And so the idea is now mentioned always in the past tense. Its ultimate death seems to be as much aided by Americans as it is sought and worked for by the Kremlin.

To my colleagues I say most sincerely, the trimmers have been at work. The fearmongers have taken over. They have argued that perhaps the Soviets would join the pool plan if negotiations could go on in secret. Well-meaning men, these are. But what could have played into Russia's hands more surely? Here is an idea which caught fire in men's minds. World pressure was there for the asking. Russia could be forced to join the plan by world public opinion.

The myth of Soviet peace motivation is scarcely believed anywhere more than in Russia and its satellites. What could force the hands of the hypocrites more than to be faced with their own hypocrisy?

The joint committee has spent days considering what it might do to give new fire to the President's international atomic pool proposal. Yet even in our own discussions the fear that we might be getting into something we did not fully understand came to dominate our thinking. Too many comments and observations began with "just suppose." "Just suppose; just suppose; just suppose." Too many can see only the things which might go wrong. I have great sympathy for the majority of the joint committee, as I have for all of those who have been hesitant to advise bold action to implement the President's international atomic pool proposal. But I cannot join them. I plead with the Senate to help us prove to the world that our Nation has the qualities of leadership and the courage necessary to start us up the road to genuine peace.

Fear of what might happen leads to defensive measures. But no defense has ever won against a strong aggressor. My amendment seeks to restore life to the great idea expressed before the United Nations. I am not fearful that

our atomic secrets will flow into enemy hands. Instead, I am hopeful that by this action the hands of those enemies will be constricted in their movements. All too frequently the statements of our public leaders play into the hands of the Kremlin. Let it not be so in this case. All that the President proposed last December was that we make a start—just make a start. That is my plea today to the Senate—that we just make a start. There is no intention here to turn over tons of classified documents or even a single scrap of information vital to the design of weapons or to weapon-material production. That is not involved. But there is a great deal of American know-how which cannot be matched by any other nation in the world. That information is ammunition in our war for peace. Who can imagine harm coming to the United States if we should assist other nations in acquiring atomic devices for medical therapy? Who can imagine evil flowing from American assistance in raising the standards of living, through production of atomic power in remote and backward areas of the world? It is my hope that we win friends, win allies, and defeat our enemies, by taking the offensive in a cooperative venture. We must not expect miracles overnight. But the miracles which men accomplish require that they put their energies into constructive actions.

There is no international atomic agency, there is no existing international atomic pool, to which Congress can indicate it is prepared to subscribe. But there is an idea which we cannot reject without demonstrating, for all the world to see, that we are afraid of our own strength.

Here is an opportunity. The President has taken the lead; he had the courage to make a more bold proposal than anyone had dared to expect. Despite all of the chipping away at his great idea that has been done in the past 6 months by both the Kremlin and the ill-advised counselors here at home, that idea still stands. That standard is still ready for us to grasp and carry forward. The next move is up to the Congress, not the President. Without some positive sign that the representatives of the people are behind him, he cannot do less than heed the advise of those who counsel fear.

As the bill was reported to the Senate, as it now lies on the desks of Senators, without my amendment, it does not go far enough to indicate our willingness, our preparedness, to implement the President's idea.

At the cost of repetition, let me say that the harm it does is stated in the conclusion of my dissenting view, beginning on page 104 of the report, namely:

> The very foundation of our foreign policy has been built on a philosophy of collectiveness. As a result we have seen the free world grow stronger step by step. It would be wiser for us to take no action at all, rather than injure the spirit of unity which now prevails in the free world. Psychologically, I am afraid that we do exactly this if we make it more difficult for us to deal with a group of nations, as against dealing with one nation in this very important field.

In other words, Mr. President, under the provisions and strict requirements of section 123, the Commission is told, in effect, "You can deal with one nation at a time; but if you wish to deal with both Canada and Great Britain at the same time, you must, first, either have the Senate ratify a treaty in that connection, or a joint resolution for that purpose must be passed by both Houses of Congress"—isolationism, Mr. President, in the *n*th degree.

Mr. President, I have discussed at great length—and I apologize for the length of my presentation—the details of this vital piece of proposed legislation. I have taken the time of the Senate, however, because I have a deep belief that, upon an understanding of the issues involved and of the careful study and consideration that have gone into the framing of these legislative proposals, both sides of the aisle will approve them.

The field of atomic energy is too closely interwoven with our national well-being to be subject to narrow, partisan consideration. I am sure this measure will not be so involved.

To me, this bill is more than just a modernization of existing law. It is, rather, a part of the collective armament of the free world in the battle of good against evil. Atomic energy is a God-given force. It can be a force for good. It is for us to choose to use it wisely. With the great power locked in the heart of the atom, we can, if we approach it with humility and wisdom, establish order in this world and, with it, bring to humanity both the material things essential to the well-being of man and an era of peace which recognizes the dignity and nobility of spirit which God in his great love for man has ordained to be ours.

Mr. President, as we here debate this measure, let us not forget that free men everywhere are following the course of our deliberations. Free men everywhere look to us to provide a way to bend the atom to the ways of peace. We must rise to meet the challenge that world circumstances and our leadership have placed before us. We must provide an answer in deeds—not in words—to the vicious competition of evil world-communism in its battle with us of the free world for the minds and souls of men.

With full sincerity, Mr. President, I urge that the Senate adopt my amendment, and then pass the bill as thus amended.

Mr. SPARKMAN. Mr. President, will the Senator from Rhode Island yield to me?

Mr. PASTORE. I yield.

Mr. SPARKMAN. First, I should like to commend the able Senator from Rhode Island for his most able presentation of this entire subject matter. He has done a remarkable job.

If he will permit me to do so, I should like to ask him a few, brief questions regarding the latter part of his remarks, that dealing with the international aspects.

Do I correctly understand that, under the bill, the President is authorized to exchange certain information, under adequate safeguards—as the Senator from Rhode Island so carefully pointed out—with an individual nation, but that if 2 or 3 nations happened to be involved in exactly the same matter and the same interest, the President could not engage in such an exchange with them, without the ratification by the Senate of a treaty or without the taking of appropriate legislative action by both Houses of Congress?

I wonder if the Senator can enlighten those of us who are not members of the joint committee as to just why that distinction is made.

Mr. PASTORE. The distinction is made—and I think the argument is fuzzy and flimsy—on the theory that we can trust 1, but we cannot trust 2. That is it, in essence. We can trust Canada if we deal with her alone, and we can trust Great Britain if we deal with her alone. But if we sit down with both Canada and Great Britain, we cannot trust them. In essence, that is what the bill says.

Mr. SPARKMAN. As I interpret the message of President Eisenhower and other messages on the same subject, going back to the time when atomic energy ceased to be the great secret it once was, including the message President Truman delivered to the United Nations on October 24, 1950, as I recall, and other messages on the same subject, going back to the Baruch plan, they contemplated some kind of international agreement into which all nations would enter. We know that that plan has been held up by reason of the unwillingness of the Kremlin and its satellites to enter into any such arrangement. Can we hope to make much headway in working toward that ultimate goal if the relations are to be only on a single-nation basis?

Mr. PASTORE. The tragedy which inspired the present provision in the bill lies in the fact that those who advocate this provision are assisting Russia in her position of not being allowed into the pool. That is precisely what they are afraid of. They are afraid that Russia might come into the peactime pool. In other words, they are upholding the attitude of Russia. I do not say that they are unpatriotic. They are honorable men. Possibly they are better Americans than I am, but that is the argument that is being made.

To me that is the tragedy of our time. I believe that when the President of the United States spoke before the United Nations on that day in December, he rocked the world. He gave hope to the people of the world. He showed, once and for all, that atomic energy could be put to a useful purpose. He showed that we could use it to build up the hearts and minds of men, and lift them from their poverty and squalor. He showed that we could give them hope and build up their standard of living. That message electrified the entire world.

What are we saying in this bill? Not a single thing in the field of cooperating with a group of nations could be done under the provisions of the bill, if it were enacted, that could not be done under present law. In other words, if we should not enact the pending bill, under the McMahon Act we could negotiate an atomic pool by way of a treaty, because that is a constitutional right. Even the McMahon Act could not affect that right. It is distinctly so stated in the McMahon Act. We can impart information to

UNIVERSITY OF MICHIGAN LIBRARIES

other nations, provided they enter into an agreement sanctioned by both branches of Congress, or by way of a treaty.

Mr. SPARKMAN. Let me ask one further question, and then I shall not detain the able Senator longer.

I have read with great interest the dissent, the minority views—or perhaps a better description would be the supplemental views—expressed by the able Senator in connection with the report, in which he very forcefully sets forth the arguments on this subject.

One thing which caught my attention was his reference to the fact that in the bill as it was being studied by the committee his amendment was included. Apparently somewhere along the way the committee struck from the bill what the able Senator now seeks to restore in it.

Mr. PASTORE. In writing the clean bill that is precisely what was done. There is a new tragedy. In the first place the committee put the amendment into the bill, and then, after some deliberation, took it out. In that way it was accentuated.

Mr. SPARKMAN. That provision was emphasized.

Mr. PASTORE. Yes. Psychologically I think we broke down the morale and the unity which we have been able to achieve over the years. In my opinion, that is very harmful. I feel more strongly about that provision than I do about any other part of the bill. Our action in that connection was a step backward, not forward. Anyone who supports the provision of the pending bill with relation to international cooperation disagrees with the President of the United States. I make that as a categorical statement.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had insisted upon its amendments to the bill (S. 2900) to authorize the sale of certain land in Alaska to the Harding Lake Camp, Inc., of Fairbanks, Alaska, for use as a youth camp, and related purposes, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. SAYLOR, Mr. D'EWART, Mr. DAWSON of Utah, Mr. ENGLE, and Mr. ASPINALL were appointed managers on the part of the House at the conference.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H. R. 9006) to amend the act of May 22, 1896, as amended, concerning the loan or gift of works of art and other material.

The message also further announced that the House had severally agreed to the amendment of the Senate to the following bills of the House:

H. R. 2617. An act for the relief of Guillermo Morales Chacon;

H. R. 6642. An act for the relief of Mrs. Augusta Selmer-Andersen; and

H. R. 8713. An act to amend section 1 (d) of the Helium Act (50 U. S. C. sec. 161 (d)), and to repeal section 3 (13) of the act entitled "An act to amend or repeal certain Government property laws, and for other purposes", approved October 31, 1951 (65 Stat. 701).

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9242) to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 1276. An act to amend the Bankhead-Jones Farm Tenant Act, as amended, so as to provide for a variable interest rate, second mortgage security for loans under title I, and for other purposes;

S. 3539. An act to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services;

H. R. 1067. An act to authorize the Supreme Court of the United States to make and publish rules for procedure on review of decisions of The Tax Court of the United States;

H. R. 1673. An act for the relief of James I. Smith;

H. R. 5578. An act for the relief of Hatsuko Kuniyoshi Dillon;

H. R. 5731. An act to authorize the Secretary of the Interior to construct facilities to provide water for irrigation, municipal, domestic, military, and other uses from the Santa Margarita River, Calif., and for other purposes; and

H. R. 7664. An act to provide for the development of the Priest Rapids site on the Columbia River, Wash., under a license issued pursuant to the Federal Power Act.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, July 15, 1954, he presented to the President of the United States the following enrolled bills:

S 1276. An act to amend the Bankhead-Jones Farm Tenant Act, as amended, so as to provide for a variable interest rate, second mortgage security for loans under title I, and for other purposes; and

S. 3539. An act to further amend title II of the Career Compensation Act of 1949, as amended, to provide for the computation of reenlistment bonuses for members of the uniformed services;

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. BRICKER obtained the floor.

Mr. SPARKMAN. Mr. President, will the Senator from Ohio yield in order that I may suggest the absence of a quorum?

Mr. BRICKER. I am glad to yield provided I do not lose the floor.

Mr. SPARKMAN. Of course.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPARKMAN. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. LENNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BRICKER. Mr. President, at this time I desire to comment on the minority views of the junior Senator from Rhode Island [Mr. PASTORE] with reference to the international cooperation provisions of S. 3690 to amend the Atomic Energy Act of 1946.

First, let me express my agreement with the junior Senator from Rhode Island to the effect that the bill before the Senate represents a splendid example of bipartisanship on the part of all members of the Joint Committee on Atomic Energy. This highly technical and complex bill is, of course, the product of numerous compromises. Several portions of the bill do not have my unqualified endorsement, but I feel that I can support the measure in substantially its present form without sacrificing what I regard as any matter of strong principle. In particular, I regret that the safeguards surrounding the international exchange of atomic energy information were not made stronger. However, the security safeguards contained in the bill do not appear to me to be so low as to require a negative vote on my part.

The junior Senator from Rhode Island proposes to strike from the bill section 124 reading as follows:

SEC. 124. International atomic pool: The President is authorized to enter into an international arrangement with a group of nations providing for international cooperation in the nonmilitary applications of atomic energy and he may thereafter cooperate with that group of nations pursuant to sections 54, 57, 64, 82, 103, 104, or 144a: *Provided, however*, That the cooperation is undertaken pursuant to an agreement for cooperation entered into in accordance with section 123.

The words "international arrangement" are defined as follows in section 11k of the bill:

k. The term "international arrangement" means any international agreement hereafter approved by the Congress or any treaty during the time such agreement or treaty is in full force and effect, but does not include any agreement for cooperation.

In other words, such cooperation would be outside the control of Congress or of the Senate in the ratification of a treaty.

The junior Senator from Rhode Island also proposes to insert in section 123 of the bill the phrase "group of nations." This would empower the President, without obtaining the approval of the Congress or the Senate, to make multilateral agreements with other nations involving the foreign distribution of special nuclear material and the disclosure of classified atomic energy information.

It was at my suggestion that the Joint Committee on Atomic Energy deleted

the phrase "group of nations" from section 123. As a result of this amendment to the bill in committee, the President cannot, without the approval of the Senate or of the Congress, commit the United States to participation in any international atomic pool. However, the bill—section 144b—does empower the President to convey certain information relating to the military application of atomic weapons to a group of nations, but only if such group of nations is a regional defense organization to which the United States is a party.

It was also at my suggestion that the joint committee added section 124 to the bill authorizing the President to enter into an international agreement involving the creation of an international atomic energy pool. The net effect of the committee's action is to require the President to submit to the Senate for ratification as a treaty, or, where appropriate, to both Houses of Congress for their approval, any international agreement involving the transfer of special nuclear materials or the disclosure of secret atomic-energy information to the United Nations or to any other group of nations.

The junior Senator from Rhode Island and I are in full accord as to the effect of the committee's action, although we do not agree as to the wisdom of that action. The effect of the joint committee's action is accurately explained as follows in the minority views:

> It should be noted that these agreements for cooperation can be entered into only bilaterally; that is to say, the statute does not authorize the President to enter into agreements for cooperation with a group of nations or with an international agency unless, as specified in section 124, an international agreement has previously been entered into with a group of nations. This means that the President must negotiate a treaty (which must receive the approval of two-thirds of the Senate before it can be effective), or an executive agreement (which, under the terms of the law, must be submitted to both Houses of Congress and receive a favorable majority vote before it can become effective), before he can cooperate under the bill with any group of nations.

Why should not the President be required to submit to the Senate or to both Houses of Congress any international agreement implementing his proposal for an international atomic energy pool? It is almost universally conceded that President Eisenhower's address before the United Nations General Assembly on December 8, 1953, contained a bold and somewhat revolutionary suggestion for ending the cold war. The importance of that address has not been exaggerated either in the public press or elsewhere. We are, therefore, by almost universal agreement, concerned with a matter of transcendent importance to the security of the United States and to the peace of the world. To put it bluntly, I am shocked by the suggestion that the Congress should give the President a blank check to implement his revolutionary proposal to end the cold war. I am particularly shocked in view of the fact that President Eisenhower has not requested any such blank check. Referring to the creation of an International Atomic Energy Agency in his speech before the General Assembly, President Eisenhower said:

> I would be prepared to submit to the Congress of the United States, and with every expectation of approval, any such plan.

That can be done under the bill as reported by the committee, and the amendment of the Senator from Rhode Island is not necessary to carry out the plan of the President.

Several months later, on February 17, 1954, to be exact, the President said in his special message to the Congress on atomic energy:

> These recommendations are apart from my proposal to seek a new basis for international cooperation in the field of atomic energy as outlined in my address before the General Assembly of the United Nations last December. Consideration of additional legislation which may be needed to implement that proposal should await the development of areas of agreement as a result of our discussions with other nations. (H. Doc. No. 328, 83d Cong., 2d sess., p. 4.)

The negotiations to which the President referred are still going on. They are being conducted in secret. When Mr. Dulles testified before the joint committee last month the Soviet Union had not finally rejected the idea of joining an international atomic pool, although such participation seems most unlikely. Senators will recall that the President in his United Nations address expressly conditioned his proposal on the willingness of the Soviet Union to join in the pooling arrangement. In view of all these uncertainties, the President was absolutely right, in my judgment, in warning against hasty or premature action by the Congress on his bold, new approach for international cooperation in the atomic-energy field.

I simply cannot understand the reasoning of those who urge that Congress or the Senate abdicate its constitutional prerogatives in this highly fluid and uncertain situation. We can all agree, I think, as to the general desirability of an international atomic-energy pool in a world at peace. Personally, however, I have grave doubts that it is possible to create such a pool in the present international climate without endangering the security of the United States.

That is the reason why I want the Congress or the Senate to attempt a careful survey of any proposal for an international pool which might be submitted by the President. He has never asked anything else than what I propose.

Naturally I have no objection to the negotiations now underway. In fact, I am delighted that the President and his Secretary of State are exploring with such diligence this possible avenue to a more peaceful world. Nevertheless I am unalterably opposed to authorizing in the bill now before the Senate the conclusion of an agreement for an international atomic-energy pool without further reference to the Senate or to the Congress.

The junior Senator from Rhode Island points out in his minority views that section 124 of the bill "does little more than restate the powers he—the President—already has under the Constitution and existing law." That is true. Section 124 could be deleted from the bill without detracting from the President's authority in any way whatsoever, because it is a constitutional power which the President of the United States has.

Although section 124 actually confers no authority on the President to carry out his atomic pool plan in addition to that which he already possesses, I believe that section 124 should be retained in the bill as an expression of Congress' hope that the international atomic pool idea will be thoroughly investigated.

Three reasons are presented in the minority views of the junior Senator from Rhode Island for empowering the President in advance, and without approval of the Senate or the Congress, to make international agreements with a group of nations involving the transfer of special nuclear material and the disclosure of secret atomic energy information. The first reason is stated in these words:

> Consider the effect on the downtrodden of Asia, for example, if the Soviet Union should seize the initiative in bringing to these power-starved nations the great benefits of atomic energy. I say on that day we shall have lost the battle.

If anything is certain in this uncertain world, it is that the Soviet Union is not going to export fissionable materials beyond the Iron Curtain. These materials, it must be remembered, can be used in the making of atomic weapons. They can be used for research on or development of atomic weapons. That sobering fact is recognized in section 123a (3) which requires a guaranty by the nation receiving such material that it will not be used for military purposes. Obviously, the special nuclear material proposed to be transferred in accordance with the terms of agreements for cooperation can be used to make an atom bomb. Otherwise, there would be no reason for the guaranty required by section 123a (3). In my judgment, it is virtually certain that the Soviet Union is not going to transfer the nuclear material with which to make an atom bomb either outside the Iron Curtain or to any of its satellite nations.

The second reason advanced in the minority views for the proposed abdication of senatorial and congressional responsibility is stated in these words:

> I find it very difficult to reconcile this distinction (between bilateral and multilateral agreements for cooperation) and I would further point out that this is not so, for the information with which we are here concerned is of a low degree of sensitivity and is far removed from the area of information on atomic weapons and atomic production that we must carefully circumscribe.

I respectfully submit that this view is not only fallacious but exceedingly dangerous. The material to be transferred under the agreements for cooperation authorized by this bill are intended, of course, solely for the development of peacetime uses of atomic energy within the territory of the recipient nation. The fact is, and all authorities on atomic technology agree, that there is no way in which to separate the peaceful and the military uses of fissionable material. The same material that is used in power development can also be used in bomb development. In addition, dual-purpose

UNIVERSITY OF MICHIGAN LIBRARIES

reactors produce both power and militarily useful byproduct material. To say that little danger is attached to the making of these agreements for cooperation is truly reckless. We need only to visualize a large nuclear reactor in northern India serving simultaneously the power purposes of that neutral nation and the military purposes of Red China.

The bill provides internal evidence to the effect that we are not dealing with materials and information of any low degree of sensitivity. Section 2h of the bill reads as follows:

> 2h. It is essential to the common defense and security that title to all special nuclear material be in the United States while such special nuclear material is within the United States.

If it is not consistent with the common defense and security to give title to special nuclear material to American citizens and corporations, it can hardly be said that yielding such title to a foreign nation is not fraught with danger.

In other words, we deny the ownership of special nuclear material to citizens of the United States or to corporations of this country, even to be used for peaceful purposes; yet we intend, by the order of one man, or the agreement of one man, to transfer title and information to the other nations of the world.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. BRICKER. I yield.

Mr. PASTORE. Does not that indicate very strongly that the Senator is opposed to the bill?

Mr. BRICKER. I am not opposed to the bill; all I ask is that Congress or the Senate of the United States—either one or the other—as well as the President, simply take a look at this to see whether there is any danger involved.

Mr. PASTORE. No matter how one may look at it, the end result is to give away nuclear materials; and the Senator is arguing against that.

Mr. BRICKER. If it is a dangerous arrangement, we ought to understand what it portends. While I am willing to take that risk in dealing with a few of our allies, I cannot support the assumption of that risk in dealings with the United Nations or with any large group of nations.

There is nothing in the bill, if the amendment submitted by the Senator from Rhode Island be adopted, which would prevent the United States from dealing with the United Nations, with the North Atlantic Treaty Organization nations, or with any other group of nations which might be organized, and that without submitting one iota of the contract provisions to the Senate or to Congress.

Mr. PASTORE. Mr. President, will the Senator further yield?

Mr. BRICKER. I yield.

Mr. PASTORE. Is it not a fact that no matter what agreement is made, or with whatever number of nations, under section 123 the conditions, terms, and periods must be set forth to Congress? The President of the United States must make a certificate in writing that our national security is not being jeopardized. All those things have to be done before contracts can be made, all this has to be stated to Congress.

Why does the Senator from Ohio try to create the impression that if we deal with one nation we shall have to tell all these things, but if we deal with two nations we shall not have to tell them. Of course we have to tell them.

Mr. BRICKER. There is a wide difference between dealing with one nation of the world through an individual, and dealing with a number of nations or a multitude of nations.

Mr. PASTORE. Mr. President, will the Senator further yield?

Mr. BRICKER. I yield.

Mr. PASTORE. So the argument made by the Senator from Ohio is that we could trust one nation, but we could not trust two.

Mr. BRICKER. The President could bind one nation, as he could not bind a group of nations?

Mr. PASTORE. Why not?

Mr. BRICKER. The Senator from Rhode Island recognizes, as well as I do, that there is a reason for dealing with one or two other nations of the world, when there is no reason for dealing with a multitude or a group of nations. I submit that the United States might enter into an agreement with England or with Canada, as the Senator has suggested, but that is not the contrast which makes the problem apparent. When we are dealing with a group of nations, one of whom, perhaps, we do not have a right to trust, or whom we should not trust, and another of whom we do trust, while that nation trusts the nation whom we distrust, as we find now in the United Nations, in the Geneva Conference, and in other international affairs, the President of the United States and the State Department would be under great pressure. If there were organized, among Italy, France, Belgium, Great Britain, and Canada, a cooperative movement for pooling with the United States their atomic resources, whatever they might have, and if there were an agreement reached among them, the President would be in a very difficult situation to have to say that Italy could not come in, that Germany could not come in, that Great Britain could not come in, but that some other countries could come in.

Congress could do that without any reflection at all. That is all I am asking.

Mr. PASTORE. The President of the United States is of the opposite political belief to that which I entertain——

Mr. BRICKER. I said in the beginning that there was no partisanship in this matter, and I hope none will come into it, although I think I have detected a good bit of partisanship.

Mr. PASTORE. I do not think the President of the United States would allow himself to be hoodwinked in the sense which the Senator from Ohio has explained. I think the President of the United States, or any other man who rises to that position of dignity, will have the courage and the stamina not to be frightened. I think his first concern will be for the security of the United States of America.

What does the Senator from Ohio mean when he says the President of the United States will be placed in a delicate position to say "No" to a risk? I do not believe that for 1 minute. But I am saying that when the provisions of section 123 of the bill are set forth before Congress, Congress can repudiate. But what the Senator is saying in his amendment is that when we deal with a group of nations, we shall have to have two bites at the cherry: first of all, it will be necessary to negotiate a treaty, which the Senate will have to approve. Then, after a treaty has been approved, it will still be necessary, under section 124, to return to section 123 and to spell out all the conditions. In other words, the same thing will be done twice.

Mr. BRICKER. In response to the statement of the Senator from Rhode Island, the same argument was made in the Constitutional Convention. As a result of the argument, the provision was placed in the Constitution requiring ratification of treaties by the Senate of the United States.

There is no authority to give the President power in advance. I do not believe power should be given in advance to evade the responsibilities under the Constitution to submit a treaty to the Senate of the United States. There have developed since that time international dealings, under which this Nation cooperates with other nations by means of what are known as executive agreements.

The Senator will remember the discussions on the floor a short time ago, in regard to the danger of 1-man rule in this country, as was authorized by the decision of the Supreme Court in the Pink case. As a result, the Senate sought to put a safeguard around international or executive agreements, by requiring their submission to Congress.

This is a most important field with which Congress is dealing at this time, perhaps the most important with which it has dealt during this session. It is a field in which the safety of the world is affected. It is a field in which, possibly, the whole defense of the United States may be affected. The peace of the world may be affected by it.

So I feel that Congress should be guaranteed a second look before there occurs any international pooling, as among many nations of the world, of this most valuable and vital material. We represent the people of the United States. We have a trust which we should not give up.

Mr. PASTORE. Mr. President, will the Senator further yield?

Mr. BRICKER. I yield further.

Mr. PASTORE. I subscribe to everything the Senator from Ohio has just said, but what I fail to recognize is the distinction he tries to make. If the Senator takes the position that in dealing with any nation, we should do so under the process of the Constitution, by way of a treaty which must be ratified by two-thirds of the Senate in all cases, that is perfectly proper. But the only trouble I find with his logic is this: In the case of dealing with 1 nation, it is all right to do so without a treaty; but if we deal with 2 nations, we must have a treaty. Will the Senator please tell me why he makes the distinction?

Mr. BRICKER. I must have been very obscure in what I said, because I have been trying to explain my position for about 10 minutes. What I have been trying to do is to draw a distinction between a bilateral agreement, which binds the two nations exclusively, and entering into an agreement with a group of nations, in which we must deal with the nation that becomes most dangerous, and becomes the weakest link.

As the Senator well knows, there are certain practical situations which we must face, which are obvious to us, which have been discussed back and forth in the Joint Committee on Atomic Energy, as to whether the President or the Commission should have authority to work out deals with one nation. I think that is an obvious necessity. The need is much greater in that case than it is in the case of an international pooling arrangement, and it has nothing to do with the international pooling.

Mr. PASTORE. I do not want to get into a discussion of restricted data any more than does the distinguished Senator from Ohio, but I still contend that in order to be consistent in the principle he is trying to enunciate, the Senator should say that in all cases the arrangements with nations ought to come to the Senate by way of treaty. When he begins to make a distinction between nation No. 1 and nation No. 2, on the ground that nation No. 1 can be trusted, but nation No. 2 cannot be, I say that is a distinction which he will find difficulty in maintaining.

Mr. BRICKER. I have in writing a statement which I think may be clearer than what I have already said, and may help to answer questions raised by the Senator from Rhode Island.

With regard to the last statement made by the Senator, I wish to say there is not involved a matter of trust or confidence; it is a matter of carrying out our constitutional responsibility. I for one do not want to evade the constitutional responsibility which I assumed as a Senator of the United States.

The final reason advanced in support of the minority views is that there is no greater danger in dealing with a large group of nations than there is in dealing with particular nations individually. For example, it is stated in the minority views of the junior Senator from Rhode Island:

> If the President can deal with a single nation in the atomic field under the stringent safeguards prescribed in this bill, then he should be able to deal with a group of nations under the same stringent arrangement.

This contention ignores an international fact of life that has been demonstrated again and again over the past decade; that is, the pressure for ratification of international agreements increases in almost geometric proportion to the number of parties to the agreement. The history of the Genocide Convention is a good example.

Throughout the negotiations on the Genocide Convention, for instance, the representative of our State Department, Mr. John Maktos, took the very sound position that the definition of genocide should contain the words "with the complicity of the Government." I think the Senator will agree with me that the inclusion of those words is essential if we are to effectuate what is desired—to put an end to race killing.

Mr. Maktos felt, as I do, that genocide could not be committed without Government participation, or that without such participation could it be an international crime. In addition, Mr. Maktos proposed on behalf of the United States that "political groups" be included among the groups to be protected by the terms of the Genocide Convention. At the insistence of the Soviet Union, the United States was outvoted and "political groups" excluded from the terms of the Genocide Convention. As is well known, the Soviet Union contends that none of the 10 million people in its slave-labor camps were sent there by reason of belonging to any "national, ethnical, racial, or religious group" within the meaning of the Genocide Convention. All of those slaves, according to the Soviet Union, are political enemies of the state.

It is perfectly obvious that if the United States had been writing a Genocide Convention with Great Britain as the other party, the word "genocide" would have been properly defined. However, in the form in which the Genocide Convention was submitted to the Senate, the word "genocide" is so defined as to make the treaty a fraud and a hoax. Nevertheless, the then President of the United States urged its ratification. In spite of the fact that the Genocide Convention fell far short of embodying the views of the United States, the pressure of world opinion could not be resisted by him. Those same pressures would operate at any international conference attended by scores of nations for the purpose of drawing up an agreement for an international atomic-energy pool. The United States would be under extremely heavy pressure to go along with a majority of the nations represented.

On the other hand, when the United States negotiates with one other nation on a particular international agreement, the pressures for ratification are much less. If the President refuses to sign the agreement, or if the Senate refuses to consent to ratification, it is unlikely that illwill or misunderstanding will result. Examples could be cited endlessly proving the opposite result when the United States refuses to go along with scores of other nations. We have been criticized viciously around the world for our refusal, in many instances.

As I construe the bill reported by the Joint Committee on Atomic Energy, its purpose is not to spread the benefits of atomic energy throughout all of the underdeveloped countries of the world. In the first place, there are relatively few countries that are now in a position to guarantee that classified information and fissionable materials will be properly safeguarded against the Communist threat within their own countries. In supporting the international cooperation provisions of S. 3690, I do see the need for making agreements for cooperation with Great Britain, with Canada, and with several other countries that have in the past made significant contributions to our atomic-energy program.

In my judgment, it would be the height of folly for the Congress to authorize the President to transfer special nuclear material and secret atomic-energy information to the United Nations, or to any of its specialized agencies, or to any group of nations. In the first place, secrets cannot be maintained in the United Nations, and probably not by any large group of nations. If I am wrong in this, however, the President will not be prevented from making such agreements and then asking the Senate or the Congress, whichever is the appropriate body, to give its consent.

To repeat, nothing in the bill as reported by the committee—I wish to emphasize what I have just stated, nothing in the bill as reported by the committee—prevents the President from making agreements for cooperation with the United Nations or with groups of nations, provided, however, that he submits the proposed treaty or agreement to the Senate or to the Congress, respectively. I will not, however, be a party to giving the President a blank check in a field where a single mistake on his part could seriously jeopardize the security of the United States, and, as I pointed out earlier, the President has not asked for any such blank check. On the contrary, in his United Nations address on December 8, 1953, he specifically said that he would submit the plan for an international atomic pool to the Congress.

There is one respect in which I believe that the security standards set forth in section 123b should be tightened. That section, as reported by the committee, contains the following requirement:

> b. The President has approved and authorized the execution of the proposed agreement for cooperation, and has made a determination in writing that the performance of the proposed agreement will promote and will not constitute an unreasonable risk to the common defense and security.

That is a prerequisite to entering into such an arrangement.

I should now like to offer a proposed amendment to that section of the bill striking out, on page 53, lines 5 and 6, the words "the performance of." In its present form, almost any proposed agreement for cooperation would satisfy the security test set forth in section 123b. For example, the President would have no difficulty in finding that "the performance of" a proposed agreement for cooperation with Red China would promote and would not constitute an unreasonable risk to the common defense and security. No such agreement should be made, of course, because it is absolutely certain, at the present time at least, that Red China would not perform the agreement in accordance with its terms. In other words, the President should be required to find that the proposed agreement for cooperation will in fact be performed, and not merely that the agreement, if performed, will not constitute a danger to the security of the United States.

Mr. President, I submit the amendment, and ask that it be printed and lie on the table until consideration of amendments is in order.

UNIVERSITY OF MICHIGAN LIBRARIES

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table.

Mr. BRICKER. I may state at this time that I have talked to members of the staff of the Joint Committee on Atomic Energy about this matter, and they have a suggestion which may be used as a substitute for the amendment later on, if it is agreeable to the other members of the Joint Committee on Atomic Energy. I am hopeful that can be worked out, but I do not want the bill left with only a prerequisite that "if the President of the United States finds that the carrying out of the provisions of the agreement shall not imperil the United States." I want it to read that the agreement itself if carried out will not imperil the safety of the United States.

Mr. HICKENLOOPER. Mr. President, will the Senator from Ohio yield?

The PRESIDING OFFICER (Mr. PAYNE in the chair). Does the Senator from Ohio yield to the Senator from Iowa?

Mr. BRICKER. I yield.

Mr. HICKENLOOPER. I have been very much interested in the statement of the Senator from Ohio. In the main, I think I find myself in very thorough agreement with him.

The question of whether the President shall be authorized by this bill to go forward with the negotiation of agreements with a group of nations which is as yet nebulous and unknown, was one which came before the Joint Committee for rather exhaustive consideration. I think it safe to say that the Joint Committee, as now constituted, would look with great friendliness upon a proposition—which might be submitted at a later date by the President—to the effect that there were in the offing tentative arrangements whereby a certain group of nations was willing to enter into a cooperative effort for the safeguarding of atomic-energy matters, and yet contributing to the progress, atomicwise, of the world.

However, the committee considered, in its judgment—of course, there was some disagreement among the members, but, in the main, this was the judgment of the committee—that it was not yet time to write into the organic law authority of that kind; that it should be done, as the Senator from Ohio has so ably pointed out, at a time if, as, and when the situation, both in the Senate and in the United States and in the rest of the free world, had developed to a point where such a proposal would seem to have a reasonable chance of success.

Therefore, in accordance with the President's message, we decided that if the President, after thorough investigation and thorough canvassing of the situation, were to decide to submit the matter to Congress to obtain its approval of such a pool or of negotiation leading to the formation of such a pool, that would be wise and prudent.

At this time I say—and I think and hope the Senator from Ohio will agree with me that the sense of the joint committee and, I believe, of Congress as a whole, is that at such a time such an agreement will very possibly be in the interest of progress and of peace; and that not only the joint committee, but the Congress as a whole, would look with at least a cordial eye to the matter, until Congress had a chance to examine it thoroughly. I further believe that if the terms of the proposal were proper, it is probable that Congress would be more than glad to go along with such a promising proposal.

But at this time we limit it to bilateral agreements with one nation, on certain phases of the industrial development. As a matter of fact, we did that in order to show to the rest of the world that the United States is willing to proceed with a nation that wishes to utilize atomic energy for peacetime, developmental purposes. No one in the world can correctly say that in this bill we have not expressed that attitude, and that we are not proceeding now, by great strides, not only toward the goal of cooperation with other nations, but also toward the goal of making whatever possibilities there may be in connection with the use of atomic energy in peacetime available to other nations who may need an opportunity to benefit from such possibilities.

So I compliment the Senator from Ohio on his address. I myself am not opposed to the theory the Senator from Rhode Island [Mr. PASTORE] was advancing, and which he proposes in his amendment; but I question the timeliness of writing such a provision into the basic or the organic law.

Mr. BRICKER. I agree entirely with the Senator from Iowa; and at this time he has expressed my thinking very, very well. I appreciate his contribution to what I have said in support of the bill as it came from the committee.

I may say, further, that we are in thorough compliance with the wishes of the President, insofar as anything he has stated either in his messages to the Congress or in his addresses to the United Nations is concerned.

Mr. HICKENLOOPER. Mr. President, if the Senator from Ohio will yield further, let me say that I know of the great concern of the Senator from Ohio and of other members of the joint committee in connection with the matter of safeguarding vital secrets, the loss of which might endanger our national security. No Member of Congress has been more concerned about that than I have. At all times I have attempted to watch that situation very carefully. I have not changed my position regarding the necessity of safeguarding such secrets, and I know the Senator from Ohio has not changed his position or his zeal regarding their being adequately safeguarded.

But with the unfolding or progressive development of conditions in the world in connection with atomic energy, I believe we can now, under careful safeguards, go forward with friendly nations in aiding them in their development. In my judgment, this bill will not, under the safeguards it provides, subject us to undue or unnecessary risks, especially when we consider the equities of the situation and the value and benefits which we and the other sincerely peaceful nations of the world can receive as a result of proper, honest, and vigorous cooperation along this line.

Mr. BRICKER. I thank the Senator from Iowa. In my opinion, the bill as reported by the committee, if it is enacted into law, will give encouragement to the President of the United States to go ahead with his negotiations.

Mr. HICKENLOOPER. That was one of the intents of the bill.

Mr. BRICKER. Yes; it was one of the intents of the bill, and I think it is thoroughly carried out in the provisions of the bill—and, furthermore, that we encourage the President to come to the Congress. This is a cooperative effort, dealing with various vital matters in which every citizen of the United States is, or ought to be, deeply interested; and every Member of Congress should have a look at such a proposal.

Mr. HICKENLOOPER. Mr. President, if the Senator from Ohio will yield again to me, to permit me to make an observation regarding the statement that the bill encourages the President to come to the Congress, I will say that the bill indicates that the Congress will cordially receive any sound proposal of that sort.

Mr. BRICKER. Yes; and that certainly expresses my view.

Mr. HICKENLOOPER. I should like to make a further observation, namely, that the President, in every utterance of his, either public or private, of which I know in connection with this matter, has stated repeatedly that he believes he should come to the Congress when any measure or substantial alteration in policy of this kind is contemplated, and that not only is he perfectly willing to submit, but will submit, these matters to Congress, as the representatives of the people, to pass on any variations or changes in policy which may affect our security and our interests in the atomic-energy field.

Mr. BRICKER. I wish to say to the Senator from Iowa that I have searched the record, and I find no statement by the President to the contrary of what the Senator from Iowa has just now expressed.

Mr. HICKENLOOPER. Mr. President, I thank the Senator from Ohio for his indulgence.

At this point I should like to quote—unless the Senator from Ohio has already done so—from the last part of the President's address to the United Nations. I refer to the President's address in which the pool theory was developed.

Mr. BRICKER. I quoted a portion of that address, but I shall be glad to have the Senator from Iowa place in the RECORD the part of the address to which he has reference.

Mr. HICKENLOOPER. Almost at the end of his address, the President said:

> I would be prepared to submit to the Congress of the United States, and with every expectation of approval, any such plan that would—
>
> First, encourage worldwide investigation into the most effective peacetime uses of fissionable material, and with the certainty that they had all the material needed for the conduct of all experiments that were appropriate;
>
> Second, begin to diminish the potential destructive power of the world's atomic stockpiles;

Third, allow all peoples of all nations to see that, in this enlightened age, the great powers of the earth, both of the east and of the west, are interested in human aspirations first, rather than in building up the armaments of war;

Fourth, open up a new channel for peaceful discussion, and initiate at least a new approach to the many difficult problems that must be solved in both private and public conversations, if the world is to shake off the inertia imposed by fear, and is to make positive progress toward peace.

I do not believe the committee, the President, or men of good will anywhere in the United States oppose the principles. The opposition of the committee was to writing a group-of-nations authority into the organic law at this time, when even the President had not requested such broad authority for an indefinite time in the future. We will meet that situation when the time comes. We will welcome the opportunity to meet it when the proposal is attractive in the interest of world peace.

Mr. BRICKER. I thank the Senator. I did quote a portion of the President's speech to the United Nations. I am glad to have the remainder of it in the RECORD at this point. But I see no reason for giving the President more power than he asked for. I am quite confident the President never would ask for the power which would be given him were the amendment submitted by the Senator from Rhode Island adopted.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. BRICKER. I yield.

Mr. ANDERSON. I recognize that this is not quite the right place to start asking questions back and forth. I know the Senator from Ohio does not feel that I am doing it in that fashion. However, we have been talking about an atomic pool. My memory goes back to the fact that I tried in committee to raise certain questions on the subject of an atomic pool. I have been trying to think whether it was done in the open hearing or the closed hearing. I did not receive answers to those questions. I wonder if the Senator would mind if I were to ask him if he has ever had satisfactory answers to these questions. If the Senator prefers, I can place the questions in the RECORD later, but I should like to have his views on certain questions.

The first question is:

To what extent will information relevant to the practical production of nuclear power be transmitted to the international agency?

I pointed out that mere possession of nuclear materials by such an agency without information would place the scientists involved in about the same position as the United States was in 10 years ago. Clearly, if the major countries involved pursue vigorous atomic-power programs of their own and independently of the international agency, the practical utility of the work done by the agency will be extremely small. At the hearings I did not receive an answer to the question as to the extent to which information relative to the practical production of nuclear power would be transmitted to the international agency.

Mr. BRICKER. I believe that if the international development for peacetime purposes is to be effective or accomplish anything at all, it will require complete information as to the utilization of fissionable material such as we may have in this country.

Mr. ANDERSON. I think the Senator's answer is absolutely correct. I agree with him thoroughly. I did not get that answer to the question which I put in the committee.

Closely related to that question is a second question——

Mr. HICKENLOOPER. Mr. President, will the Senator yield so that I may inject a thought?

Mr. ANDERSON. Certainly. I am only trying to get the expressions of Senators on this subject, which is very important.

Mr. HICKENLOOPER. I agree with the answer which the Senator from Ohio has given. I suggest that the degree of information which might be made available at a given time in the future would be determined, first, by the terms of the contract which was proposed; secondly, upon the advancement which the respective country or countries had achieved in the atomic art. It might be governed by several considerations, but I think the information under any such arrangement should be adequate. The information we would give should be adequate for the purposes of the progressive and profitable development of the atomic elements which would be placed in the pool for the general utilization of the countries involved.

Mr. BRICKER. I think the Senator and I had both of those conditions in mind when we were discussing the question. It was a theoretical problem we were facing. We do not yet have in this country sufficient information for the practical operation of a reactor for the production of electric energy. We are working on it now.

Mr. ANDERSON. I realize that. I listened to the Senator from Ohio discuss this question in the committee, and I think he has made valuable contributions. That is why I ask these questions at this time.

Mr. President, will the Senator further yield?

The PRESIDING OFFICER (Mr. SCHOEPPEL in the chair). Does the Senator from Ohio yield to the Senator from New Mexico?

Mr. BRICKER. I yield.

Mr. ANDERSON. Closely related to the first question is the second question:

"Will individuals who have been involved in nuclear power developments in the United States be permitted or encouraged to work with the international agency?"

If this is permitted, it will be essentially equivalent to a full exchange of information. The other horn of this dilemma is the obvious one that peaceful nuclear power is basically indistinguishable from military nuclear power. Indeed, the first successful developments of nuclear power have been for military use; that is, as a submarine powerplant, and considerable effort has gone into and will continue to go into the undertaking to adapt nuclear power to aircraft use. The fundamental problems involved in these reactors cannot be separated from the problems involved in reactors which produce power for peaceful purposes. To some extent the military devices are even easier, because for military purposes the cost of the power produced is far less important than the form in which it is packaged. Moreover, even peaceful power is a part of the national strength—for war—of any country, since it is fundamental to production levels. It may be extremely dubious that we would care to pass on too much information, for example, regarding our submarine nuclear powerplant. Yet without such information, and without the participation of scientists and engineers who are abreast of our own nuclear-power developments, I fear the international agency will start its work discouragingly far behind.

As I remember, I asked that question of the Chairman of the Commission. I said, "Would individuals involved in nuclear-power developments be permitted or encouraged to work with the international agency?"

Mr. BRICKER. With the prescription which was suggested by the Senator from Iowa to the limitations of the agreements, I think it would be absolutely necessary. We have the only great pool that I know of outside Soviet Russia. Practical men are required to carry out a program of this kind. We have been working on the problem in this country, as the Senator from New Mexico well knows, for a considerable number of years. We are now at the point of beginning the development. I think if any international pooling for peaceful purposes were to be effective it would necessitate personnel from this country to aid. If that were not done, we would not be following our full desires or commitments.

Mr. HICKENLOOPER. Mr. President, to assist in making the record at this point in connection with the questions which the Senator from New Mexico has raised, I invite attention to page 701 of the hearings, part II. The Senator will find that he asked questions similar to these at the time of the hearings. After qualifying his question by explaining what he meant, which was the pool theory, the Senator from New Mexico asked this question of Mr. Dulles, Secretary of State:

Is it your thought that information relevant to the production of nuclear power will be transmitted to this international agency?

Secretary DULLES. Yes, I think it probably would be.

A little later the Senator from New Mexico asked this question:

Senator ANDERSON. Then individuals who have been involved in nuclear work in this country might be available to that sort of pool?

Secretary DULLES. Yes, sir.

That is the attitude expressed by the Department of State.

Mr. ANDERSON. Let me say to the Senator from Iowa that it is my feeling that the Secretary of State is not primarily an expert in the field of atomic energy, and might not have understood

UNIVERSITY OF MICHIGAN LIBRARIES

the problems involved in the transfer of individuals.

Mr. HICKENLOOPER. I suggest that the Secretary of State is the spokesman on policy, programs, or attitudes in connection with international operations, and therefore what he might have to say in that field, as to what would be expected by way of international exchange, would, I think, be very significant.

Mr. ANDERSON. If I may continue with the Senator from Ohio, let me say that I appreciate his taking the time for this exchange. This is a field in which I am greatly interested, and I appreciate his courtesy.

Mr. BRICKER. I remember full well discussing the subject around the table with the Senator from New Mexico.

Mr. ANDERSON. The third question which I asked was as follows:

"What fraction of our own nuclear stockpile, or production, are we willing to give to such an agency?"

It has been stated that if this international pool is developed the result may be to cut down the amount of fissionable materials which individual nations may have left for military purposes. I pointed out that large amounts of fissionable material are not necessary for power reactors of even quite impressive output. Accordingly, unless the amount of material transferred to the international agency is a considerable fraction of any participating country's stockpile, the actual effect of such transfers upon military strength is negligible.

Therefore, I ask the Senator whether he believes we would be willing to transfer a large amount, or is it more likely that we would make a rather small amount available, thereby perhaps not preventing conflict, but making a greater contribution to the peacetime uses of atomic energy.

Mr. BRICKER. I may say to the Senator from New Mexico that that is entirely outside the range of judgment of the Senator from Ohio, because it is a technical question involving how far we may go before we will not imperil our military reserves of strategic material.

However, as the years go by, and as peace becomes more secure and war less imminent, I believe there may be greater emphasis upon peacetime uses than is possible at the present time or was possible in the past.

If the Senator from New Mexico will indulge me, I believe we must rely on the professional opinion of our scientists and military officials to determine how much may be made available.

I may say in passing that we have the same problem in utilizing fissionable material or strategic material in our private and peacetime uses. How far we can go is a matter of judgment, and the emphasis must always be placed upon the national security.

The President of the United States in his message stated:

> I therefore make the following proposals: The governments principally involved, to the extent permitted by elementary prudence, to begin now and to continue to make joint contributions from their stockpiles of normal uranium and fissionable materials to an International Atomic Energy Agency. We would expect that such an agency would be set up under the aegis of the United Nations.
>
> The ratios of contributions, the procedures, and other details would properly be within the scope of the private conversations I have referred to earlier.

Of course, that again emphasizes the need of retaining the bill as it is, without the amendment of the Senator from Rhode Island [Mr. PASTORE]. It is a matter for future determination. First of all, I put the emphasis upon our own military needs in this country for the defense of our own shore; second, the utilization of the material which is deemed necessary for the protection of the world against aggressive forces at this time; third, upon a pool arrangement for peacetime uses. I believe that is the program that has been suggested by the Atomic Energy Commission and by the President.

Mr. ANDERSON. I have one final question to ask of the Senator from Ohio. Does he know of any limit to the range of financial support we may be willing to give to such a program. I point out the fact that there is now being set up a United Nations nuclearphysics laboratory. The laboratory will be located in Switzerland, with the participation of practically all the western European countries. The United States, however, is not a participant in this venture. The total annual support for this laboratory will be about $4 million, which is a little less than one-tenth of the cost of operating the Los Alamos laboratory in my State alone.

I am sure the Senator from Ohio will agree with me that if we are going into this field, we cannot go into it with merely a whisper about what is going on in the field of atomic science. If virtually all the nations of the earth that belong to this venture are to pool their resources into a little laboratory costing about $4 million a year, when the Los Alamos laboratory alone costs $40 million a year, the contribution will not be very significant. Probably the relation of the individual national laboratories to an international pool should be in the other direction. I am merely calling this point to the Senator's attention, and I ask him whether he does not feel that persuading the people of this country, and of other countries as well, to make a contribution that may run to $50 million or $100 million a year to an international laboratory of this nature is going to be difficult in the foreseeable future?

Mr. BRICKER. It is going to be very difficult. I believe the Senator will agree that if such a pool were to be established at this time or in the near future, a great deal of the burden would be cast upon the United States, and the money would come out of our Treasury. That is one other reason why the Senator from Ohio would like to take a second look at any international pooling. If we are to enter a pool with other nations, I believe we ought to look at the situation a second time, from the standpoint of Congress, as well as from the standpoint of utilization of our stockpile.

Mr. ANDERSON. I wish to assure the Senator from Ohio that I fully subscribe to his last statement, and I appreciate very much his courtesy in replying to my questions.

Mr. BRICKER. I thank the Senator for his contribution.

Mr. STENNIS obtained the floor.

Mr. GORE. Mr. President, will the Senator yield, so that I may suggest the absence of a quorum, without his losing the floor?

Mr. STENNIS. I shall be glad to yield, provided I do not thereby lose the floor.

Mr. GORE. Mr. President, with the understanding that the Senator from Mississippi will not lose the floor, I suggest the absence of a quorum.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HENDRICKSON in the chair). Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I first wish to voice what I believe to be the sentiment of all of us who have been privileged to hear the debate as presented by four members of the Joint Committee on Atomic Energy, the Senator from Iowa [Mr. HICKENLOOPER], the Vice Chairman, followed by the Senator from New Mexico [Mr. ANDERSON], and the Senator from Rhode Island [Mr. PASTORE], who, in turn, was followed by the Senator from Ohio [Mr. BRICKER]. I wish to express a sense of gratitude on behalf of myself and all other Members who heard the speeches, and I think I can speak for the other Members of the Senate and for the Nation, for the very fine presentation they have made regarding this highly important subject about which so little is known by the average membership and by the people of the Nation.

Mr. President, I further wish to say that I think it is one of the tragedies of the Congressional processes that the membership of this body could not be present and hear the very fine exposition by these Senators who are so well versed in this subject.

In that connection, Mr. President, I wish to point out that the debate this morning started at 10 o'clock. At that time the Senator from Rhode Island was speaking, and at the same time there were going on the following committee meetings:

The Committee on Finance; the Committee on Armed Services; the Committee on Banking and Currency. These were full committee meetings. Those three committees would in themselves involve most of the membership of this body. The Committee on the District of Columbia had 2 subcommittees meeting. At the same time there was a meeting of a subcommittee of the Committee on Interior and Insular Affairs and also a meeting of the full committee at 10 o'clock. The Committee on the Judiciary had 2 subcommittees meeting at the same time, and the Committee on Public Works met at 12:30.

I point that out, Mr. President, to show that in the rush of affairs it is

physically impossible to be carrying on committee work and floor work at the same time. But it is, nevertheless, tragic that the membership of the Senate has not had an opportunity to hear these very fine speeches. They were more than speeches, Mr. President; they were learned expositions of the subject matter presented by the 4 Senators whom I have mentioned.

Mr. President, I shall not speak with reference to the major provisions of the bill. I shall direct my attention to a subject matter which I really wish were not involved in the bill. Those of us who are primarily interested in this question are not responsible for its being in the bill. It concerns the steam-generating plant which is proposed to be built across the river, near Memphis, Tenn. I wish to emphasize that I do not think this subject matter has any proper place in connection with the broad subject matter of atomic-energy legislation. That is one of the main points which I wish to make, that it does not have anything to do with the higher responsibilities of the Atomic Energy Commission, and that it should not be involved in such a subject matter nor in such a controversy.

A further point is that the Commission does not have the authority, it has not been granted the legislative power, to enter into a contract under the circumstances which have been enumerated and considered at the hearings on this bill as outlined by the General Manager of the Atomic Energy Commission. That is why the Anderson amendment, which was proposed yesterday afternoon by the Senator from New Mexico, becomes pertinent and has application to this bill, because it does pin down definitely and make clear and absolutely certain what I respectfully submit was the original intent of the Congress a year ago.

The pertinent part of the Anderson amendment reads as follows:

> The authority of the Commission to enter into contracts for electric utility services shall extend only to contracts with persons who agree to supply the contractual amount of electric utility service directly to the installations of the Commission named herein.

Mr. President, I especially invite the attention of the Members of this body who are lawyers to that language. But there is no special legal learning necessary to give a fair, reasonable, and middle-of-the-road interpretation of the legal authority involved in this section which was amended just a year ago. At that time, in order to meet a practical situation involving the getting of enough electricity to supply certain named plants or installations of the Atomic Energy Commission, the Congress passed the additional legislation, conferring what we might call contractual authority. I now wish to read from the act which was passed last year the pertinent clause which gives authority to the Atomic Energy Commission. The quotation is to be found on page 79 of the pending bill, but it is merely a rescript of the present law. It is as follows:

> The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric utility services for periods not exceeding 25 years.

Mr. President, that was the act which Congress passed. It named three specific installations: Oak Ridge, Paducah, and Portsmouth. When it named those three, it stopped; it did not name any more. It could have, but that was the limit. Congress set forth the purpose for which the legislative authority was to be used to make contracts for electric current—for what? For the construction or the operation of those three-named plants. That is all that Congress said. That is the terminal point of the legislative authority.

There are two small, thin, vague words in addition to what I have quoted, and I shall come to them in a moment. But considering the provision in all its aspects, looking at it top, side, and bottom, from the angle of a lawyer, the angle of a layman, the angle of a professional man, the only authority it conveys and carries is to do exactly as I have recited. That is the end of the authority. It is a matter of policy as to whether the authority should be extended. That is a question for Congress to decide.

However a Senator may wish to vote on that policy is up to himself to decide. It is a question for his judgment. But my point is that this is the extent of the present authority which the Commission has; and to go beyond that would be a usurpation of power—not a corrupt usurpation, but simply a usurpation.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HICKENLOOPER. Do I understand the Senator from Mississippi to take the positive position—that is, the firm position—that the Atomic Energy Commission does not have the legal authority to enter into the Dixon-Yates contract?

Mr. STENNIS. Yes; that is the position of the junior Senator from Mississippi.

Mr. HICKENLOOPER. I might suggest that that has been the announced position of, I believe, the Senator from Tennessee [Mr. GORE] and other Senators. Therefore, if they feel strongly that the Commission does not have the legal authority to enter into the contract, then this debate is utterly useless, because the Commission could not enter into the contract, or could be prevented from entering into the contract by proper action in the courts.

If the Senator from Mississippi takes the position that the Commission does have the authority to enter into the contract, but that it is an unwise contract for the Commission to enter into, then I can understand fully the attempts being made by way of amendments, and otherwise, to alter the existing law. But on the theory that the Commission has no authority to enter into the contract, I believe we are speaking to a moot question in all this debate, because the legality of the contract is something which should be settled in the courts.

Mr. STENNIS. If the Senator from Iowa would care to write into the bill clearly that the extent of the authority intended by section 164 is with respect to contracts for current which is to be directly used by the three named plants, then the argument would be ended, so far as I am concerned.

Mr. HICKENLOOPER. In order to dispel any question that might arise, I think the Commission has the legal authority to enter into the contract, so I disagree with the Senator from Mississippi on that point. I do not favor writing into the bill a provision which would take away from the Commission the authority which I believe it legally has.

Mr. STENNIS. Or if the Senator from Iowa would agree to strike out section 164 and not to reenact the section, so as to preclude the claim later that Congress gave it a new lease on life or a new breath of life, that would be satisfactory.

Mr. HICKENLOOPER. So that the RECORD may be clear on this point, it is under section 164 that the Commission annually, I think, or perhaps every 6 months, but at least periodically, must renew the contracts for the acquisition of power in the Portsmouth, Paducah, and Oak Ridge territories, as supplementary to the power to be furnished by other companies. It is necessary for the Commission to approve the purchase of peak power from time to time. If section 164 is repealed, I fear that that authority of the Commission would not exist.

Mr. STENNIS. I would not propose to deprive the Atomic Energy Commission of its power to procure electricity to be directly used for these three plants. There would be no controversy about that.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ANDERSON. I am in a bad situation because I am arguing with two lawyers about the law. I am a layman, but I know there are very good lawyers who think as does the Senator from Mississippi, apparently, that the reenactment of section 164, with the Dixon-Yates contract pending, would give the contract some standing in court, because the passage of H. R. 4905 as permanent legislation would not be repealed in any way, and would permit the Atomic Energy Commission to make its regular reviews without any question. By the passage of H. R. 4905 everything necessary is done for the three plants, and the only reason, in the opinion of many persons, why section 164 is in the pending bill is so as to breathe some life into the Dixon-Yates contract, if it should be signed subsequently, because it is already being considered, and is involved in an agreement of understanding, even though not formalized into a contract.

If the Senator from Mississippi will permit me to have just another moment, I remind him that if he will look at page 35 of the hearings which were held on H. R. 4905, which the Senator may not have before him, that that bill did

UNIVERSITY OF MICHIGAN LIBRARIES

not specifically deal with the Portsmouth and the other plants, but read:

> The Atomic Energy Commission is authorized, in connection with the construction and operation of installations of the Commission, without regard to the antideficiency statute, to enter into contracts for these plants.

But the committee, after hearing the testimony, wrote into the bill specifically the three installations, and named them somewhat at the suggestion of Representative HINSHAW, of California, who wanted to be certain that an additional contract could not be made. He testified, as I have placed his words in the RECORD, that if that provision were not made, this was the last time the committee would ever review a contract.

I should be happy to show the Senator, if he so desires, the language of the original provision, in which there is no mention of a specific plant. It was thought that when the three plants were specifically named the matter had been tied down so that it could never get away.

But then it was found, because of the little words "in connection with," that anything in connection with it, even though the connection was only a telephone connection, might be sufficient to continue and to extend the authority.

Mr. STENNIS. I thank the Senator from New Mexico for his contribution. It is a real one.

The hearings on H. R. 4905, on April 28 and June 10, 1953, before the Joint Committee on Atomic Energy, at page 35, contain the original wording of section 164, about which we are now speaking. As the Senator from New Mexico has said, the original text shows that the plants were not stated by name; but, by amendment, Oak Ridge, Paducah, and Portsmouth, were specifically written into the bill, so as to convey the grant of authority to these particular plants.

Mr. President, a complete reading of this section shows clearly and unmistakably that that authority was granted directly and solely for the purpose of supplying electricity to those three plants.

This is not a TVA controversy; it involves the integrity of legislation and the integrity and discretion of the Commission, a subject to which I shall refer later.

The undisputed evidence with regard to the proposed plan is that the electricity is not to be used at any one of the three plants, it is not needed at any one of the three plants, and it is not suggested that at any remote or any foreseeable time in the future there will be such a need. I appreciate very much the contribution of the Senator from New Mexico.

Mr. GORE. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I am glad to yield to the Senator from Tennessee.

Mr. GORE. I should like to have the attention of the able Senator from Iowa with regard to the point I am about to make.

I call to the attention of the junior Senator from Mississippi the fact that earlier today the senior Senator from Iowa in debate expressed to the Senate his confidence that the Atomic Energy Commission could not enter into the generation of power by use of fissionable materials unless it was in connection with research and development. Upon two occasions today the able senior Senator from Iowa used the specific words, "in connection with," giving his assurance to the Senate that the words were a limitation on the power of the Commission.

I call to the attention of the Senator from Mississippi the fact that about a year ago the able Senator from Iowa brought this amendment to the floor of the Senate, and that the same words, "in connection with," were incorporated in the amendment. As I recall, in colloquy between the senior Senator from Iowa and the junior Senator from Tennessee he gave to the Senate assurance at that time that the amendment would be limited in its application to the three plants named. Does the Senator recall that debate?

Mr. STENNIS. The Senator from Mississippi does not personally recall that part of the debate, but I have before me the RECORD, to which the the Senator from Tennessee may refer. I was going to read from the RECORD.

Mr. GORE. I am not in any way seeking to be critical of the Senator from Iowa. That was not my intention. What I am seeking to point out is that if in this case the words "in connection with," relating to these 3 specifically named plants, can be so stretched out of proportion; if congressional intent can be distorted out of any logical, sensible meaning, so as to include the making of a contract hundreds of miles away, for an operation unrelated to the atomic-energy program and unrelated to the operation of the 3 plants, then use of the same words "in connection with" with respect to the broader aspect of the program takes on a new and different meaning.

Mr. HICKENLOOPER. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I am glad to yield to the Senator from Iowa.

Mr. HICKENLOOPER. I will say to the Senator from Tennessee that I do not recall the words used in the presentation of the amendment a year or so ago. I have the utmost respect for the word of the Senator from Tennessee, and if he recalls that the words were used, I shall not undertake to dispute his statement. I have not looked up the record.

Mr. GORE. I was not undertaking to quote the Senator from Iowa verbatim as of a year ago. I was quoting the Senator as of today. The Senator repeated the words "in connection with" as they relate to other sections of the bill. But now these words seem to have a different meaning. I do not recall verbatim the report of the debate of a year ago, but I believe the Senator from Mississippi has it before him.

Mr. HICKENLOOPER. Will the Senator from Mississippi yield further for a moment?

Mr. STENNIS. I am glad to yield.

Mr. HICKENLOOPER. We have heard arguments pro and con as to whether the electricity is to be used by or for or in connection with the atomic-energy plant, and much has been made of the idea that the contractual authority on the part of the Commission should be limited to persons or corporations which will furnish electricity directly to the three plants. I suggest that under the proposed Dixon-Yates contract electricity will be furnished for the benefit of the Paducah, Portsmouth, and Oak Ridge plants, even though the Dixon-Yates plant is located near Memphis, and will put its electricity into the TVA system in that area of the country. However, the electricity would be used for the benefit of those plants just the same as a locomotive at the head of a freight train is being used for the benefit of the caboose at the tail of the train. The locomotive is not directly hooked to the caboose, there are many cars in the train; but no one can say that the locomotive is not puffing up at the front end of the train for the benefit of the caboose at the back.

There is an analogy here to the matter under discussion. Electricity will be put into the TVA system, as proposed in the Dixon-Yates contract, at one end of the barrel. It is a completely closed system in the State of Tennessee. Adequate and corresponding amounts of electricity will come out at the north end of the reservoir, which will assure an ample and needed supply to installations involved. The AEC proposes to underwrite a 25-year contract for the purchase of that electricity on that firm basis. It is like the engine on the front of a freight train.

Mr. STENNIS. The Senator more or less admits that the atomic energy plants do not need any more electricity; that no need for electricity is anticipated for the future, and that, therefore, there will be no need of any more electricity for the construction and operation of the plants. Still it is proposed to go to an entirely different geographical site and build a plant and turn it over to the TVA and say to it, "You retail this electricity." Let me read what the Senator from Iowa said a year ago.

Mr. HICKENLOOPER. So as to dispel any misunderstanding which may have resulted from what I said, I did not by any connotation intend to discuss the question of whether the AEC does or does not need more electricity. I do not wish to be misunderstood. The fact is that the Commission does have an immediate need for from 175,000 to 180,000 more kilowatts of electricity. It needs it very urgently at this time, and will probably need more electricity in the future.

Mr. STENNIS. Then why is the Atomic Energy Commission opposed to the proposed contract which is being negotiated? If the Commission needs the electricity, and this is the legal way to get it, why does it oppose the contract?

Mr. HICKENLOOPER. The Atomic Energy Commission is making the contract. The Commission is in favor of it.

Mr. STENNIS. According to the undisputed record made during the hearings on the bill which is now before the Senate, General Nichols, who, as my colleague knows, is the General Manager of the Atomic Energy Commission, testified

on that point, as appears on page 950 of the hearings of the joint committee, as follows:

Subsequent to receiving the proposal—

He was talking about the proposed contract—

the Atomic Energy Commission, after making an analysis to compare it with the rates that we are now paying at Paducah and the total cost, forwarded the proposal with the analysis to the Bureau of the Budget, and in forwarding it, it was made clear to the Bureau of the Budget that the Commission did not agree on the wisdom of the AEC entering into this type of contract.

I have read from the testimony of the General Manager of the Atomic Energy Commission, which he gave to the committee in open hearing. He testified that when the contract was sent to the Bureau of the Budget, the Commission made it clear that it did not agree with the wisdom of the contract.

Mr. HICKENLOOPER. I will say to my friend, the Senator from Mississippi, that there is a precedent for such action. The Senator will recall that at one time in the past a majority of the Atomic Energy Commission vigorously opposed the development of the H-bomb.

Mr. STENNIS. There is no parallel between the two situations.

Mr. HICKENLOOPER. The Commission went ahead with the program, and thank God it did.

Mr. STENNIS. Certainly there is no parallel between the two problems.

Mr. HICKENLOOPER. The problems are different; but the Senator from Mississippi was speaking to the original questioning by a majority of the Commission of the wisdom of the contract; and I say it is not without precedent, because at one time a majority of the Commission vigorously opposed going into the H-bomb program; but when it was determined to be the policy, the Commission went along.

Mr. STENNIS. Even if it is not without precedent, that does not make it right. The question is whether they think it is sound, and also whether they have the authority.

Mr. ANDERSON. Mr. President, I hope the Senator will carefully examine the record and will determine whether he wishes to have the statement he made stand. I do not believe he can find in the record anything to show that the Commission vigorously opposed this. If so, he should do all he can to work toward the removal of the chairman.

Dr. Smyth said the Commission never voted 3 to 2 against it. Of course, this matter has been discussed a great deal, by now; and many of the details are well known. Let me read, from page 790 of the hearings, part of the testimony of Dr. Smyth:

The Commission never voted 3 to 2. The Commission voted unanimously that this decision should be made by the President; that it involved so many different facets of the Government and was of such far-ranging importance that the Commission voted unanimously to send a paper to the President which suggested the various facets of the problem.

So I hope the Senator will examine that language.

Mr. HICKENLOOPER. Mr. President, will the Senator from Mississippi yield again?

Mr. STENNIS. I am glad to yield.

Mr. HICKENLOOPER. At the moment I cannot differ with the statement that the Commission voted 3 to 2 against it. But I feel very positive that the Commission voted 4 to 1 against it, and then 1 member switched and went on the side favoring development of the hydrogen bomb program. And then they submitted it to the President. But, on policy and on their original statement, they were 4 to 1 against entering upon the development of the hydrogen bomb program.

Mr. ANDERSON. Mr. President, it seems to me—and this is all I wish to say on the matter, because a great deal of the testimony was given in executive session, although I think much of it should be made public—that there was an expression of views, and I think when those views were sent to the President, approximately 4 of the members of the Commission had 1 view, and 1 of the members had another. It is greatly to the credit of Admiral Strauss that he was the one who thought they should go ahead. As I recall subsequently he was joined by Gordon Dean, and that the others in their recommendations to the President expressed the point of view that they should go slowly about it.

But I do not believe that it came to an actual vote. On the contrary, I believe it was an expression of opinion. I agree with the Senator as to the numerical division.

Mr. HICKENLOOPER. I do not wish to labor the point regarding the exact vote. I have referred to the fact that it is true that three members of the Commission expressed themselves in opposition to the project. Whether they came to a vote on the question, I do not know.

But I was merely saying there was precedent for such a difference of opinion and a subsequent change to agreement. I referred to their original decision on the development of the hydrogen bomb program. I think the shift of position and the subsequent decision to proceed with the development of the hydrogen bomb program was a wise one, and contributed materially to the safety of the Nation.

Mr. STENNIS. Mr. President, regardless of what the precedent may be, my argument is that the contract is unsound, illegal, and unlawful because the statute upon which it is based is not broad enough or long enough to carry the load, except in the three cases I have enumerated. The statement made by the Senator from Iowa bears out my original point, namely, that this question is one of policy, and should be decided, not by the President, but by the legislative branch of the Government.

Mr. GORE. Mr. President, will the Senator from Mississippi yield to me?

Mr. STENNIS. I yield.

Mr. GORE. Even though all the circumstances related by the able Senator from Iowa existed, that situation would not be parallel to this one, and would not constitute a precedent for it. Under the basic atomic energy law, certain authority and responsibility go to the Atomic Energy Commission. Certain powers are conferred upon the President of the United States. The President is specifically authorized, directed, and empowered to give direction—that is specified in the act—to the Commission with respect to weapons and weapons development. Here, however, even if the circumstances related by the Senator from Iowa actually existed, the situation would be different, because this case involves a matter upon which the members of the Commission seek to find their authority in the section cited by the Senator from Mississippi. I agree with him that the section is not broad enough to stretch all the way to southern Arkansas and to enable the Commission to enter into a contract with a firm not yet created, to build a plant to furnish power to another agency, unrelated to the atomic energy program, and wholly unrelated to the three specific production facilities contemplated in the act.

Before the Senator from Mississippi leaves the point, I hope he will complete his reference to the record of last year when the measure was passed. I believe the legislative intent can clearly be discerned from the statements then made on the floor of the Senate.

Mr. STENNIS. I shall reach that in a few minutes.

Question has been raised about the policy regarding atomic energy. I wish first to discuss that point briefly.

Section 164 begins, on page 79 of the bill, with the following words:

The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission—

Mr. President, the proponents of the contract are driven to the necessity of bottoming their case solely on the two slender words "in connection," although those words have no particular legal significance whatsoever, and have no legal meaning, within themselves. In view of all the facts, the rule of reasonable interpretation is the only one which possibly can be applied. It is possible, by straining the imagination considerably, to try to read into those words some fragment or small segment of legal authority; but that attempt is beaten down by a brutal set of facts. When the electricity that is to be generated there is too far away and too remote, there is a bare possibility that there could be some faint, far-fetched relationship of some kind, but not sufficient to bottom a legal authority on an important matter, and not sufficient to bottom $107 million worth of bonds, not sufficient to bottom a 25-year contract upon which the Government, according to the lowest estimates and the most conservative figures, will have to spend more than $90 million, in addition to what the cost normally would be, by means of the other route.

When it is undertaken to substantiate the authority for a matter of this kind, there must be something of substance, not just a reed that would bend in the wind, but something upon which reasonable men can agree, and, which they can find—on the basis of solid, substantial interpretation—to be sufficient to give the Commission that power.

UNIVERSITY OF MICHIGAN LIBRARIES

I respectfully submit that I do not believe any court, after weighing the facts and historical background of the section we are talking about, could, under any judicial construction, read into those flimsy words sufficient authority to say that the Congress of the United States gave approval for this contract. I do not believe it could happen.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HICKENLOOPER. The Senator made the statement a moment ago that, according to the most conservative estimate, under the so-called Dixon-Yates proposal the cost to the United States would be at least $90 million more than the cost of power from some other source—presumably TVA. Of course, the Senator is aware of the fact that if the TVA were to build this plant, the United States would have to appropriate from $100 million to $107 million of the taxpayers' money to build the plant, so it would have that much money in it and in addition it would pay for the electricity.

Mr. STENNIS. I was speaking in terms of the end of the 25-year period.

Mr. HICKENLOOPER. At the end of the 25-year period that plant would not be worth $5 million.

Mr. STENNIS. The Federal Government would own the plant all that time and have every benefit which accrued from it. At the end of the 25 years, whatever it might have in the plant itself, it would have the $90 million, which would be almost enough money to pay off the $100 million.

Mr. HILL. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HILL. Ninety million dollars is the figure given by the Atomic Energy Commission as the excess cost, over and above the cost of the TVA construction.

Mr. STENNIS. That is correct.

Mr. HILL. In other words, there would be not only the cost of the TVA building, but, under this contract, the cost would be $90 million in excess of that figure.

Mr. HICKENLOOPER. Mr. President, I submit that is an utterly inaccurate statement.

Mr. HILL. If the Senator will read the record he will see that it is not.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HICKENLOOPER. We have only two proposals. The first is that the power shall be furnished by a plant to be built by the TVA in that area. That would involve an immediate appropriation of between $100 million and $107 million of the taxpayers' money, which would have to go into the plant.

Under the Dixon-Yates proposal Dixon-Yates would put up the money for the plant. The Government would not put up the money. There is a differential, of course, based upon the taxes Dixon-Yates would have to pay, and the increased cost, which would amount to several million dollars over the period of the contract. In the meantime—and this is perhaps where I misunderstood the Senator from Alabama—I understand the Senator from Aalbama to say that under the Dixon-Yates contract the Government would have the money invested in the plant, and would pay the $90 million too. That would not be the case.

Mr. HILL. That is exactly what I said. The Government would have the plant and would pay some $3,685,000 a year more under the Dixon-Yates proposal than it would pay if it were to build the plant through TVA.

Mr. STENNIS. Those figures are uncontradicted. In 25 years that would amount to the $90 million which I mentioned.

Mr. HILL. The Senator is exactly correct.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. STENNIS. I am very glad to yield, but I hope the Senator will make his question brief.

Mr. KEFAUVER. It does not seem to me that it is the appropriation which is bothering the administration, because another proposal was made, by Mr. Von Tresckow and Mr. Lucius Burch, which would save the Government $90 million or $100 million. Under that proposal they would furnish their own capital and build the plant, which would later become the property of the Government, or the Tennessee Valley Authority. No appropriation by Congress would be required. Apparently that proposal was not given serious consideration by the Atomic Energy Commission, although under it the Government would not have had to appropriate a dollar. Is not that correct?

Mr. STENNIS. The Senator from Tennessee is correct. I am not particularly familiar with that proposal. I have based my argument on a comparison of the two proposals which were more or less compared by the manager of the Atomic Energy Commission. He seemed to know what he was talking about. I have taken his figures, although there is another estimate to the effect that the additional cost to the Government would not be the $3 million-plus mentioned by the Senator from Alabama, but would run $5 million-plus a year for a 25-year period, which would make the difference in cost far more than $100 million.

Mr. KEFAUVER. Mr. President, will the Senator further yield?

Mr. STENNIS. I yield.

Mr. KEFAUVER. That is a fact; and the testimony shows it. If it be true that under the Von Tresckow-Burch proposal the Government could get the power and the plant a great deal cheaper than under the Dixon-Yates proposal, without appropriating any money, would not the logical conclusion be that the Government wants to enter into a contract with a private power utility, through Dixon-Yates, regardless of what the cost is to be?

Mr. STENNIS. The decision is certainly not measured by the cost, because the dollars-and-cents cost is much less to the Government under the other proposal.

A question has been raised as to the Atomic Energy Commission. Whatever I say with reference to the members of that Commission is said with all deference and great respect. One of the things which impressed me when I first came to the Senate a few years ago was the near reverence expressed on this floor for the Joint Committee on Atomic Energy, and I learned that the same attitude was held with respect to the Atomic Energy Commission, and with good cause. One of the first things I remember about the Senator from Iowa [Mr. HICKENLOOPER] was his very fine, impartial presentation on the floor of the Senate of some of the atomic-energy legislation. I learned to appreciate his fine judgment. I heard him make an argument on this subject. The sentiment seems to be unanimous in according members of the Atomic Energy Commission the highest consideration. They operate on the highest possible plane. They must make decisions such as the decision with respect to the hydrogen bomb, and decisions in the realm of high policy with reference to the national defense. Our hats are off to the members of the Atomic Energy Commission. We want to keep them on a high plane.

I think it is most unfortunate that we have now come to the position where, against the will and judgment of all members of the Atomic Energy Commission, the Commission is about to be forced, by Executive order, into what I think is an unlawful contract for the manufacture of electricity. This power will not be a part of the operations of the Oak Ridge, Paducah, or Portsmouth installations. Therefore it is far beyond the law authorizing power contracts by the Commission. The Atomic Energy Commission is being used to carry out a policy of the administration in this case. I regret this, and I believe members of the Atomic Energy Commission regret it. It is my personal belief that the members of the Joint Committee on Atomic Energy regret it. I directly challenge the sponsors of this contract to show any reasonable semblance of legal authority to sustain their position.

I wish to read at this point the section of the bill which is involved:

SEC. 164. The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts or modify or confirm existing contracts to provide for electric utility services for periods not exceeding 25 years, and such contracts shall be subject to termination by the Commission upon payment of cancellation costs as provided in such contracts, and any appropriation presently or hereafter made available to the Commission shall be available for the payment of such cancellation costs. Any such cancellation payments shall be taken into consideration in determination of the rate to be charged in the event the Commission or any other agency of the Federal Government shall purchase electric utility services from the contractor subsequent to the cancellation and during the life of the original contract.

I understand that confers what we call contract authority. The Commission would not even have to wait for an appropriation. It would be given authority to bind the Government to the full limit. That shows on how high a plane we grant such authority. Now it is dis-

couraging to find what I respectfully submit is usurpation—not a corrupt one, of course—of the power which was granted by unanimous consent only 1 short year ago.

Before going into the history of this section, I wish to say a word further about the rule of interpretation with reference to legislation respecting contracts, and especially legislation which delegates power to another branch of the Government. The only rule that applies is one of reason and of logic. There must be a substantial reason, a substantial logic, applied to the interpretation of such a statute.

A mere possible inference or a possible interpretation by reading it into a statute is not enough, and on this point the thin, meager words "in connection," upon which the proponents necessarily rely, fall far short of their goal.

We must remember that we are dealing with a serious question on a very high plane, and that we are dealing with the serious matter of bonds, involving more than $100 million, being issued, to be sold to the public. The bonds will be taken on the full faith and credit of the United States Government. That is a double reason for moving with caution and having a substantial legal point to stand on. Otherwise, someone may ask for a clear-cut definition of the authority. The clear-cut definition is exactly what the Anderson amendment gives.

I am not trying to defeat the Atomic Energy Commission under the power granted to it by the present law to have the reasonable and necessary power necessary to carry out its highly important and necessary mission. Time is already short on that mission. I am asking for a reasonable interpretation of the authority that is already granted, and a reasonable clarification and expression of the subject matter in the Anderson amendment.

Mr. President, it would be tragic if some court should give any weight to the fact that this section is now to be reenacted, and therefore uphold it on that account. This is a power of government that is needed. This is a bill that needs to be passed. It is important legislation. It has worldwide consequences. The opposition cannot say that we are trying to defeat the bill. There is no suggestion such as that. All we are contending for is a reasonable writing out and spelling out of what I submit was the original intent and the only intent that was described by the legislation when it was passed.

With this interpretation before us and with this plain and simple language before us, let us look to the legislative history as reflected by a part of the record, to determine whether it favors the interpretation I have given or one that is farfetched, inferential, and deals with implied power, which is the interpretation of the proponents of this contract.

This reference to the legislative history is largely repetitious, because yesterday evening the Senator from New Mexico [Mr. ANDERSON] brought out these same points in his speech, in which he cited the witness, Mr. Boyer, who testified in connection with this law when it was originally passed. I refer the Senate to the hearings of April 23 and of June 10, 1953, before the Joint Committee on Atomic Energy. The hearings at which this testimony was given were held in connection with S. 4095. I do not seem to have the page number of the hearings. However, Mr. Boyer testified:

> If you will notice the language we are proposing: "The Atomic Energy Commission is authorized in connection with construction and operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission, without regard to section 3679 of the Revised Statutes."
>
> In other words, it is limited to the power requirements of those three installations. It is not wide open authority.

I was quoting from what the Senator from New Mexico quoted yesterday, because it is the best word I have on it. It is right on the beam.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ANDERSON. I believe the Senator said he could not find the page reference of Mr. Boyer's testimony. It is page 22 of the hearings.

Mr. STENNIS. I thank the Senator from New Mexico. That completes the record on that point.

From the same hearings, the Senator from New Mexico read again, from page 43, quoting the same witness:

> The proviso of the Supplemental Appropriations Act of 1953 is the proviso that gives us the authority to make this contract or make these contracts, and it is essentially the same language as this, except that as it will now be written it will limit it to Oak Ridge, Paducah, and Portsmouth.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. ANDERSON. That ties in, if the Senator from Mississippi will permit me to say so, with what he pointed out a little while ago, namely that the language of the act for a while carried no limitation at all on the places to which it might apply. Then it was decided that it would be wiser not to issue what would amount to a blank check, or give permission to approve contracts in blank. The law limited the application to the three places mentioned. That is what Mr. Boyer's testimony refers to. The Senator from Mississippi pointed out, as I had done, that the bill originally did not contain such a limitation, but when the bill was before the committee it was decided to tie that question down, so that the limitation would apply to the three places, and those three places only. There is no mention of Memphis or Fulton or any other place.

Mr. STENNIS. I appreciate the Senator's comment. If I may have the Senator's attention, I should like to ask him whether I am correct in the statement that at the very time this legislation was being passed, contracts were in the negotiation stage for electricity, to be used directly in these three plants. This legislation was expressly passed to cover those contracts, then being proposed or negotiated. The significance of naming those three places became all the more important. Does the Senator agree that that is correct?

Mr. ANDERSON. I know it is correct. The appropriation act carried a limitation of $57 million as the amount that could be paid for termination costs. Private utilities were offered an opportunity to build these plants. They were not able to do it. They were not able to obtain their financing on a billion dollars worth of contracts with only $57 million in damages to be awarded in case of termination.

The able Senator from Mississippi should bear in mind that separate claims have ben made that as soon as electric energy can be developed from nuclear power, power may be so cheap that it will put out of existence some of these same plants. Of course I think that is a long time in the future. However, investors, who would buy the $100 million bonds, to which the Senator has referred, might be frightened by the possibility that development of nuclear power would be as rapid as the development of the hydrogen bomb was rapid, and the results would take effect overnight, and therefore these plants might be put out of existence. Therefore $57 million was not enough.

The Commission was unable to find a contractor who would take on the contracts unless a great deal was added. The contracts were negotiated as of the 1st day of August 1953. The hearings were held in June 1953. The bill did not clear Congress until July 1953. Therefore, it was only a matter of a few weeks until the contracts had been signed. I am glad to say to the Senator from Mississippi that that part of the testimony is important, because this was the legislative enactment designed to handle the situation at three plants, and three plants only, and those plants were well known to everyone, and they were the ones involved in these contracts, and they were the only ones involved.

Mr. STENNIS. I certainly thank the Senator. I think his statement of fact is directly in point and makes it inescapable that the subject matter which he describes is all that Congress could possibly have had in mind, because that was the only thing presented to the Congress in the hearings, in the bill, in the report, and in the debate. The only things seized on to contradict and to overcome all this background of evidence were these two little measly words, "in connection."

Mr. President, can that overwhelm the structure which is fortified from the rock foundation on up to the sides of the walls and the arches overhead? As a lawyer, as a layman, or as one who is responsible under his legislative oath, of course those words cannot overwhelm the background of that structure.

Mr. President, I do not wish to detain the Senate. I have made my major point, but I should like to cover one phase of the subject briefly——

Mr. KEFAUVER. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield to the Senator from Tennessee.

Mr. KEFAUVER. The Senator is a jurist with a great deal of experience. I wish to ask him this question: In legal interpretation, whenever specific places

UNIVERSITY OF MICHIGAN LIBRARIES

or conditions are concerned, unless there is a protective clause providing that the language should not exclude others, does not that mean that the section of the particular law is applicable only to the places mentioned in the act?

Mr. STENNIS. I think that is correct.

Mr. KEFAUVER. Is it not even stronger in the legislative history, as pointed out by the distinguished Senator from New Mexico and the distinguished Senator from Mississippi, that the legislative history was, first, in general terms, without pinning it down to particular places, and then, later, particular places were provided for by legislation, without any clause providing that this should not exclude other places? Does not that show a very definite legislative intent, and would not any court interpret such an intent to be a part of the law under those circumstances?

Mr. STENNIS. I agree with the Senator, absolutely, and I appreciate the point being brought out at this moment.

Mr. President, I have two more references to the historical background of the legislation. I am reading now from the hearings of this year, from a letter which Dr. Smyth and Mr. Zuckert sent to Mr. Hughes. It will be found at page 958 of the hearings. I read:

> The present proposal would create a situation whereby the AEC would be contracting for power not 1 kilowatt of which would be used in connection with the Commission production activities.

Not one kilowatt, Mr. President. That is not contradicted. On the other hand, it is substantiated. By whom? By the general manager of the Atomic Energy Commission himself, when he said, at page 959 of the hearings:

> Probably it is technically correct that no ampere ever produced at this plant will technically get into Oak Ridge or Paducah.

Consider those words, Mr. President, in the light of the report on the House bill by the joint committee.

Through that report the joint committee told the Congress—and this is in the Senate committee report on the House bill, at page 2:

> This power—

Speaking of the power for which we gave authority to negotiate—

> This power is to be used for the operation of the gaseous diffusion plants at the three cities specified.

That is what the law says is the extent of their authority. Substantiated by that historical background, Mr. President, how can those flimsy words which were added at the last moment, when no one gave them any attention a year ago—not the draftsmen, not the authors, not the reports, not the debates, but added at the last moment and used as the basis of a policy decision, as the Senator from Iowa agrees—how can they be used now to offset the firm foundation constructed on the Rock of Gibraltar with reference to this section?

Mr. GORE. Mr. President, will the Senator from Mississippi yield?

Mr. STENNNS. I yield.

Mr. GORE. As I have listened to the Senator develop his legal argument, I have been reminded of a famous Tennessee judge who, in making his charge to the jury and in summarizing a case, had a system of logic which was heralded throughout the hill country of Tennessee. I congratulate the Senator from Mississippi.

I have been thrilled at the magnificent way in which he has constructed his argument, brick by brick, and now that he has reached its climax, dispelling, as I see it, the faintest question of the legality of the proposed contract to which he has made specific reference. I should like to inquire of the Senator if he thinks an attempt so to stretch and strain the act, unrelated to the intent of the Congress, adds to the confidence of the people in their Government.

Mr. STENNIS. After the officials are well advised as to the facts, with a full chance to read and to study the authority and the limit of the authority involved here, it seems to me, without imputing any bad motives to anyone, it is a great strain on the confidence of the people to have this matter go on unchecked. I have an abiding confidence, I will say to the Senator from Tennessee and to the Senate, that when the facts are all fully known by everyone, including the President of the United States, something will be done toward stopping this contract. I confidently believe that will be the final outcome of this controversy.

Mr. EASTLAND. Mr. President, will my colleague yield?

Mr. STENNIS. I shall be very happy to yield.

Mr. EASTLAND. The Senator remembers the lease-purchase bill and realizes that it was an administration bill, does he not?

Mr. STENNIS. The Senator is correct.

Mr. EASTLAND. Is it not true that under that bill, where the Government of the United States was the renter, buildings being leased by the Government were constructed by private funds and a rental was charged which would give the constructing parties their cost back, plus a reasonable profit, and at the end of the contract period the property would belong to the United States Government?

Mr. STENNIS. The Senator is correct.

Mr. EASTLAND. That was an administration proposal, was it not?

Mr. STENNIS. Yes.

Mr. EASTLAND. That is not followed in this instance, because here is a contract providing that at the end of the 25-year period the facility will belong to private investors.

Mr. STENNIS. I thank my colleague from Mississippi for the very timely contribution. His analogy is correct and his parallel is correct and sound. It points up one of the great fallacies of this proposal.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. STENNIS. I wish to point out to my colleague, the senior Senator from Mississippi, that when the proposals were made concerning the lease-purchase plan, Congress was approached and was asked for the authority. It was not necessary to try to launch out on two flimsy words which perhaps could have been found in some law, somewhere. The interested persons came to Congress; they acted properly. The question was debated back and forth in the committee and on the floors of Congress for many weeks, and finally there emerged the legislative act which is now the law of the land, and the project has proceeded thereunder accordingly.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. EASTLAND. The only difference is that here is a facility the product of which the Government of the United States will use. At the end of the period the administration is violating its own proposal, because its own proposal, in the Lease-Purchase Act, was that at the end of the lease period, the Government would own the facility. But in this instance the situation is being manipulated to create a tremendous fortune for persons who will own the facility at the end of the lease period.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. KEFAUVER. While I feel very strongly that the TVA should be able to have hydroelectric plants and steamplants to supply its own power, it should be pointed out that the Government, if it does not intend to do that, had an opportunity to enter into a contract analogous to the lease-purchase kind of contract to which the Senator from Mississippi [Mr. EASTLAND] referred, when it was presented with a well worked out proposal by Mr. Von Tresckow and Mr. Burch, which contained facts and figures as to what the cost would be. The Government would have saved a great deal of money in the interim, and at the termination of the lease the Government would have owned a steamplant. I think that information should be made a part of the RECORD.

Mr. STENNIS. I thank the Senator from Tennessee for his excellent contribution to the record.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HICKENLOOPER. Repeated reference has been made by the Senator from Tennessee to the Von Tresckow contract. Let the RECORD show, because I think it is desirable that the actual fact be shown, that the Von Tresckow proposal never has been made as a firm proposal. It never has been detailed. All it provides is that when a $4,500,000 promotion fee has been guaranteed by the Government, then the Von Tresckow interests will undertake to put together a group to build a plant, and the Government will guarantee every last dollar to build the plant. Von Tresckow will have no responsibility whatsoever.

It is nothing but a financial promotion proposition, for a fee of $4,500,000. They will sell bonds to the public, with no responsibility whatsoever on their part. The Government will hold the sack completely. There will be no limitation whatsoever. The Government will not even receive a report as to who

will comprise the engineering group which will construct the building.

There is no specification, there is no outline of the program, other than that the Government is to hand out $4,500,000, while the Von Tresckow group will sell some bonds, will get someone to build the plant, but will have no responsibility for the construction, and will have no responsibility for the limiting costs.

The Von Tresckow offer is only a brokerage banker's promotional operation for a fee of $4,500,000, which they hope to pick up within the first years of operation. It is vastly different from the businesslike proposition of the Dixon-Yates Co., with guaranties, with a specific outline of what is proposed to be done, and of what the price will be over a 30-year period of time.

Mr. STENNIS. I thank the Senator from Iowa. I am not prepared to comment on that contract.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. KEFAUVER. I appreciate the Senator's yielding to me on this point. I shall later, on my own time, discuss the Von Tresckow proposal, but I think it should be pointed out in the colloquy that Mr. Von Tresckow and Mr. Burch, after their first engineers were pressured out of the business, had other engineers meet with the engineers of the Atomic Energy Commission, who, the testimony shows, were very favorably impressed with their proposal. They asked for permission to meet with the Commissioners and the other top people of the Commission. They had a specific proposal. Apparently the Senator from Iowa has not read the testimony before the Monopoly Subcommittee of the Committee on the Judiciary, which I have in my hand, in which the proposal is set forth in detail as a workable proposal. No one has shown that it is not a sound proposal. The only difficulty was that the top officials of the Atomic Energy Commission refused to sit down and go over the proposal with the Von Tresckow engineers. They would not even give them an opportunity to be considered.

The specifications apparently were written so that only the Southern Co. and the Middle South Utilities, Inc., could bid on the proposal. It is interesting to note that Mr. Yates, attorney for the Southern Co. and the Middle South Utilities Co., Inc., said in his testimony that they had not even seen the Government specifications when they started to negotiate with the Atomic Energy Commission.

So there seems to have been a firm determination on the part of certain officials of the Atomic Energy Commission not to negotiate with the Von Tresckow group, no matter how good their proposal was, and not to negotiate with anyone else except the Southern Co. and the Middle South Utilities, Inc., and the Commission began to negotiate with them before the Dixon-Yates group ever saw the specifications which the Government wanted in connection with the steam plant.

I must take exception to the statement of the Senator from Iowa as to the Von Tresckow proposal not being sound and worked out in detail. A reading of the hearings before the Monopoly Subcommittee of the Committee on the Judiciary will show that the Von Tresckow proposal was well considered and was not objected to by the Atomic Energy Commission or its staff, and that no flaws whatsoever were pointed out in the plan.

Mr. STENNIS. Mr. President, I have only one further point, and I shall be brief as to that.

The proposed contract has been heralded far and near as a private enterprise venture. It does not have the first elements of a genuine private enterprise venture because it is subsidized—top, side, and bottom. There is a guaranty as to its cost, with a margin allowing for error. There is a guaranty for its operation, with a margin allowed for increased cost of labor and increased cost of fuel. That is a Government guaranty as to those items. Does that sound like private enterprise or free enterprise, as those words are ordinarily understood? Does that sound like it has basic fundamentals?

There is a guaranty of income on the invested capital, and, incidentally, at a high rate. There are no competitive bids for its construction. Does that sound like free enterprise? The Government will pay all taxes and fees—State, local, and Federal. The Dixon-Yates group will be called on to invest only $5,500,000 of their own money, and this can hardly be called chance money. But, at the same time, they will be guaranteed a return of 9 percent per annum on the $5,500,000; and when the 9 percent is figured in connection with the profits, the Federal Government then will pay the Federal and State income tax on the 9-percent return on the investment.

Only a few days ago it was the opinion of the majority of the Senate that the Government could not afford to increase the personal exemption of a small income taxpayer, as to his gross income, by as much as $100 a year.

I do not make these points in criticism of private enterprise companies. This is far from my purpose. I make the point to show that the atomic-energy enterprise is so vast that it cannot be handled by private enterprise under the normal business methods, and will have to be guaranteed and underwritten for all practical purposes by the Federal Government. That is why there has been a request for guaranties and what are, in effect, subsidies, and that is why there has been a request for insurance against increases in the cost of fuel and labor. That is why there is desired a virtual guaranty as to the cost of the undertaking. That is why there has been requested a guaranty as to taxes and other similar costs. Such a vast enterprise is involved, and it is so fraught with uncertainties, that it is unreasonable that they be asked to take all the risk, which leads us to the inescapable conclusion on that point that the Government would stand on much firmer ground if it built the plant in the first place, and thereby saved the extra money which letting of the contract would cost.

Awhile ago the Senator from Mississippi mentioned the lease-purchase bill. I was a member of the Committee on Public Works which considered the bill. I was also a member of the Armed Services Committee when it considered a measure relating to contracts for the building of small ships. We learned much about the subject matter during the progress of discussion and debate on the two bills. Incidentally, I supported the bills as an experiment along the lines of that method of doing business.

As the Senator from Mississippi pointed out, however, when the period of leasing was over, the Government would receive the benefit of whatever usefulness there remained in the ships. Under the present proposal, there would be nothing left for the Government. Under the present proposal, there would have to be the guaranties which I mentioned, which shows it is beyond the pale of a reasonable private enterprise measure as it is ordinarily understood, and that it is necessary for the Government to become a party to the arrangements and to carry the risk. I submit the Government might just as well build the plant.

Mr. REYNOLDS. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Nebraska.

Mr. REYNOLDS. Does the Senator mean to infer that an escalator clause having to do with increased costs of labor and fuel is alien to private industry?

Mr. STENNIS. I understand it is now used to some extent in some industries, but it is certainly a long way from the rugged individualism which was involved when a man used to take a risk.

Mr. REYNOLDS. I think the Senator will find that there probably is not a contract of any size having to do with a private powerplant which does not contain such a clause.

I should like to ask another question. Do not consumers pay all the taxes which a powerplant pays? In the last analysis, no one else can pay the taxes except the consumer. The purchaser always pays the taxes.

Mr. STENNIS. It certainly is not customary for the Government to pay the taxes of a manufacturing concern or industry which is selling goods, and that is what we are being called upon to provide for in this case. The Government buys many Buicks from General Motors for the use of officials at the Pentagon, but the Government does not pay the taxes on the automobiles.

Mr. REYNOLDS. The tax is included in the cost of the automobile.

Mr. STENNIS. At least, the manufacturer takes a chance on making a profit on the sale of the automobiles it manufactures; but, as the Senator from Mississippi interprets the situation, no one will be taking a chance so far as the Dixon-Yates contract is concerned.

After all the payments are guaranteed and everything is subsidized, as I have outlined, the Government may have to pay a $40 million cancellation fee if the contract is canceled. That is a considerable amount of money. If the contract is carried out it will cost the Government, at the lowest estimate, more

UNIVERSITY OF MICHIGAN LIBRARIES

than $90 million additional over what it would cost to build and operate the plant itself. In addition, at the end of the 25 years the Government will have nothing left whatsoever, not even a burned-out light fuse. The contractors will own the plant. If the Government builds the plant, of course it will own it all the while, as well as at the end of the 25 years, and indefinitely.

Mr. President, I yield the floor.

Mr. EASTLAND. Mr. President——

The PRESIDING OFFICER (Mr. UPTON in the chair). The Senator from Mississippi is recognized.

Mr. EASTLAND. Mr. President, the Dixon-Yates proposal constitutes a very bad business practice. It is a glaring example of governmental paternalism. It is worse than paternalism, because the Government would reimburse all taxes paid by the group and then leave the United States at the mercy of the Arkansas and other taxing authorities. It is paternalism participated in and for the benefit of those who cry "free enterprise," who profess to abhor any form of governmental help or assistance, and who condemn TVA, REA, and all the power programs which have meant so much to our people as governmental paternalism in its worst form.

The plant in question will cost $107,250,000. The Dixon-Yates group will invest only 5 percent of this amount. The group is guaranteed a 9-percent profit on this investment plus immunity from all taxes—local, State, and Federal. The other 95 percent of this huge sum is to be financed by bonds guaranteed by the Government, which would yield 3½ percent interest. That is an unnecessarily high rate of interest, and is in fact a subsidy which must be paid for in electric-light rates. At the end of the period the group will own the plant. It has a contract that the Government will take 93 percent of the power generated in the plant.

Mr. President, this group would be using Government credit and a Government contract to acquire property worth in excess of $100 million. It would create a tremendous guaranteed fortune for those involved. They would acquire the fortune by Government manipulation and without the chance of loss. It would be a fortune acquired without the necessity of competitive bidding, which I have always understood was necessary in Government to protect the taxpayers and to promote the public welfare. What is the justification for letting a contract such as is proposed without competitive bidding? In times other than when we are engaged in war a Government contract which is not let to the lowest and best bidder should be looked upon with suspicion.

Mr. President, at this session of Congress, not more than 60 days ago, the Senate passed a measure dealing with exactly this type of contract; the Senate passed the lease-purchase bill for the construction of public buildings. Under the provisions of that measure, when the Government negotiates with a private industry or corporation to construct a building in which the Government is to be the sole taker of office space, a contract is entered into with the private corporation or builder to guarantee occupancy of the space at a specific rental which will pay for the cost of the building, plus a reasonable profit to the contractor. But at the expiration of the contract, the building will belong to the Federal Government. Why has this administration ignored its own principles governing contracts whereby the Government is the sole taker of commodities?

Mr. GORE. Mr. President, will the Senator from Mississippi yield to me?

Mr. EASTLAND. I yield.

Mr. GORE. Did not the Senator from Mississippi, along with the junior Senator from Tennessee, support the philosophy of giving a reasonable profit to those who wish to invest in a facility for the Federal Government, but require that after the reasonable profit has been realized and after the cost of the building has been amortized, the building shall become the property of the people who paid for it?

Mr. EASTLAND. Yes; in other words, the building will then belong to, and be the property of, the people of the United States. That was the proposal of the Eisenhower administration.

Mr. GORE. And we supported it.

Mr. EASTLAND. Yes.

Mr. GORE. But the proposal now before us is not of that kind.

Mr. EASTLAND. No; it is not. This proposal is identical in all respects with the other, except that at the expiration of the contract, the private organization will obtain title to all the property.

Mr. HICKENLOOPER. Mr. President, will the Senator from Misisssippi yield for a question?

Mr. EASTLAND. I yield.

Mr. HICKENLOOPER. The Senator from Mississippi referred to the great fortune which will accrue to those who build this plant. Is the Senator from Mississippi suffering under the delusion that the plant will be worth any large amount of money at the end of the 25 years, plus the 5-year extension the Commission can require if it chooses to do so?

Mr. EASTLAND. Of course, it will be worth more than the $5 million the Senator from Iowa mentioned. But I submit that $5 million is a fortune; and by right and justice, that plant—whether worth $5 million or $2 million—should belong to the people of the United States.

Mr. HICKENLOOPER. I suggest to the Senator from Mississippi that at the end of the 25 years, the Dixon-Yates Co. will not have received back its $5 million. That money will still be unpaid; and 25 percent of the cost of the plant will still be unamortized.

Mr. EASTLAND. But they will get 9 percent, and on that small investment, they will get property which will be worth many millions of dollars. It will be worth many times what they invest in it.

Mr. HICKENLOOPER. At this time it is impossible to say what a plant of that kind will be worth in 25 or 30 years. But the probabilities are——

Mr. EASTLAND. Then that is all the more reason why the United States should have title to the property.

Mr. HICKENLOOPER. But the probabilities are that it will be worth practically nothing, except as an occasional standby, peak-power producer on a most inefficient basis.

Mr. EASTLAND. That is the conclusion of the Senator from Iowa. Even if that conclusion is correct, the property should belong to the people of the United States, who will have paid for it.

Mr. HICKENLOOPER. They will not have paid for it, under this proposal; but they will pay for it, to the extent of $107 million or more, if the procedure followed is by way of immediate appropriation to be spent through the TVA. If that procedure is followed, that amount of money will be tied up during the entire time.

Mr. EASTLAND. Let me say that the only dispute I have heard in this case, as I have listened to both sides, is a dispute regarding how much more the cost to the taxpayers of the United States will be under this proposal. Everyone admits the cost will be more. Does not the Senator from Iowa agree that this proposal will cost more?

Mr. HICKENLOOPER. No; I do not think under this contract it will cost a dime more.

Mr. EASTLAND. What was the opinion of the Atomic Energy Commission?

Mr. HICKENLOOPER. The Atomic Energy Commission, after adding or including the taxes and the extra costs of the money, arrived at a figure of approximately $3,500,000 a year.

Mr. EASTLAND. Yes; that much more each year. What did the Bureau of the Budget say?

Mr. HICKENLOOPER. In other words, that it would cost more than to have the TVA furnish the power—but after the Federal Government had furnished the TVA with from $100 million to $120 million of the taxpayers' money, to build the plant.

Mr. EASTLAND. How did the Bureau of the Budget figure it?

Mr. HICKENLOOPER. Roughly the same.

Mr. EASTLAND. Certainly.

Mr. HICKENLOOPER. But let me point out something that has not been included in the calculations. Under the Dixon-Yates proposal, the private-enterprise proposal, the Government will not pay the cost of keeping the plant modernized during the period of 25 years. But the Dixon-Yates people will pay for that.

Mr. EASTLAND. Mr. President, is the Senator from Iowa asking me a question?

Mr. HICKENLOOPER. No; I am trying to get the Senator from Mississippi straight on the facts.

Mr. EASTLAND. The Senator from Iowa needs to be made straight on the facts. I certainly agree with him that this is a case involving private enterprise; in fact, it is very private—so private, that nobody but this group could participate. It was tailormade for them.

Mr. HICKENLOOPER. This is the only group that presented any kind of understandable or reliable proposal.

Mr. EASTLAND. Mr. President, the distinguished Senator from Iowa knows this matter was not thrown open to competitive bidding.

Mr. HICKENLOOPER. The Dixon-Yates group was the only group I know of that made a proposal. Any group

had a right to make a proposal, if it wished to—even the von Tresckow group, which is an investment bankers group.

Mr. KEFAUVER. Mr. President, will the Senator from Mississippi yield to me?

Mr. EASTLAND. I yield.

Mr. KEFAUVER. I think it should be pointed out that on page 65 of the hearings before the Judiciary subcommittee, it is shown that the von Tresckow group presented a proposal and stated who their personnel were. Although the underlings—the engineers—of the Atomic Energy Commission were satisfied, and did not raise any question, the von Tresckow group never could get consideration from the top echelon of the Atomic Energy Commission. The top echelon men were not even willing to sit down with the von Tresckow group and see what their proposal was.

Mr. HICKENLOOPER. Mr. President, if the Senator from Mississippi will yield to me, let me say that the record does not bear out that statement.

Mr. KEFAUVER. The record is here before me.

Mr. HICKENLOOPER. Mr. President, I wish to correct that statement.

The PRESIDING OFFICER. The Senator from Mississippi has the floor. Does he yield; and if so, to whom?

Mr. EASTLAND. At this time I yield to the Senator from Iowa.

Mr. HICKENLOOPER. The record shows that the Von Tresckow group, representatives of brokerage houses, did meet with the proper officials of the Atomic Energy Commission who had charge of the Commission's power organization. The Von Tresckow group did not necessarily meet with the Atomic Energy Commissioners themselves, who are not engineers; but the Von Tresckow group met with the responsible heads of the department of the Atomic Energy Commission whose duty it is to deal with this matter, those who were the technically trained persons in charge of the matter.

If the Von Tresckow group are complaining because they did not see the Commissioners, who are not technically trained and capable in this field, that is just too bad. Perhaps the members of the Von Tresckow group felt that they did not receive the plush, red carpet treatment of the sort they would have liked to receive. But they talked to those in the Atomic Energy Commission who knew about the matter.

Mr. KEFAUVER. Mr. President, according to the testimony, they talked to Mr. Thaxton, who apparently was well satisfied with their proposal. But General Nichols and the Commissioners would not even get information from Mr. Thaxton about what the proposal was. They seemed to be bent on getting along with the Dixon-Yates group. According to the hearings, General Nichols said he did not even know who Mr. Thaxton was. Yet Mr. Thaxton was the one who met with the Von Tresckow group; and, as Mr. von Tresckow and Mr. Burch expressed it, they thought everything was fine, and that the Commission would be willing to negotiate with them. But then the carpet was pulled out from under their feet, whereupon Mr. Burch and Mr. von Tresckow sent the telegram that appears on page 69 of the hearings, setting forth who were their engineers and who all the others connected with the proposal were, and asking only for leave to negotiate with someone who had the power to act. But they were not even accorded the courtesy of a reply to that telegram.

Mr. HICKENLOOPER. They met with the proper officials of the Commission.

Mr. KEFAUVER. The proper officials apparently would not even tell General Nichols about it, because General Nichols did not know anything about it.

Mr. EASTLAND. Mr. President, I should like to make an observation in connection with what the Senator from Tennessee has said. The Senator from Iowa [Mr. HICKENLOOPER] said that the von Tresckow-Burch proposal was a banker promotion scheme. If it was a banker promotion scheme, why were they not given the opportunity of making a bid? If they could save the Government money, why should they not have had an opportunity to bid?

Mr. KEFAUVER. That is something I have not been able to understand. The only explanation given is by Mr. James, the attorney for Dixon-Yates, that his clients did not even have the Government specifications when the Atomic Energy Commission sought them out to negotiate with them. So apparently the Atomic Energy Commission did not want any alternative proposal. It did not want competitive bidding. It would not even sit down and see what the von Tresckow group had, and that in the face of the fact that Mr. von Tresckow and his group had competent engineers and competent financiers, and they had had experience in building steam plants. It seems to me that the Commission should have been interested in considering a proposal which would have saved the Government a great deal of money initially, and under which, after the end of the contract, the property would belong to the Government, and not to the private utility.

Mr. EASTLAND. The point the Senator from Mississippi was making was this: It is the proposal of the Eisenhower administration under the Lease-Purchase Act, which I supported, and which I thought was sound, that when the Government is the taker of all the office space in a building, a rent should be charged which will provide the lessor his investment plus a reasonable profit over a period of years, and that at the end of that period the building shall be owned by the people of the country. If that was a sound principle in the Lease-Purchase Act, it would be a sound provision in this contract. When the Government is the taker of the electricity, a provision in a contract that at the end of the contract period the facility shall be owned by the private utility is inexcusable.

In the instant contract the Government is the sole taker of this electric power. Government credit is building the facility, yet contrary to the principles of the Lease-Purchase Act, after the Government credit builds the plant and pays for it, the plant and facilities still belong to the private corporation. Why was not the principle of the Lease-Purchase Act not followed in this instance, whereby after the Government credit built the plant and it was paid for, the title does not pass to the Government?

Mr. President, why was not this practice followed in this instance? Why were not the doors thrown open and everyone given an opportunity to compete? The principal question is why is it necessary to construct this plant at all? What is the necessity of giving this contract to Dixon-Yates group or to any other private power company? A public utility is essentially a monopoly, it has the responsibility to serve the needs for which it is created in the particular area for which it has a franchise to serve. TVA is obligated by the Congress and by the Government to supply the power needs of the Tennessee Valley and adjacent areas which it now serves. It has a franchise to do this. It is obligated to do it. It has the right and duty to supply the power for this particular area. This is the law. This is the policy of the Government. The construction of this plant will invade this territory and is an invasion of the TVA's franchise. It is obvious that this is the first step, Mr. President, for the private power companies to take over the Tennessee Valley Authority. It has been their purpose to do so. When the Government permits another group to invade TVA territory or to generate electric current which is the Tennessee Valley Authority's obligation to generate, it is obvious that the Government is attempting to this extent to permit private groups to take over the Tennessee Valley Authority.

Mr. President, it is likewise the duty and the obligation of the Government under the law embodied in the TVA Act to see that electric power is furnished by economical means and at as low cost as is possible. The United States Government through its agency, the Tennessee Valley Authority, operates the power business and supplies the power needs of the Tennessee Valley area. There is no question but that this power can be generated and supplied by the Tennessee Valley Authority at a lower cost than is proposed in the Dixon-Yates contract. The only question is the amount of the increase. This is an exceedingly bad business practice.

Mr. GORE. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. GORE. The Budget Bureau, the Federal Power Commission, and the Atomic Energy Commission reached an agreement as to the difference in the cost. The Tennessee Valley Authority thought the difference would be somewhat greater. Was not the figure agreed upon by the Budget Bureau, the Atomic Energy Commission, and the Federal Power Commission in excess of $3 million a year?

Mr. EASTLAND. That is correct.

Mr. GORE. And the TVA estimate was in excess of $5 million a year?

Mr. EASTLAND. Yes; and I think it is the more accurate of the two.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. President, the Tennessee Valley Authority is a yardstick to measure the cost of producing electric current. It is likewise a yardstick to measure the costs of transmitting electric current.

Mr. LONG. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. LONG. I assure the Senator that I have an open mind on this subject. I have not closed it, and I am following the Senator's argument. When the Senator urges that TVA is a yardstick to measure the cost of producing electric power, does he urge that that yardstick should not include the cost of interest on the money?

Mr. EASTLAND. Of course it should.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. ANDERSON. In the analyses which have been made of the cost, the cost of money for TVA has been computed, just as in the case of the private company. There is one difference. A Government agency can probably borrow a little more advantageously than can a private company. There is a difference in the cost of money, figured over a period of 25 years.

Mr. EASTLAND. But that is very small.

Mr. ANDERSON. It is not too large.

Mr. LONG. Mr. President, will the Senator yield?

Mr. EASTLAND. I yield.

Mr. LONG. Allowing for the fact that the Government can borrow money more cheaply than can private enterprise, does the Senator feel that tax payments should not be taken into consideration when one attempts to determine, by a yardstick, what the cost of producing electric power should be?

Mr. EASTLAND. Taxes are taken into consideration. The TVA pays taxes, or the equivalent of taxes.

This yardstick has been of great benefit to all the people of every section of the United States. It has demonstrated the low cost of producing electricity and has caused a reduction in electric light rates all over this country. It is responsible for a reduction in the electric light bills in homes and a reduction in the power bills for industry all over the country. It has saved the people of the United States billions of dollars in their electric charges because it has demonstrated how cheaply electricity can be produced and has caused power rates to decline. There is not an electric consumer in this country who has not benefited because of the Tennessee Valley Authority. It has earned for the American people many times the money which the Government has appropriated for this agency. If the Tennessee Valley Authority is taken over by the private companies or if its costs of operation are increased, as this proposal would cause, there is no adequate yardstick to measure the costs of producing electricity and the result would be an increase in the electric power rates all over the country, and this will include approximately a thousand REA associations with over 4 million members. Do not forget that over 80 percent of all REA associations buy their power from the private sources and serve only rural areas.

Mr. President, it is imperative that this amendment be adopted in order to protect the consumers of electricity in every section of this country.

Mr. ANDERSON. Mr. President, one of the members of the Atomic Energy Commission wrote a letter to the Chairman of the Joint Committee on Atomic Energy with reference to section 21 of the bill. The letter refers to the subject of the chairman being the principal officer of the Commission, and there has been quite a bit of discussion about it.

I ask unanimous consent that the letter be printed in the RECORD at this point. It was written by Commissioner Thomas E. Murray, and is dated June 24, 1954. In the letter Mr. Murray expresses his view on that subject. When we come to discuss section 21 reference to the letter may be helpful, and I believe it should be available for that purpose to the Members of the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 24, 1954.

Hon. W. STERLING COLE,
Chairman, Joint Committee on Atomic Energy.

DEAR MR. COLE: Section 21 of your proposed new bill still contains language that, in my opinion, may destroy the effectiveness of the Commission form of organization.

On Sunday, June 13, on the television program "Man of the Week," you repeated an interpretation of the proposed revision to section 21 of the Atomic Energy Act which you originally made in the open hearings on June 4, 1954. I refer to your reservation as to equal access to atomic information among the Commissioners.

Your statements leave no doubt that the intention of the present language is to give the majority authority to deny to 1 or 2 Commissioners access to information necessary to carry out their responsibilities. Such powers could be used by the majority to make it impossible for the minority to establish the facts on which to base their position. This situation could have the effect of a suppression of minority views, thus negating one of the fundamental principles of a Commission-type organization.

There are other reasons besides your public statements which give me concern. I refer to the history of certain important policy issues many of which have already been brought to the attention of your committee: The TVA negotiations; the U. N. atomic pool proposal; inability to properly exchange mutual ideas with the military; the "size of weapons" issue; the inaction to reach a decision to continue continental testing; difficulties arising out of the dual relationship of the Chairman with the executive branch.

In view of these considerations, I urge you to add after the sentence ending "or as the Commission may direct" the following sentence:

"Nothing in this section shall be construed in any way to limit the right of access of each Commissioner to the information necessary to carry out his responsibilities under this act."

I respectfully request that this letter, along with my letters to your committee of May 4, 1954, May 20, 1954, and June 1, 1954, be made a part of the record of the hearings on H. R. 8862.

Sincerely yours,

THOMAS E. MURRAY,
Commissioner.

Mr. FERGUSON. Mr. President, I wish to discuss briefly the means which the Atomic Energy Commission, with the approval of the President and the Bureau of the Budget, seeks to use in order to secure the electric power which it needs to carry out its work.

Some of the Members of the Senate have propounded the point of view that the Atomic Energy Commission must secure its additional power from the Tennessee Valley Authority.

TVA is a creature of the United States Government. It was created to serve a number of purposes, as a multipurpose agency, concerned with the control of floods on the Tennessee River, promotion of navigation on the river and in the course of these activities to dispose of the electric power generated through these activities.

In the disposal of this TVA electric power, Congress set up different classes of customers on a priority system. Agencies of the Federal Government have the top priority, and municipal systems and cooperative have next call and so forth.

However, the customer is not obligated to exercise his priority option and a Federal Government agency is not required to secure its power from the TVA. The priority is imposed on TVA, not on the customer agency. An option is a right, not a restriction.

In the present case, the Atomic Energy Commission may or may not exercise its option as it sees fit and as its best interest dictate, consistent with the law.

The TVA through the practice of exclusive supplier contracts now operates as a monopoly wholesaler of electric energy in its entire service area, and because it operates as a monopoly, it maintains that it has an obligation to supply all the necessary power to its customers.

Mr. GORE. Mr. President, will the Senator yield?

Mr. FERGUSON. I shall be glad to yield, with the understanding that the Senator's remarks will appear at the end of my remarks.

Mr. GORE. I should like to ask a question of the Senator and to make a comment on his statement.

Mr. FERGUSON. I should be glad to have the Senator do so at the end of my remarks.

There is no reason why the Atomic Energy Commission must exercise its option, which could create a power deficit for other customers which TVA as a matter of practical reality must serve.

There is nothing unprecedented about the present proposals to supply the needs of AEC. At Paducah, Ky., within the service area of TVA monopoly, the Atomic Energy Commission already has firm contracts for purchase of power from sources other than TVA. TVA itself has a long history of buying electric power from outside, private sources.

Opponents of the private-company-AEC power contract, which incidentally, is not even in existence, have sought to create the impression that such a contract would be unique, unprecedented, and a violation of the unsullied chastity of the Tennessee Valley Authority's

hitherto unsoiled dealings with private enterprise. Nothing could be more false.

Let us keep the following factors in mind:

First. If the Congress forces the Atomic Energy Commission to buy its power from the TVA, as the President's opponents desire, they will bring about two possibilities. Either TVA must further expand its power generating facilities—outside its service area and very likely outside its legal authority—or TVA must fail to meet its existing commitments within its service area.

Second. The use of privately generated power will avoid an outlay of about $100 million of Federal tax revenues for capital investment over the next 3 years, during a period when all of us would like to balance the budget and reduce the taxes.

Third. Action to force AEC to buy its power from TVA sets a strange and, to me, entirely unwarranted precedent for the Atomic Energy Commission. The Commission, in the course of its several billion dollar annual business contracts for and buys a vast number of services and products in both large and small quantities. To me it is dangerous to require AEC to buy its electric power from a single source of supply in the area and further to specify what that source will be.

AEC in the course of its normal operations must deal with and purchase from a large number of agencies, both public and private and there is nothing unholy in permitting them to buy power from a private source in this case.

The proposal now under consideration by AEC for its power requirements is a firm offer. This offer provides a stated maximum capital cost which can be reflected in the rates. The annual costs are reasonable in comparison with every other estimate. The proposed contract provides for cancellation without burdensome complications. It is backed by competent engineering and other technical services. The sponsors assume the major risk if the costs of construction exceed the estimate.

The AEC will benefit by lower rates if the construction costs are below the estimate.

Completion of this proposed contract between AEC and the private source will not destroy TVA, it will not hurt TVA, and the only effect on TVA which I can foresee is a strengthening and a greater ability of TVA to serve its area. The President, in his budget message made it clear that there is no intention or desire to dismember TVA.

I do not believe this amendment is in the public interest for the reasons I have outlined above, and I hope the Senate will defeat it.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. FERGUSON. I yield.

Mr. FULBRIGHT. The Senator is a member of the Committee on Appropriations, and a point has arisen in the debate during the last few days about TVA that interests me. It is the statement by the AEC, particularly Mr. Nichols, which I put into the RECORD yesterday, and which has been referred to several times. The statement would indicate that the estimate of the TVA of the cost of production at Fulton—and it is an estimate only—led Mr. Nichols to believe that the AEC was overcharged by TVA by the present rates at Shawnee, and also at Oak Ridge. In other words, under the existing contract there is such a great disparity between the actual rate the AEC pays at Oak Ridge and Shawnee and the estimate of cost TVA has made with regard to the Fulton project. If that be true, does the Senator think it is good governmental practice, and does he think that the Senate is aware of the fact that the TVA, one governmental agency, is charging a much higher rate than it could or should charge to another governmental agency, in this case the Atomic Energy Commission? What does the Senator think of that? Has he ever thought about the question that arises in such a situation?

Mr. FERGUSON. To be frank with the Senator, I did not understand that, as the Senator is now suggesting, the charges were out of reason with the actual cost.

Mr. FULBRIGHT. I did not understand it, either. Did the members of the Appropriations Committee of the Senate understand it when the matter was brought to their attention?

Mr. FERGUSON. I am not familiar with it.

Mr. FULBRIGHT. I submit the evidence from the TVA itself, which shows the agency cannot have it both ways. If the estimate is anywhere near accurate, AEC is definitely overcharged, because it estimates its rate on 600,000 kilowatts would be some $5,500,000 lower. In other words, the estimate of TVA's own engineers is that the cost of production of a similar quantity of power, 600,000 kilowatts, on an annual basis, would be some $5,500,000 less than is proposed by the Dixon-Yates group, which is approximately the same as the amount now carried under the Paducah contract. It is obvious that there is an overcharge of $5,500,000.

Is it not a very unusual scheme by which one Government agency can siphon out of another agency an undue amount of money without its having to be appropriated by the Congress? It would show up in their net profits.

Mr. FERGUSON. We certainly should not allow that. It would show up in their net profits. It would not be a profit at all. It would be money taken out of another agency.

Mr. FULBRIGHT. It would be a transfer from one agency to another. The answer of my distinguished friend from Tennessee [Mr. GORE] was: "What difference does it make? They are all Government agencies, and the Government owns them all."

Mr. GORE. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. In a second I shall be glad to yield. In connection with appropriations, about which the Senator from Michigan knows a great deal, it makes a difference whether we are appropriating new money or are permitting the utilization of net profits.

Mr. FERGUSON. That is correct.

Mr. FULBRIGHT. It is a matter of human nature.

One other question, and then I shall be glad to yield to the Senator from Tennessee. Is the Senator from Michigan familiar with how the bookkeeping on the net profits of the TVA is handled?

Mr. FERGUSON. I have been over it at times in the Appropriations Committee, but I would not be able to state it on the floor.

Mr. FULBRIGHT. Since the Senator is a member of the committee, I think it would be a contribution to the RECORD if a member of the staff of the Appropriations Committee would prepare a memorandum on that very point to be inserted in the RECORD tomorrow.

Mr. FERGUSON. Would the Senator tell me what he would like to demonstrate?

Mr. FULBRIGHT. As I understand, the money directly appropriated by the Congress to TVA is to be returned over a 40-year period.

Mr. FERGUSON. That is correct.

Mr. FULBRIGHT. Does that same requirement apply to what they call their net profits?

Mr. FERGUSON. I think they apply their net profits to amortize this fund of the taxpayers.

Mr. FULBRIGHT. That is where I get lost. I do not understand it.

Mr. FERGUSON. What is the Senator's understanding?

Mr. FULBRIGHT. My understanding is that there is a fund of more than $200 million which they call net profit. It is not subject to the requirement of the turnover 40-year period. It is a sort of a floating account which is in an indefinite state and is not subject to the same rules, we will say, that apply to money appropriated directly out of the Treasury. I think it is an important matter.

Mr. FERGUSON. Does the Senator feel that none of the net profit is required to be returned? I want to check it and insert something in the RECORD tomorrow regarding it. I understood they use the net profit to repay the tax money within the 40-year period and do not return the profits as such.

Mr. FULBRIGHT. I would consider it a payment made to amortize the appropriation as a charge, a return on capital, and not a net profit. It is a very complex bookkeeping system, and I do not pretend to understand it. The reason why I asked the question was that if this device of taking it into the net profits is actually used, there is a very strong motive in connection with it. If the net profit is involved in the same manner as is the capital advanced there would not be such a motive.

Mr. FERGUSON. I shall not wait until tomorrow. I shall try to find time today to get the information.

Mr. FULBRIGHT. I think it should be clarified for the record.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. FERGUSON subsequently said: Mr. President, earlier today the Senator from Arkansas [Mr. FULBRIGHT] and I discussed the use of power revenues from TVA and the results of possible overcharging another government agency for its power.

If the TVA overcharges another government agency, such as AEC, and uses the receipts of those charges to repay the Federal Government for its investment in TVA, it puts us in the position of having the taxpayer reimbursing himself, and he is going to lose on the deal. If TVA uses excess revenues gained from overcharging a government agency in the general operation of its power system, it means that the Government is providing an additional subsidy which would reduce the cost of power to TVA's other consumers, a subsidy which I am sure is not contemplated by Congress in the operation of TVA. The Director of the Bureau of the Budget is reviewing this situation, and I believe corrective action will result.

The Senator also raised a question about the net profit of TVA.

In an effort to answer this question I have gone to a document entitled "Tennessee Valley Authority, Budget Program for the Fiscal Year Ending June 30, 1955." A portion of this book discussed payments to the United States Treasury. This material indicates that TVA carries on its books an item entitled "Balance Reserved for Contingencies," which for the 1954 fiscal year was estimated at $34,478,712, which apparently represents the funds available to TVA from its power receipts after making its payment to the Treasury.

I ask unanimous consent that material entitled "Payments to the United States Treasury" be inserted at this point in the RECORD, together with the accompanying tables, including schedule C–1.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

Tennessee Valley Authority—Schedule C–1.—Repayment of investment in power program under provisions of the Government Corporations Appropriation Act, 1948

Fiscal year	Minimum repayments required under 1948 law		1/40th of plant investment at end of previous year		Actual and estimated payments [1]	
	Year	Total period	Year	Total period	Year	Total period
1948	$10,500,000	$10,500,000			$10,500,000	$10,500,000
1949	2,500,000	13,000,000	$8,705,981	$8,705,981	5,500,000	16,000,000
1950	2,500,000	15,500,000	8,705,981	17,411,962	5,500,000	21,500,000
1951	2,500,000	18,000,000	9,149,627	26,561,589	9,000,000	30,500,000
1952	2,500,000	20,500,000	9,733,970	36,295,559	12,000,000	42,500,000
1953	2,500,000	23,000,000	12,256,316	48,551,875	15,000,000	57,500,000
1954	2,500,000	25,500,000	17,482,476	66,034,351	[2] 20,000,000	[2] 77,500,000
1955	2,500,000	28,000,000	[2] 22,845,649	[2] 88,880,000	[2] 50,000,000	-127,500,000
1958		87,059,810				
1968		174,119,620				
1978		261,179,430				
1988		348,239,240				
1990		365,985,080				
1991		389,358,811

[1] In addition to repayments under the provisions of the Government Corporations Act, 1948, bond redemptions of $8,572,500 and other repayments of $15,059,019 were made prior to fiscal year 1948.
[2] Estimated.

PAYMENTS TO THE UNITED STATES TREASURY

Payments to the United States Treasury for 1955 are presently estimated at $55,172,000. Of this total, $50 million would be from power revenues and $5,172,000 from nonpower sources. This would bring the total payments in cash from TVA to the United States Treasury general funds to $178,342,665, of which $151,131,519 applies to power investment. This is $38,620,000 more than the scheduled payment requirements as of that date. The estimated power repayment is subject to revision following completion of studies now under way regarding payment of interest on appropriations made for power purposes.

REPAYMENTS FROM POWER REVENUES

The Treasury funds employed in the power program are repayable to the Treasury from net power proceeds under the provisions of the Government Corporations Appropriation Act, 1948. This act requires that not less than $2,500,000 of TVA bonded indebtedness shall be repaid annually; that total repayments (including principal payments on bonds) shall be not less than $87,059,810 by June 30, 1953; and that an equal amount be repaid during each succeeding 10-year period until a total of $348,239,240 has been paid. In addition, new appropriations invested in power facilities must be repaid within 40 years after the year in which the facilities go into operation. The first additional amount, $17,745,840, is repayable by 1990. This and successive amounts repayable for new facilities, including those provided for in TVA's budget program for 1955, are reflected in schedule C–1, page 90.

TVA's rate of return on its investment in power facilities is more than sufficient to meet the repayments required. Since the total net investment in power facilities comprises both appropriation-financed and revenue-financed plant, the average repayments of appropriations required over the years could be met with an annual rate of return of something less than 2½ percent on the total net investment. During the period 1933–53 TVA's power operations have provided an average annual return of more than 4 percent on investment. There are variations in the rate of return from year to year. Favorable streamflows and markets for supplemental power resulted in returns of 5.8 percent, 5.4 percent, and 4.7 percent for 1950, 1951, and 1952, respectively. The rate of return in 1953 was 2.7 percent. It is estimated to be about 3¼ percent in 1954 and about 4½ percent in 1955 if average streamflow conditions prevail.

As provided in section 26 of the TVA Act, power revenues are used to finance the expenses of power operations and the construction of certain power facilities. In determining the amount to be repaid to the Treasury in any 1 year, these requirements and the need for working capital must be considered. These requirements vary substantially from year to year depending on the demand for power, the volume of construction work required to meet this demand, and, most important, variations of streamflow from the average conditions assumed for budget estimates. If low streamflow should occur during the remaining months of 1954 or in a substantial portion of 1955, the net of funds available from power operations could fall below estimates by as much as $30 million—due partly to a reduction in revenues but mostly to increased power production expenses. Another factor to be considered in determining repayments for a particular year is that the full rate of return on large investments in new capacity cannot be expected to be realized immediately upon placing the plant in service. In view of the wide fluctuations in the requirements for power revenues to meet operating expenses, finance capital additions, and provide working capital, year-to-year repayment plans must be reviewed from time to time as the situation unfolds. The need for flexibility in scheduling payments was recognized both in section 26 of the TVA Act and in the repayment provisions of the 1948 Appropriation Act.

In order to assess TVA's performance in repayments actually made through June 30, 1953, and those budgeted for fiscal years 1954 and 1955, these figures are compared on the foregoing schedule C–1 with (1) minimum repayments required under the 1948 law and (2) repayments that would be made under a hypothetical schedule which assumes that each increment of investment would be repaid in equal installments of one-fortieth each, beginning with the year immediately following completion of construction. As seen from schedule C–1, repayments under the 1948 law made and budgeted through June 30, 1955, are about 45 percent more than those which would have been made on the basis of repaying each year one-fortieth of the plant investment at the end of the previous year. Because of the uncertainties in the demands on power revenues from year to year, it may be necessary in some future years to pay less than the calculated one-fortieth figure; in such instances the payments already made ahead of schedule will keep the average high enough to meet the 10- and 40-year requirement.

The Bureau of the Budget, TVA, and other Federal agencies have been asked to develop recommendations relative to payments to the Treasury of interest on appropriations made for power purposes. Such payments as may be subsequently made effective for fiscal year 1955 would require an adjustment in the amount budgeted for repayment in that year.

REPAYMENTS FROM NONPOWER SOURCES

The balance of nonpower proceeds at the end of each fiscal year not required for the purposes enumerated in section 26 of the TVA Act are paid into the Treasury prior to the end of the following calendar year. The 1955 budget is based on repayment during fiscal year 1955 of $5,172,000, which is the estimated balance of nonpower proceeds at June 30, 1954. Payments from nonpower sources during 1953 were $4,229,268 and are estimated at $4,676,977 in 1954; the total of such payments through June 30, 1955, is estimated to be $27,211,146.

Power proceeds

	1953 actual	1954 estimate	1955 estimate
Income for year:			
Power operations	$105,004,030	$134,920,000	$200,312,000
Other income	888,950	18,000	−62,000
Total income for year	105,892,980	134,938,000	200,250,000
Program requirements:			
Expense of power operations	66,963,344	80,062,000	109,305,000
Acquisition of assets	19,720,496	30,987,000	25,694,000
Power portion of expense of multipurpose reservoir operations	1,329,464	1,549,000	1,573,000
Changes in power inventories	4,249,092	5,619,000	8,236,000
Total program requirements	92,262,396	118,217,000	144,808,000
Balance, current year	$13,630,584	$16,721,000	$55,442,000
Balance, previous year	39,127,128	37,757,712	34,478,712
Total available for contingencies and payments to U. S. Treasury	52,757,712	54,478,712	89,920,712
Payments to U. S. Treasury:			
Retirement of bonds	5,000,000	5,000,000	15,000,000
Repayment of investment	10,000,000	15,000,000	35,000,000
Total payments to U. S. Treasury	15,000,000	20,000,000	50,000,000

TRANSFER OF HAY AND PASTURE SEEDS

The PRESIDING OFFICER (Mr. UPTON in the chair) laid before the Senate the amendment of the House of Representatives to the bill (S. 2957) to provide for the transfer of hay and pasture seeds from the Commodity Credit Corporation to Federal land-administering agencies, which was, on page 2, line 11, strike out "1954" and insert "1955."

Mr. AIKEN. Mr. President, the bill was passed unanimously by the Senate on May 4, and provided for the transfer of grass seed from the Commodity Credit Corporation to other Government agencies during the fiscal year 1954. Inasmuch as the House did not pass the bill before July 1, it was necessary to amend the bill so as to make it read "fiscal year 1955."

I move that the Senate concur in the amendment of the House of Representatives.

Let me say this matter has been discussed with the majority leader.

Mr. GORE. Mr. President, I have checked with the minority members of the committee, and they are in agreement on this matter.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Vermont that the Senate concur in the amendment of the House of Representatives.

The motion was agreed to.

KLYCE MOTORS, INC.—CONFERENCE REPORT

Mr. LANGER. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5185) for the relief of Klyce Motors, Inc. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 5185) for the relief of Klyce Motors, Inc., having met after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the Senate amendment numbered 1 and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert "$91,000"; and the Senate agree to the same.

WILLIAM LANGER,
HERMAN WELKER,
ESTES KEFAUVER,
Managers on the Part of the Senate.

EDGAR A. JONAS,
USHER BURDICK,
THOMAS J. LANE,
Managers on the Part of the House.

Mr. LANGER. Mr. President, I ask unanimous consent for the immediate consideration of the conference report. Two amendments were made by the Senate, as follows:

The first amendment raised the amount of the claim from $38,960 to $116,982.76.

The second amendment struck out the 10 percent attorneys' fees and provided that no part of the moneys should be paid as attorneys' fees.

At the conference between the House and Senate conferees it was agreed that the House would recede from the disagreement to amendment No. 2 relating to attorneys' fees, and the conferees further agreed that the sum of $91,000 was a fair amount in regard to this claim.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the report?

Mr. HENDRICKSON. Mr. President, reserving the right to object, I should like to inquire what the Senator said the attorneys' fees amount to.

Mr. LANGER. They were eliminated entirely.

Mr. HENDRICKSON. I have no objection.

Mr. KEFAUVER. Mr. President, reserving the right to object, has the report been agreed to by the House conferees?

Mr. LANGER. Oh, yes.

Mr. KEFAUVER. I am one of the conferees, and I am in favor of the conference report.

Mr. LANGER. It has been agreed to unanimously by the conferees on each side.

Mr. President, I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from North Dakota.

The motion was agreed to.

MUTUAL AID

Mr. LANGER. Mr. President, last year when the mutual-aid bill was before the Senate for consideration my minority views were not printed. As a matter of fact, while we were waiting for them to be printed, the bill was passed. This year I intend to bring to the attention of the Senate the mutual-aid bill before it comes to the floor of the Senate, so that every Member of this body may know exactly what the Government is giving away to foreign countries in this giveaway program.

The committee ordered the bill reported 3 days ago by a vote of 11 to 2. The senior Senator from North Dakota was joined by the junior Senator from

UNIVERSITY OF MICHIGAN LIBRARIES

Iowa [Mr. GILLETTE] in opposing the favorable report on the bill.

Mr. President, the mutual-aid bill which will be reported to the Senate very shortly, is not a matter of the $3,100,000,000 which is being given away this year. The $3,100,000,000 is simply in addition to what has not been expended under prior appropriations. We shall be giving away, instead of $3,100,000,000, the sum of $12,850,000,000. I repeat the amount: $12,850,000,000. That is the amount which the taxpayers of the United States are being called upon to give to other countries, because that is the sum involved in the decision we shall be making. In other words, we shall only be adding $3,100,000,000 to the sum which is left from prior appropriations. I cannot make that too clear. Every Senator who votes for the $3,100,000,000 will be simply adding that amount to unappropriated sums, which will total to the grand sum of $12,850,000,000.

Mr. President, the assessed valuation of the State of North Dakota, when I was Governor, was approximately $2 billion, at 100 percent valuation. I might add that 12 States in the Union have a lower assessed valuation than does the State of North Dakota. So we are giving away, in the so-called mutual-aid program, between 6 and 7 times the value of every acre of land and all the real and personal property, including every horse, cow, and sheep, within the boundaries of North Dakota.

Since I have been in the Senate, I have voted against each and every item of the giveaway program. In the Senate, I voted against the ratification by the United States of the United Nations Charter, although I had with me only the vote of Senator Henrik Shipstead, of Minnesota, and the vote of the dying Senator Hiram Johnson, of California, then confined to his death bed in the hospital, and who was paired against ratification.

I have spoken on this matter on the Senate floor time and time again. I shall, in this report, simply reiterate, reassert, reemphasize, and redeclare, as strongly as I can, what I said last year on the same subject.

Mr. President, I am only a small town lawyer from North Dakota. It may be that I am not equipped, by intellect or training, to weigh such mysterious and extraordinary matters. But when I look upon the present policy of the United States, and especially that part which passed under the name of mutual aid, I am tempted to consider that we have been sold a bill of goods by foreign countries.

It seems to me to be a mockery of common sense when 2 and 2 are alleged to be anything other than 4. This may be a piece of oversimplification, but it is a standard rule of thumb that we can all go by. A policy which rests on other and more mysterious considerations may be suspected to be more occult than factual, and to consist, at best, of a pretentious tilting at windmills. At most, it is a fraud. I wish to emphasize that. It is a fraud upon the credulity of the American people, to the degree that they have been hoodwinked by it. It is my considered judgment that the policy of so-called mutual aid constitutes just such a fraud.

It seems to me, further, Mr. President, that there are currents here which run deeper than men perceive, and that when these terrible times are reduced to the dry dust of history, there will appear to be very little difference between the world strategies espoused by former Secretary of State Acheson and those followed by his present successor, Mr. John Foster Dulles.

Now that the sound and fury of campaign declarations have abated, it becomes increasingly evident that the present administration has inherited and accepted the very policies against which the Republican leaders once inveighed so loudly and so clearly. These policies, in simple fact, were made with Republican participation. They are being continued by the Republican administration. I wish to add that the administration under Mr. Dulles is exactly like that of Mr. Acheson's.

One of the chief architects of that policy, John Foster Dulles, has now become the spokesman of the American people to the nations of the world, and he has brought with him to the halls and the meeting chambers of the State Department the entire Truman-Acheson foreign concept, almost without variation.

I do not like to labor the subject, for it is not one which gives me pleasure to dwell upon. But is it not true that the identical bipartisan nature of our policy, under which Senator Vandenberg and other leading Republicans cooperated fully with the Truman-Acheson axis, though they paid lip service to another ideal, continues today in all of its main essentials?

Did we not continue to appease the Communists at Korea, although we sometimes clothed our doubts, vacillations, and retreat from principle in brave words? Do we not still continue to pretend that we were not at war with the Chinese, whose great armies had laid the northern half of the Korean peninsula prostrate? Did we not continue another vain and cynical pretense by affecting to fight under the banner of the United Nations in a war which was being fought by American soldiers and American arms and which was paid for by American tax moneys?

Is it not true that this pathetic fraud against the American people and against ordinary simple honesty continues under conditions in which our so-called European allies have constituted themselves the main suppliers to the Chinese Communist enemy for a commercial profit?

Consider the wholly inadvised jaunt of Secretary Dulles over the Eurasian world some months ago, symbolized by his presentation of a nickel-plated revolver to the Egyptian strong-arm man, General Naguib, in the name of the American President, Dwight Eisenhower. Has not the whole world seen the pictures of this small-time dictator brandishing this absurd weapon? Do not Naguib and his successors represent the type of authoritarian usurpation of government to which we have proclaimed ourselves unalterably opposed? Is his country not the same Egypt which did not lift a hand in its defense when Rommel threw its legions at Cairo and Alexandria? It is the same Egypt which was thrown back on its heels by the untrained regiments of poorly armed little Israel during the latter's war for independence. Does any military man question today that this opera-bouffe country could be reduced to impotence in a matter of days by two good British companies attended by half a dozen airplanes?

Everywhere on Mr. Dulles' itinerary he played the part of a big bluff Santa Claus without whiskers—a few million extra here, accompanied as he was by Mr. Stassen, and more millions in the next place; new M47 tanks to a Yugoslavia—whose devotion to our cause is more than questionable; a thousand jet aircraft of new design to the Turks, who, noble as they may be, could not resist Russian arms for a week. At the same time we are told there is not enough money to equip our own Air Force, which the late General Vandenberg assured the Congress is already below the danger line.

Can any Senator find in these ill-considered, childlike actions any justification for faith in Mr. Dulles and in the future? Where is the realism here, and where is the good sense? Where is that clarity of bold purpose which the present position critically demands?

Is it not true that we continue to follow the identical foolish and unsound policy of "Asia for the Europeans," while Moscow has been allowed to take up unchallenged the slogan of "Asia for the Asiatics"? Has not the Kremlin made the most of this in the tremendous struggle for the conquest of men's minds? And have we not had to answer this challenge with the bodies and lives of our best young men on the bloody battlefields of Korea and elsewhere?

THE PRESIDENT'S FARM PROGRAM

Mr. HUMPHREY. Mr. President, will the Senator from North Dakota yield to me with the understanding that my remarks shall come at the end of his address?

Mr. LANGER. Mr. President, I yield to the Senator with the understanding that I will not lose the floor, and that his remarks will be printed in the RECORD at the end of my remarks.

Mr. HUMPHREY. Mr. President, as of yesterday I noticed an editorial in the New York Times of July 14, 1954, entitled "Where Leadership Counts." The New York Times editor gave his views in reference to the proposed farm legislation which will soon be before the Members of the Senate, and in the latter part of the editorial the editor took the time and the pains to make a particular reference to the junior Senator from Minnesota. The editorial reads in part:

> Or are they going to look to committee members like Senator HUBERT HUMPHREY, who likes to be considered a liberal, but who is responsible for one of the most backward-looking of all the provisions that make this bill thoroughly iniquitous—the creation of a status for four more crops that would put them almost on the same footing as the six existing "basic crops"?

To ask that question is like asking which would have the greater firepower—a machinegun battalion or a battalion armed with flintlock muskets.

I appreciate the courtesy of the editor of the New York Times. I am sure he is an expert in agricultural matters. I can see the fields of waving grain on the roofs of the penthouses of New York City. I am sure he has great knowledge of petunia plants and such other garden variety products. I recognize that the acres of Central Park are a great inspiration for editorial comment on the complex subject of agriculture. With those facts in mind, I appreciate the views of the editor.

I have always had a high regard for the New York Times and its editorial staff, and I still have. The staff has a right to be wrong, as anyone else may be, and I am sure that after the editor reads my letter to the New York Times he will correct the error of his ways.

I have only one comment to make to the editor of the New York Times. When the Times discusses foreign policy, immigration, and economic conditions, it is on familiar ground; but when it gets into the field of agriculture, I think it is short of talented personnel able to make concise and accurate expressions on the subject.

I should now like to read the letter which I wrote to the editor of the New York Times:

JULY 15, 1954.

The EDITOR,
New York Times, New York, N. Y.

DEAR MR. EDITOR: I have read with considerable interest your editorial of July 14, entitled "Where Leadership Counts." In this editorial you have vigorously supported President Eisenhower's farm program. There are certain aspects of that program with which I have expressed sharp disagreement. You have gone out of your way to single me out for editorial criticism, and in your reference to me have said: "Is responsible for one of the most backward-looking of all the provisions that make this bill thoroughly iniquitous—the creation of a status for 4 more crops that would put them almost on the same footing as the 6 existing basic crops."

Now, what are the facts? First of all, it is very apparent that you are supporting the Eisenhower farm program as presented to the Congress. You obviously are not supporting the Eisenhower farm program as presented to the voters in the fall of 1952. You, of course, vigorously supported the candidacy of Mr. Eisenhower in 1952. I would imagine that your support would include not only the man, but what he stood for.

You have always taken pride, I am sure, in the fact that your editorial columns are based upon principle and not upon expediency—facts, and not just personalities. Therefore, let me call to your attention the statement of Mr. Eisenhower at Kasson, Minn., on September 6, 1952, when he said: "As provided in the Republican platform, the nonperishable crops so important to the diversified farmer—crops such as oats, barley, rye, and soybeans—should be given the same protection as available to the major cash crops."

Realizing that a New York City editorial editor may not be fully informed on agricultural matters, permit me to objectively interpret this statement of President Eisenhower. It means what it says, that crops such as oats, barley, rye, and soybeans should be given the same protection as the so-called basic commodities. What Mr. Eisenhower meant was apparently 90 percent of parity for these crops, since he had fully endorsed 90 percent of parity for the basic commodities. What he also meant by the language of his speech was that oats, rye, barley, and soybeans should be included under mandatory price-support provisions, just as the major cash crops. There can be no other interpretation to the statement of the then Republican candidate for the office of President.

Now, what was the proposal of Senator HUMPHREY? It was to do exactly what the President had recommended in his campaign and in his pledge to the farm people at Kasson, Minn., on September 6, 1952. There may be one exception to this. The Humphrey amendment does not require 90 percent of parity for oats, barley, rye, and soybeans. In fact, it does not apply to soybeans at all. My amendment included oats, barley, rye, and grain sorghums, all alternate or substitute feed grains for corn. My amendment required that these grains be included under mandatory price-support provisions as the President had recommended when he was a candidate, but that the parity price support should be based on the feed value ratio equivalent to corn. In other words, the price of these alternate or substitute feed grains should be related to the feed value as compared to the feed value of corn.

Now, what would be the result of this in terms of price. If corn is supported at 90 percent of parity my amendment would provide mandatory price supports for barley at 75 percent, oats at 72 percent, rye at 68 percent, and grain sorghums at 84 percent. Now, while these price-support levels are less than corn, they provide a price balance between corn and the alternate grains that relate directly to the feed equivalent value of the respective crops.

Frankly, Mr. Editor, the Humphrey amendment is a forward-looking, modern, and fair provision. The purpose of my amendment is to maintain a balance between price-support levels of the feed grains so that economic pressures will not be built up that will endanger the programs for these and other crops that compete for land, capital, and labor resources and for the market.

I respectfully suggest to you, sir, that your editorial is inaccurate and misleading. It is but another example of the misrepresentation that has characterized this debate on agricultural policy.

Sincerely yours,

HUBERT H. HUMPHREY.

Mr. President, that is the letter I sent to the New York Times editor.

I wish to say to the New York Times editor that if he is going to join in this farm program debate, I ask him to live up to the principles and purposes of his newspaper. I say to that newspaper that on this issue, it was partisan in 1952 and it is partisan in 1954. In 1952, that newspaper apparently endorsed Mr. Eisenhower; and it sent throughout the land, millions of copies of its newspaper, pledging itself in support of Mr. Eisenhower; and when Mr. Eisenhower was in Minnesota, he pledged himself in support of the Humphrey amendment, because all the Humphrey amendment does is put into action what Mr. Eisenhower, as a candidate, promised.

Mr. President, the trouble with the debate on the farm program is that there are two programs—one, the program which was promised; and the other, the program on which the administration is delivering. I am working on the program the administration promised, not the one the administration sent to Congress.

Again, I wish to say that the editorial is grossly misleading, misrepresents the facts, is inaccurate, and leads to distortion of the truth. I am shocked and amazed that an editorial in the New York Times would stoop to such low levels.

I shall be back again, on another day, to take on editors or anyone else on this issue.

I wish to help the President keep his promises. He may wish to run for office again; and if he does, he should keep his promises.

Mr. President, I thank the Senator from North Dakota for yielding to me.

Mr. LANGER. Mr. President, I ask unanimous consent that the remarks of the distinguished Senator from Minnesota appear in the RECORD at the conclusion of my remarks.

I may say that if the Senator from Minnesota wishes to have me yield him another hour, in order that he may talk further along the same lines, on the same subject, I shall be very glad to yield such time to him.

Mr. HUMPHREY. I may come back to the Senator from North Dakota, because he is a very good friend of the farmer, and he agrees with my point of view.

Mr. WILEY. Mr. President——

Mr. LANGER. I yield to the senior Senator from Wisconsin, if I may obtain unanimous consent to do so without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILEY. Mr. President, as I listened to the statements made by the distinguished junior Senator from Minnesota, there came to my mind a statement that Lincoln is said to have made, to the effect that, "If I were to pay attention to all the misinformation given out about me, I could not do anything else."

I remember that another philosopher said, "If you cannot say something good about me, say something, even if it is not good, but say something."

So, Mr. President, with those two bits of human wisdom, I think we understand how some folks get publicity and others do not. The press plays a great part in keeping some folks before the public.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1945, as amended, and for other purposes.

Mr. COOPER. Mr. President, will the Senator from North Dakota yield to me?

Mr. LANGER. I yield with the understanding that I do not lose the floor.

Mr. COOPER. Mr. President, I have a short speech to make on the pending bill. The distinguished Senator from North Dakota has kindly consented to yield to me for this purpose if I can get unanimous consent that, at the conclusion of my remarks, he may have the floor again. I now ask unanimous consent for that purpose.

UNIVERSITY OF MICHIGAN LIBRARIES

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. COOPER. Mr. President, the amendment which we are debating was proposed by the junior Senator from New Mexico [Mr. ANDERSON] to S. 3690, to amend the Atomic Energy Act of 1946. I ask unanimous consent to insert in the RECORD at this point the text of the amendment.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

On page 80, line 9, insert the following: "The cancellation costs authorized in this section shall be payable only to the extent of any actual loss suffered by the contracting party. The authority of the Commission to enter into contracts for electric utility services shall extend only to contracts with persons who agree to supply the contractual amount of electric utility service directly to the installations of the Commission named herein. Any contract entered into by the Commission pursuant to this section shall be submitted to the joint committee and a period of 30 days shall elapse while Congress is in session (in computing such 30 days, there shall be excluded the days in which either House is not in session because of adjournment for more than 30 days) before the contract of the Commission may become effective: *Provided, however,* That the joint committee, after having received such contract, may by resolution in writing, waive the conditions of or all or any portion of such 30-day period."

Mr. COOPER. The clear purpose of the amendment is to insure that the Atomic Energy Commission shall be limited in its authority to contract and purchase power only for its direct needs. Its immediate purpose is to forbid the AEC to execute a proposed contract with a private-utilities company sponsored by the Middle South Utilities and the Southern Co. for the supply of 600,000 kilowatts of power to the TVA system. This contract has been referred to as the Dixon-Yates contract.

I intend to support and vote for the amendment because I believe that its purpose is sound. I do not believe that the Atomic Energy Commission should be placed in a position of contracting for power that is essentially intended for the civilian and domestic needs of the western portion of the TVA system. Further, I believe that such a contract could set a precedent for similar contracts by the AEC and perhaps other independent agencies for the supply of power to the TVA and that such contracts would unquestionably in time change the character, function, and purpose of the TVA. Congress created the agency and if any basic alterations in its nature are to be made, they should be made directly by the legislative action and not by the direction of executive agencies of the Government.

I have listened to the lengthy statements which have been made on both sides of the issue. I do not subscribe to many of the attacks on the proposal. In many instances it seems to me that they have been extravagent and, in some cases, reckless. But quite apart from them, the proposal raises some extremely substantive questions. There is first the question of whether the AEC has the authority to negotiate such a contract. There is the second question of whether it is the policy of Congress to maintain the TVA as an independent agency. There is finally the very important question as to how the power demand of the Tennessee Valley Authority for the Memphis area can be met if the Dixon-Yates proposal is not adopted.

These issues are not simple ones. Consequently, I have not found them as susceptible of easy solution as has been made to appear in some quarters.

I am sure of one thing. It is that the President of the United States has been motivated by the sincerest purpose, in his effort to assist in meeting a power deficiency in the Memphis area which TVA officials have been insisting must be corrected.

I do not intend to deal with questions of the relative costs of the 600,000 kilowatts as they would be provided by the TVA or by the Dixon-Yates group. Many figures have been put forward, and while this factor is an important one in the issue, I do not feel qualified, like many other Members of this body, to decide which cost estimates have the soundest basis.

My position against the contract is based first on my belief that the AEC does not have the authority to sign a contract to perform a function which has been given to the TVA by Congress. It has been maintained that the purpose of the contract is to supply the requirements of the AEC. There is no question that the AEC has the power to contract with Dixon-Yates or any private power company to supply its plants at Paducah or Oak Ridge, or at any other place. But this is not the case with which we are dealing. The TVA has now under construction at Paducah the Shawnee steam plant, which will have a capacity of 1,350,000 kilowatts, an amount that will be sufficient, according to the AEC, to meet the needs of the gaseous diffusion plant at Paducah in conjunction with the power that is to be provided by the privately owned Electric Energies, Inc.

It is clear that the power shortage in the TVA area is not at Paducah but in the Memphis area. For the past 2 years—and I think before that—TVA officials have asked authority to construct a steam plant at Fulton, 30 miles above Memphis, to alleviate this threatened deficiency. Now the AEC proposes to contract with private utilities for a steam plant, located in Arkansas across the river from Memphis, 300 miles from Oak Ridge, and 160 miles from Paducah, that would have as its basic purpose the ultimate provision of power to Memphis, which has been since 1934 a part of the TVA system. I would like to make it clear that I am not critical of the good will of the AEC in desiring to make return to the TVA of the power which it has drawn from these TVA sources. Neither am I critical of the good intention to make available to the Memphis area power which it has not been able to secure. The question is simply, first, one of the power and authority of the AEC to take these steps.

It is my position that the AEC, as an independent agency of the executive branch of Government created by the Congress, with power fixed by the Congress, does not have the authority to direct a supply of power from private sources or from any sources into the TVA power system. The act which created the TVA in 1933 gave to it the statutory authority to acquire, develop, and make available for distribution its own sources and supply of power. It is a right and function of the TVA and not of the AEC. It is a right which can be limited only by Congress through its legislative power, including the control of appropriations, or by the executive in certain specific cases. If the AEC can exercise a power of the TVA in this instance, we can in logic ask if it can exercise other powers of the TVA, if it can make similar contracts which affect other independent agencies of the United States. We can ask if it can continue to make contracts to supply power to the TVA in the event that it becomes necessary to draw larger supplies of power from the TVA system and should desire to replace that power. I do not ask these questions captiously nor do I assume that the AEC would undertake to exercise the powers of the TVA or any other independent agency unless it felt that the exercise bore some relation to its own functions. But I make these suggestions to point up the real defect in the position of the AEC. That defect is that the AEC cannot exercise any power which has not been granted to it by Congress. Certainly it cannot assume to exercise power granted to the TVA by Congress.

Both the TVA and the AEC are independent agencies exercising functions which are primarily executive and administrative. They are, of course, the creatures of Congress and have only such powers that Congress has seen fit to give them. Both the TVA and the AEC Acts prescribe the powers which these agencies shall have and which shall be exercised by them in the conduct of their affairs. In the case of *Morgan* v. *TVA* (115 Fed. (2d) 990, 6th Circuit, 1940), in which case certiorari was denied by the Supreme Court—312th United States Reports, page 701—we find this statement by Judge Simon:

It requires very little to demonstrate that the TVA exercises predominantly an executive or administrative function. To it has been entrusted the carrying out of the dictates of the statute to construct dams, generate electricity, manage and develop Government property. Many of these activities, prior to the setting up of the TVA, have rested with the several divisions of the executive branch of the Government.

In this case the issue was the power of the President to remove a member of the Board of Directors of TVA and the language which I have quoted was not the deciding factor in the case, but I have quoted Judge Simon's statement to indicate that in its management of power TVA is following the dictates of the Congress.

In a case affecting the AEC, *Carson, Commissioner of Finance and Taxation,* v. *Roane-Anderson Company et al.* (342 U. S. 232), dealing with the question of the immunity of a private contractor of the AEC from local taxation, the issue turned upon whether the Atomic Energy

Act gave the Commission the power to enter into contracts with private persons to produce fissionable materials. In both of these cases the issue was the nature and the powers of these two independent agencies. Certainly, neither agency is given the power to act for the other in any way.

There is a general Federal statute—31st United States Code Annotated, paragraph 686 (a)—which has been referred to in the debate, which gives any executive department or independent agency the right to place orders on another agency for services it can supply under certain conditions. This general statute does not apply in this case. The problem here is not the general supply of power to AEC but the general supply of TVA. The question before us is one of facing squarely the issue of the powers of the AEC and the TVA as fixed by Congress and their right to initiate policy in their own fields.

It may be asked: Where will the TVA be if the contract is not signed? The Budget Bureau's purpose in proposing the arrangement with the private utilities was to alleviate the threats of a power shortage forecast for the fall of 1957 by TVA officials. In the House appropriations hearings this February, Gordon Clapp stated that a 1957 shortage of 17,000 kilowatts would exist even if arrangements should be made with the private utilities to take over 500,000 kilowatts of the TVA commitment to the AEC plant at Paducah. Since then the AEC has made it known that it will require an additional 135,000 to 175,000 kilowatts at Oak Ridge. This could mean, then, on the basis of TVA estimates that the area which obtains its power from the authority would face a deficiency of as much as 692,000 kilowatts by 1957.

The Budget Bureau has not recommended to the Congress the appropriation of funds for steam generating units that would be necessary to meet such a shortage. The Congress, under Democratic as well as Republican leadership—I say that because this request, I believe, was made in the 2 years prior to 1953—has shown an increasing disinclination to go along with the TVA in its budgetary requests. The budgetary recommendations of the past 2 years have been cut further by congressional action. The development of the region in recent years has been such as to harden the sympathy of other areas which made appropriations for the TVA easier to obtain in the years gone by.

But despite this hardening attitude of Congress, the TVA is still the integrated power system for a 70,000 square mile area, and that power system must increase its capacity just as all the utility systems in the country have been increasing their growth at an average rate, I am informed, of 9.6 percent a year for the past 7 years. It has been suggested that the TVA buy the additional power it needs from its neighboring utilities. TVA has bought additional power, but the purchase of such a large block of power, which would involve interim power and long transmission, are costly and clearly out of question for a public system whose purpose is to provide power at the lowest rate possible. It has been suggested that the major cities in the TVA system build their own steamplants and thus alleviate the shortage. This would end the integration which is the finest feature of the TVA system or of any good power system.

How then is the TVA to meet the growing needs of the area which it serves in the face of a stringent budget, the hardened attitude of Congress and of other areas, and the vast cost of electrical generating equipment on the scale that is required?

I had hoped that in this statement I could make some positive and constructive suggestions with respect to the problem. I believe it will be necessary for the new Chairman of the TVA, when he is appointed, to examine the capacity of TVA and the power needs of the area.

If after his examination, he should recommend to the Congress and to the executive branch that appropriations should be made for the construction of steam plants by the TVA to supply power deficiencies of the area, it seems to me that such a recommendation by an appointee of the President would have to command respect.

If, on the other hand budgetary problems, an adamant attitude of the Congress, and the views of the executive branch combine against the construction of steam plants by Government appropriations, then a new alternative to the type of proposal we are considering—that is, the supply of power to TVA by a private power company—must be developed.

I suggest one alternative that could meet the necessities of the situation and at the same time preserve the TVA as an integrated system, in charge of its own affairs.

The alternative is that the new Chairman and the Board examine the possibility of independent financing with a view toward determining the best way by which the authority can obtain its capital investment by the issuance of bonds. I do not know whether the bonds should be issued by the TVA as an independent Government entity, whether they should be issued with a Treasury guaranty, or whether they should be issued by authorization through the Treasury.

It is significant that the Von Tresckow syndicate, which had no actual experience in utility operation and no management organization, was in a position to offer to provide approximately $100 million for the construction of a steam plant at Fulton, Tenn. To accomplish this end the syndicate proposed to sell 3½-percent bonds to the insurance companies and to charge a $4 million fee for its role in the money raising. This plan of using private capital for the financing of a public facility relied completely on the credit of the United States Government. In other words, the bondholders were willing to stake their money on the fact that the Government would last for 32 years and meet its obligations for that long.

If a private syndicate can make such an offer, there should be no reason why the TVA, if it is finally compelled to take this step, cannot itself sell bonds and enlist private funds without paying a $4 million fee. I have just read an article in the New York Times, dated September 9, 1953—an old article—which describes the way in which the Hydroelectric Commission of Ontario, which operates over a larger area and has almost as much capacity as the TVA, has financed all of its development through the issuance of bonds guaranteed by the provincial government. All indebtedness is borne directly by the Hydroelectric Commission, which obtains an approval and a guaranty that are now granted almost perfunctorily by the Government. Under this arrangement, investors have been willing to loan the system all of the money that has been necessary for a vast construction program costing over $1 billion and extending to such projects as the development of the Niagara River and the St. Lawrence River resources.

It may be argued that this alternative would destroy the character of TVA. I point out that in 1939 the TVA was authorized to issue some $65 million of bonds. They were sold by the Treasury, and I am informed that interest and principal payments have been made on this issue, and that the issue has been reduced to a balance outstanding of $29 million.

It may be argued that this would mean saddling the TVA with interest charges. In this connection, I would like to quote from page 2464 of this year's House appropriations hearings when former Chairman Gordon Clapp was asked by Representative JONAS, of North Carolina:

> You do not take into consideration any interest in fixing rates, do you, because you do not pay it?

Clapp replied:

> But we take into account a rate of return higher than the interest cost. I think you are overlooking a very important thing. We have been averaging between 4 and 5 percent as a rate of return on the average investment in these power facilities. Suppose you took 2 or even 2½ percent as an interest cost to the Government. We would still have enough left to make our 40-year return, and the Government would still have the property. The electrical rates that produce that rate of return would not only retire the capital investment and pay interest but would leave a little over. No utility company retires its capital debt that way. It refinances. So it is carrying interest but not amortizing capital. TVA is earning a rate of return that can do more for the owners than private utilities can do, leaving out the income-tax question.

I want to make it clear that I do not want to use this statement of Mr. Clapp out of context, to indicate that he was proposing the payment of interest, to independent financing by the TVA, but, assuming that Mr. Clapp's statement is correct, it would seem to me that as a better alternative than the Dixon-Yates contract, the TVA Act could be amended in such a way as to provide the TVA with the flexibility that it needs to be a power system capable of answering the challenge of its region. Again it could be direct action by the Congress; not indirect action by the AEC or some other independent agency of Government.

It has been said that the power situation is so urgent in the Tennessee

UNIVERSITY OF MICHIGAN LIBRARIES

Valley that action must be taken in this session of Congress to avert an emergency. However, the Tennessee Valley Power Distributors, the men most directly concerned with the power supply in the area, have stated in a letter that was signed by the president of their association, R. V. Taylor, and placed in the RECORD by the senior Senator from Alabama on July 8, that they would rather run the risk of a shortage in 1957 than see the contract between the AEC and the utilities signed.

Further, the figures show that there is no shortage of power for AEC that is not available in the TVA system. If there is any shortage of power, it is in the Memphis area.

That shortage has been existing for some time.

Because of these facts, Mr. President, and in this spirit, I would recommend that the Dixon-Yates contract not be executed, or at least that the matter be put over until early in the next session when it may be hoped that the administration will have a recommendation aimed at economic self-sufficiency on the part of the TVA, developed in the spirit and purpose of the TVA Act. If such a recommendation were enacted by Congress, the Dixon-Yates proposal would cease to be an issue. Further, it would serve to clear away a great many of the continuing problems of TVA in its relationship with the Congress and the executive branch of the Government.

I should like to say that whatever may be the views of individual Members of the Senate, the fact cannot be escaped that TVA exists because of an act of Congress. It exercises functions which have been given it and prescribed for it by the Congress. No other agency has those powers. No other agency can assume or usurp those powers. Over a long period of years, since 1933, Congress has carried into effect the purposes of the act. Congress has confirmed in many ways, by legislation and appropriations, the intent of the act to create an integrated public power unit operated and controlled by the Tennessee Valley Authority for the purposes which are stated in the act. I shall not attempt to detail those purposes, except to say that they have had their effect not only locally, but nationally and internationally. I do not believe it is within the function of any executive branch of the Government to attempt to alter the nature of this authority without legislative action by the Congress.

I shall vote for the Anderson amendment. If it should not be adopted, I urge again that the Dixon-Yates contract should not be consummated. I state again my principal ground, that it is not within the power of the AEC, and that its eventual effect would be to weaken by indirect action the character and purpose of TVA.

If Congress wishes to change TVA and alter its purposes, that is the right of Congress. But Congress itself acts under law. We are as much subject to law as is any private citizen.

Mr. President, I wish to thank my good friend, the distinguished Senator from North Dakota [Mr. LANGER] of his kindness and great courtesy in yielding to me in order that I might make this statement.

Mr. UPTON. Mr. President, will the Senator from North Dakota yield?

Mr. LANGER. I yield.

ADM. FORREST P. SHERMAN

Mr. UPTON. Mr. President, on July 4, 1954, memorial exercises for the war dead were held at the Cathedral of the Pines, Rindge, N. H., in which special tribute was paid to the late Adm. Forrest P. Sherman, a native of New Hampshire. The Cathedral of the Pines, beautifully located in a pine grove on the crest of a hill looking out on Mt. Monadnock, was established by Douglas Sloane as a memorial to his son, Lt. Sanderson Sloane, who gave his life as a member of the Eighth Air Force in a raid on Germany on February 22, 1944. Mr. Sloane conveyed the Cathedral of the Pines to trustees to be held in memory of his son, for religious and other public uses.

Admiral Sherman was born in Merrimack, N. H., on October 30, 1896, and died, after a short illness, on July 22, 1951, at Naples, Italy, where he was a guest of Adm. Robert P. Carney. He was the second of a family of 6 sons and 1 daughter. The family early moved to Massachusetts where Forrest was appointed to the United States Naval Academy from the Eighth Congressional District. He graduated second in his class in 1917 and saw service in the Mediterranean during the First World War. In 1920 he was assigned to the Atlantic Fleet and, as Lieutenant Sherman, held his first command, the U. S. S. *Barry*, in 1921. In 1922, on shore duty at the Naval Air Station in Pensacola, Fla., he received flight training and qualified as a naval aviator. He became one of the Navy's best pilots and much of his career was with the Navy's Air Force. In 1923 he was executive officer of Fighting Plane Squadron 2, attached to the U. S. S. *Aroostook*. From 1924 to 1926 he was in charge of combat training at Pensacola. In 1927 he was assigned to the aircraft carrier *Lexington* and served on that ship and on the aircraft carrier *Saratoga* until 1930. In May 1931 he was reassigned to the *Saratoga* and in 1932 was given command of Fighting Plane Squadron 1, which won the aircraft gunnery trophy in 1932 and 1933. From June 1933 to June 1936 he was on duty at Washington as head of the Navy Ordnance Section. For 3 years, 1937–40, he was aviation officer on the staff of the admiral commanding the United States Fleet. He returned to the Navy Department in February 1932, serving with the War Plans Division in the Office of Chief of Naval Operations until February 1942. On May 31, 1942, as Captain Sherman, he took over the command of the U. S. S. *Wasp*, which in September was sunk by enemy action while covering reinforcements to Guadalcanal. He was the last man to leave his ship and for his extraordinary heroism was awarded the Navy Cross.

In 1943 he served as Chief of Staff and aid to Vice Admiral Towers, commander of the Air Force of the Pacific Fleet, and was promoted to the rank of rear admiral. He later became Deputy Chief of Staff to Adm. Chester W. Nimitz, commander in chief of the Pacific Fleet, and for his service under Admiral Nimitz in the implementation of operational plans, he was awarded the Distinguished Service Medal for contributing to the "successful prosecution of the war in the Pacific." He was present on the U. S. S. *Missouri* on September 1, 1945, at the formal surrender of Japan. After a brief assignment as commander of Carrier Division 1, he was ordered to Washington to serve as Deputy Chief of Naval Operations. For more than a year he represented the Navy in the preparation of plans for the proposed merger of the Armed Forces. In these conferences the differences between the Army and Navy were overcome and in the plan as finally developed, all three services—the Army, Navy, and new Air Department were to be separate branches. In the course of the hearings on the bill authorizing the merger, he drafted clarifying amendments defining the functions of the Naval Air Force and the Marines to assure their future within the Navy Department. When the naval forces were reorganized on June 1, 1948, he took over the command of the Sixth Task Fleet in the Mediterranean. In 1949, to bring to a close a bitter Navy-Air Force dispute, he was made Chief of Naval Operations. In this new position, he said that his chief purpose would be to "keep naval aviation up to its proper proportion in national defense."

Two weeks before his death, Admiral Sherman began his tour of the Atlantic pact defense area for the Joint Chiefs of Staff. In Madrid he opened negotiations with General Franco for United States naval and airbases in Spain. In Paris he reported on the Spanish mission to General Eisenhower and from there went on to Naples, where he died of a heart attack.

Admiral Sherman's brothers all served in the military forces with distinction. Present at the memorial services were Colonel Edward, Commander Kenneth, Colonel Paul, and Comdr. Ernest Sherman, and also his sister, Miss Mary Sherman. The principal speakers were Adm. Robert P. Carney, and Chaplain George L. Markle, United States Navy. I request unanimous consent to have their addresses printed at this point in the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

EULOGY TO ADM. FORREST SHERMAN, UNITED STATES NAVY, BY ADM. ROBERT B. CARNEY, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, AT THE CATHEDRAL OF THE PINES, RINDGE, N. H., ON SUNDAY, JULY 4, 1954

I am grateful for the opportunity to participate in this service honoring the memory of one of New Hampshire's distinguished sons. It permits me to render the Navy's accolade of "well done" to an officer who, through his service in the United States Navy, rendered a conspicuous and inspired service to his country.

Many years ago, John Paul Jones gave us his definition of those qualities required in a

naval officer. I could not improve upon his timeless language and I therefore quote it:

"It is, by no means, enough that an officer of the Navy should be a capable mariner. He must be that, of course, but also a great deal more. He should be, as well, a gentleman of liberal education, refined manner, punctilious courtesy, and the nicest sense of personal honor."

Even in these days which are far more complex than the era in which John Paul Jones lived, Admiral Sherman measured up to those rigid requirements. As he climbed the ladder of achievement, he performed each of his tasks to perfection, acquiring an ever-increasing background and fundamental technical knowledge, and at the same time, his inquisitive and acquisitive mind was absorbing an understanding of those other governmental functions with which the military is inseparably related.

In the test of World War II, he proved himself to be a fighting captain and a brilliant planner with a great capability for comprehensive strategic understanding.

He saw clearly the advantages which could accrue to the country from the closer integration of the three military services while at the same time never losing sight of the psychological inspiration that can be achieved only in the competitive and dedicated atmosphere of a closely knit unit with its fierce traditions.

He proved himself to be competent in high command at sea as leader of the Sixth Fleet where he showed that he also had the attributes of wisely interpreting national policy and assuming heavy responsibilities—attributes, in addition to those he had already shown as a planner and as an administrator.

As Chief of Naval Operations, he brought to the Navy, to the Department of Defense, and to his country a leadership and an understanding which encompassed fields far beyond the military horizon. He held a clear understanding of the political nuances of our democratic system which reflects the thinking of our people, and his counsels in the field of international relationships were listened to attentively.

In some curious way, even those who did not know him personally, those who had never even seen him or heard him speak, seemed to sense the capacity and judgment of this man, and his passing was genuinely mourned throughout the country as a loss of a valuable national asset.

As the military head of the naval service, he inspired the confidence of his superiors, of the legislative branch of the Government, and of the people of his own service who felt a comfortable confidence that the affairs of their beloved Navy were in capable hands.

Admiral Sherman was my guest in Naples when he died. Perhaps he overestimated the capacity of his physique to support the tireless energy of his mind. At any rate, he never spared himself in his endeavor to accomplish the utmost that could be achieved in any given 24 hours. It would be a rare man indeed that could accomplish more in his allocated span of years than did Adm. Forrest Sherman. New Hampshire does well to honor his memory. Today's ceremony is a beautiful expression of the regard in which this faithful citizen is held by his native State. His accomplishments in behalf of his service are also inscribed in the collective memory of the Navy which he served for so many years.

The enduring spiritual structure of our country is symbolized by this altar, built up, as it is, of ingredients of the land itself. Each stone has its special significance, and the bonding mortar bespeaks the fundamental faith and reverence without which no political organism can truly endure. The stones now offered by Admiral Sherman's family will fittingly strengthen this shrine just as his own contribution in life added to the worth and durability of our country.

I join with the citizens of New Hampshire, and I also speak for my service, in rendering homage to an outstanding sailor and an outstanding American.

A New Sense of Moral Integrity

(Address delivered by Capt. G. L. Markle, Chaplain Corps, United States Navy, district chaplain, First Naval District, at memorial service in memory of Adm. Forrest P. Sherman, United States Navy, on July 4, 1954, at the Cathedral of the Pines, Rindge, N. H.)

Text (Micah 6: 8): "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?"

"America is living on the moral momentum of the past" is the highly disturbing statement of one of our country's eminent theologians.

If this assertion is true, and it probably is, it should cause us to be a little uneasy and to reexamine, if possible, the source of our moral momentum, and to seek out a remedy for this weakness in our moral fiber.

One source of moral momentum, though by no means the only one, is puritanism. The Puritans, whatever else may be said of them, were strong, rugged people. Their moral code was not subject to fluctuations caused by changing conventions of society.

To them, God was very real and very near. He had everything to do with life as a whole. No detail was beyond His concern. As a result, they held themselves responsible to Him in all matters. At the same time, they claimed His promises of protection and daily blessing. Their faith was simple and sturdy. Nothing weak about it.

No doubt, they were stern even to harshness. They probably were neither long suffering nor very patient. Kindliness and other endearing qualities were, as a rule, not predominant characteristics. But their integrity was unassailable, their honesty beyond question. Their respect for the laws of God and man was unswerving. To them, truth was never relative, always eternal, and inviolable.

Because they held the unshakable conviction that God was actively present in all circumstances of life, they could say with confidence, "He only is my rock and my salvation: He is my defense; I shall not be moved." (Psalm 62: 6.) We lack this strength today and are living on the moral and, I may add, spiritual momentum of the past.

A NEW MORAL SENSE NEEDED

The world needs today a fresh understanding of moral integrity. A new moral sense is needed.

A sentence in John Buchan's "Memory, Hold the Door," has power to haunt the mind. "The pillars of civilization," he wrote, "are cracking and tilting." That is more than a vivid phrase. It is the judgment of careful observers of the human situation.

That there is something wrong with civilization is a point that need not be labored. What is it? The economist says one thing, politicians say another, scientists say another, and churchmen say yet another. There is one answer which ought to receive more consideration.

The historians tell us that every age has a blind spot. It fails to see weaknesses in practices and institutions which to later generations are clear as crystal. The drowning of witches in the 17th century, penal laws in the 18th century, slavery in the 19th. What will our successors say about the 20th century? Will it not surprise them that we were so strangely blind to our chief problem—the disparity between scientific development on the one hand and moral development on the other?

Sir Richard Livingstone predicts that our grandchildren will say of us: "They boasted that science had unified the world. They never saw that the only real unity is spiritual."

It is to be hoped that our grandchildren will speak in such fashion, for if they do, they will be much wiser than their grandparents. Only, why can we not learn to think and speak so now?

Man has made nature his servant but he has not rooted out of his soul the instincts of greed, pugnacity and cruelty. That is why we have the current crime wave, the juvenile delinquency, and the sadistic cruelty to prisoners of war such as recently exposed, and chargeable to Red Chinese and North Korean troops.

Will Durant is very emphatic about this when he says: "We are spiritual pygmies in gigantic frames. Utopia has come everywhere except in the soul of man."

Elton Trueblood, the Quaker spokesman from Earlham College, is equally emphatic. He says: "Man has been more successful in making machines than achieving the will and wisdom to use his engines for humane purposes. This is the predicament of western man. He has built up a complex civilization, but he may lose it because in his hour of achievement he has so largely lost or failed to develop the inner resources that are needed to keep a possible boon from becoming a calamity."

There is a woeful abundance of dissension, bitterness, and bad feeling in the world, and it all goes to illustrate the disparity between material and moral achievement.

"What we need most in this country are the things unseen—spiritual development, moral power, and character." (J. Edgar Hoover.)

Now is the time for men of good will to stand up and be counted, and for men who believe in God to render their greatest service. The campaign of the godless is continuously being waged against truth. People must learn that "man cannot live by bread alone."

The Jew and the gentile, the Catholic and the Protestant, who believe in the God of their fathers, must stand together, shoulder to shoulder, against the inroads of communism, which would in the last analysis outlaw God and our way of life.

If our Judaic-Christian civilization is to survive, the God of our fathers must be our leader in spirit and in truth.

MORALS AND RELIGION

Many of the fundamental beliefs which Americans hold are deeply rooted in one or more of the major faith. So that when we speak of them we are actually expounding religious beliefs that are common to many, if not all, of us.

Take, for example, the Declaration of Independence. You will recall how the phrase runs: "That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness," etc.

One need not be a mastermind to recognize here the theme that runs through many of the great religions of history.

This belief in the equality of man is a fundamental American concept. It must be adhered to by a majority of our people if they are to be found willing to defend our way of life.

Each of us may have his own personal list of essential beliefs or convictions, and they would differ in certain respects or details. But all lists would have a few items in common. Among these would be the dignity of the individual, belief in government by law instead of by the whims of men, respect for the truth, and certainly a fundamental faith in a God that is good, just, and merciful, and One who rules the universe in accordance with a benevolent plan.

Such beliefs as these, if they are widely held and firmly adhered to, would be a great

UNIVERSITY OF MICHIGAN LIBRARIES

boon to our security and a safeguard to our way of life.

There is an urgent need to instill and develop in our people today some of the self-same confidence which led our forefathers to perform such heroic feats of endurance when they conquered the wilderness and laid the foundations here for the strongest and most progressive nation on the earth.

There were doubters and the fainthearted in those days, but there were also giants in the earth in that era. They counted trials, tribulations, and recurrent crises as payments on the future they were building for themselves and their prosperity.

They were down-to-earth, practical individuals, too. They were not bothered with certain things that trouble us today, such as self-analysis, motives, complexes, and neuroses. They were men and women of simple faith and action. They were willing to work hard and cheerfully for what they wanted and if necessary, to fight hard and long for what they had.

It is a revival of this simple but effective faith which is needed today. From this type of simple faith will spring naturally and honestly a new sense of moral integrity.

In the current struggle for freedom and democracy, at home and abroad, our greatest weapon, both a sword and a shield, will be our love of and our faith in God. To open the hearts and minds of men to this truth will require a mighty river of faith and effort. Each one of us is a drop to swell that river and augment its force.

"When we turn a deaf ear to God's commandments, we also cease to hear His promises. We cannot be assured of His care if we reject His claim."

Paul, the apostle, wrote in his letter to the Galatians, saying:

"Stand fast therefore in the liberty wherewith Christ hath made us free." (Galatians 5: 1.)

And the prophet, Micah, cried out to his people, saying: "He hath shown thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and love mercy, and walk humbly with thy God." (Micah 6: 8.)

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

NEVADA'S INTEREST IN COMMERCIAL NUCLEAR POWER

Mr. MALONE. Mr. President, will the Senator from North Dakota yield?

Mr. LANGER. I yield to the Senator from Nevada, provided I do not lose the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ATOMIC ENERGY COMMISSION'S POWERPLANT

Mr. MALONE. Mr. President, I fully agree with the Atomic Energy Commission in its decision to build a 60,000 kilowatt atomic energy industrial powerplant or commercial plant.

THE ARMY PORTABLE POWERPLANT

I agree with and approve of the Army's consideration being given to the building of a flatcar atomic energy power unit, which might be transported to isolated areas, in the same manner as a diesel powerplant, in order to obviate the necessity of building long-range power lines to isolated areas, where only relatively small amounts of power are necessary.

INTEREST IN NUCLEAR POWER

I became interested in the possibilities of commercial nuclear energy powerplants even before I came to the United States Senate, to which I was elected in 1946.

In the part of the country from which I come, there are large isolated desert and mountain areas, where mining and the pumping of water are very expensive due to the cost of power, but where only relatively small amounts of energy are needed in the individual areas, which are widely separated. Mr. President, it is not economical to build a powerline a distance of 50, 75, or 100 miles for only, let us say, 5,000 or 10,000 kilowatts of energy. Of course, much depends on the particular type of plant and the hazards which must be faced in the construction of such a line. But to transmit 15,000, 20,000, or 25,000 kilowatts a distance of 100 or 150 miles from an operating center is impractical except under extraordinary conditions.

The junior Senator from Nevada discussed the matter many times with Gordon Dean, who was then the head of the Atomic Energy Commission, and later with Admiral Strauss, who is now the head of the Commission.

He discussed the problem with them from the standpoint of feasibility.

Senators may recall Dr. James B. Conant, who for many years was active in the development of the first atomic-energy project, and in atomic warfare plans, and his writings for Sunday newspaper magazines and other methods of propagandizing became a common occurrence; and, generally held that perhaps commercial atomic energy would be available in 25, 30, or 35 years.

DISCUSSION—NO FEASIBILITY CONNECTION

Mr. President, the junior Senator from Nevada has been in the engineering business for 30 years, and he could not understand that kind of a discussion. It made no sense to him, because it was not based upon relative feasibility.

The conversation he had with the director of the Oak Ridge plant in Tennessee, and the Brookhaven plant on Long Island, N. Y., and at the Atomic Energy Commission offices in Washington, was that feasibility is a relative term; that perhaps it would be a long time before nuclear power could be developed to compete with power from Hoover Dam, in southern Nevada and northern Arizona, which comes off the switchboard at a cost of 2 mills per kilowatt-hour, one-fifth of a cent, for firm power.

But if one goes to Eureka, in the east central part of the State of Nevada, he is in a region which is isolated, perhaps 100 miles from a power center, where from 20,000 to 25,000 kilowatts are needed to pump an estimated 12,000 gallons of water 2,400 feet to make available an estimated $100 million to $150 million worth of lead and zinc, according to the United States Geological Survey, Department of the Interior.

TURNED ZINC-LEAD ORE INTO COUNTRY ROCK

Of course, the estimate of $150 million worth of lead and zinc in the Eureka area was made before we financed Great Britain in the building up of a great stockpile of lead and zinc, which England then shipped into our country at an opportune time and sold for 10 to 12 cents per pound and broke our domestic market from 16 cents to 10 cents per pound. At 16 cents per pound there were many millions of dollars' worth of zinc ore in the United States mines, while at 10 cents per pound it turned into country rock. We pay miners $1.75 to $2 per hour, while England pays them 30 to 40 cents per hour and 50 to 75 cents per day in South Africa. Anyway, we gave them the money to buy the zinc and lead so they could not lose by breaking our markets.

LOCATION OF FIRST POWERPLANT

Power was costing the mining men 2½ to 3 cents a kilowatt-hour in the Eureka, Nev., area—not mills, Mr. President, but cents.

Mr. President, I hold in my hand a report on the various high-cost power areas of the United States, which was made at my request to the Atomic Energy Commission, to determine where the first plant should be constructed.

SMALL PLANT FIRST

Following the early discussions between the junior Senator from Nevada and the Atomic Energy Commission the first plant which was contemplated by the Atomic Energy Commission was a small plant with a capacity of perhaps 20 to 25 thousand kilowatts to determine the operating cost and to get the "bugs" out of it.

The Commission would have learned a great deal through the construction of such a plant and through its operation.

HIGH-COST POWER AREA

The next question was where the plant would be constructed. The Commission naturally wanted it constructed in one of the highest cost power areas.

In 1953 the Commission ordered a survey by the Federal Power Commission, Bureau of Power, San Francisco regional office.

Mr. President, I hold in my hand the Nevada section of that study. On page 4 of the study are outlined comparable costs of areas of western Washington, eastern Washington, and so forth, including Idaho, Montana, southern Nevada, western Nevada, and northeastern Nevada. The price per kilowatt-hour ranged from 1.03 cents per kilowatt-hour in western Washington to 4.75 cents per kilowatt-hour in northeastern Nevada, where Eureka is located.

Mr. President, I ask unanimous consent to have the table appearing on page 4 of the study printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

1950 average revenues

Area:	*Cents per kilowatt-hour*
Western Washington	1.03
Eastern Washington	0.99
Northwestern Oregon	1.15
Southwestern Oregon	1.40
Eastern Oregon	2.06
Northern California	1.58
Southern California	1.58
Southern Arizona	2.15
Central Arizona	1.31
North central Arizona	2.34

1950 average revenues—Continued

Area:	*Cents per kilowatt-hour*
Idaho	1.19
Montana	1.01
Northern Utah	1.73
Southwestern Utah	2.58
Southeastern Utah	3.65
Southern Nevada	1.01
Western Nevada	2.08
Northeastern Nevada	4.75

CONTINUED WORK WITH THE COMMISSION

Mr. MALONE. Mr. President, I continued my talks with the Commission regarding feasibility, which, as I have described, is a relative term.

Dr. Hafstead, of the Atomic Energy Commission, who is quoted at length in the material I am asking to have printed in the RECORD, listed Eureka, Nev., twice as a possible site for the powerplant. To all intents and purposes, the site was agreed upon.

Then, after enough of the heads of the Commission were interested and began to take it seriously, they decided on the 60,000-kilowatt plant, which was too large for our area.

WE OVERSOLD THE IDEA

As a result we did not secure the plant for our area. However, Mr. President, I approve of the work of the Commission, knowing that as soon as nuclear power is proven feasible in the 60,000-kilowatt plant, with the Army following through with the flatcar units, within a relatively short time we believe the practical feasibility will be apparent.

When the cost of construction, amortization, and fuel is known, then we shall know exactly how to proceed with the installation of comparable units in the higher-cost desert and mountain areas for mining, pumping water, and processing purposes.

Mr. President, perhaps the work done by our Nevada citizens in promoting the Eureka plant has assisted in launching a program which will be of inestimable value to the Nation and ultimately to themselves.

NUCLEAR-POWERED SUBMARINE

Mr. President, early this year I attended the launching of the first nuclear-powered submarine, in Connecticut.

I think that is only a start, and that our entire fleet of submarines will be constructed in the same manner within a reasonable time and in the foreseeable future.

Such a nuclear-powered submarine can stay under water for 6 months, and go around the world without surfacing. As a matter of fact, in a joking vein, someone said such submarines will only have to come to the surface at intervals long enough for the men to reenlist.

INTEREST OF NEVADA CITIZENS

Mr. President, to illustrate the interest which the State of Nevada has had in the commercial nuclear power project from the beginning, and, as a matter of fact, before the beginning, of any serious talk by the Commission, and because we like to think that, working through the junior Senator from Nevada, we had something to do with bringing about the present project, I ask unanimous consent to have printed in the RECORD at this point in my remarks a letter to me from Louis L. Strauss, Chairman of the Atomic Energy Commission, dated November 1953, together with my answer, dated December 2, 1953.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C.

Hon. GEORGE W. MALONE,
United States Senate,
Washington, D. C.

DEAR SENATOR MALONE: This letter is in response to the telephone call to Mr. E. R. Trapnell, of my staff, on Friday, October 23, 1953, regarding the pressurized water reactor program announced for Westinghouse, and its relationship to package power units which might be applicable to the Eureka, Nev., area.

The pressurized water reactor which Westinghouse is scheduled to build for the Commission is a pilot plant for a large reactor. It is designed to produce 60,000 kilowatts of electricity, and because of its experimental nature a firm power commitment would be undesirable. It is for this reason that a location will probably be selected within one of the Commission's facilities where the presence or absence of a large block of power will not be critical. We would, therefore, not regard the pressurized water reactor program as being applicable to the purposes you have in mind.

At the same time the Commission has been continuing its package power reactor studies. None of these studies have to date indicated a competitive situation between atomic energy and conventional fuels for the market which was described in the report of the Federal Power Commission which was sent to your office on July 16, 1953. We are continuing to keep as one of our objectives the satisfying of the kind of market which that report describes.

Sincerely yours,

LEWIS L. STRAUSS,
Chairman.

DECEMBER 2, 1953.

Mr. LEWIS L. STRAUSS,
Chairman, Atomic Energy
Commission, Washington, D. C.

DEAR MR. STRAUSS: Thank you for your recent letter regarding the pressurized water reactor program announced for Westinghouse.

Since receiving your reply my office has discussed the matter further with Mr. E. R. Trapnell, of your staff.

I fully understand that the reactor you have in mind under the Westinghouse program would not be applicable to the Eureka, Nev., area. What then is the outlook for smaller-type units at isolated, power-short locations such as that afforded at the mining community of Eureka, Nev.?

As you know, there is an acute shortage of power in Nevada. In the Eureka area the shortage is especially critical, and it is there that a vast quantity of ore has been blocked out but has not been taken from a deep shaft because of the inability to provide power cheaply enough.

Your scientists are very familiar with the Eureka area and it is my fervent hope, as well as the hope of a statewide committee created to further atomic energy development in Nevada, that a small reactor can be constructed there—even though it is an experimental model.

I sincerely feel that the time to develop these smaller power-producing reactors is at hand. Certainly the place to build them is in the power-short areas of the Nation, and in that connection I can think of no better place than in Nevada.

We in Nevada are anxious to cooperate with the Atomic Energy Commission in any way—just as the State and its people have cooperated with your agency in the conducting of atomic experiments in southern Nevada.

As members of your staff will tell you, the Nevada location mentioned is an excellent one for the construction of a reactor which could provide power for the area.

We in Nevada have our hopes raised that the AEC will someday build one of these reactors there. I would appreciate your giving me your views in this matter at your earliest convenience.

Kindest personal regards.

Sincerely yours,

GEORGE W. MALONE.

Mr. MALONE. Mr. President, I also ask unanimous consent to have printed in the RECORD at this point in my remarks, in succession, letters from Mr. Louis D. Gordon, addressed to the junior Senator from Nevada, together with my answer, and other correspondence between me and Mr. O'Connor and Dr. Lambert.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NEVADA MINING ASSOCIATION,
Reno, Nev., July 2, 1953.

Hon. GEORGE W. MALONE,
United States Senator for Nevada,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MALONE: The mining industry of Nevada has noted with much interest your attempts to secure an atomic energy industrial powerplant to be located in the State of Nevada, preferably at Eureka, Nev.

We feel that it would be difficult, if not impossible, to secure an equally suitable location in the United States for the initial installation of such a facility. Eureka is in a sparsely settled area and is so situated geographically as to provide every possible measure of security. It is separated from the Pacific coast by the Sierra Nevada mountains and other mountain barriers, and is surrounded on all sides by airfields which would furnish additional protection against air attack, being within striking distance of our protective airfields on the Pacific coast, Fallon and Las Vegas, Nev. airfields, and airfields in Utah, Idaho, and Montana.

In addition to all of the above, the need for electric energy in the Eureka district is, as we see it, a vital factor in our national defense, as there is an immense quantity of lead-zinc ore available if power at a cost less than that which is presently available can be obtained.

We will follow with much interest your future endeavors to secure such an atomic-energy industrial plant for the Eureka area, at least of a pilot or experimental nature.

With kindest personal regards,

Sincerely,

LOUIS D. GORDON.

JULY 6, 1953.

Mr. LOUIS D. GORDON,
Nevada Mining Association,
Reno, Nev.

DEAR LOUIS: This is to acknowledge your recent letter concerning an atomic reactor for Nevada.

I have been working closely on this project with Dr. Lawrence Hafstad, the man who builds such plants. He is on a vacation at the present time and will not return until next week.

I have forwarded copies of your letters to him and have asked for another progress report. I will keep you advised.

Thank you for your interest, and with kindest personal regards, I am,

Sincerely,

GEORGE W. MALONE.

UNIVERSITY OF MICHIGAN LIBRARIES

CONSOLIDATED COPPERMINES CORP.,
Kimberly, Nev., June 30, 1953.

Hon. GEORGE MALONE,
United States Senate,
Washington, D. C.

DEAR SENATOR: Recently I have received an information bulletin from Alfred Merritt Smith, chairman, Atomic Power Utilization Committee of Reno, Nev., in which he advocates the establishment of a power reactor at Eureka, Nev. I assure you I am very much in favor of the plan as set forth by Mr. Smith and feel that Eureka is probably the best location for such a plant. Unless a plant of this nature is established in the vicinity of Eureka, there are very numerous comparatively small ore bodies in this part of the State that cannot and will not be brought into production because of the excessive cost of bringing power into this area.

Your efforts to further this cause will be appreciated by the entire mining fraternity, particularly those of us in eastern and central Nevada.

With best personal wishes, I remain,

Yours very truly,

A. J. O'CONNOR,
General Manager.

JULY 6, 1953.

Mr. A. J. O'CONNOR,
Consolidated Coppermines Corp.,
Kimberly, Nev.

DEAR AL: This is to acknowledge your recent letter concerning an atomic reactor for Nevada.

I have been working closely on this project with Dr. Lawrence Hafstad, the man who builds such plants. He is on a vacation at the present time and will not return until next week.

I have forwarded copies of your letters to him and have asked for another progress report. I will keep you advised.

Thank you for your interest and with kindest personal regards, I am,

Sincerely,

GEORGE W. MALONE.

NEVADA CHAMBER OF COMMERCE
EXECUTIVES ASSOCIATION,
Ely, Nev., June 29, 1953.

Senator GEORGE W. MALONE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MALONE: The people of Nevada feel rather strongly that this State should have one of the first atomic powerplants, and it appears that Eureka, Nev., is probably the most suitable site for such a plant in the entire United States.

Eureka is located in the center of a vast area which badly needs economical power for development—while the prospects for securing such power from sources other than atomic are almost nil. Surely our State—which is rocked by the atomic tests—deserves some practical advantage from atomic power development and can make use of such power even in preliminary stages of relatively high cost.

We realize, of course, that such development may actually not be undertaken by the Government alone. Regardless of who does the job, however, we feel that Nevada offers the most feasible location for early generation and use of atomic power.

Anything you can do to help will be appreciated.

Yours,

DARWIN LAMBERT, *President.*

JULY 6, 1953.

Mr. DARWIN LAMBERT,
President, Nevada Chamber of Commerce,
Ely, Nev.

DEAR DARWIN: This is to acknowledge your recent letter concerning an atomic reactor for Nevada.

I have been working closely on this project with Dr. Lawrence Hafstad, the man who builds such plants. He is on a vacation at the present time and will not return until next week.

I have forwarded copies of your letters to him and have asked for another progress report. I will keep you advised.

Thank you for your interest and with kindest personal regards, I am,

Sincerely,

GEORGE W. MALONE.

Mr. MALONE. Mr. President, I hold in my hand the organization proceedings of the Atomic Power Utilization Committee of Nevada, dated July 1, 1952, and I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

ATOMIC POWER UTILIZATION COMMITTEE OF NEVADA ORGANIZATION PROCEEDINGS

(Mr. Alfred Merritt Smith, chairman, administrative assistant to Senator MALONE.)

The committee was organized at Reno, Nev., on July 1, 1952, upon the suggestion of Dr. Lawrence R. Hafstad, Director of Reactor Development, United States Atomic Energy Commission, who came to Nevada upon the request of Senator GEORGE W. MALONE for a preliminary examination of the Eureka Mining District as a site for the construction of a reactor to supply electric energy to the mining industry while primarily engaged in the production of plutonium for the Government. It is proposed to install a reactor of sufficient capacity to supply the power needs of all the various mines of the Eureka Mining District, and also power for pumping ground water for irrigation in several desert valleys located within economic electric transmission distance.

PURPOSES

1. To prepare a feasibility report on the Eureka project, setting forth comparative costs with those of diesel-electric and hydroelectric power.

2. To disseminate information throughout the State in regard to atomic energy, and its use in various industries. This will be done by lectures to service clubs and other civic groups and by the distribution of unclassified and unrestricted literature supplied by the Atomic Energy Commission and affiliates.

3. To arouse the interest of the mining industry and owners of mines located in areas of difficult and remote accessibility in the use of atomic reactors to solve their power problems.

4. To promote educational programs in high schools in order to spread general information regarding nuclear energy physics, chemistry, and technology, in the belief that such knowledge will do much for the future development and welfare of our citizens.

5. To actively support the program that has been initiated at the University of Nevada for the beneficiation of low-grade uranium ores; to promote the adoption of additional studies covering effects of radioactivity on plant, animal, and human life and in the special fields of medicine, therapeutics, the conditioning and preservation of foods, and of procedures to prevent or neutralize any deleterious effects that may be created.

ORGANIZATION

Present at a dinner meeting in Reno, Nev., on July 1, which had been called by Senator GEORGE W. MALONE, were a number of leading men in engineering, mining, financial, legal, and educational fields. With Senator MALONE acting as moderator, these men organized as a general committee for an investigation of the possibilities of use of atomic energy as a source of power in Nevada.

A chairman and a board of directors were elected, consisting of the following men:

Alfred Merritt Smith, E. M., Nevada State engineer, 1935–51, chairman.

Roy A. Hardy, E. M., Wingfield mining interests, manager, Getchell mine, etc.

George W. Mitchell, E. M., managing director, Eureka Mining Corp., Ltd., Eureka, Nev.

Joseph E. Moose, Ph. D., chief of chemistry department, University of Nevada.

Stanley G. Palmer, D. Sc., dean, College of Engineering, University of Nevada.

Vernon E. Schied, Ph. D., dean and director, Mackay School of Mines, University of Nevada.

The directors were requested by Dr. Hafstad to proceed rapidly with the preparation of a feasibility report concerning the proposed construction of an atomic reactor by AEC at Eureka, Nev., upon or near the property of the Eureka Corp., Ltd., to generate electric power for dewatering the Richmond-Eureka mine in order to permit recovery of large bodies of valuable lead-zinc ores now urgently required in the national economy; and for the operation and development of other mines in the Eureka mining district, and for pumping ground water in the several adjacent arid valleys for irrigation.

Dr. Hafstad stated that a new reactor would definitely be constructed by AEC somewhere in the United States as soon as possible for the manufacture of plutonium; that electric energy would be a byproduct which would be sold as profitably as possible as a credit to the cost of the plutonium.

Each of the directors will be cleared by the Atomic Energy Commission in order to receive restricted information, particularly as to data and costs of reactor construction and operation.

The directors were further instructed to contact operators in all fields of private work and invite them to become members of the Atomic Power Utilization Committee, and participate in discussions.

The membership will be composed of persons who are active in State affairs and in the advancement of industry, including those engaged in professional work, especially in education. Meetings will be held, at which speakers who are specialists will appear. Lectures and panel discussions will be arranged. The more highly technical features of the subject will be avoided. The great advantages of peacetime utilization of this great force in science, industry, and commerce will be described and discussed in the light of present widespread developments. The phenominally rapid and dramatic progress in nuclear energy use has gone ahead of public information and education on the subject. An essential part of the committee program will be the spreading of knowledge regarding atomic energy, destined soon to become of major importance to the welfare of mankind, and vital to the economic development of mining and agriculture in the arid Western States.

Mr. MALONE. Mr. President, I have in my hand an outline addressed to the members of the Atomic Power Utilization Committee of Nevada, by Mr. Alfred Merritt Smith, who is chairman of the committee, and also my administrative assistant. I ask unanimous consent that the outline be printed in the RECORD at this point in my remarks.

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

RENO, NEV., *December —, 1952.*

DEAR MEMBER: Your chairman attended a hearing held by a subcommittee of the Public Works Committee of the United States Senate in Henderson, Nev., on October 10–11, recessed to reconvene in Las Vegas on the 14th and again in Las Vegas on October 20. Problems bearing on power, flood control,

irrigation, and reclamation were considered with Senator MALONE, chairman, conducting the investigations.

Dr. Lawrence R. Hafstad, Director of Reactor Development, United States Atomic Energy Commission, appeared as a witness in this hearing on October 14 on the outlook for atomic power. Dr. Hafstad indicated that the AEC is almost ready to undertake the construction of a reactor designed to generate electric power, but several points must first be decided and agreed upon. Two or three different types of reactors are being considered and the experimental work continues. How long before a certain definite type is selected and also a site among several under consideration is not definitely known, and predictions of the time vary from 1 to 10 years, but there is a predominant feeling among the atomic engineers and scientists that it will be very soon, probably within 1 year.

As to proposed sites, Dr. Hafstad stated that Eureka, Nev., came very near to meeting all of the requirements. He complimented this committee on the reports it has submitted to the AEC. He stated further study and examination of the site are not considered necessary until a certain type of reactor design has been decided upon.

Dr. Hafstad stated that the construction of a reactor at a site distant from hydroelectric power sources, and also distant from fuel for steam-electric power generation, would probably be the first development. The cost of conveying the small quantity of atomic fuel required to operate such a power plant to any remote site would be negligible, and disposal of radioactive waste would be less of a problem than in a populous community.

It must be a major purpose of this committee to closely observe developments in the nuclear reactor power field and keep before the Atomic Energy Commission our urgent need for such power in Nevada to stimulate and activate dormant mining, development of new areas for production of strategic metals, and the irrigation of desert areas by pumping of ground water.

For your further information, I enclose a reprint of an article on reactors sent by Dr. Hafstad for distribution to our members. A copy of the supplemental report made to AEC on the resources and advantages of the Eureka, Nev., site is also enclosed. Most of the data for the report was collected by a committee of citizens in the Eureka district who are alive to the great advantages such an installation could bring to them and the State.

On October 16–17, 1952, a conference on atomic energy education was held at the University of New Mexico, Albuquerque, at which scientists and engineers in the nuclear field made addresses and submitted papers. It was the intention of your chairman to attend, but he was required at the Henderson-Las Vegas hearings. Such meetings are significant of great public interest in nuclear physics. Our progressive State must not lag behind in highly necessary education on this subject.

In a letter to Senator GEORGE W. MALONE dated September 16, 1952, Chairman Gordon Dean, of the AEC, included the following excerpt from a letter he had written to the Honorable HENRY M. JACKSON, of Washington, a member of the Joint Committee on Atomic Energy. Mr. Dean stated that his letter reflected as precisely as possible the views of AEC in response to a question as to "how soon these developments (power from atomic energy) can be expected."

"In addition to the development of power-producing reactors, a great deal of work is being expended for the defense effort on propulsion and materials producing reactors. Fortunately, the early phases of this work are in a large measure directly applicable to the development of power reactors.

"Undoubtedly, atomic power when it first appears in any significant quantity will be at high cost relative to conventional power. The plants will, therefore, be more likely to be located where they will supplement those producing electricity from high-cost fuel rather than in hydrogenerated or other cheap power areas.

"It is also possible that the cost of building and operating reactors will have fallen to the point where power production alone will be competitive in areas where power costs currently are high. It should not be assumed, however, that within 10 years such units can be expected to provide more than a very small fraction of the national power demand.

"* * * a prolonged period of intensive military effort may well retard the appearance of a significantly large amount of atomic power. Other factors such as the depletion of the Nation's conventional fuel resources and a possible resulting increase in their cost might hasten its appearance. Most probably this new energy source would not supplant any of the low-cost power stations but would, to a limited extent, contribute to existing power systems where fuel costs are high or special location problems exist.

"One thing is certain. The atom is the most potent source of energy known. This Nation must not neglect the task of seeking out the methods by which this energy may be harnessed. Ordinary prudence in the conservation of our energy resources demands the continued application of scientific research and development to the problem. It is the intent of the Atomic Energy Commission to continue its own program toward this end and to encourage the exploratory and developmental efforts of private companies in the field."

The foregoing was written some months before the Eureka, Nev., site had been brought to the attention of AEC, and it shows how clearly that site meets requirements for the first power reactor. The interest of AEC in the Nevada site was indicated by the presence of Dr. Hafstad at the Senate Public Works hearing on power at Henderson.

Our latest information is that Harvey L. McPhail, Assistant Commissioner of Reclamation, has been directed by the Bureau of Mines to examine prospective sites in the United States and the AEC awaits his report. Mr. McPhail is a native of Nevada and a graduate of the University of Nevada. Before his promotion he was for several years Director of the Branch of Power Utilization, Bureau of Reclamation.

Very truly yours,

ALFRED MERRITT SMITH,
Chairman.

TWO HUNDRED AND FIFTY MEMBERS OF THE NEVADA ATOMIC POWER UTILIZATION COMMITTEE

Mr. MALONE. Mr. President, there were approximately 250 members of the Atomic Power Utilization Committee of Nevada, made up of prominent persons throughout the State, who were interested not only in establishing a power unit in the State of Nevada, but in establishing for the Nation the knowledge necessary to make such power available to the Nation, but are still looking forward to the time when the contemplated project in Nevada will prove feasible.

The committee will then make another attempt to have a powerplant built there. In the meantime, they are interested in private financing of such a project.

I ask unanimous consent that the message to the members of that committee, signed by Mr. Alfred Merritt Smith, and dated May 7, 1953, be printed in the RECORD at this point in my remarks.

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

ATOMIC POWER UTILIZATION COMMITTEE,
Reno, Nev., May 7, 1953.

DEAR MEMBER: Your interest in this committee is evidence of a desire to see our largely arid State profit by utilization of atomic power as soon as this astounding new scientific resource can be given to the public. It will soon be possible to construct atomic powerplants in arid regions, distant from present sources of fuel and power. We have a number of such areas, and now it seems that a way is opening to develop them for mining and agriculture, and so bring Nevada up toward the industrial level of other Western States. This cannot be done without power at lower costs than are presently possible in such areas.

You have kept abreast of the phenominal scientific investigations for conversion of nuclear energy to electric power, and so can visualize the almost unlimited benefits that the first atomic power reactor would bring to Nevada.

Your committee, engergetically and ably assisted by Senator GEORGE W. MALONE has presented to the United States Atomic Energy Commission the advantages of establishing an atomic powerplant in central Nevada. The project has been kept before AEC through personal contacts, correspondence, and the presentation of additional information from time to time.

A special power market survey of the Eureka area was made by two electrical engineers from the Federal Power Commission on February 17 to 21, inclusive. Your chairman accompanied the engineers to Eureka, Ely, and Elko.

Again, on April 2, two engineers were sent by AEC from the New England Power Co. to doublecheck on power costs and power availability. Upon their arrival, I met these men in Reno. The Nevada State Bureau of Mines provided an automobile and a geologist, and together we went over the area. None of these engineers were at liberty to express opinions or give out figures. Their findings have not yet been released.

It has been indicated to us that other sites where power costs are high, in Maine and Florida are also being studied, but Eureka yet has a high listing. One of our committee members, Col. Dale O. Smith, United States Air Force, while in Washington, D. C. recently, called upon Senator MALONE and also on Dr. Lawrence Hafstad, Director of Reactor Development, AEC, and writes as follows:

"Much that Dr. Hafstad told me I am not authorized to reveal; however, I can say this: Dr. Hafstad is a strong supporter of the Eureka, Nev., project. He thinks that it will be a very valuable activity, and even though there is not much evidence as to what they can build a plant for, how much the power can be sold for, and whether it will be an economic venture, he believes the way to find out is to go ahead at once. There are people in the Commission, however, who are more conservative and would like to wait until more facts are available from experimentation before going ahead on projects such as these. Dr. Hafstad has recommended the project to the Commission and it is up to the Commission to determine whether or not the project should be approved this year."

The change in national administration has caused some changes in the personnel of AEC, also in the Congressional Joint Committee on Atomic Energy. It is not probable that such shifting will greatly affect the gigantic going concern, to which Congress has now altogether allocated a total of $12 billion through the 1953 fiscal year, making it the world's third largest business, out-

UNIVERSITY OF MICHIGAN LIBRARIES

ranked only by Metropolitan Life and American Telephone & Telegraph.

Your directors propose to work continuously to get a reactor built in Nevada and we know we have your valuable support. Senator MALONE and his staff will spare no efforts to bring this about. MALONE has been successful in establishing a project for the study of extraction of uranium from low-grade ores at the University of Nevada, and is also responsible for a contract now being drawn up for another project there to study the effects of atomic blast dust and radiation on all forms of plant life. His engineering knowledge and intimate acquaintance with key members of the joint committee and AEC are indispensable to this project. The Senator has given time and travel to this work. Your chairman has also personally contributed all of his travel and the correspondence expenses of the committee.

We need a little money for stationery, postage, mimeographing, etc. We have the ear of AEC which has given our reports most favorable comment. Please help us carry on by sending in a small contribution of a dollar or two for the cause. What we do now may be the means of eventually bringing millions of dollars to Nevada; first for construction, and then in production. We don't intend to stop plugging whether or not we get any money from our supporters, but it will help.

Your chairman has for 18 years been Nevada's director in the National Reclamation Association, which is designed to promote reclamation and irrigation in the 17 Western States, and therefore clearly visualizes what low-priced power could do for our dry lands. While in Washington, D. C., for a meeting of National Reclamation Association directors in April, I discussed the Eureka project with Drs. McLain and Peterson, AEC technicians, and with Dr. Gordon Dean, the chairman of AEC. They are in favor of reactors for genertaing power, which while still experimental, can be built. Some of the Commissioners think such a reactor should be built now, and any defects could be worked out in actual operation. Others favor more time being spent on the several designs and in experimental work before a plant is undertaken.

Chairman Gordon Dean expressed his intention to visit Nevada this summer, which indicates his interest.

Sincerely yours,

ALFRED MERRITT SMITH,
Chairman.

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks a letter dated October 1, 1953, from Alfred Merritt Smith to the members of the Atomic Power Utilization Committee of Nevada, together with his message to them of October 1953.

There being no objection, the letter and message were ordered to be printed in the RECORD, as follows:

ATOMIC POWER UTILIZATION COMMITTEE,
Reno, Nev., October 1, 1953.

DEAR MEMBER: Attached hereto is copy of a talk I made on September 10, 1953, to the Lions Club of Elko, Nev., and on September 11 to the Rotary Club of Elko, entitled "Atomic Power for Nevada" which I hope will be of interest.

The Federal Power Commission has just released a report on 4 counties in northeastern Nevada which it states is the area of highest power cost in the 8 most Western States. This fact, coupled with the great natural resources of these counties continues to keep Eureka in the foreground as a site for the construction of a pilot plant power reactor.

The failure of Congress to appropriate money for construction of such a plant by the Government has delayed progress on nuclear power. Private enterprise is very reluctant to build such plants, not because it doubts their efficiency and regards such work as premature, but for the reason that present governmental regulations for security are so restrictive that private companies will not move until they are given more liberty.

Since the Government hampers private development of nuclear power for reasons designed for national security, it should build the first plants and operate them, and then turn them over to private ownership and operation as soon as security regulations can be sufficiently reduced, or entirely abolished.

We are hopeful that the Atomic Energy Commission will soon build such a plant. When it does, Nevada and in particular Eureka, will certainly be given serious consideration as a desirable site.

Sincerely yours,

ALFRED MERRITT SMITH,
Chairman.

ATOMIC POWER FOR NEVADA

(By Alfred Merritt Smith)

The atomic power situation in the United States seems to be in a condition of stalemate. How long this may last depends upon Congress. The AEC a year ago gave 4 study teams from 8 private corporations enough released information to enable them to investigate and study power reactors. Using their own money, but with some help from AEC technicians, each group determined that atomic power is both possible and practical, but none of the companies had any incentive to go ahead. All discoveries and patentable processes in the atomic field must be turned over to Uncle Sam. They could only buy their atomic fuel and sell their byproducts to Uncle Sam, who is not ready to contract to buy the most valuable byproduct, which would be weapon-grade plutonium, although presently AEC is making plutonium at enormous cost and wasting the heat generated by the process which heat could be converted into electric power. At the great Hanford plant in Washington State almost all of the Columbia River is used to carry the reactor heat away. The Government has spent $8.6 billion in its atomic weapons program, but very few dollars on peacetime uses. It is now building new billion dollar plants at Aiken, S. C., Portsmouth, Ohio, and Paducah, Ky., and meanwhile the older great plants at Oak Ridge, Tenn., and Hanford, Wash., are being enlarged, at incredible expense, all for bombs and warfare.

The press and the radio, and many public speakers, fill the air with a clamorous yakity-yak insisting that Russia will bomb our Nation out of existence if we do not constantly maintain and advertise our superiority in atomic weapons and the means of using them. The fear element is exploited to the limit. No expenditure designated as being for national protection, however lavish and heavy on the public taxpayers, is turned down. As the Russians listen to the clamor for more and bigger atomic weapons in this country it is probable that they are as scared as we are. But when our public asks for a conversion of some of this great new energy to peacetime uses, numbers of our technicians and Congressmen again become dollar conscious.

Various members of the AEC would like to have the existing security regulations reduced by amendments to the Atomic Energy Act, which act now keeps their hands tied in atomic power construction, excepting in military fields, and hinders cooperation by private capital. Several major private companies indicate that they would at once build reactors if given liberty of action and freedom of markets.

The necessity for governmental security regulations has greatly diminished, or may have even ceased to exist. Traitors and spies, such as Fuchs and the Rosenbergs have conveyed much knowledge of our secret processes to the Russians.

The cost of a big atomic-power station making byproduct plutonium has been estimated to range between $50 million and $100 million. Charles A. Thomas, president of Monsanto Chemical Co., which last year spent $250,000 of its own money investigating commercial uses of atomic energy, says in a published statement it would cost $60 million to build a 125,000-kilowatt atomic-power plant. This company states that of this sum $44 million would be the cost of the reactor for plutonium production, and could come from the Government. The remainder would be for the steam-electric power portion of the plant, $16 million, which could be supplied by private industry.

Although this is a large plant for a beginning, some AEC men say it is about as small as one can be made to economically manufacture plutonium. A dual-purpose power and plutonium plant must be large, and the experts say only about six of them should be built in the United States.

Mr. Thomas estimates that, basing power price on the $16 million capitalization of the electric power part of the plant, they could generate power for 3 mills per kilowatt-hour, as compared to present 8 mills for coal-steam power. Sale of this power would reduce the cost of the plutonium to much less than it costs the Government to make it now.

At Henderson, Nev., we probably have the best site for a large dual-purpose reactor in the United States. All of you know that five large electrochemical plants now operating there are clamoring for more electric power. Each of these big plants is manufacturing strategic materials or metals urgently needed for the national defense. They have absorbed all of Nevada's share of 18⅔ percent of the power generated at Boulder Dam, and 25 percent of the power from Davis Dam, all that was allocated to this State, a total of 990 million kilowatt-hours or 113,036 continuous kilowatts. Efforts by the Nevada Colorado River Commission and by Senator MALONE to get more firm electric power have so far been unproductive. The operators at Henderson decline to invest the large sum necessary to build an adequate coal-steam plant, for they have comparatively short-term contracts with the Government, and their margin of profit is close. Clearly the Government should help here in supplying power. The market demand at Henderson is very large now, and it is rapidly increasing. We assume that the Government's need for more plutonium will continue in the interest of national security; for the present plutonium plants are running at full capacity. Even if it be assumed that world peace is in the making, and that our national defense need for plutonium and uranium 235 will diminish, there will very soon be an increasing demand for these atomic fuels to keep the wheels of industry turning. Such is the consensus of opinion of the best brains in the atomic-energy field today.

And that isn't all in southern Nevada. We have many thousands of acres of desert land there that can be reclaimed and made wonderfully productive in that semitropic climate. We claim water rights in the Colorado River for 900,000 acre-feet. We have a contract with the Bureau of Reclamation for 300,000 acre-feet in Boulder Dam. We presently use about 10,000 acre-feet. We may eventually lose our right if we don't use the water, and if we continue to allow other States to put all of it to highly beneficial uses. California and Arizona are fighting bitterly over a division. Both belligerent States assume that Nevada's share is only 300,000 acre-feet, but no interstate compact

on division of the water has ever been ratified.

Senator MALONE has introduced 6 bills in the United States Senate for the reclamation of 190,000 acres of land to be irrigated from the Colorado River. The Bureau of Reclamation, the Soil Conservation Service, the Nevada State Agricultural Experiment Station, the State engineer, and the Bureau of Land Management are actively studying the area and will soon make a report. So far, they conservatively estimate 95,000 acres of land that will produce crops if irrigated. Future reclamation and irrigation of presently estimate croplands and other uses will call for about 500,000 acre-feet, and rapidly growing industrial, municipal and suburban developments may eventually double this demand.

All of this water will have to be pumped up to the lands through lifts of from 200 to 1,000 feet. No additional electric power will be obtainable from Bridge Canyon Dam in less than 6 years—perhaps 12 years. Bridge Canyon Dam affords only small water storage and in order to become effective as a power site must be supplemented by a dam and reservoir at Marble Canyon. These projects have not been authorized. Nevada's share of the power may be 250,000 kilowatts, which will be quickly absorbed. Power from other dams farther upstream will probably all go to upstream States. Arizona even now is demanding all future power from Bridge Canyon. Our future supply from the Colorado River is limited, and will come too late. A large atomic power reactor at Henderson, to which more units can be added would apparently solve all future power demands. The reactor power cost might be relatively high at first, but it will rapidly come down as skills and techniques improve. Improvements come slowly but surely for all new processes and inventions. On the other hand, our hydro and steam costs are steadily increasing, hydro sites are fixed and limited in number; coal and oil transportation is expensive, and the total reserves are steadily decreasing. On the other hand, transportation and storage of atomic fuel would be almost nil, the cost will lower, and the estimated supply is practically inexhaustible.

Atomic energy for the weapons program cost our taxpayers $1.8 billion a year. That expense will continue indefinitely unless the Government reduces the cost of its operations and processes, or private industry is allowed enough leeway to induce it to get into the operation with projects that will pay taxes.

Nevada has other large fields for atomic power, and with probably better locations for its application than any other State in the Union. There is a need for power to develop mining in remote locations, and for pumping ground water to reclaim vast areas of desert lands. I will very briefly discuss one area which has a radius of about 100 miles from Eureka in northeastern Nevada.

The Nevada Atomic Power Utilization Committee has made two reports on this area to the Atomic Energy Commission, and it has been the subject of a special power market survey by the Federal Power Commission at the request of AEC. I have had copies of the APUC reports mimeographed and they are available to each of you here, as well as an address on atomic power for western mining development by Senator GEORGE W. MALONE, and copies of the testimony on this subject by Dr. Lawrence Hafstad before a hearing held in Las Vegas, Nev., on October 10, 1952. I will, therefore, touch only a few high points of this project, and will rely upon your reading of the more comprehensive reports.

At the Ruby Hill Mine, one of the numerous mining properties in the Eureka Mining District, the Eureka Corp., Ltd., cooperating with the United States Bureau of Mines has developed by core drilling a tabular ore body conservatively calculated to contain 1 million tons of gold-silver-lead-zinc ore with a gross value of $38,850,000 at present metal prices. Additional core drilling during 1952–53 has revealed extensions of this ore body that more than double the value of the first discovery, and the drilling which is being continued constantly reveals more ore. To get access to and mine this ore will require the continuous pumping of 15,000 gallons of water per minute through a lift of 2,250 feet. Present diesel electric power cost is 2.6 cents per kilowatt-hour, too expensive for pumping and mining. This one operation will immediately require 15,000 kilowatts for pumping. Other mining properties and ground-water pumping in adjacent valleys will require at least 25,000 kilowatts more in a short time. Studies by the United States Geological Survey Division of Water Resources in cooperation with the office of the Nevada State engineer indicate that at least 24,000 acres of first-class land can be reclaimed in adjacent valleys by the available ground water. Therefore, a 50,000-kilowatt plant is indicated for the area. This is within the capacity range of the package-size plant suggested or recommended for development of isolated areas, and would probably cost somewhere around $12 to $15 million. For national land reclamation and mining of strategic metals it should be financed by the Government similar to an agricultural reclamation project. The power could be sold at a figure that would repay the Government within a 50-year period. Such an installation at this location would rapidly bring about the development of the valuable natural resources in minerals and agriculture.

The reactor could also be built as a pilot plant, just as the Government presently builds such plants to determine methods of producing fuel oil from oil shale and coal in an emergency, and plants to study processes for beneficiating manganese, titanium, zirconium, beryllium, and other metals that have suddenly become very important to our national welfare. When it has been demonstrated that such reactors are practical and very necessary, private capital should be encouraged to take over.

President Eisenhower in his message to Congress on July 31 said:

"In the stress of dealing with urgent problems of peace and security and budget appropriations and tax revenues, we sometimes overlook the fundamental importance to our national well-being of constructive, forward-looking policies designed to conserve and improve the Nation's natural renewable resources."

Although he stressed renewable resources, at a later point in his talk he said:

"We must build a balanced program for the use and development of all our natural resources."

It should be apparent that development and conservation of our nonrenewable resources in fuels and minerals is vital to our welfare. In time of war we may be unable to obtain urgently needed metals from foreign sources.

How clear it is that atomic power can increasingly replace oil, gas, and coal, and promote mining of strategic minerals and metals now difficult to obtain because of the deposits being distant and economically inaccessible to present sources of hydroelectric power, and to fuel for steam-electric power.

The Nevada Atomic Power Utilization Committee made examinations and reports on the Eureka area at the request of the Atomic Energy Commission. The Federal Power Commission made an examination during 1952 and 1953. Dr. Lawrence Hafstad, director of reactor development, has visited Eureka district and power reactor sites. We are now urging AEC to continue its studies of the area.

The Federal Power Commission examination in 1952 was made to comply with a request by the Atomic Energy Commission to determine whether it would be possible to market the output of an atomic electric generating plant west of the Continental Divide. This report was released May 1953. Two criteria were used: one, that present power costs were in excess of 10 mills per kilowatt-hour, and two, that loads of from 15,000 to 30,000 kilowatts be available at rates covering costs of between 10 and 17 mills.

After surveying this great western field they selected northeastern Nevada because (a) electric rates there are higher than in any other area of comparable size in the eight Western States; (b) potentialities exist for the development of electric loads of 15,000 to 30,000 kilowatts.

The area centers in Eureka, and also includes the towns of Ely, Elko, Carlin, and Austin. Current production costs were found to range from 17 mills to 35 mills per kilowatt-hour. Federal Power Commission estimated that power might be delivered into the area for about 10 mills if a 30,000-kilowatt load could be assured, but qualified this statement by saying such a load is not presently assured, and the load is quite scattered, so the cost of bringing in outside power might be higher.

Our comment is that since the examination for the FPC report were made continued core drilling has doubled the known quantity of ore given in our first reports. The new ore is of higher grade, and exploration continues with increasing gains in tonnage which insures a longer term mining operation. Pumping tests conducted to accurately determine water volume necessary to remove in order to uncover the ore show that 20,000 gallons per minute should be pumped for about 1 year, after which 12,000 gallons per minute must be continuously pumped. Careful geological studies indicate that little, if any, of this water can be sealed or cemented off to reduce the underground inflow. I quote from a letter by George W. Mitchell to R. E. Gale, of the Idaho Power Co., dated April 23, 1953:

"During January 1953 we carried on a pumping test from which calculations have been made, indicating that the most economical volume to pump in order to attain our objective, recovery of the 2,250 level in the ore zone, is 20,000 gallons per minute and that the mine will make from 10,000 to 12,000 gallons per minute continuously thereafter. It is recommended that we provide not less than 25,000 gallons per minute pumping capacity. This volume will have to be lifted 2,250 feet to the surface.

"In order to accomplish the initial drawdown at 20,000 gallons per minute, the power demand will be some 20,000 kilowatts continuously. The pumping load would diminish to approximately 10,000 kilowatts in about a year but, at that time, an ore-treatment-plant load, also continuous, would replace the drop. A 1,500-ton-per-day plant will require about 3,500 kilowatts, while adequate mining equipment to hoist this tonnage would be another 2,500 to 3,000 kilowatts. The mine plant load (not pumping) would be an intermittent load operating a large hoist and compressors.

"If power were obtainable at a sufficiently low price it is likely that eventually a lead smelter using an electric furnace, possibly of 2,500-kilowatt size, would be installed.

"At the present time, we have invested approximately $8 million. The Eureka project unwatering will cost an additional $7 million to $8 million with another $5 million being required for a treatment plant.

"We would have to assure ourselves, by further drilling, of a life of not less than 10 years in order to justify the above expense. There is every geological reason to expect a life in excess of this. In fact, geologists familiar with this district, particularly Dr. Thomas B. Nolan, assistant of the United

UNIVERSITY OF MICHIGAN LIBRARIES

States Geological Survey, believe the success of our operation will lead the way to the discovery of other large deposits in the 8 by 2 mile mountain range to the south of Eureka Corp., Ltd., the upper 600 feet of which was extensively explored and mined in the late 1800's."

To date, the nearest outside power companies have shown little interest in Eureka. Idaho Power Co. might be a possibility, but a necessary 300-mile transmission line and the initial light load are deterrents, and might require a power rate of around 20 mills. If the possibility for atomic power fails, Eureka Corp. seriously considers installing its own steam-electric plant, providing additional development of ore will require a 10-year mining operation. The FPC estimated cost of conventional steam-electric power for a 30,000-kilowatt plant at Eureka is 14 mills, based on private financing, 60 percent load factor, 30,000 kilowatts, coal-fired, capital cost $191 per kilowatt, with coal at Eureka $15.17 per ton. It is improbable that costs for power from any contiguous area would ever be lower than when such service might be first established in Eureka.

On the other hand, if reactor power is 20 to 25 mills (AEC 30,000-kilowatt plant estimate) the sale of coproduct plutonium might make it possible to market power at 10 mills and break even on the total operation. Furthermore, it is certain that the first costs will come down as the techniques of this new process are improved in operation.

The Federal Power Commission has tabulated figures showing that electric power rates in this area are more than double those of any other area in the Western States, and average 4.75 cents per kilowatt-hour.

Costs of nuclear power for the FPC study were assumed to be between 10 and 17 mills per kilowatt-hour. It is improbable that FPC worked from a purely theoretical rate. The best reactor scientists and power engineers in the country have been estimating reactor power costs for a long time. There seems to be a desire on the part of some technicians in the nuclear field to bypass actual atomic power development at this time as premature, and they express an opinion that further pilot plant experimentation should be carried out adjacent to some presently established nuclear laboratory. This is contrary to the premise we have been working on as a result of various conferences with other personnel of AEC during the past 18 months.

In view of our new developments at Ruby Hill in Eureka, and the increasing public demand for more attention by AEC to possible service in power-starved areas, a continued study of northeastern Nevada is recommended, and should be urged by all of our influential agencies and men.

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks a further message from Alfred Merritt Smith to the members of the Atomic Power Utilization Committee of Nevada, dated April 5, 1954.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

ATOMIC POWER
UTILIZATION COMMITTEE,
Reno, Nev., April 5, 1954.

DEAR MEMBER: The United States Atomic Energy Commission sent out a news release on December 7, 1953, inviting private industry to submit proposals for financial and engineering cooperation in the construction of nuclear power reactors that would meet their respective power requirements. The release was as follows:

"The Atomic Energy Commission today renewed its invitation to private industry to submit proposals for the investment of risk capital in the recently announced project to build a full-scale nuclear reactor for generating electric power. The AEC is proceeding as rapidly as possible with necessary decisions on architect-engineering considerations, site selection and operating specifications.

"Since the initial announcement the Commission has discussed with several organizations proposals for building with private funds the steam turbine and electrical generating portions of the project and for operating the entire power plant. The AEC encourages further evidence of industry's interest in private investment for the purpose of obtaining firsthand experience with the new technology involved in building and operating a large-scale reactor designed specifically for power-producing purposes.

"The location for the atomic powerplant has not been chosen. Although the AEC announced in October that sites near the gaseous diffusion plants for the separation of uranium 235 would be considered, the agency added today that the attractiveness of proposals involving private financing for the steam and the electric generating portions of the plant and for operating the plant would considerably influence the decision on plant site.

"Companies or organizations interested in participating may submit proposals prior to February 15, 1954. Detailed information may be obtained from the AEC Reactor Development Division, Washington, D. C."

In response to the general invitation, George W. Mitchell, vice president and managing director of Eureka Corp. Ltd., Eureka, Nev., wrote AEC on January 26, 1954, as follows:

"DEAR SIRS: Eureka, Nev., and Eureka Corp., Ltd. (a lead-zinc mine), have often been mentioned as the possible location and sponsors of the first atomic energy powerplant. Your Director of Reactor Development, Dr. Lawrence R. Hafstad, has received several reports from Nevada's Atomic Power Utilization Committee, of which I am a director, on the feasibility of the project as well as realistic estimates of Eureka Corp.'s and other power requirements in the area, our present production costs, capacity, etc.

"Eureka Corp. is interested in participating in the construction and operation of a nuclear powerplant. We would seriously consider building, with private funds, the steam turbine and electrical generating portions as well as operating the entire powerplant.

"We shall appreciate receiving details as to the size of reactor (in terms of boiler capacity) which might be considered, so we may work up an estimate on the expenditure that we would be required to make for the steam and electrical portion of the plant. This would enable us to make a specific proposal. We presume the boiler in which the steam is made would be part of the reactor section of the plant and thus not a part of our problem."

During February 1954, Dr. Lawrence R. Hafstad, Director of Reactor Development, AEC, wrote to Mr. Mitchell in reply:

"DEAR MR. MITCHELL: Our staff has been studying the material you sent in support of an application for participation in the second round of industrial studies in connection with the use of electric power from nuclear energy.

"This material has been very helpful to us in documenting a very real need for relatively high cost electric power. As a general matter we would expect that one of the early applications of nuclear power would be to supply needs such as yours.

"Since, as we understand, it is not your wish or intent to become involved in the actual design of reactors, it appears that it would not be appropriate for you to enter into an active study agreement with the Commission of the type which power companies and other industrial companies have entered into with the Commission.

"We suggest that you continue to study the problem of utilization of nuclear energy in your industry, keeping us currently informed as to changes in your estimates of future consumer demands.

"We are returning the brochure with confidential information on your company but we would like to retain for our own use the maps and charts indicating the great need for some kind of power in your area."

On February 24, 1954, Lewis L. Strauss, chairman, United States Atomic Energy Commission, wrote the following letter to Senator MALONE:

"DEAR SENATOR: This is in reference to a subject on which you and I have had several conversations, viz., the feasibility of an early introduction into our economy of electrical energy derived from a nuclear source. I have been impressed by your arguments in behalf of locating one of the initial units in areas where power costs are relatively high, as in Nevada. You are aware, of course, that our best estimates to date are not yet at the point where power so produced would be economically competitive in most of our States where hydroelectric power or power from the burning of oil, gas, or coal is more cheaply developed.

"The last time we discussed the subject you were particularly interested in the pressurized water reactor with which the Commission decided to move forward last year and on which design work has made substantial progress. From this reactor we intend to derive important information concerning costs, and for that reason our technical people have strongly contended that those cost experiences cannot be realistic if the unit is designed to produce less than, say, 60,000 kilowatts. As I recollect our last conversation, we both agreed that this amount of power was in excess of the optimum size which you had in mind and which your area could presumably justify.

"In the course of our conversation last week, we also discussed the possibility of the so-called packaged powerplants in which the military are interested in principle and which, as envisaged, will be considerably smaller than the pressurized water reactor above mentioned. In this field there may be something which in a few months we could profitably discuss further. There is nothing to explore at this writing.

"Interest in the civilian use of electric power derived from nuclear sources, and confidence that such use will ultimately be attained, is now fairly widespread. Dr. Hafstad informs me, however, that the Nevada group and particularly the committee headed by Alfred Merritt Smith was especially interested, understanding, and helpful in the early days of great skepticism as to whether nuclear energy could ever be utilized except for military purposes. For this support and encouragement we are deeply appreciative."

These letters show that our sustained emphasis on the desirability of Eureka, Nev., as a site for the first industrial power reactor has been given serious consideration. It seems probable that changed personnel in the Federal nuclear ranks, and also failure to obtain an adequate appropriation for this phase of atomic work has prevented or delayed continued investigation by AEC. This delay may eventually turn out to be beneficial. Our feasibility reports were submitted 2 years ago, since when the Eureka Corp., key power users, has greatly increased its known tonnage of high-grade ore by means of continuous mining explorations. The potentially productive ore-bearing area has been extended a distance of over 1 mile to the northwest of the deep Fad shaft.

A second shaft is now being sunk into the extended ore zone. The new ore exposed by core drilling is very rich and of higher

grade than that of the original discovery. The new ore-bearing horizon is not so deep below the surface, and mining there will not be troubled by excessive water as it is at the original discovery where the Fad shaft is located.

A stronger new feasibility report could now be submitted than was possible 2 years ago. However, it should not be necessary to labor the point by continuously extolling the advantages of Eureka. Results of the recent mining explorations confirm predictions made by mining engineers and geologists who have studied the region. Widespread exploration and development of the entire area would certainly follow the introduction of lower priced electric power, yet such power need not be of low cost compared with rates in less remote areas. Hydroelectric and steam power costs will inevitably be high at Eureka, as we have so often stated, and as is confirmed by the recent report of the Federal Power Commission.

Of course, the AEC cannot publicize all of its plans for power development while they are being formulated, yet recent news shows that the Commission has been very active. The Wall Street Journal, March 10, 1954, states:

"Atomic Energy Commissioner Henry Smyth disclosed four new reactors—all of unusual design—are to be constructed over the next 5 years. The AEC believes, he said, atomic power can be produced cheaply enough to be of general use. The new devices may help to settle the question, he added.

"Smyth gave no estimates of the reactors' cost, nor did he indicate where they would be built."

And again on March 16, 1954, states:

"The first electric plant powered by atomic energy will be built and operated by Duquesne Light Co., in Pittsburgh, the Atomic Energy Commission disclosed. Output will go into the company's power system and be marketed to its customers. Construction of the plant is expected to take about 2 years."

These proposed power reactors seems to be in addition to the 60,000-kilowatt reactor the Commission announced a short time ago that it intends to construct, and for which initial funds had been made available. No estimates of costs or decision as to sites have been made public. So the location of the 60,000-kilowatt job apparently will be limited either to the site of some one of the present vast nuclear installations or to a place selected by some one of the large power or chemical companies which have been cooperating with AEC on reactor studies. It would seem that no small private company, especially one in a remote semidesert area such as the Eureka district, can hope to cooperate effectively in the design of a reactor. Dr. Halstad's letter to the Eureka Corp. indicates that such cooperation may be necessary, and is currently subject to agreement before planning will be undertaken.

Amendments to the atomic-energy law are forthcoming soon and they will give the AEC greater freedom in its operations and permit the offering of more attractive terms to private industry. We hope then that AEC, with its outstanding leadership and technicians, who have done such a phenomenal job in weapons, will soon be able to use its skills to help develop our vast dormant resources in water, land, and minerals.

Very truly yours,

ALFRED MERRITT SMITH,
Chairman.

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks another message from Alfred Merritt Smith to the members of the Atomic Power Utilization Committee of Nevada, together with attached letters.

There being no objection, the message and letters were ordered to be printed in the RECORD, as follows:

ATOMIC POWER UTILIZATION COMMITTEE,
Reno, Nev., June 21, 1954.

DEAR MEMBER: The Wall Street Journal of May 11, 1951, reports that a new bill now before Congress to license private industry is considered "confusing, vague, and perhaps even unworkable" by expert witnesses. Spokesmen for Dow Chemical—Detroit Edison and Associates atomic-power development project—also said the bill would require Congress to approve any license to a private company, and would give Congress responsibility for approving sale and use of fissionable materials that are the lifeblood of the industry.

Walter Cisler, president of Detroit-Edison, declared "the potential complications are beyond imagination," although he praised the bill for some steps it would take toward encouraging private atomic enterprise. It would, for example, allow normal patent rights to atomic operators. It would permit mining prospectors to benefit from their discoveries. It would make it possible for private industry to own atomic-power plants. However, Paul W. McQuillan, the legal head of Dow-Detroit, said, "The lifeblood of the industry, the special material without which it would be a dead shell, is kept in the ownership of the United States." Any private operator would have to get at least nine licenses from the Government, and the AEC has power "to amend, revise, or revoke and annul any license for almost any reason." Such restrictions and also confusion in the official nuclear development ranks have caused us to drop behind.

A staff reporter for the Wall Street Journal at Harwell, England, quotes an official of Britain's Department of Atomic Energy as saying: "We think we've got the jump on America in building atomic powerplants and exporting radioactive atomic chemicals, and we equal the United States in building sensitive atomic measuring machines."

Bolstering these statements is an atomic-powered generating plant Britain is building at Calder Hall that they expect will be producing electricity a year ahead of the United States. Two thousand men are employed on the job. They point to worldwide sales of radioactive materials and nuclear mechanisms that have exceeded such United States exports for 7 years. Last year Britain exported 4,315 units of radioisotopes, America only 713, states Bill Eastwood, isotope expert, who says fast delivery, absence of redtape, and lower prices are major factors in Britain's supremacy. The British firm of E. K. Cole, Ltd., has just sold $40,000 worth of atomic measuring machines to the Carborundum Co. at Niagara Falls, beating out American competition.

Britain's $8 million electricity station will be Government owned but will sell power to the public. It will have 2 reactors similar in type to the one in the U. S. submarine *Nautilus*, but each will be 5 stories high. It is planned to be in operation in 1956, a year sooner than Duquesne's plant at Pittsburgh.

About 300 miles north of Calder Hall, a second atomic powerplant site is being staked out for a $45 million breeder reactor powerplant. The reactor for this much more costly plant is to be housed in a 200-foot-diameter steel ball to protect surrounding Scottish people. It is expected to go into operation in 1958, 2 years later than the Calder Hall plant. The two are expected to supply heat enough to generate 100,000 kilowatts. If Britain's nationalized electricity industry is able to burn uranium instead of its diminishing coal reserves, a single pound of U–235 will release energy equal to about 2 million pounds of coal. The electricity will cost more than conventional power at first, but with greater efficiency and use the price will come down.

The first power reactor for United States industry will be built not in Nevada, as we had hoped, but near Pittsburgh, Pa. Even with a greater power market in north-central Nevada than we have shown, we could not possibly equal the Duquesne Light Co.'s offer of $5 million on costs, plus payment for the generated steam. Duquesne also agreed to furnish a free site for the entire project and to operate the entire plant and pay all labor costs.

However, we hope AEC and the Government will soon consider such power for use by our underdeveloped areas and mines in remote localities. Just as Uncle Sam has done much public good by building atomic materials, few plants are likely to be built by private enterprise. It seems to me that nothing could be more desirable than to divert for peacetime power for smaller projects a much larger part of the billions of dollars we have poured into the atomic weapons fund. It may be that Duquesne Co. will light the way, but AEC, with its vast public resources, if released by Congress, can create useful reactors for small projects and build them in power-hungry areas.

The following letter to Senator MALONE and an AEC news release dated March 14, should be of interest to our members.

UNITED STATES ATOMIC ENERGY COMMISSION,
Washington, D. C. March 22, 1954.

Hon. GEORGE W. MALONE,
United States Senate.

DEAR SENATOR MALONE: In view of the interest you have expressed in the pressurized water reactor project, I wanted to be sure you were informed of the Commission's action in selecting a participant.

Nine major proposals were received in response to the Commission's invitation for participation in the project. After evaluation of these proposals, the one submitted by the Duquesne Light Co., Pittsburgh, Pa., was selected as the most favorable to the Government. A copy of the Commission's release announcing the selection and summarizing the Duquesne proposal is attached.

We are advising those who submitted the other proposals that, as indicated in the last paragraph of the press release, there will be other opportunities to participate in the Commission's reactor research and development activities.

Your interest in the Commission's program is appreciated.

Sincerely yours,

K. D. NICHOLS,
General Manager.

AEC AND DUQUESNE LIGHT CO. TO NEGOTIATE ON ATOMIC POWERPLANT

Lewis L. Strauss, Chairman of the Atomic Energy Commission, announced today that a proposal submitted for participation by the Duquesne Light Co. of Pittsburgh, Pa., in the construction and operation of the Nation's first full-scale central station nuclear powerplant is the most favorable to the Government and that the AEC is negotiating a formal agreement with the company. The Duquesne Co. submitted 1 of 9 major proposals to the Commission.

Under the Duquesne proposal the company would—

1. Furnish a site for the entire project and build and operate a new electric generating plant at no cost to the Government.

2. Operate the reactor part of the plant and bear the labor costs thus entailed.

3. Assume $5 million of the cost of research, development, and construction of the reactor portion of the plant.

4. Pay the Commission at the rate of 48.3 cents per million British thermal units of steam used in the turbines for the first year; the rate increasing annually until it reaches 60.3 cents in the fifth year.

UNIVERSITY OF MICHIGAN LIBRARIES

5. Waive any reimbursement by the Government of costs incident to termination of the contract.

The chairman estimated that, including revenues from the sale of steam generated by the reactor, the company's proposal would reduce by an estimated $30 million the expenditures the Government would have to make during the period of construction and 5 years of operations if it undertook the full cost of the project.

The proposed plant site is on land presently owned by the company in the greater Pittsburgh area. The reactor design will incorporate safety features developed through 10 years of experience with reactor operation.

The Westinghouse Electric Corp. has a contract with AEC to develop, design, and construct the reactor portion of the plant. The reactor is expected to generate sufficient heat to produce a minimum of 60,000 kilowatts of salable electricity in addition to meeting the electricity requirements of the plant itself. The actual capacity of the reactor may turn out to be somewhat greater than the minimum of 60,000 kilowatts design and foreseeing this possibility the company would design its generating plant with some reserve capacity.

It is not expected that this first plant will produce electric power at costs competitive with power from conventional fuels. The project has been undertaken, in order to gain more design and technological experience than could be obtained otherwise, such as from a smaller plant, and to provide firm cost estimates for the future.

This type of reactor, known as the pressurized water reactor (PWR), will be cooled and moderated by ordinary water under pressure. The fuel will be slightly enriched uranium; that is, it will have a slightly greater concentration of uranium 235 than occurs in nature. This type of reactor was selected because research and development on it was more advanced than on other types. Several early reactors were water cooled, and this technology also was advanced to a very great extent by the work of Westinghouse on the submarine thermal reactor developed to power the submarine *Nautilus* and on the large naval vessel reactor project.

The Duquesne Light Co. supplies electric power to the greater Pittsburgh district, one of the world's largest industrial centers. Since last October the company has engaged in nuclear power reactor studies under the AEC's industrial participation program. Preceding its entry into this study the company arranged to have some 40 of its engineers attend a special course on atomic energy at the Carnegie Institute of Technology.

In announcing the negotitions with Duquesne for participation in the PWR project, Mr. Strauss pointed out that this project represents only one of several approaches to the development of technology and equipment for economical electric power production from atomic reactors. He called attention to the announcement by Dr. Henry D. Smyth, member of the Commission, in an address March 9 to the American Institute of Chemical Engineers, of other approaches which the Commission has concluded should be undertaken, including breeder, boiling water, homogeneous, and sodium-graphite reactor projects.

Mr. MALONE. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point in my remarks pages 1, 2, 3, and 4, down to the middle of the page, but not including the table, which has already been made a part of the RECORD, of the Market Study, High Cost Power Areas, Nevada, Federal Power Commission, Bureau of Power, San Francisco Regional Office, May 1953.

There being no objection, the indicated pages of the study were ordered to be printed in the RECORD, as follows:

MARKET STUDY, HIGH-COST POWER AREAS—NEVADA

A. INTRODUCTION AND SUMMARY

1. Introduction

This report is one of a series of studies which were made at the request of the Atomic Energy Commission. Its purpose is to determine whether it would be possible to market the output of an electric generating plant in the region west of the Continental Divide. Two criteria were used for guidance in selecting the area: One, that the cost of power from present and potential sources is in excess of 10 mills per kilowatt-hour; and two, that potential loads totaling 15,000 to 30,000 kilowatts are available at rates which will be sufficient to pay production costs averaging between 10 and 17 mills.

The procedure followed consisted of reviewing generating costs in the region, and then selecting the area in which power costs and growth would best meet these criteria. The area encompassing northeastern Nevada was selected, for the following reasons:

(a) Electric rates there are higher than in any other area of comparable size in the eight Western States.

(b) Potentialities exist for the development of electric loads of 15,000 to 30,000 kilowatts.

Within the northeastern Nevada area, the specific area centering in Eureka, including the towns of Ely, Elko, Carlin, and Austin was selected for intensive study. The 1955 and 1960 power requirements of each potential customer in this selected area were estimated; the cost of power to these customers from existing or prospective sources was determined; and, based on these power costs the maximum rate at the bus bar of the proposed project was computed for each potential load. The loads that could be served at various assumed bus bar rates were then summarized.

2. Summary of findings

1. The potential 1960 loads of the Ely-Elko-Carlin-Austin area were estimated at 31,108 kilowatts, including 7,930 kilowatts for utilities, 19,300 kilowatts for mining loads, and 3,878 kilowatts for agricultural loads.

2. The foregoing estimates do not include any part of the power requirements of the Kennecott Copper Corporation's large mine and smelter near Ely. This industry operates its own steam-electric plant and its incremental fuel cost is estimated at 3.5 mills per kilowatt-hour—well below the assumed total cost of power from a nuclear-type plant. Should the incremental cost of the nuclear plant prove to be less than 3.5 mills per kilowatt-hour, off-peak energy may be sold to Kennecott as fuel replacement.

3. Current production costs of potential customers for firm power range from about 17 mills to 35 mills per kilowatt-hour. Estimates indicate that, assuming a 30,000-kilowatt load, power at 60 percent load factor could be delivered to Eureka from contiguous areas at a cost of about 10 mills per kilowatt-hour. However, since the total amount of load available in the area at 10 mills is less than 30,000 kilowatts, and is quite scattered, the cost of energy from outside sources will be somewhat higher.

4. Rates at the bus bar of the proposed project were assumed to range from 5 to 20 mills per kilowatt-hour at the system load factor. After adding transmission costs between the project and the potential customer, and comparing the resulting total cost with the cost of an alternative supply, the probable magnitudes of the 1960 potential loads obtainable are estimated to be as follows:

1960 potential loads obtainable at various assumed selling prices

Assumed bus-bar rate (mills per kilowatt-hour)	Load (*Kilowatts*)
5	30,600
10	29,000
15	23,900
17	9,500
19	0

5. Assuming that power were sold in Eureka at 15 mills per kilowatt-hour, the following 1960 loads may be obtained:

Customer groups	1960 estimate	
	Peak	Energy
	Kilowatts	*Million kilowatt-hours*
Utilities	3,215	11.9
Major industries	16,500	114.1
Miscellaneous mines and farms	4,141	9.5
Total	[1] 23,856	135.5

[1] Rounded to 23,900.

6. The estimates shown in finding No. 5 for utilities and miscellaneous mining and farm loads are believed to be reasonably firm, assuming that the transmission system is financed and constructed in accordance with the assumptions made. However, service to the Ely Light & Power Co. would be competitive.

7. The 1960 load of the major industries consists of the Eureka Corp., Ltd., zinc-lead operations (14,500 kilowatts, of which about 75 percent is for pumping), the Simplot Iron Mine (1,000 kilowatts), and the Goldacres Mine and Mill (1,000 kilowatts for mining gold and processing cyanide). The first two are not operating at present. If the Eureka Corp. should succeed in sealing off the flow of water into the mine, its 1960 load may be reduced to between 3,000 and 7,000 kilowatts. If it is not successful, the pumping load requirements may exceed the amount estimated in this report. The composition of the ore from the Simplot mine is such that it appears to be presently unsuitable for use by United States steel industry. Its operation therefore may be dependent on foreign markets.

8. Because of the uncertainties as to cost of power from a nuclear powerplant, and the unresolved problems of the largest potential customer (Eureka Corp.), definite assurance of a 15,000- to 30,000-kilowatt load for the proposed project cannot be given at this time.

B. SELECTION OF MARKET AREA

The purpose of this study was to determine whether a nuclear powerplant could be employed advantageously in any part of the area served by the San Francisco regional office of the Federal Power Commission. The criteria used were: (1) High power costs at present, and (2) a potential 1955 to 1960 load of 15,000 to 30,000 kilowatts.

In the eight western States covered by the San Francisco regional office there are very few areas that are not near either large sources of reasonably priced hydro power, or relatively cheap fuel, or both. For example, all parts of the States of Washington, Oregon, Idaho, and Montana are served by systems which obtain their power primarily from the hydroelectric plants located throughout these States. Rates range from moderately high down to the lowest in the country. California has available large amounts of hydro power and relatively cheap oil and natural gas. Electric rates are moderate. Arizona, except for the sparsely popu-

lated area in the extreme northern part of the State, is served from hydroelectric developments on the Colorado and other rivers of the State and by steam-electric plants fueled primarily with low cost natural gas from Texas and New Mexico. The metropolitan centers of Utah (with reasonable electric rates) are supplied from hydro plants and from fuel-electric plants using as the principal fuel, coal from the vast deposits of that State. The southern part of Nevada is served from the Federal hydro developments on the Colorado River and rates are low. Western Nevada is served from systems which obtain a large part of their supply from California hydro plants, consequently rates are not extremely high.

The following tabulation shows by load areas throughout the eight western States the average revenues, in cents per kilowatt-hour, received by the major electric utilities in 1950 from sales to ultimate consumers.

Mr. MALONE. Mr. President, I close by saying that I am fully aware of debate going on to develop such energy.

The debate also refers to the public power versus private power question. I have not entered into the debate. I think it is relatively unimportant.

The important thing is that the work be carried forward, that the 60,000 kilowatt powerplant be constructed, that it be constructed as now contemplated by a private company in conjunction with the Government, that the work undertaken by the Government in this connection with the atomic-energy plant be carried through until such time as the project is proven to be feasible, and that private interests throughout the country, may then enter into the construction of such projects to the point that the Government need no longer enter into this particular work.

URANIUM POWER—SENATE RESOLUTION 143

Mr. President, at this time I quote from a report which has just been completed, pursuant to Senate Resolution 143, by the Minerals, Materials, and Fuels Economic Subcommittee, of which I am chairman, of the Committee on Interior and Insular Affairs.

The report was submitted to the Senate on July 9, 1954, by order of the Committee on Interior and Insular Affairs.

The report contained 12 recommendations. The eighth recommendation is as follows:

8. We recommend that goals for production of uranium for fuel be made adequate to meet both military and civilian requirements.

Mr. President, that is a positive recommendation. We need not depend on the Belgian Congo or on any other area across a major ocean, from which it will be impossible to secure such supplies in time of war.

I read further from our recommendation No. 8:

Hemisphere self-sufficiency in uranium for fuels can be attained. A liberal long-range market price must be maintained as long as Government control is necessary for security. A tremendous civilian potential use of uranium is assured based on nuclear power for industry.

A GREAT INDUSTRY IN THE OFFING

Mr. President, I believe that one of the greatest industries in America will come from the splitting of the atom. I believe that the civilian use of the resulting commercial power will far surpass, in terms of the quantity or amount of material used, the use of such material for war preparation or even in war.

THIS NATION SELF-SUFFICIENT IN URANIUM

Mr. President, just assume for a moment that we had a civilian industry that was using the amount of this fuel annually that would be necessary to prepare for war.

In that event the material would no longer be on the critical list.

In my considered opinion there is no question, since uranium has now been found in seven of our States, that we are assured an adequate domestic supply. Originally, uranium was known to exist in Utah and Colorado. In 1944, there was published on industrial report prepared by the junior Senator from Nevada, on 11 Western States. In connection with the report, we reported on the unranium area in Colorado and Utah; we devoted several pages of the report to a discussion of the supply of uranium in those two States.

Now uranium has been found in seven of our States, and it will be found in many more States. The question is simply that of keeping it profitable to find uranium.

I foresee a time when we shall have in the United States, Canada, Mexico, and adjacent countries, more uranium fuel than we could possibly use; and the same applies to every one of the 77 critical and strategic materials and minerals on the list with reference to the Western Hemisphere.

Mr. President, I wish to close by saying that I believe that the step the Atomic Energy Commission has recommended, and that our Joint Committee on Atomic Energy is furthering, is a forward step. I am depending upon the committee, in which I have every confidence for the accuracy and completeness of the material submitted with the bill. I will vote for its passage.

THE DROUGHT SITUATION IN TEXAS

Mr. JOHNSON of Texas. Mr. President, will the Senator from North Dakota yield to me at this time, with the understanding that in doing so he will not lose the floor?

Mr. LANGER. Yes, I yield, if I may obtain unanimous consent to do so with that understanding.

The PRESIDING OFFICER Is there objection? Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, Texas farm crops are burning up as a result of the combination of too much sun and not enough rain. In many parts of the State, the temperature has risen above 100 degrees for 10 or more consecutive days. Some areas have not had adequate rainfall within the last several years.

Corn is about gone in large areas of central and east Texas.

Pastures are rapidly passing the point of no return.

Milk production in the dry areas is declining.

Beef cattle producers in some sections are faced with the threat of having to sacrifice their foundation herds—which certainly would represent flagrant economic waste.

The small-grain harvest, almost completed in central Texas, resulted in yields far below normal.

Mr. President, the brutal truth is that the drought has never been broken in some parts of Texas. Conditions are worse today in these areas than they were last year or 2 years ago.

Today is the cutoff date for the national drought-relief protein-feed program, under which farmers and cattlemen have been receiving some assistance. The need for extending this program, or for devising a special aid program, for the stricken areas is great and immediate.

Mr. President, I have today sent messages to the President of the United States and to the Secretary of Agriculture to urge that this need be met without delay. These farmers and cattlemen, struggling against heavy odds to stay in the all-important business of producing food and fibers, deserve to receive a helping hand in their time of need.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD my letters on this very important subject, addressed by me to the President of the United States and to the Secretary of Agriculture.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JULY 15, 1954.

The PRESIDENT,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: I regret to report that in some sections of Texas drought conditions are the worst they have ever been. Pastures have dried up and small-grain harvest has resulted in yields far below normal. Dairy production in the affected areas—comprising especially some 25 counties in central Texas, but not confined to them—is rapidly declining. Beef-cattle producers are faced with the threat of having to sacrifice their foundation herds.

The national drought-relief protein-feed program, under which farmers and cattlemen have been receiving some assistance, expires as of this date. I respectfully urge the necessity either of extending this program or of devising a special program of assistance for the stricken areas.

Won't you please ask for an early report on this and see if a decision can be reached.

Sincerely,

LYNDON B. JOHNSON.

JULY 15, 1954.

The Honorable EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: As your Department has been informed by the Governor of Texas and the State agriculture commissioner, important areas of Texas are suffering severely from the continuing drought. Dairy production in the affected areas is declining rapidly. Beef cattle producers are faced with the threat of having to sacrifice their foundation herds.

Expiration as of this date of the national drought relief protein feed program leaves the drought-stricken areas without hope of assistance. I urge upon you in the strongest

UNIVERSITY OF MICHIGAN LIBRARIES

terms the wisdom and necessity either of extending the program or of devising a special program of assistance.

Won't you please ask for an early report on this and see if a decision can be reached. You will have my fullest cooperation toward that end.

Sincerely,

LYNDON B. JOHNSON.

Mr. JOHNSON of Texas. Mr. President, I thank the distinguished Senator from North Dakota for his courtesy and graciousness.

Mr. LANGER. Mr. President, it is always a pleasure to yield to the distinguished senior Senator from Texas.

AID TO SOCIAL-SECURITY BENEFICIARIES COMPELLED TO SEEK ASSISTANCE UNDER STATE WELFARE PROGRAMS

Mr. LONG. Mr. President, will the Senator from North Dakota yield to me?

Mr. LANGER. I am glad to yield to the Senator from Louisiana, provided that I may obtain unanimous consent to do so without losing my right to the floor.

The PRESIDING OFFICER. Does the Chair correctly understand that the Senator from North Dakota is requesting unanimous consent to yield approximately 10 minutes to the Senator from Louisiana, provided that in yielding for that purpose, he will not lose the floor?

Mr. LANGER. Yes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. LONG. Mr. President, on behalf of myself and Senators SMATHERS, MALONE, and KUCHEL, I have submitted an amendment to benefit those persons whose social security protection is so inadequate that they are compelled to seek public assistance under State welfare programs. Briefly stated, the purpose of my amendment is to provide that those aged persons, as well as the blind and totally disabled, who are receiving public welfare assistance, will not have their assistance payments reduced by virtue of the modest increases in social security payments, resulting from the administration's social security bill.

To illustrate the problem, let me describe the situation in the State of Louisiana. There the majority of persons insured by social security have been receiving the minimum amount provided by law for old-age and survivors insurance payments.

Let us assume that a needy retired person 65 years old was receiving the $10 minimum social security payment for years prior to September 1950. During the years 1948 through 1950, that same person was in need of public assistance, although his income from social security made his need $10 less than that of a needy person who had no income whatever.

The public assistance portion of the social security legislation required that any public welfare plan should take into consideration all income of a citizen, from whatever source derived.

For this reason, a needy aged person with $10 income from old age insurance would have had his $50 old age assistance payment reduced by $10. The only difference between his income and that of a person who had no social security insurance was that he received his income in two checks, while the other needy person received his $50 in one check.

From the point of view of a man who had made payments to the social-security fund, this was a cruel paradox. He was exactly as well off as he would have been if he had not contributed to the fund at all.

In 1950, Congress increased the minimum social-security payment for the aged and blind to $20. When the Louisiana Department of Welfare found that the income of a retired worker had been increased by $10 from social-security sources, the department of public welfare immediately reduced the man's public assistance check from $40 to $30.

Again, the aged person who had contributed to the social-security fund found himself in no better position than the needy person who had not contributed at all.

The same result occurred in 1952, when the minimum benefit was raised from $20 to $25. Thus, we find that while the average recipient has had his old-age-insurance payments doubled, the less fortunate of these recipients have had no improvement in their situation. This is an odd situation—where the Federal Government has undertaken to increase payments to those covered by social security, with the result that those who have benefited the least have been those who needed the assistance most.

I am not unmindful of the fact that in 1952 Congress increased the matching for public assistance, in the effort to raise old-age assistance to $55 with Federal matching. Nevertheless, the basic injustice remains, and a needy person who has contributed to social security receives no reward under existing legislation. He will not receive any meaningful recognition of his contribution to the social-security fund, under the administration's proposal as it presently stands.

It is for that reason that I have been joined by one of my Democratic colleagues and two Republicans in a bipartisan effort to eliminate the defect of the law which would prevent needy persons from being benefited as a result of the proposed $6 average increase in social-security payments.

If we are going to increase social-security benefits, why take the portion of benefits which would aid the needy and use it to reduce the burdens of expenses of State governments? If that is the purpose, it would be just as well to increase the matching formula for aid to State welfare plans. I have pending before the committee an amendment to increase Federal matching by $10 on the average pension. Thus far, I have received little support for that amendment, and I have virtually no hope of securing favorable action on it at this session.

I am confident that Secretary Hobby and Assistant Secretary Rockefeller have every desire to make the administration's social-security bill a model of farsighted and sympathetic understanding of the needs of citizens.

There is no doubt in my mind that this situation is an oversight by those conscientious persons, who have had only 2 years' responsibility for public welfare legislation. I say this without partisan feeling. Democrats, too, have made their share of mistakes in groping for the answer to our public welfare and social-security problems. In fact, a Democratic administration twice made the very same error.

The philosophy of my amendment is evidenced elsewhere in the administration's social-security bill. For example, the standards and conditions under which a person can draw old-age assistance payments and continue to work have been liberalized considerably. It will, in fact, be possible for an individual to earn as much as $1,880 a year without losing even 1 month's benefits.

Surely those who have recommended such liberal provisions for the relatively more fortunate would not want to insist upon Scrooge-like penury in dealing with the needy. I feel certain that the adoption of the amendment proposed by me and the three other Senators would be an important improvement in the administration's bill. It would be an accomplishment in which both parties could take considerable pride.

ACTIVITIES OF SENATE SMALL BUSINESS COMMITTEE IN CONNECTION WITH ATOMIC ENERGY QUESTIONS

During Mr. LANGER's speech,

Mr. THYE. Mr. President——

Mr. KEFAUVER. Mr. President, will the Senator from North Dakota yield to me?

Mr. LANGER. I yield first to the Senator from Minnesota [Mr. THYE], with the understanding that I shall not lose the floor.

Mr. THYE. I thank the distinguished Senator from North Dakota for yielding to me. I wish to lay before the Senate a report concerning the activities of the Small Business Committee in connection with the atomic energy question.

As chairman of the Senate Small Business Committee, I have been concerned within the past month with eight telegrams and letters I have received from certain rural electric cooperatives on the subject of amendments to the Atomic Energy Act. These amendments are currently under discussion on the Senate floor in the form of S. 3690.

The communications I have received have been concerned primarily with those provisions in the present bill which deal with the compulsory license provisions as contained in section 152 of S. 3690. It is the contention of the co-ops that the bill does not contain sufficiently stringent provisions which will prevent private utilities from gaining a monopoly in the all-important field of development of nuclear power.

I want to make clear that both as an individual Senator and as chairman of the Senate Small Business Committee, I will continue to fight against any form of monopoly which would serve to weaken

our free enterprise economy. I also feel compelled to add that as one who has spent his entire life fighting for a healthy and strong agricultural economy in this country, I am fully aware of the future potential which the production of nuclear power holds for the rural areas of the Nation.

During the past few weeks I have personally studied carefully all the information I have been able to receive on the subject of atomic energy. The staff of the Small Business Committee has also been working on this matter for the past 3 or 4 weeks. I have kept in constant touch with the staff to keep abreast of their activities. I have read the proposed bill, and I have gone over the report of the Joint Committee on Atomic Energy which was issued on July 12, 1954.

In considering whether the Small Business Committee should hold hearings on the amendments to the atomic energy bill, it had to be determined that such hearings would be in the best interests of all parties concerned.

In the course of our study, we found that section 15 (b) of the atomic energy bill and section 201 of S. 3690 contained the following language:

> All bills, resolutions, and other matters in the Senate or the House of Representatives relating primarily to the Commission or to the development, use, or control of atomic energy shall be referred to the joint committee.

That immediately raised the question of the jurisdiction of our committee. A study of this point reveals that it was the clear thinking of both Houses of Congress that the subject of atomic energy was of such great importance to the American people that it demanded the appointment of a joint congressional committee which would devote all of its time and energies to this subject. There has been no dispute as to the soundness of that decision. The Senate has nine members on the joint committee chosen from both political parties. The nonpartisan character of the work of the joint committee has impressed me on many occasions. The work of the committee and its staff has always been of the highest caliber and has earned the deep respect not only of the Congress but of the American people.

When I read the law quoted above, I immediately instructed the staff of our committee to contact the staff of the joint committee in an effort to accomplish the following:

First. To determine if all parties interested in the amendments to the atomic energy bill had been given an opportunity to appear before the committee to present their views.

Second. To relate to the joint committee the nature of the complaints we had received.

Third. To determine if the same subjects had been discussed in hearings held by the joint committee.

Fourth. To determine whether careful study had been given to these complaints.

The staff of our committee has reported to me as follows in line with my instructions:

First. The parties who have written to this committee were represented before the joint committee and testified on S. 3690.

Second. The Small Business Committee staff did relate to the joint committee the nature of the complaints we had received.

Third. These same complaints were registered with the joint committee.

Fourth. A most careful study was given to these complaints by the joint committee.

In line with point 4 above, I call your attention to the fact that the subject of compulsory licensing was one of the most controversial subjects taken up by the joint committee. That is evidenced by the minority reports presented in the joint committee report, No. 1699. One minority report took the position that there should be no compulsory licensing provisions contained in the bill. Compulsory licensing was attacked as being unconstitutional, unnecessary, dangerous, and in conflict with current patent laws and procedures.

The other minority report stated that the bill did not go far enough in providing for compulsory licensing and that the bill placed too many requirements for obtaining such a license.

It is interesting to note that no Senator of either party wrote a minority report on any subject contained in the bill. In other words, the nine most capable Senators whom we have designated to represent the Senate of the United States on the joint committee are recommending that we adopt the provisions as written in S. 3690. That does not mean that we are obligated in any way to accept these provisions. The floor debate on this bill has already demonstrated that there are certainly many questions which must be explored and debated on the Senate floor. However, the fact that compulsory licensing was a major topic of discussion within the joint committee, the fact that both extremes on this subject are ably set forth in the report, and the fact that none of the Members of the Senate on the joint committee filed a minority report must weigh heavily when you consider whether or not another committee of the Senate should open public hearings on the same subject matter.

The reason I am making this explanation, as chairman of the Committee on Small Business, is that some Members of the Senate have expressed the hope that the Small Business Committee would hold hearings on this question. I am stating why at the present time I, as chairman, do not believe it to be advisable for the Small Business Committee to proceed with hearings. I feel that the Joint Committee on Atomic Energy has gone into the question very fully and very thoroughly.

Should another committee of the Senate hold hearings on these provisions, it is logical to assume that the same parties would appear and the same arguments would be advanced. The question of needless duplication of effort immediately comes to mind.

It would appear that the joint committee in reporting out S. 3690 took into consideration all of the arguments proposed and have come to us with a carefully thought out compromise.

I also feel impelled to add that the staff of the Senate Small Business Committee has also contacted the REA concerning this matter. We have been assured that REA, under the direction of Ancher Nelsen, has already taken measures that will insure that the agency will be kept abreast of all developments in the nuclear power field and will be in a position to work with the Atomic Energy Commission in those matters which will be of future benefit to the rural electric cooperatives of this Nation.

Returning to the subject of compulsory licensing, it must also be realized that there are many businessmen represented by our committee in the Senate who are opposed to such a provision. We have a situation where the same arguments at both extremes of this subject would present themselves just as they did before the joint committee.

I strongly believe that the field of nuclear power development must be closely watched by all Members of the Senate, and every effort must be made by the Congress, by the Department of Justice, by the Atomic Energy Commission, and by the Federal Trade Commission that the small-business concerns and the rural electric cooperatives and other parties in interest are not frozen out by anyone who has monopolistic designs on this development.

In line with that thinking, I can assure you that as long as I am chairman of the Small Business Committee and as long as I am a Member of the United States Senate, I will do all that is in my power to insure to future generations the fullest development of atomic energy for peacetime use, free from the encroachments of monopoly. I have, therefore, instructed the staff of the Senate Small Business Committee to make the subject of atomic energy a continuous part of the work of this committee. We have been assured the fullest cooperation from the joint committee, the Atomic Energy Commission, the REA, the Justice Department, and the Federal Trade Commission.

I thank the distinguished Senator from North Dakota for yielding to me at this time, because I have released my statement to the press, and I was eager to make it on the floor of the Senate.

Mr. LANGER. The distinguished Senator from Minnesota has made an excellent report on the present situation, particularly as it refers to small business.

Mr. KEFAUVER. Mr. President, will the Senator from North Dakota yield to me?

Mr. KNOWLAND. Mr. President, the distinguished Senator from North Dakota has been extremely generous with his time. He has yielded to Members on both sides of the aisle. He has shown great courtesy to Members of the Senate. Certainly I have no desire to object to the request of the Senator from Tennessee, if his request is to make a speech for a limited period of time, perhaps 5 or 10 minutes. However, it

UNIVERSITY OF MICHIGAN LIBRARIES

should be noted that it is contrary to the rules of the Senate, as I am sure the Senator knows, for a Senator to yield to another Senator who must leave the Chamber except for an insertion in the RECORD or a brief statement. Of course, we have not applied the rule strictly in that regard, and I do not wish to object or ask for a strict application of the rule at this time. I think, however, that in fairness to every Senator, unless the request is for a limited period of time, it should not be made. The distinguished Senator from North Dakota has a speech which he would like to complete. I hope there will be some understanding as to the amount of time the Senator from Tennessee desires.

Mr. LANGER. The Senator from Tennessee will be the last Senator to whom I shall yield today until I have finished my speech. Of course, I am willing to yield to him if no objection is made. I understand that he has released his statement to the press.

Mr. KNOWLAND. I have no desire to prevent the Senator from Tennessee speaking at this time, but I should like to have some understanding with regard to the amount of time he desires.

Mr. KEFAUVER. I have not spoken on the pending business at all, and the Senator from North Dakota had promised to yield to me before he yielded to several other Senators, and I have stood by while the Senator from North Dakota has yielded to the other Senators before yielding to me, which of course was agreeable to me. My speech will not be a long one, but I cannot say just how long it will take, because I do not know what colloquy might be involved.

Mr. KNOWLAND. Can the Senator make an estimate? Will it take 10 minutes or 15 minutes or 20 minutes? I should like to have some understanding on that point. If the speech is to take more than that length of time it would seem to me that the orderly procedure would be to let the distinguished Senator from North Dakota complete his address first. It is contrary to the rule of the Senate to surrender, in effect, a prerogative of the Chair to a Senator. I do not believe that normally that is a good parliamentary practice.

I am sure if the Senator from Tennessee would set some limit on the length of time he desires, and if before he completed his speech he required more time, there would be no desire to object if he needed an additional 5 minutes, perhaps. I hope we can maintain the orderly procedures of the Senate.

Mr. LANGER. Mr. President, as I understand, the distinguished Senator from Tennessee has released his statement to the press. Therefore I yield the floor.

REVISION OF THE ATOMIC ENERGY ACT OF 1946

The Senate resumed the consideration of the bill (S. 3690) to amend the Atomic Energy Act of 1946, as amended, and for other purposes.

Mr. KEFAUVER. Mr. President, I thank the Senator from North Dakota very much for his thoughtfulness and generosity. The Senator has been very generous by yielding without any limitation to other Senators, I believe to five Senators on the other side of the aisle and to three Senators on this side of the aisle. I shall not take long with my remarks, but I do appreciate the Senator's thoughtfulness.

I feel confident that none of the 82 Congresses that have preceded this one was ever called upon to consider and enact a more important piece of legislation than the atomic energy bill now before us.

I am equally confident that no legislation, even remotely comparable to this in its importance, was ever taken up in such an atmosphere of haste.

There seems to be a determination somewhere—I do not know where or in whose bosom—to get this bill through the Congress before we know all there is to know about it.

I appreciate the desire of many persons to wind up the legislative business as rapidly as possible and go home. But I am sure the country feels that this matter is much too important to be decided in a last minute burst of legislative energy.

As time is measured, atomic energy is a new human problem. But it is a problem so vital, so enormous in its consequences, that a flaw in our handling of it could well mean the end of human existence.

Atomic energy is a force about which we must be able to formulate a basic philosophy. Unfortunately, because of its highly technical nature, only a relative handful of people can appreciate the magnitude of the problem before us.

Mr. President, we cannot approach this problem as if it were a resolution proclaiming National Honeysuckle Week, or an amendment to the tax bill. We are dealing here with the basic stuff of the universe.

We are trying to answer a fundamental question of philosophy by formlating rules of administration for a Government agency.

I believe that if we persist in this approach, we shall find ourselves, within a very few years, in a Gordian knot of cultural, scientific, and legal difficulties.

In discussing this measure, I intend to confine myself to but one of its many aspects: The Atomic Energy Commission and its relations with plain, everyday, conventional, steam-generated electricity.

I am sure that certain of my colleagues will, as others have already done, shed a great deal of light on other phases of this vital measure before us.

Mr. President, I do not believe one has to be an expert in nuclear physics to see that the proposed Dixon-Yates contract is a bald perversion of authority Congress intended the Atomic Energy Commission to have.

I do not mean to infer that the Congress in any way mistrusted the Atomic Energy Commission. The record will show it is a most favored agency. For the 1955 fiscal year, for instance, we appropriated more than $1 billion to carry on the work of the Commission. Later Congresses will most probably do likewise.

The fact is that Congress intended the Commission to do certain things under the authority granted it. And there were certain things that the Congress did not intend it to do.

Under section 12 (b) of the Atomic Energy Act, as amended, Congress gave the Commission authority to enter into long-term contracts to purchase power for use in AEC installations.

I think we would all agree that the Commission needs such authority to insure the proper functioning of its various plants and operations.

But I do not believe that even by the most tortured logic can we twist and subvert the authority granted therein to cover the contractual monstrosity presented in the Dixon-Yates proposal.

Mr. President, I was very much interested in the excellent address delivered by the junior Senator from Mississippi [Mr. STENNIS] in which he analyzed the legislative history of section 12 (b), pointing out that when the Atomic Energy Commission first needed additional power at its Paducah plant and also at its Portsmouth, Ohio, plant, it asked Congress for authority to enter into contracts to enable it to obtain power. The Commission was given general authority at that time to make contracts for securing power. The legislative history is that the three places, Oak Ridge, Paducah, and Portsmouth, were written into section 12 (b), which undoubtedly shows that the legislative intent was to enable the Commission to enter into power contracts only at those specific places. It seems to me that is a logical conclusion. It is one which any court in the land would follow. When certain places are named, without a clause providing that other locations are not excluded, it is meant to limit the Atomic Energy Commission to contracts at those specific places. That would be true even in the absence of legislative history. Where the legislative history shows there were 3 specific locations, the inevitable meaning is that the legislation intended that the Commission could enter into contracts only for power which would go directly to those 3 places.

Mr. President, it is not fair to the Congress and it is not fair to the agencies involved to twist the legislative intent of Congress as expressed in section 12 (b) of the Atomic Energy Act.

As has been pointed out on this floor time and time again, nothing in the basic Atomic Energy Act gives AEC the remotest authority to purchase electric power for use of the 400,000 citizens of Memphis, Tenn., and the people in that area.

If the proposal had no other fault—actually, it is riddled stem to stern with the most atrocious shortcomings—I would still be against it.

Let me say that I would be just as firm in my opposition if the AEC proposed to supply electric-power services to the people of San Diego, Calif., or Pleasant Point, Maine.

Mr. President, in 1934—20 long years ago—the people of Memphis voted 16 to 1 to buy their electric power from the Tennessee Valley Authority. They purchased their own distribution system

and entered into an agreement to buy their power wholesale from TVA.

A part of the system was purchased by the city of Memphis for which bonds were issued obligating the city of Memphis and its citizens for the payment of the bonds A part of the facilities of the Commonwealth & Southern were purchased by the Tennessee Valley Authority. The deal was consummated between the cities, the TVA, and cooperatives in the area. In the Congress itself meetings were held, and finally the arrangements were made and the Congress of the United States authorized the issuance of bonds by the Tennessee Valley Authority for the purchase of facilities in that area. It was set forth in the legislation approving the issuance of those bonds that the area should be served by the Tennessee Valley Authority. Since that time it has been so served. There has been a friendly relationship between it and the private power companies operating in the adjacent areas.

There has been no attempt on the part of the TVA to spread out into some other section, and up to this time there has been no open attempt on the part of the private power companies to get into the TVA territory.

Mr. SPARKMAN. Mr. President, will the Senator from Tennessee yield?

Mr. KEFAUVER. I yield very happily to my distinguished colleague from Alabama, who was a Member of the House Military Affairs Committee at the time this arrangement was negotiated and worked out, and the legislation was passed.

Mr. SPARKMAN. As a matter of fact, I would remind my friend from Tennessee that I was the sponsor of that legislation in the House of Representatives.

Mr. KEFAUVER. That is correct.

Mr. SPARKMAN. However, I rose for the purpose of asking the Senator this question: Is it not true that no further back than last year the officials of the power companies operating in the Southeastern States testified before the Senate Appropriations Committee to the effect that this agreement had been entered into tacitly, and the statement was made that since that time it had been meticulously observed by both sides?

Mr. KEFAUVER. The Senator is correct.

In the testimony before the Senate Appropriations Committee representatives of power companies in Alabama, Mississippi, Arkansas, and elsewhere surrounding the Tennessee Valley area said they had great confidence in the TVA electrical department, that there was a pleasant and cordial relationship in connection with the sale of power back and forth from time to time, and that the arrangement had been lived up to by both sides.

Mr. SPARKMAN. And that it had worked well?

Mr. KEFAUVER. And that it had worked well, and there was no complaint whatsoever about the dealings with the Tennessee Valley Authority.

Mr. SPARKMAN. Mr. President, will the Senator yield for one other question?

Mr. KEFAUVER. I yield.

Mr. SPARKMAN. A few moments ago, the Senator from Tennessee said that the Atomic Energy Commission had no more right to make a contract for the purchase of power with which to supply the needs of the people of Memphis and the area thereabouts than it had to buy power with which to supply the needs of people in other places throughout the United States. He particularly named one city in California, and another in Maine.

As a matter of fact, if the Atomic Energy Commission can be used as an agent to purchase power for the use of private citizens in the Memphis area, cannot the Commission just as well be used for the purchase of power for the citizens of any other city in the United States, having no connection with and no propinquity whatsoever to the operations of the atomic energy installations?

Mr. KEFAUVER. The Senator is entirely correct. If the Atomic Energy Commission can be used as a power broker, something for which it was not designed—and Congress never intended it to be used for the purchase of power to be used in the Tennessee Valley for commercial purposes transmitting power a distance of 200 miles or more from the atomic energy plants—it can be used for the purpose of building a steam plant anywhere to produce electricity which has nothing to do with or is far removed from any atomic energy plant.

To extend the parallel a little further, if the criterion was that the cities should be within 250 miles of some atomic energy work, then cities like Cleveland and most of the other cities of Ohio, cities in Michigan, Illinois, Indiana, Kentucky, Missouri, most of the cities of the Pacific Northwest, and many other large cities, would be as close to atomic energy operations as West Memphis, Ark., is to Paducah, Ky. So the Atomic Energy Commission could build steam plants to furnish any of those cities or communities with power, using the same logic with which they are proposing to build the plant in question. Of course, the people of those communities would have nothing to say about it. The plant would be used by the Atomic Energy Commission, acting as a power broker, apparently because of the influence of certain private power interests.

If the principle were established, it would not make any difference whether the cities were 250 miles or 500 miles away. The principle would be the same.

When the subject is considered carefully, it is an outrageous contortion of the Atomic Energy Act. It is outrageous to use an agency for a purpose it has never intended to serve, and for which it was never formed, merely to force the people in the section affected to purchase from a source from which they never expected to buy.

I thank the Senator from Alabama for his contribution. Let me say, in that connection, that I think any corporation attempting, on such tenuous legal substance, to do what is sought to be done here, would have a very difficult time selling bonds upon its operations and on the constitutionality of its contract.

The situation is bad to start with. Anyone who might try to carry it through will get into trouble. The program ought to be terminated, and another look should be taken at it now. As the distinguished Senator from Kentucky [Mr. COOPER] has stated—and undoubtedly he has given the matter a great deal of consideration from a legal viewpoint, citing the statutes and their construction by the courts—the Dixon-Yates contract will not stand up.

Any alternative—the ones mentioned by the Senator from Kentucky, or any others—in which the integrity of the TVA would be preserved, and in which the Atomic Energy Commission would not be used for something for which it was never formed, in violation of law, would be preferable to the proposed operation.

The operation under which the city of Memphis is now operating is its own, made on its own initiative, and the city of Memphis is satisfied with it. Memphis is operating under a contract, and is getting its power under a contract, made with the approval of Congress. Yet Congress, by the passage of the pending bill, would be doing away with the ability of Memphis to get power from the Tennessee Valley Authority, and would make Memphis accept power from a source from which it had never contracted to get power.

Imagine the surprise of the people of Memphis, Mr. President, when they read in the newspapers that after 1957 they will be getting their electric power, not from the Tennesse Valley Authority, but from Messers. Dixon and Yates.

They were just as surprised to learn that the Atomic Energy Commission—that great, ponderous agency whose mere mention calls up visions of ingenious research, of hushed secrecy, of high-level security operations—is now about to set up shop as an ordinary power broker.

What does the Atomic Energy Commission know about the power business? The Atomic Energy Commission was created for the purpose of splitting the atom. That is a very different problem from running a steamplant, and entering into contracts in connection with steamplants, and trying to make rates for the sale of electricity.

It seems to me that if the Atomic Energy Commission, with its specialists along a certain line, is expected to make headway with its hydrogen program, the American people will not look with very much favor upon a division of responsibility, which will take the minds and attention of the Atomic Energy personnel away from the work for which the Commission was formed, and to put them into the business of an ordinary power broker, which they will be under the bill.

Mr. President, the Atomic Energy Commission has important work to do.

During the presidential campaign of 1952, General Eisenhower himself outlined the future confronting it. "Our frontiers of scientific development," he said, "have not even been tapped. We are just entering the atomic age. The possibilities of nuclear fission to help us

UNIVERSITY OF MICHIGAN LIBRARIES

go forward to new and richer lives are almost unlimited. Our scientists believe we are just tapping a new frontier."

As a member of the Committee on Armed Services, I was impressed with the testimony with regard to the possibilities of atomic energy in the operation of the *Nautilis*, the atomic-powered submarine, which has been developed and is near completion. The idea of taking the minds, brains, and attention of atomic-energy scientists, such as Admiral Rickover, who has devoted many years of his life to the development of the atomic submarine, and putting them in the business of power broker, far removed from any atomic operation, simply because it is desired to grant a favor to a private power group, which apparently is the case in this instance, is unthoughtful, is not right, and certainly is not in the public interest.

Numerous spokesmen for the administration—both the current one and its predecessor—have told us of the tremendous strides that have been made in our atomic-weapons program.

Yet, in this year of 1954, the Atomic Energy Commission is asked to devote a little less attention to tapping this new frontier, a little less attention to our atomic-weapons program, so it can operate a power-brokerage business for the citizens of Memphis, Tenn.

The Commission has a new frontier to tap, all right, but it is not in the marketing of hydro- or steam-generated electricity. I believe the Commission ought to keep tapping, but in the proper direction.

Now, in fairness to the Atomic Energy Commission, I want to say that it is not entirely responsible for the pass we have come to. Testimony before the Joint Committee on Atomic Energy indicates quite clearly that three members—a majority—did not believe in the feasibility of AEC taking on this new responsibility. The orders for the AEC to enter into this Dixon-Yates contract came from a higher authority—from the Executive Office of the President of the United States.

They wanted to stay in the atomic energy field. They realized that they did not have the authority, under section 12b of the Atomic Energy Act, to enter into such a contract. They realized that this was not within their province. They realized that they were in the field of development of atomic energy, and they should not undertake to divide their attention with something entirely foreign and strange, such as operating a power brokerage business for the purpose of supplying electricity to the people of Memphis.

Mr. President, an important principle of orderly Government is involved. Can executive departments be shifted around and used for purposes foreign to those for which they were formed? It has always been the policy of our Government, in the interest of orderly procedure, to require the departments to engage in activities for which they were created. The TVA was created for specific purposes, which it has been following. The Atomic Energy Commission was created for specific purposes. We would have chaos in Government, we would have a breakdown in its functions, there would be a division of responsibility, if one agency were to be allowed to inject itself into the affairs of another and take over its responsibilities.

As pointed out by the distinguished Senator from Kentucky [Mr. COOPER] this afternoon, there is a Federal statute, 13th United States Code, paragraph 6868, which gives an executive department or independent agency the right to place orders on another agency for services it can supply upon certain conditions. But, as the Senator from Kentucky also said, that statute has no application to the question now before the Senate. That was as far as the Congress was willing to go in allowing one agency to infringe upon the powers, rights, and obligations of another.

The problem in question does not involve the general supply of power to the AEC, but the general supply of power to the Tennessee Valley Authority. The question before the Senate is one of facing squarely up to the issue of where the Tennessee Valley Authority is going to be able to get its power for the purpose of supplying its customers. Certainly, the Atomic Energy Commission, which was not established for the purpose of supplying power to the Tennessee Valley Authority, has no authority and no moral or legal right to inject itself into running the business of the Tennessee Valley Authority, and Congress should not permit it to do so.

Mr. SPARKMAN. Mr. President, will the Senator yield before he leaves that point?

Mr. KEFAUVER. I am glad to yield to the Senator from Alabama.

Mr. SPARKMAN. I agree fully with what the distinguished Senator has said, that the Atomic Energy Commission has no power to thrust itself into the operation of affairs of the TVA, any more than the TVA would have a right to run the Atomic Energy Commission. In other words, each agency is independent of the other. It may be that I am anticipating the remarks of the Senator from Tennessee, and perhaps he is going to say something about it, but I wish he would discuss what I consider to be a very serious aspect of these attempts, and that is the effort to destroy the integrity of independent agencies as such. Before he concludes his speech I hope the distinguished Senator from Tennessee will give us his ideas on that question.

Mr. KEFAUVER. I thank the Senator from Alabama. I expect to deal with that question at some length. But at this time, I wish to point out that Congresses of the United States, through their committees and in debate in the Senate and in the House of Representatives, have struggled long and hard to delineate the duties and responsibilities of the various agencies of the Government. Congress requires those agencies—and properly so—to make an accounting of the use of their authority and the performance of their duties, as assigned to them by the Congress.

Mr. President, Congress might as well fold up and quit if the duties prescribed by it for one agency are to be taken away from that agency and assumed by another which never was created for the same purpose. Congress has created both these agencies, and they exist as a result of acts of Congress; and the obligations, duties, and rights of the agencies are defined by law. I do not think any lawyer can argue very persuasively that there is in the Atomic Energy Act any provision giving that agency even the remotest right or obligation to go far from its field of operations, and generate power for the purpose of supplying it to users in the Tennessee Valley; and I do not think there is in the Atomic Energy Act any provision which would make it possible to give the Atomic Energy Commission the right to kick around another agency, interfere with its operations, and impair its ability to meet its obligations to the Government, merely because someone does not like that agency. After all, if the Tennessee Valley Authority is going to be treated badly, it should be treated badly directly by the Congress which created it. The Tennessee Valley Authority has already been badly pushed around and choked off as a result of a lack of appropriations. But the step now proposed would amount to going a long way merely for the purpose of giving the Tennessee Valley Authority a kick.

Mr. President, if it is desired to build a steam plant to supply power for Atomic Energy works, why is not one built at Paducah? Following the enactment of section 12d of the Atomic Energy Act, a large plant was built directly across the river, at Joppa; and that plant is furnishing some power. A very sad experience was had with that plant of Electric Energy, Inc.; and the power developed there will be very costly to the Government. But it is even better to pay a large price, as will have to be paid for the power generated at the Joppa plant of Electric Energy, Inc., than it is to contort and pervert the purpose of the Atomic Energy Commission, solely for the purpose of kicking around the TVA and putting the AEC into an operation in which it never had any business, and in which—mark you, Mr. President—3 of the Atomic Energy Commissioners did not want the Commission to be, inasmuch as 3 of the Commissioners believed that the Commission had no business entering into this contract.

Mr. President, from the financial point of view, there might be some justification for entering into the contract if it would result in saving money. However, even the Bureau of the Budget has stated that the contract will cost the Government a great deal more money; according to the figures of the Bureau of the Budget, the cost to the Government, over the period of the life of the contract, will be approximately $92 million. According to the figures of the Tennessee Valley Authority—and the TVA has been very accurate in its estimates—the cost to the Government, under this contract, will be approximately $137 million.

Mr. President, the proposal is to build the steam plant at an untenable location. The Tennessee Valley Authority proposed to build a steam plant at Fulton, Tenn., approximately 30 miles north of Memphis, on a bluff on the bank of the Mississippi River, where there would be

a good, solid foundation, and at a point on the river where it would be easy to obtain the cold water which is necessary in order to produce steam to be used to turn generators to produce electricity. Furthermore, electricity generated at that site would have to be transmitted only a short distance, in order to be integrated into the TVA system. In addition, coal can be delivered very economically to that point.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield to me?

The PRESIDING OFFICER (Mr. COLDWATER in the chair). Does the Senator from Tennessee yield to the Senator from Illinois?

Mr. KEFAUVER I yield.

Mr. DOUGLAS. The Senator from Tennessee touched on a matter of great interest to the State of Illinois, when he referred to the accessibility of coal, because, as he knows, central Illinois has coal fields of great richness, where coal can be produced at relatively low cost, with the aid of all the mechanical means of cutting and loading. If the powerplant were located near the Paducah area, Illinois coal could be used in the plant at relatively low generating cost, whereas if coal were shipped to West Memphis—either coal coming from Illinois or coal coming from eastern Kentucky—the transportation cost would be extremely high.

So, from the standpoint of location, I would say that a plant located at West Memphis would be placed in just about the worst location that could be found, from the point of view of the economical development of power from coal.

Mr. KEFAUVER. The Senator from Illinois is eminently correct. If the plant were located at Joppa, across the river from Paducah, where the Electric Energy, Inc., has its plant located, the cost of transporting good Illinois coal there—the good Illinois coal in which the Senator from Illinois has always been so much interested; and let me say I well realize how long and how hard he has fought for markets for it—would be much less than the cost of shipping the coal away down the river to West Memphis, Ark.

But I point out to the Senator from Illinois that that site does not have the advantage of making it possible to disturb the operations of the Tennessee Valley Authority; the construction of a plant in Illinois would not have that advantage.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield once more to me?

Mr. KEFAUVER. I yield.

Mr. DOUGLAS. The Senator from Tennessee has used that word in an ironic fashion, I am sure.

Mr. KEFAUVER. Yes.

Mr. DOUGLAS. It is not a real advantage to the Nation to disturb the Tennessee Valley Authority, I am certain, and the Senator from Tennessee, who has been a great defender of the Tennessee Valley Authority, is, I am confident, using that word sardonically.

Mr. KEFAUVER. I hope everyone understands that I was using it in that fashion—either ironically or sardonically, as one may prefer to state it.

Undoubtedly it would be much more economical—if it is desired to have private interests build a steam plant—to have the plant built in the vicinity of the Paducah works, where coal is very accessible and would have to be transported only a relatively short distance. But that would not do what some persons are anxious to do, namely, disturb the operations of the Tennessee Valley Authority, and it would not disturb the TVA's yardstick, and it would not be using the Atomic Energy Commission to push around the TVA. So apparently the location at West Memphis, Ark., was decided upon for that reason.

I was discussing the difference between the Fulton, Tenn., location and the location at West Memphis, Ark. The Fulton, Tenn., location also involves a saving of about 50 miles in the distance coal would have to be shipped. Fulton, Tenn., is up the river. West Memphis is down the river. The foundation at Fulton is solid. The plant would cost a great deal less. The country around West Memphis, Ark., is a fine country, but it is in the lowlands. Former President Hoover once went over this location during a flood, when the land was flooded to a depth of 27 feet, according to the press reports. It would be very much more difficult to obtain solid foundations at West Memphis. The harbor facilities would be entirely inadequate, and would cost a great deal more to construct. It would be difficult to get cool water for the operation of the steam plant.

One thing to which the people of Memphis object is the tremendous amount of fly ash which would settle on that city by reason of the prevailing northwest winds, which blow directly in line from West Memphis over to the city of Memphis.

Mr. HILL. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. HILL. Is it not true that the Fulton site was selected after most careful study and analysis of the entire situation, and was found to be the best site in all that area for the steam plant?

Mr. KEFAUVER. Yes. That is entirely true, and that is not disputed even by those who want to build the plant at West Memphis, Ark. Even their own figures show that one reason why the Government will have to pay more for electricity is that the site is at West Memphis rather than Fulton. The TVA and its engineers spent a great deal of time in canvassing the situation and selecting the best site. Everyone who has studied or considered the matter knows that Fulton is the best site. But, of course, that site is not proposed here. West Memphis is now proposed, even though the cost will be greater.

In addition, the TVA would be required to build a cable line across the Mississippi in order to get the electricity from Arkansas over into Tennessee. That would be very expensive to build and maintain. I think the proposal is that the TVA build the transmission out to the middle of the Mississippi River, and that the Atomic Energy Commission, acting through Dixon-Yates, build it the rest of the way. All that great expense would be eliminated if the TVA were allowed to have its own source of supply, as Congress intended it should have, and as it always has had.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. SPARKMAN. Who would pay the cost of the transmission line which the TVA would have to build?

Mr. KEFAUVER. It is not quite settled yet as to whether that cost is to be immediately passed on to the users of power in the Tennessee Valley. Presumably the cost of that part of the transmission line which the Tennessee Valley Authority would have to build would be immediately passed on to consumers of power in the Tennessee Valley.

As to who would pay the $137 million more over the period of the contract, that is not actually settled. It would either be paid by the taxpayers or by the users of power in the Tennessee Valley region. I think the cost would come immediately from the users of power in the Tennessee Valley area.

Mr. SPARKMAN. Since the discussion at this point relates to some of the hardships imposed upon TVA by reason of this contract, let me ask the able Senator this question:

It has been said rather frequently here by some of those who have been attempting to defend this Executive directive to the Atomic Energy Commission to become a power broker, that the TVA would not be hurt in any way by this proposal. The Senator has just detailed one item which the TVA would be required to build. It would be required to build a part of a transmission line. The cost of such a line, as well as other charges, would be chargeable directly to the TVA.

The able Senator knows that in the 1952 campaign President Eisenhower—then Candidate Eisenhower—made a speech in Memphis, if I recall correctly, in which he pledged his good offices for the welfare and the continued operation of the TVA. The Senator will remember that after he came away, apparently some of his supporters were not satisfied with the statement he had made, and sent him a telegram. In reply to that telegram he went still further and said that they could rest assured that he would do everything he could to maintain and continue the operation of TVA at maximum efficiency.

The able Senator recalls, of course, that because of that pledge given to the people of the Tennessee Valley a good many of the newspapers in that area supported him, including large influential dailies. The State of Tennessee, by a very narrow margin, gave its electoral vote to the Republican ticket.

Let me ask this question, based upon that premise: Is it not true that today those same influential daily newspapers, almost without exception, are editorializing very strongly against this proposal, and are telling the people of the great harm that will be done to TVA, and also reminding the people that this action is not in keeping with the pledge which was made by President Eisenhower when

UNIVERSITY OF MICHIGAN LIBRARIES

he was a candidate for the Presidency of the United States?

Mr. KEFAUVER. The Senator from Alabama is exactly right. Mr. Eisenhower, when he was a candidate, made a speech in Knoxville. He made a speech in Memphis, in which he paid high tribute to the Tennessee Vally Authority for the part it was playing in developing a great region of the United States. He was high in his praise of the way it had been managed, and the contribution it had made. Two of the great newspapers of the State of Tennessee were not quite satisfied with the specific points made by the President as to exactly what he was going to do about the TVA. Some question had been raised to the effect that the President had spoken in general terms, and the newspapers wanted to be able to assure the people of Tennessee in unequivocal terms that the President of the United States—if he were elected President—would be a friend of the Tennessee Valley. So they sent Mr. Eisenhower a telegram and asked him to telegraph back exactly what he had in mind. His telegram, in addition to paying tribute to the Tennessee Valley Authority, contained this significant statement:

The Tennessee Valley Authority will continue to be operated at maximum efficiency.

Many of us have felt that that solemn pledge, which resulted in tens of thousands of voters voting for General Eisenhower when he was a candidate, which enabled him to carry the State of Tennessee, thereby undoubtedly affecting the outcome of the national election so far as the majority he received was concerned, has already been substantially repudiated. If this practice continues, unless the administration backs away from this outrageous deal, which is solely for the purpose of chipping away and destroying the Tennessee Valley Authority little by little, there can be no question in the mind of anyone who will read the record that this unequivocal pledge given to the people of this section and the Nation, as to what his intentions were with respect to the Tennessee Valley, will have been completely and dishonorably repudiated.

I thank the Senator from Alabama for his question. His question was, What are those newspapers saying today? The Knoxville News Sentinel was one of the newspapers that had sent the telegram and printed the reply. The other newspaper is the Memphis Press Scimitar. I have read editorial after editorial condemning this proposal. One of the great conservative newspapers, which also supported the President, a newspaper which has great influence in many States of the mid-South, the Memphis Commercial Appeal, also published an editorial, which was placed in the RECORD day before yesterday. It is a succinct editorial, and I wish to read what that great Memphis newspaper had to say. The editorial, which is entitled "Why We Oppose Powerplant Deal," was published in the Memphis Commercial Appeal of July 11 1954. It reads:

President Eisenhower has undertaken to give a private power combine a $107 million powerplant.

By Executive order he has directed the Atomic Energy Commission to underwrite it with taxpayers' money.

He has ordered acceptance of a proposal from this combine, the Middle South Utilities, Inc., and the Southern Co., which includes a guaranty of 9 percent on earnings.

At the end of 25 years the plant would belong to this combine.

This has been done without any effort at competitive bidding.

The plant would be situated in West Memphis, a part of our community.

Three years of a big construction payroll would ring cash registers—for 3 years.

This 3-year gain will be lost many times in future years by higher prices for electricity because of undermining the Tennessee Valley Authority.

The principal purpose of this plant would be to keep TVA from building a plant.

TVA is being prevented from starting new plants necessary to serve its customers.

This policy has created a power shortage, principally because the Nation's defense is diverting so much TVA power.

The shortage is most severe in Memphis and the tightening shortage ahead will be worse here.

For the Government to give private power a plant at Memphis sets the stage for reducing the TVA power shortage by taking Memphis out of TVA.

That is the real purpose.

We are on the extreme edge of TVA territory.

We see this proposed private powerplant at Memphis as the second step of a policy of which the third step would be forcing TVA out of Memphis.

We see it followed by another step in which northeast Mississippi would have to give up TVA, and another step taking TVA from the westward-sloping portions of west Tennessee.

Private power prices, or a crippled TVA forced to raise its prices, or small, locally owned plants—any of these would take from this community a purchasing power far higher and much longer than the 3-year construction payroll.

While power prices quiver under the assault of this plant, Memphis would be showered with fly ash and sulfur dioxide from boiler stacks.

We know modern combustion engineering can, if it is used, end the visible smoke and reduce fly ash and fumes, but it is only a reduction.

Ash and sulfur continue to come from the stacks, in particles reduced in size by the best engineering and therefore traveling greater distances.

This harmful waste from the boilers would be spread alike over Red Acres, Glenview, Fort Pickering, West Memphis, and all other Memphis communities.

This is a proposal to hand a powerplant, to be paid for from the Nation's taxes, to a specific company.

This is a proposal for powerplant that would be 100 percent subsidy, while even TVA's most bitter critics can claim only a fractional subsidy in TVA powerplants, principally in the matter of freedom from Federal taxes on Federal property.

We consider this proposal would result in years of net harm to this community which would be so apparent in the future that we could be held responsible unless we raised the alarm now. We consider it to be a wasteful, unsound attempt at favoritism with the Nation's funds.

As citizens of Memphis and of the United States we protest because we must.

That is the end of the editorial which was published in a very thoughtful and conservative newspaper. It has been one of the strongest supporters of the President, and the editorial answers the question of the distinguished Senator from Alabama.

If the proposal shall be adopted, if the effort to cut away the TVA and make it rely on high-priced electricity furnished by a private power utility on the perimeter, shall succeed, how can anyone reconcile such action with President Eisenhower's statement, and say that in that way TVA will be operating at maximum efficiency?

The only conclusion we can draw from all the newspapers that condemn the proposal—and editorials have been published all over the United States—is that it would not help TVA operate at maximum efficiency, but it would be a very efficient way of destroying the operation of the TVA.

That apparently is its purpose. I do not think that we ought to let the President repudiate his campaign promises. I believe that the people have a right to expect such promises to be lived up to.

If TVA is going to be destroyed and cut away, and Memphis is to be taken out of the territory of TVA, along with northern Mississippi and the rest of the area, why not amend the act by which the TVA service area was approved by Congress? Why not do it directly? Why try to destroy the arrangement provided for the operations of TVA? Why force another agency, the AEC, to violate the law in order to take a whack at the TVA at the behest of certain big private power interests of the United States?

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. KEFAUVER. I am happy to yield to the Senator from Illinois.

Mr. DOUGLAS. Is it not true that in the early days of TVA one of the vital questions was whether the cities of Tennessee would be willing to buy power from TVA and distribute that power to their citizens, and that probably the crucial decision which really established TVA was the decision of the city of Memphis to buy its power from TVA and distribute it through a municipal utility?

Mr. KEFAUVER. Yes; the Senator is correct about that.

Mr. DOUGLAS. Is it not true that Mr. E. H. Crump, who has not always been particularly friendly to the senior Senator from Tennessee, nevertheless in this case supported the purchase of power from TVA and its local distribution?

Mr. KEFAUVER. The Senator is entirely right. Let me say that while Mr. Crump and I have had differences, his record shows that he has been one of the great friends and supporters of TVA and public power, and one of the leaders in bringing TVA power into Memphis. That has certainly been his position. I believe in giving credit where credit is due. Mr. Crump has done many good things, one of the foremost of which has been that he has fought like a tiger for TVA.

Mr. DOUGLAS. Is it not true that the citizens of Memphis, in a solemn referendum by an overwhelming vote—I think the vote was about 20 or 30 to 1—

agreed to accept TVA power and to distribute it locally?

Mr. KEFAUVER. The Senator is correct. The vote was about 16 or 17 to 1. It was an overwhelming vote. All the officials and leading citizens voted for it and led the fight for it. I may point out to the Senator from Illinois that the vote was based upon an arrangement which had the approval of Congress.

Based upon that arrangement, the people of Memphis obligated themselves for very large amounts of money in buying the distribution system and in enlarging it, with the understanding that they had the right to rely upon what Congress had said, that Memphis was going to be in the TVA area; that the TVA could make a long-term contract for furnishing power, and, of course, the TVA would have its own power supply and be able to furnish power. There was never any understanding that the TVA would be forced to buy high-priced power from a private-power combine that wanted to put it out of business. I do not think it is playing fair with the people who put up their money and bonded their cities now, under the subterfuge of the Dixon-Yates contract, to repudiate the whole thing and go back on the bargain which has been made.

Mr. DOUGLAS. While I am not certain about the precise sequence of events, as to which city came first and which cities followed, is it not a fact that Knoxville, Chattanooga, and, more recently, Nashville, all made similar decisions and all agreed to take TVA power and distribute it locally?

Mr. KEFAUVER. That is correct. I think Chattanooga was the first large city to do so. That is my home city. I remember the referendum and the election, very well. I think Memphis followed, and then Knoxville and Nashville. In places where there are no cities the rural cooperatives purchased the distribution system.

Mr. DOUGLAS. The decisions of the citizens were definitely and thoroughly overwhelming.

Mr. KEFAUVER. The Senator is correct.

Mr. DOUGLAS. If this private plant is constructed at West Memphis, Ark., will it not have the effect of forcing the city distributors at Memphis to buy power from the so-called Dixon-Yates plant?

Mr. KEFAUVER. It will have the purpose of forcing TVA to buy power from the Dixon-Yates plant in order to sell power to the city of Memphis. So it will be forcing the city of Memphis to buy Dixon-Yates power at a price, undoubtedly, on which the TVA would lose a lot of money if it carried out its obligation to the city of Memphis.

That violates everything for which the people voted, with the approval of Congress and with the understanding that was had at that time.

Mr. DOUGLAS. Would it not be possible for the same tactics to be later applied in connection with such cities as Nashville and Chattanooga?

Mr. KEFAUVER. Undoubtedly it would be possible, and I think it is probable that such tactics would be applied. I think the people of the Nation ought to realize that this effort to destroy public power operations wherever they may be is not going to be limited only to the Tennessee Valley area. I think the people must be put on notice and must realize that the same tactics are going to be applied to Southeastern and Southwestern operations, and operations in California, at Bonneville, and wherever there may be any public operation.

I thank the Senator from Illinois very much for his most important contributions.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield further in order that I may pursue the matter a little further?

Mr. KEFAUVER. I yield.

Mr. DOUGLAS. It might set a pattern by which the TVA functions would be confined almost exclusively to the generation of power used by the Atomic Energy Commission in connection with its development of fissionable and thermonuclear materials, and it would be shut out from its original function of supplying cheap power to the farmers and the people of the Tennessee Valley. Is that correct?

Mr. KEFAUVER. That would be one result. Of course, the result would also be to take the TVA out of operation in the overall research development program which it has been carrying out in that part of the country.

Permit me to say to the Senator that one thing that is very, very bad about this proposal—and I wish Senators would consider this when they come to vote upon this measure—is that the TVA personnel have worked diligently, overtime, and hard. They constitute one of the greatest groups of public servants, I am sure, that any nation has ever known. Many of them could get better jobs, but they stay with the TVA because they have their hearts in it. They have worked very hard to make a success of the TVA.

Its success is shown by the cooperation of the States, the counties, and the cities. Everyone supports it, whether they be Democrats or Republicans. Even the old Commonwealth & Southern has spoken very highly of the TVA. They are working hard to make a success of it, in order to meet the commitment which was imposed upon TVA by a law enacted by Congress, the commitment being to pay back in 40 years of every dime invested in the power operations. The purchasers of power must pay back in 40 years, through the TVA, every dime invested.

Mr. President, is it right by legislation to require an agency to meet an obligation which is a difficult one and at the same time to cripple and hamstring it, to cut it up and make it buy electricity at high rates, and refuse to let it carry out its contract, to meet its own obligations, and do what any utility ought to be able to do? Any utility ought to be able to estimate the needs of its customers in the future and have the authority to construct facilities for the purpose of meeting such needs.

Mr. President, it is not an honest thing to do to require the TVA to pay back its investment and then force it to buy power at high rates, to build lines across the river and maintain them, and make it responsible for eventually paying back the investment in a steam plant located at the wrong site, placing it at the mercy of private power companies so that the people who want to use more power can never be sure of their supply. I have never known of a more outrageous performance.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield further?

Mr. KEFAUVER. I yield.

Mr. DOUGLAS. The Senator has touched on a very important matter with reference to a transmission line across the river, involving the extra cost of stretching the transmission line over the water as compared with the cost of construction of a transmission line on land.

Unfortunately, it has not been the privilege of the Senator from Illinois to take a Mississippi River trip, but I have traveled in my mind, because I have read Mark Twain's book entitled "Life on the Mississippi," and other stories about the Mississippi River and its lower reaches. Unfortunately, I have never been able to travel there.

Mr. KEFAUVER. We are very anxious to have the Senator visit that section. He has been such a great friend of ours, we hope that he will come there.

Mr. DOUGLAS. May I ask the Senator from Tennessee, for the purpose of the RECORD, and also for the benefit of the less traveled Members of the Senate, if it is not true that the Mississippi River at Memphis is an extremely broad stream?

Mr. KEFAUVER. Yes; the Mississippi at Memphis is very broad. The number of miles, I would not be able to say; but to get across the swamps into the place where the steam plant would be built would be a very substantial distance, and would involve very expensive construction, operation, and maintenance, in order to build the cables all the way across.

Mr. DOUGLAS. Would piers be required for the placement of high poles, from which the wires could be strung?

Mr. KEFAUVER. Yes, piers would be required; and I think the testimony was that very heavy cable would be required to be constructed between the piers on either side of the river.

Mr. DOUGLAS. Would it be necessary to construct piers in the center of the stream?

Mr. KEFAUVER. Frankly, I may say to the Senator, I do not know if that would be necessary.

Mr. DOUGLAS. But the process would be a very expensive one?

Mr. KEFAUVER. It would be very expensive. When compared with the building of a steam plant where it should be built, and the construction of a very short transmission line on land, and the feeding of the power into the grid system of the TVA, it simply would not be economical or feasible.

Mr. DOUGLAS. Does the Senator from Tennessee remember the two novels by Mark Twain entitled "Huckleberry Finn" and "Tom Sawyer"?

Mr. KEFAUVER. Yes.

Mr. DOUGLAS. Does the Senator remember the indirect way in which

UNIVERSITY OF MICHIGAN LIBRARIES

Tom Sawyer insisted on doing everything. When Jim, the slave, was in the cabin, Tom, instead of directly going to the door and letting Jim out, insisted that a tunnel must be dug in order to get him out, and the tunnel must be dug with tin plates. So instead of the work being done in the most direct and efficient manner, everything had to be done a most indirect and inefficient manner.

Mr. KEFAUVER. I remember that very pleasantly. I am certain that if Mark Twain were alive now, he could find a perfect analogy between those operations and what is sought to have taken place under this proposal.

Mr. DOUGLAS. In other words, the Executive Office of the President—I do not say it is the President who is doing this, because I cannot believe that he has really done it—or whoever it is who has been making the policy for him, has chosen Tom Sawyer's way of doing everything in as clumsy a fashion as possible.

Mr. KEFAUVER. Yes, the Senator is exactly correct. It is proposed to be done in as expensive a fashion as possible.

Mr. DOUGLAS. Is it possible that they have been reading Tom Sawyer and Huckleberry Finn, and have resolved to imitate those two heros of the Mississippi Valley?

Mr. KEFAUVER. That might be possible, although I have no actual means of knowing for certain. But if that is the case, I certainly would like to have the opportunity of explaining to them that Tom Sawyer's ways should not be applied to the Atomic Energy Commission and the steam plant.

Mr. DOUGLAS. In other words, this is a method which is much better for the storybooks than it is in reality? Is that not true?

Mr. KEFAUVER. That is correct. The Senator from Illinois has expressed it better than I could have done, and I thank him.

If the President actually had considered all the aspects of the situation, including what it will do to his administration, which he must conduct, what it will do to two Government agencies, and the precedent it will establish of completely disregarding congressional direction, it is difficult for me to believe that the President, even though there may be some around him whose first consideration is to kick the TVA around, would have countenanced the proposal.

Mr. President, I had been speaking about the two newspapers to which the President made a solemn pledge that he would see to it that the TVA was operated at maximum efficiency. That pledge was made to the Knoxville News Sentinel and the Memphis Press Smimitar. Those newspapers printed his statement. They are newspapers of the Scripps-Howard system, and the Scripps-Howard newspapers, as I understand, supported the President in his campaign.

The Scripps Howard newspapers have been publishing editorials to the effect that this proposal is bad business and will destroy the Atomic Energy Commission, and that the promise which was made is not being lived up to. Not only have these two newspapers been condemning this deal, but all other Scripps Howard newspapers have been doing likewise.

The President's best supporters know that the proposal cannot be rationalized. They know that his pledge of maximum efficiency cannot be put on a parallel with this proposal without destruction of the TVA by this operation. The two cannot be matched, and still stand up.

I have before me, for instance, an editorial which was published in the Washington Daily News, and likewise appeared in all the Scripps Howard newspapers, including those in Tennessee, on July 6. The title is, "Peddling Private Power Is No Job for the AEC."

The editorial reads as follows:

The United States Atomic Energy Commission, whose sole job should be to maintain American atomic superiority for the safety of the free world, has been ordered into a ridiculous, costly sideline for the next 25 years.

It has been directed, over its own protest, to contract with private utility companies for a large amount of electric power to be delivered to the Tennessee Valley Authority—200 miles and more away from the closest AEC facility.

President Eisenhower issued the order. Presumably it was to prove what needs no proving: That this administration looks favorably upon private enterprise.

The President has directed that this unnecessary, dangerous, and expensive gesture of friendliness to the private power industry shall be accomplished by AEC's signing a contract with Middle South Utilities, Inc., and the Southern Co. These two companies would form a third company to build a big new steam-electric generating plant at West Memphis, Ark., just across the Mississippi from Memphis, Tenn.

AEC told the Budget Bureau "the Commission did not agree on the wisdom of AEC entering into this type of contract." Three of the five atomic Commissioners opposed it. Among this majority was the outstanding exponent of private enterprise in the AEC, Commissioner Thomas E. Murray, of New York.

I interpolate, Mr. President, to say that Commissioner Murray's opposition to the proposal has increased as time has gone on. He is the one who originally sponsored having the Atomic Energy Act amended by the inclusion of section 12 (d), so that the Atomic Energy Commission could enter into a contract with Electric Energy, Inc., for the building of the Joppa plant. He wanted to bring private power companies in to furnish power at Paducah and Portsmouth, and that was right. But, Mr. President, Commissioner Murray, who has been the strongest advocate of free enterprise in the Atomic Energy Commission, among all the Commissioners, is opposed to this proposal, because he knows that it was never what Congress intended when the act was amended. He knows that an attempt is being made to use the Atomic Energy Commission in a way in which it should not be used. He knows that such a plan will not work for orderly administration. He knows that it will be expensive. As time has gone on, he has been more and more vocal in opposing this atrocity which Congress is being asked to perpetrate on the American people.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield to the distinguished Senator from New Mexico, whose speech yesterday was most persuasive in protest against this proposal being carried out.

Mr. ANDERSON. Would it not be proper to say that Commissioner Murray was the person who went into the area and first attempted to work out these matters in the field, which finally evolved the method of conducting these operations? I ask the question because I am quite sure he was, as the Senator from Tennessee has intimated. He went into the area and offered to the private companies an opportunity to build the facilities for all the current necessary.

Mr. KEFAUVER. Yes, that is my understanding.

Mr. ANDERSON. When they found that they could not do it, he said, "Very well. Divide with the TVA, and work out contracts between yourselves."

It is my impression that Commissioner Murray is strongly against the proposal, because he feels that he came before Congress with a definite request, that certain representations were made, and that the proposal now before the Senate is beyond the scope of the representations he made in getting permission from Congress.

As any honorable man would feel, Commissioner Murray feels obligated to have the understanding carried out as he asked for it.

Mr. KEFAUVER. I thank the Senator from New Mexico. Since he is a member of the Joint Committee on Atomic Energy, he is much more familiar with what Commissioner Murray did than I am, but from reading the newspapers and the hearings I know that Commissioner Murray was one who worked out this arrangement in the first place. First, it was proposed to have TVA furnish all the power at Paducah. Then Commissioner Murray felt that it would be desirable to have private power companies do it. He negotiated with them and found they could not furnish all the power. So the load at Paducah was divided between TVA and Electric Energy, Inc.

He came before Congress, and in all the representations he made he indicated that he wanted to get the act amended so that they could build a plant for the purpose of generating electricity for the atomic energy works. So I believe he thinks what is proposed would not be in keeping with his understanding with Congress. The Senator from New Mexico had here this afternoon the report of last year, which shows unquestionably that was Commissioner Murray's attitude.

Mr. ANDERSON. Mr. President, Commissioner Murray had the background to qualify him to testify, since he has been in public utility work, and he is perfectly familiar with public utility companies, such as the companies with which he contracted in EEI. So he was not "dabbling" in that field, but he had made a reputation as a successful operator.

Mr. KEFAUVER. That is true, and let it be said to the credit of Commissioner Murray that he feels that what is pro-

posed should not be done, that it is not in keeping with the purpose of section 12 (d) of the Atomic Energy Act, that he would not be keeping faith with Congress, that he would be getting the AEC into a field where it had no business, and that he felt that the Atomic Energy Commission should not be used to try to push and destroy another great agency which had been established by the Congress.

Mr. President, I did not quite finish reading the editorial from the Washington Daily News, one of the Scripps-Howard newspapers, of which there are several. This editorial shows the general attitude of great newspapers which have supported the President. The editorial is entitled "Peddling Private Power Is No Job for AEC," and it reads:

> Although called an independent office of the Government, AEC passed the buck on the final decision to the White House. The President, through his Budget Bureau, decided in favor of the contract.

Interpolating, I may say that I wish the President himself would take a look at that, because the statement of the Bureau of the Budget simply does not stand up; it will not hold water.

I read at page 955 from the hearings before the joint committee on June 17. There appears in the record at this point a letter to the Senator from Massachusetts [Mr. SALTONSTALL] from Rowland Hughes, Director of the Bureau of the Budget. It is undoubtedly what the President may have seen, and he may have thought he could accept this statement in the letter of the Bureau of the Budget. The last part of it was:

> The fact that no additional steam-generating capacity is being provided this year does not imply any fundamental change in the program of TVA.

Mr. President, if the Atomic Energy Commission is going to become the supplier of power to the people of Memphis there is involved a fundamental change in TVA. There is also involved a violation of the agreement which the Government authorized TVA to make with the people of Memphis and the other cities of Tennessee. It brings about a fundamental change, and it will force the TVA to sell or buy power at a high rate, making it impossible for it to operate efficiently and pay back the Federal Government in 40 years, as Congress has required it to do. So that this statement does not stand up, and I hope the President will go into this matter more deeply.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield to the Senator from Illinois.

Mr. DOUGLAS. My question may not be in line with the point the Senator from Tennessee wishes to develop, and, if so, I hope he will ask that I postpone asking it. But since the Bureau of the Budget has been brought into the matter, may I inquire whether the Bureau of the Budget or any other agency took any pains to obtain competitive bids from different private concerns for the construction of the proposed new plant?

Mr. KEFAUVER. I am glad to talk about that matter, but let me finish the editorial from the Washington News. Then I will answer the Senator's very pertinent question, because I wish to discuss that matter in a few minutes.

I continue reading further from the editorial in the Washington News, which was carried in all the Scripps-Howard papers, including the two in Tennessee which printed the President's telegram of "maximum efficiency operation for the TVA." I read:

> If this were the delegated decision by Mr. Eisenhower, then some subordinate has put him in an absurd position. If he acted with all the facts before his eyes, then he misinterpreted the facts.
>
> He ordered the contract despite the fact that the Budget Bureau and AEC figures showed power from the private concerns would cost the Government at least $3,685,000 more a year than power bought from TVA at Paducah, Ky. The chief difference was in the fact that TVA paid no taxes while the private company did, and TVA got its money at a cheaper interest rate than the private company. So, Mr. Eisenhower ordered AEC to pay all the private company's taxes; and the contract, if signed, would constitute a Government guaranty of the $100 million in 3.5-percent bonds the private company would issue to finance the plant.
>
> The President's decision means that over the minimum period of the contract, the minimum excess cost to the Government of this power from this private source would be $92,125,000.
>
> The basic fault of this proposed contract is that it forces the Atomic Commission into a field where it has no business being. TVA needs more power at Memphis, not the AEC. But AEC is being used as a reluctant power broker.
>
> The next major fault lies in the waste of more than $92 million in Federal funds over the next 25 years. At the end of that time, the private powerplant, completely paid for with United States tax dollars, will remain the property of the private companies.

Interpolating, let me say that this afternoon the distinguished senior Senator from Iowa [Mr. HICKENLOOPER], the vice chairman of the Joint Committee on Atomic Energy, said that the advantage of the pending proposal would be that the Congress would not have to appropriate $100 million to enable the TVA to build the steam plant. I wish to point out that if the Congress appropriated $100 million, and if that amount were given to the TVA to build a steam plant, it would be a capital improvement, which would be repaid within 40 years. The plant would then belong to the Government. In the meantime the Atomic Energy Commission would have gotten much cheaper power, and the Government would not have lost between $92 million and $107 million, which is the additional amount the power of the Dixon-Yates group is going to cost.

Mr. ANDERSON. Mr. President, will the Senator from Tennessee yield at this point to me?

The PRESIDING OFFICER (Mr. PAYNE in the chair). Does the Senator from Tennessee yield to the Senator from New Mexico?

Mr. KEFAUVER. I yield.

Mr. ANDERSON. Has the Senator from Tennessee finished with the editorial?

Mr. KEFAUVER. Mr. President, I yield to the distinguished Senator from New Mexico.

Mr. ANDERSON. I was wondering whether the attention of the Senator from Tennessee had been called to the fact that the Bureau of the Budget possibly gave the President quite a little bit of the type of advice the Senator from Tennessee has mentioned. I am referring particularly to the fact that the figures of the Bureau of the Budget were prepared rather largely by the AEC to prove a point. I think I can best illustrate that by calling attention to the CONGRESSIONAL RECORD of Tuesday of this week. On page 10379, I inserted into the RECORD the original statement prepared by the Bureau of the Budget, outlining the proposal received by the AEC from the sponsors—the Middle South Utilities, Inc., and the Southern Co. This is the outline the Bureau of the Budget subsequently withdrew, whereupon it supplied a different analysis.

But the point to which I should like to call the attention of the Senator from Tennessee is that in the table appearing in the middle of that page, there is a comparison of costs for power supplied under the Dixon-Yates proposal versus the cost to the Atomic Energy Commission of power from TVA, from Paducah. If the Senator from Tennessee will examine the table—and I shall be glad to let him use the copy of the CONGRESSIONAL RECORD for July 13 which I now hold in my hand, if he so desires—he will see that in order to form a basis for comparison, they use 19 cents as the cost of 1 million B. t. u.'s of heat at these plants. In other words, in order to show that there is no great difference in cost, they use 19 cents per million B. t. u.'s at both places; but in the very next paragraph, in order to prove—as the Senator from Arkansas [Mr. FULBRIGHT] was trying to prove this afternoon—that the AEC has been overcharged and robbed by the TVA, they show that the cost of fuel is 15½ cents. That is shown in the very next paragraph.

I am happy to show the table to the very able Senator from Tennessee. It appears on page 10379, and is a very simple one, headed "Comparison of annual cost for power supply from Dixon-Yates proposal"—and so forth; and the last words are "19 cents per million British thermal units fuel cost."

So, in order to show that there is no difference in cost between these two proposals, they use the figure 19 cents per million B. t. u.'s; but in the very next paragraph, in order to show that the TVA is robbing the AEC, they use the figure—under the contract—15½ cents. So, you get it going and coming, so to speak. One arbitrary figure is used in order to prove there is no difference in cost, in order to prove that everything is about alike. But in the very next paragraph—absolutely the very next paragraph, as anyone can see—they use 15½ cents in order to prove there is an overcharge.

Mr. HICKENLOOPER. Mr. President, will the Senator from New Mexico state again the page of the CONGRESSIONAL RECORD?

Mr. ANDERSON. It is on page 10379 of the CONGRESSIONAL RECORD for Tuesday, July 13.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. HICKENLOOPER. I thank the Senator from New Mexico.

Mr. GORE. Mr. President, does the Senator from New Mexico mean that when it is undertaken to show that the Dixon-Yates proposal is reasonable, a fuel cost of 19 cents is assumed; but when it is undertaken to show that the TVA is charging too much, a different fuel cost is assumed?

Mr. ANDERSON. There is no question that the TVA has a contract for fuel which will permit its cost to come down gradually, and they finally get it down to 15½ cents. The last sentence of the second paragraph in the third column on page 9939 reads:

> For 5.2 billion kilowatt-hours per year, this would result in a charge to AEC over and above TVA costs of approximately $3 million per year.

That is the figure the able Senator from Arkansas [Mr. FULBRIGHT] referred to this afternoon; and then he said these figures, that the TVA introduced into the record, show a difference of $5,500,000; and he said that is proof they are overcharging AEC $5,500,000, because they are charging them the same price.

And actually, as I have said, the 19 cents is used at one point in the table, in order to show that costs are about alike; but in the very next paragraph they say:

> However, a fair comparison of cost to TVA versus charges to AEC at Paducah was calculated using 35-year amortization—

And so forth. And it says:

> Under the TVA-AEC contract at Paducah at a fuel cost of 15½ cents the charge to AEC would be 3.47 mills per kilowatt-hour——

Mr. GORE. Mr. President——

Mr. KEFAUVER. I yield.

Mr. GORE. Does the Senator from New Mexico realize that the distinguished junior Senator from Arkansas [Mr. FULBRIGHT] used still a different fuel cost, in two of his calculations?

Mr. ANDERSON. I would not blame the Senator from Arkansas for that, because when 3 or 4 sets of figures are officially supplied, one naturally comes out with all sorts of rates.

Mr. GORE. I notice that on one page of the speech of the distinguished junior Senator from Arkansas [Mr. FULBRIGHT], as it appears in the CONGRESSIONAL RECORD—and let me say that I do not like to refer to this matter in his absence; but since it is relevant at this point, I hope he will not mind—he made a calculation based on 19 cents per million British thermal units; and on the very next page he used a calculation based upon 17½ cents per million British thermal units. So, we see 19 cents and 17 cents and 15½ cents assumed for purposes of calculations.

Perhaps the Atomic Energy Commission and the Bureau of the Budget and the Federal Power Commission, when they arrived at a conclusion agreed upon by their experts, were using uniform calculations.

Mr. ANDERSON. I do not criticize the Senator from Arkansas, and say that he became mixed up in his figures, because actually the cost at Paducah is not 19 cents. It is possible to find out what the cost is; and at the present time it is 17.6 cents; and it will come down, under the long-term contract, to 15½ cents, eventually.

Mr. GORE. Is it not a fact that the rates the TVA has charged the AEC for power from Shawnee have come down, according to the cost of generating the power?

Mr. ANDERSON. I would think so, because evidence was presented that the cost had gradually come down. That is in the record of the hearings.

Mr. GORE. As I recall, the rate being charged this month was 3.56. In May it was 3.59. In January it was higher. Back at the time when a great deal of interim power was being bought, it was still higher; and as the cost of fuel comes down, so will the cost of power.

Mr. ANDERSON. Mr. President, let me say that I apologize to the Senator from Tennessee for interrupting this long; I did not mean to make so much of an interruption in his remarks.

Mr. KEFAUVER. That is quite all right; I wish to have the Senator from New Mexico take his time.

Mr. ANDERSON. I thank the Senator from Tennessee.

Let me say that the page number I just used is correct. It is page 1036. Mr. Nichols pointed out that in the first 3 months of 1954, TVA's cost was 4.86 mills per kilowatt-hour; and EEI's was 5.08 mills per kilowatt-hour.

So far as I am concerned, that difference does not reflect superior management, and so forth. It just so happens that TVA had been in business for a long time, and had firm supplies of fuel, and had large supplies of coal, and was able to effect economies because of that.

I am saying that comparisons should be based upon similar figures. One set of figures should not be used to prove one thing, and another set of figures to prove something else.

Mr. HICKENLOOPER. Mr. President, will the Senator from Tennessee yield to me?

Mr. KEFAUVER. In a moment.

I appreciate the Senator's observation. I think he has diagnosed the situation exactly correctly. In this connection, it should be pointed out—and I, too, am sorry the Senator from Arkansas [Mr. FULBRIGHT] is not present—that he made some complaint about the TVA selling power for 8 mills which it had purchased for an average of 5 mills. I know that the explanation was made that the AEC must have firm power. An average price of 5 mills for power purchased means that it is dump power, or whatever power might be available, all of which it cannot sell to AEC, because TVA requires a heavy load at night, whereas the AEC must have firm power.

If we wish to compare side-by-side operations, most of the priorities were given to Electric Energies, Inc., at the steam plant. They were expected to beat the TVA in their construction at Paducah. The TVA got its plants going much earlier, and at considerably less cost. The TVA is now furnishing power at Paducah, as my colleague [Mr. GORE] pointed out, for 3.56 mills. As to what the cost is going to be at the Electric Energies Joppa plant when it finally gets going, considering the big load placed upon it, no one can tell, but it has been estimated by the Atomic Energy Commission that the cost will be 4.2 mills a kilowatt.

It should be pointed out that in the atomic energy business, considering the amount of power the atomic energy plants at Oak Ridge, Portsmouth, and Paducah buy, a difference of 1 mill would cost the Government $50 million a year.

So it seems to me that instead of pushing the TVA around, as this contract would do, Members of the Senate and the people of the Nation ought to be eternally thankful to the Tennessee Valley Authority for being able to set a yardstick at a low price for the sale of electric power to the atomic energy operations.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. KEFAUVER. If the yardstick had been higher, the cost would have been very much greater.

I now yield to the Senator from Iowa.

Mr. HICKENLOOPER. Referring to the statement a moment ago, as to the comparison between the fuel cost of 19 cents a million B. t. u.'s at Paducah and the figure of 15½ cents, as shown on page 10379 of the RECORD of July 13, 1954, it seems to me that the table was a comparative table, both for the TVA and the Dixon-Yates proposal, based upon an assumed figure of 19 cents a million B. t. u.'s fuel cost. In the paragraph below it is stated:

> Correcting the 2.90 mills per kilowatt-hour from 18.4 cents per million B. t. u. fuel costs (used in arriving at the 2.96 mills) to the estimated fuel cost of 15½ cents that TVA indicated should prevail in the Paducah area and would be used as a basis for calculating charges to the AEC after January 1, 1956, would result in an estimated cost to TVA of 2.84 mills per kilowatt-hour for power furnished by TVA to AEC at Paducah.

So this is an estimate based upon an assumed fuel cost of 19 cents a million B. t. u.'s. Then the figures are revised, and it is said that if the cost is 15½ cents, the estimate will be accordingly reduced.

I do not follow the assumption of the Senator from New Mexico [Mr. ANDERSON] that in the report referred to in the tables on page 10379 a fuel cost of 19 cents a million B. t. u.'s is necessarily used as a yardstick in one case, and a fuel cost of 15½ cents in the other. It is stated, in effect, that if goods cost 19 cents a yard, the total cost will be so much, but if the cost of the goods is 15½ cents a yard, the total cost will be some other figure. That is why I think various figures representing costs are used to make comparisons.

Mr. KEFAUVER. Fuel never has cost the TVA 19 cents. In order to make it appear that the TVA cost is somewhere near what the Dixon-Yates group will charge, this table is issued for public consumption, showing a difference of $283,000. That is the figure which is used. Then in fine print it is acknowledged that in the comparison above too high a figure has been used, and that

probably what should have been used is the cost which the TVA actually has been paying. It never has paid 19 cents. The TVA has been paying whatever price it could get its fuel for. To show a true picture, the figure of 15½ cents should have been used in the table, which would have made the loss to the taxpayers of America nearer $137 million than $92 million, which even the Atomic Energy Commission and the Bureau of the Budget admit.

I think the Senator from Iowa is correct, in that the situation is explained in paragraph (h), but it seems to me that since the TVA has never paid 19 cents a million B. t. u.'s, the TVA's own figures should have been used, because the TVA figures represent commitments with respect to the prices at which it could get coal.

In that connection I think it is important to say just a word further about the steam plant at Paducah——

Mr. GORE. Before the Senator comes to that subject, will he yield to me?

Mr. KEFAUVER. I am very happy to yield to my colleague.

Mr. GORE. There are two additional figures which I should like to cite. As my colleague from Tennessee knows, it is quite unrealistic and almost meaningless to compare rates for two dissimilar electric loads. If a comparison must be made in this context, perhaps the most relative comparison as between customers would be a large private industrial consumer and a large AEC load at Paducah or Oak Ridge. Some effort has been made to show that the power sold at Memphis, Tenn., was cheaper than the power which the TVA was selling to the AEC plant at Paducah. I made inquiry on that point, and I am advised that according to the contract, if a large demand consumer required power at Memphis, Tenn., today, the rate to such large consumer would be 3.71. Compare that rate with the rate for normal supply from the Shawnee plant to the AEC at Paducah for this month, the figure being 3.56. I believe those two figures will explode the—I was about to say "spurious" charge; perhaps I should not use the word "spurious." Perhaps some people are merely honestly misinformed. However, I think it adds up to a smokescreen.

The real issue here is not the merits of TVA. It has stood the test of time. The President did not make a choice between the Shawnee plant, which is already under construction, and some other plant. The choice was made between the construction of a steam plant by TVA at the Fulton site, just north of Memphis, and the proposal pending here for a contract with a private concern to build a plant across the Mississippi from Memphis in Arkansas. The President did not make a choice among the irrelevant comparisons which are being made in this debate. The estimates submitted to the committee by the AEC, by the Bureau of the Budget, by TVA, and by the Federal Power Commission showed a comparison between two proposals, namely, the Fulton plant of the TVA on the Mississippi north of Memphis, and the new private plant just across the river from Memphis.

If comparisons are insisted upon, then I submit the one I have just given to my able colleague is the most relevant as between individual customers; and if a comparison must be made as between different types of contracts, then we should stick to the comparison submitted to Congress by the agencies studying the program. I may say that no expert from either of those three agencies ever suggested that the comparison showed a smaller differential than $3 million plus a year in favor of TVA. TVA thought that estimate was not large enough.

Mr. KEFAUVER. I thank my colleague. I believe TVA proved that the estimate was not large enough. TVA has been uncannily accurate in living up to its estimates.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. KEFAUVER. I yield.

Mr. GORE. To compare a 24-hour national defense load of an atomic energy plant with an industrial plant which operates a shift at offpeak hours, and to say that they are alike, is about like saying that an egg and a golf ball are alike on three grounds; one, they are both white; two, they are both round in shape; three, they both have a smooth surface. But, Mr. President, if a golfer hits them with a club, he will find there is a slight difference.

Mr. KEFAUVER. That is a very interesting and useful analogy.

Mr. GORE. Will not my colleague say it is profound?

Mr. KEFAUVER. I am very happy to add the word "profound," and I am proud of my colleague for his spirited example.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. HICKENLOOPER. Returning to the matter of the so-called 19 cents per million B. t. u.'s and 15½ cents per million B. t. u.'s, and the fact that TVA produced power based on the figure of 15½ cents per million B. t. u.'s, does the Senator from Tennessee know where TVA gets it coal?

Mr. KEFAUVER. Yes; I know that TVA gets it coal by advertising for the lowest bidder, and by competitive bidding after due advertising.

Mr. HICKENLOOPER. Is it not a fact that TVA buys most of its coal from nonunion mines?

Mr. KEFAUVER. I do not believe that is a fact at all. I am sure it is not a fact.

Mr. HICKENLOOPER. I am informed that it has been testified before the Committee on Appropriations that TVA coal is purchased at the lowest price it can get, and that most of it comes from nonunion mines. If that is so it would result in a considerable difference in the cost of production as compared with the cost of production of a private corporation, which is not free from pressures of that kind.

Mr. KEFAUVER. I say to the Senator from Iowa that TVA is very meticulous about following the directions of Congress in connection with its purchases, whatever they may be. Congress requires coal and other materials TVA needs, and this is true of every Federal agency—to be purchased on a competitive-bid basis.

I am sure the Senator would not want TVA to violate the law as enacted by Congress. However, for the information of the Senator, TVA purchases most of its coal from mines in eastern Tennessee and eastern Kentucky, and considerable coal that it purchases comes from southern Illinois, and probably from some other States. My information is—and I believe it is true—that a large number of the mines in eastern Kentucky and eastern Tennessee are unionized.

Mr. HICKENLOOPER. I understand it to be true that a large number of the mines there are unionized. However, that was not my question. My question is, Where does TVA buy its coal? I am asking whether or not TVA buys most of its coal from nonunion mines. I am asking the Senator from Tennessee for information.

Mr. KEFAUVER. I will say frankly that I had hoped that at times TVA might pay a little more for coal in some places, in order to enable some coal mines to operate, particularly coal mines which have had a rather difficult time meeting the low price TVA must pay. However, TVA gets all of its coal as a result of competitive bidding, pursuant to law.

Mr. HICKENLOOPER. I am not objecting to TVA observing the law. I am merely asking whether the Senator can inform the Senate on that point. I am not criticizing TVA. I am seeking information on the subject as to where, in fact, it gets at least the great bulk of its coal. Does it come from union mines or from nonunion mines? My information is that it comes from nonunion mines. I am not criticizing TVA.

Mr. KEFAUVER. My information is that a large part of it comes from union mines. However, whatever the situation is, I do not think we can blame TVA for following the law.

Mr. HICKENLOOPER. I am not blaming TVA.

Mr. KEFAUVER. What was the purpose of the Senator's question if he was not trying to disparage TVA?

Mr. HICKENLOOPER. No, indeed; I am not trying to disparage TVA. I am only trying to test the question of the claimed differential in the production of heat.

Mr. KEFAUVER. What is the purpose of the Senator's criticism?

Mr. HICKENLOOPER. The purpose of my question was that there has been some criticism, I understand, raised by the Senator from Tennessee and the Senator from New Mexico, that there might be some monkey business in the B. t. u. figure of 19 cents and the 15½-cent figure, which was the actual figure that TVA has claimed, and I was merely trying to find out where the difference in the cost for the production of the B. t. u.'s came from. Of course, coal produces the B. t. u.'s.

Mr. KEFAUVER. The 19½-cent rate is not the TVA figure. That is the assumed figure of the Bureau of the Budget or whoever it was that got up this table, and it was obtained out of thin air for the purpose of trying to

UNIVERSITY OF MICHIGAN LIBRARIES

make the private power and TVA cost as near as possible in amount. That is not the TVA figure.

Mr. HICKENLOOPER. The 19-cent B. t. u. rate applied to both theoretical cases, as I understand.

Mr. KEFAUVER. That is not a theory; that is an actuality. They ought not to apply a theory where there is an actual experience.

Mr. HICKENLOOPER. Then they translate that figure in the next paragraph and estimate it at 15½ cents.

Mr. KEFAUVER. That is like making a charge in a headline, and then farther down in the article saying that the headline is not right, and what is meant is actually something else. I am sure that the Senator will agree that if they wanted to get an actual comparison in the table they would have used 15½ cents.

Mr. HICKENLOOPER. They do use that figure.

Mr. KEFAUVER. But only in fine print away down below, not in the comparative table.

At any rate, Mr. President, some criticism is made by the Senator from Arkansas that at present TVA is charging a certain amount for power at Paducah. The fact is that TVA now has only four units in operation at Paducah. The Atomic Energy Commission must have a large excess of firm power. They asked TVA to get firm power at whatever price they had to pay for it, so as to be able to continue their operations. But when the final operation comes, the TVA price has been reduced and will probably be reduced further at Paducah, to 3.56 mills per kilowatt, as my colleague from Tennessee stated. The Atomic Energy Commission hopes that the Joppa plant may be able to sell its power at 4.2 mills per kilowatt. Many persons think it is a rather optimistic hope. The Joppa construction program had high costs; it was slow getting into operation, and the power will cost much more.

Quoting further from the editorial in the Washington News——

Mr. GORE. Mr. President, will the Senator yield further?

Mr. KEFAUVER. I yield.

Mr. GORE. Before the Senator reads the editorial I should like to ask him this question: Is it not correct that within the charges for electricity which the TVA makes to the Atomic Energy Commission there is a sufficient amount for depreciation and also a net return or from 4 to 5 percent, and that out of the net earnings the plant itself will be amortized?

Mr. KEFAUVER. That is correct.

Mr. GORE. So that in this comparison, taking the lowest figures that are submitted to us, the taxpayers of the country would save more than $90 million in the cost of power, but, at the same time, this will permit the complete repayment of the cost of the plant. At the end of the period the taxpayers will have recovered the complete cost of the plant and saved themselves more than $90 million, by the lowest estimate, and still have the plant completely paid for and ready to continue production.

Mr. KEFAUVER. The Senator is entirely correct about that. I think the argument that at the end of 40 years, or whatever the depletion time is, the property will not be worth anything, is not fully correct, because these great steam plants are wonderful structures. Steam plants are now constructed with more modern boilers and burners. The stacks and all the underground operation will still be there, so that a modern steam plant, built with the ability to replace parts from time to time, to keep it modern, according to engineers with whom I have talked, will continue to have a large value even after it has been fully amortized.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield?

Mr. KEFAUVER. I yield.

Mr. DOUGLAS. Is it not true that in addition to the amortization of the physical investment, TVA has paid into the Public Treasury additional sums which will be more than sufficient to meet the interest charges on long-term borrowings by the Government, and that this is in addition to the amortization?

Mr. KEFAUVER. That is correct. That is what the record shows. It is correct if the TVA is allowed to operate efficiently. Of course, if we are going to hamstring it and force it to buy high-priced power, to build lines across the Mississippi River, and put it into such a position that it cannot continue to serve its customers and is afraid to expand, then I must say that Congress should not blame the TVA if it is unable to meet its obligations.

Mr. DOUGLAS. The critics of TVA sometimes advance the argument that since the TVA is not contractually bound to pay interest in addition to the amortization of the capital investment, therefore TVA is receiving a favor. But, as a matter of fact, does not the record indicate that the surplus earnings turned back into the Public Treasury have been more than equal to the long-time borrowing costs of the Federal Government, so that even though TVA may not be contractually bound, it has nevertheless performed?

Mr. KEFAUVER. The Senator is correct.

Mr. HILL. Mr. President, will the Senator from Tennessee yield?

Mr. KEFAUVER. I yield.

Mr. HILL. The Senator was referring a little while ago to the table on page 10379 of the RECORD of Tuesday, July 13, which I understand was compiled by the Atomic Energy Commission. Is it not interesting that in a table in which the Atomic Energy Commission is seeking to show what might be called a difference of cost of production between the Dixon-Yates proposal and the TVA Paducah contract, the Commission sets forth a price of 19 cents per million B. t. u.'s for fuel costs? Was that because the Commission was trying to show that there was not much difference between the TVA cost and the Dixon-Yates cost, whereas, in subdivision (h) on the same page the Commission shows 15½ cents as the fuel cost because it is trying to show how much the TVA was charging the Atomic Energy Commission?

Mr. KEFAUVER. Yes.

Mr. HILL. Where the Commission was trying to establish how little difference there was it showed the 19-cent cost for both, and where it was trying to show that the TVA was charging the Atomic Energy Commission too much, it used the lower figure of 15½ cents.

Mr. KEFAUVER. The Senator is entirely correct. That was brought out a little while ago by the distinguished Senator from New Mexico [Mr. ANDERSON].

Mr. GORE. Mr. President, will my colleague yield?

Mr. KEFAUVER. I yield.

Mr. GORE. I asked the Senator to yield because I think we have one real prospect of support seated to my left, and I wish to use this moment to cast another bit of enlightenment upon this unjust proposal. I shall not identify the Senator, but I wish——

Mr. THYE. Mr. President, may I ask in which position the Senator from Tennessee is standing? He refers to the Senator on his left, and I should like to be certain who that Senator is.

Mr. GORE. I am revolving at this moment, but I must say that I have pinned some hopes upon my distinguished colleague from Minnesota as well as upon certain other Senators. With the indulgence of my colleague from Tennessee I have pointed out that the Bureau of the Budget, the Atomic Energy Commission, and the Federal Power Commission compared two proposals. Let us not be confused by extraneous comparisons. One was the proposal for TVA to build a plant on one side of the Mississippi River, 35 miles north of Memphis; the other, the Dixon-Yates proposal of a contract with the Atomic Energy Commission.

I have spoken of the savings. This is not fictitious; this is what was submitted to Congress by the agencies of the Government. Thus they are agreed on the estimates. TVA estimated its savings to the taxpayers at more than $5 million a year, even though during the life of this contract the taxpayers would save more than $90 million, by the lowest estimate, and at the same time the plant would be paid for and owned completely. But there is this important additional fact. Someone will say, "Oh, but it is a private concern that will be paying taxes." Mr. President, this is an unusual proposal. It is remarkable. The directive to the AEC is to negotiate an unusual contract. The Atomic Energy Commission is directed to enter into or to negotiate a contract, by which the Atomic Energy Commission would reimburse the private corporation for all of its taxes, municipal, county, State, Federal, ad valorem, excise, income, and fees.

The PRESIDING OFFICER. Did the Chair understand that the senior Senator from Tennessee had yielded the floor?

Mr. KEFAUVER. No; I yield for a question.

Mr. GORE. Does my colleague agree with me upon those observations?

Mr. KEFAUVER. I agree with my colleague. I agree also that the Federal Government would be stuck, no matter how high the county might raise the ad valorem tax. It could be raised to double or higher. Contractually, the Fed-

eral Government would be stuck with whatever taxes had to be paid.

Mr. GOLDWATER. Mr. President, will the Senator yield for a question?

Mr. KEFAUVER. I yield.

Mr. GOLDWATER. I have an understanding that I will occupy the chair within a few minutes. I was occupying the chair during a part of the Senator's discussion on this subject. I desire to ask one or two questions before I resume that honorable position.

It is true, is it not, that the TVA wanted to build a steam plant above Memphis at one time?

Mr. KEFAUVER. Yes; at a place called Fulton, Tenn.

Mr. GOLDWATER. North of Memphis.

Mr. KEFAUVER. TVA asked authority to build a steam plant at Fulton, Tenn.

Last year the TVA appeared before the Appropriations Committee. At that time it was said that the need for additional electricity would be considered, and a decision would be made this year. This year, again, the TVA asked for authority to construct a steam plant, and that is when this proposal came up.

Mr. GOLDWATER. I wish to ask the Senator if the proposed contract, which I understand has not been entered into yet, does not suggest, in effect, a wheeling agreement?

Mr. KEFAUVER. No, I do not think it is a wheeling agreement at all. It is a proposal which will make it impossible for the TVA to have its own sources of supply for its own power. It is an effort to cut off the TVA power supply. It is not a wheeling agreement.

Mr. GOLDWATER. Is it not true that the agreement, if it should be entered into, would be precisely the same type of wheeling arrangement which, for instance, is in existence in Arizona and, I am certain, in the other States contiguous to Arizona, which use power from Hoover Dam, Davis Dam, and Parker Dam, the power being wheeled out of a pool, with both private and public generating sources contributing to the pool?

Mr. KEFAUVER. This proposal has no similarity to the situation described by the Senator from Arizona, because the testimony is that not one kilowatt from the proposed steam plant would ever reach the AEC.

Mr. GOLDWATER. But, as I understand, power generated from the steam plant would be put into the pool or into the wheel at Memphis. A kilowatt generated at the steam plant might not wind up in Paducah, but a kilowatt generated at the TVA could wind up at Paducah, relieving the kilowatts generated at other places for use throughout the system. Is not that correct?

Mr. KEFAUVER. No. Every kilowatt produced at Paducah comes directly from the TVA steam plant there.

Mr. GOLDWATER. I do not think the Senator quite understands what I am getting at. I want to make certain.

Mr. KEFAUVER. The TVA has its Shawnee plant at Paducah, where every kilowatt produced would go directly to the atomic energy works.

The proposal in the bill is simply an effort to let private power companies become a source of supply for the TVA.

Mr. HICKENLOOPER. Mr. President, will the Senator yield for a comment on that particular point?

Mr. KEFAUVER. I yield for a question, or for whatever I may yield.

Mr. HICKENLOOPER. I shall be glad to couch my comment in the form of a question.

I will ask the Senator if the Johnsonville steam plant was not sold to the country and to the Committee on Appropriations on the theory that it was urgently needed for the Atomic Energy Commission; if it is just as far away as the West Memphis plant; and if not a kilowatt of electric energy from the West Memphis plant ever goes into the atomic-energy plant in the northern part of Tennessee, by the same token not one kilowatt of Johnsonville production will ever get into the atomic-energy plant. Yet, that was the theory upon which the Johnsonville steam plant was sold to the Committee on Appropriations, and the TVA has been practicing a replacement power policy for years.

Mr. KEFAUVER. I think the Senator is mistaken about that. I shall have to disagree with him. I was in Congress when the Johnsonville steam plant was built. The facts were that if the TVA was going to be able to have sufficient power to meet its commitments around Knoxville, where the Oak Ridge atomic energy plant is located, and also its growing commitments in middle and west Tennessee, there had to be additional power, there had to be additional facilities. So it was for the general power needs in the area that the new Johnsonville plant was built.

The point about the proposal before the Senate is that the Dixon-Yates contract would not affect one iota the operation of the TVA at Paducah in furnishing power to the atomic energy works there. The TVA will continue to furnish exactly what it has been furnishing there from the Shawnee plant.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. GOLDWATER. May I ask where the great need for power is at present in the TVA grid or pool? Is it at Paducah? Is it at Memphis?

Mr. KEFAUVER. The great need is in the Memphis area.

Mr. GOLDWATER. Would it not be more sensible to build a new plant near Memphis than to build another steam plant near Paducah, and have to push that power to Memphis? Would not that be wiser?

Mr. KEFAUVER. That is what the TVA has been proposing. The TVA desires to build a steam plant at Fulton, Tenn., in order to take care of its customers.

In that connection, last year the TVA asked for such authority, and did so again this year. As a matter of right and law, the TVA should be able to operate its organization so as to itself meet the increasing demands of customers in this area, just as any other utility does. The TVA wants to build a steam plant near Memphis.

What is being done in this case is something which has no relation to Paducah, because it does not cut down the amount of energy which would come from the TVA steam plant there. It is simply that private power companies want to get into the power business in west Tennessee.

Mr. GOLDWATER. That leads me to what will be my final 1 or 2 questions, because I am already 1 or 2 minutes beyond the time when I am scheduled to relieve the Senator from Maine as the Presiding Officer.

Is the TVA system operating at any lesser percentage of its total capacity today than it was, say, in the fall of 1952?

Mr. KEFAUVER. The TVA system is operating very near its total capacity. Its officials tried to keep out of operation certain small old steam plants which are very expensive to operate for the generation of power. The TVA, however, is operating very near its capacity.

Mr. GOLDWATER. The Senator from Arizona was presiding over the Senate when he heard the Senator from Tennessee, during a certain colloquy, remark about the promises made by the President of the United States, then Candidate Eisenhower, to the effect that the TVA would maintain its present rate of production, or that TVA would not be interfered with. The Senator from Tennessee said that if the proposed contract were entered into such action would be dishonorable. In view of the fact that present capacities are being utilized, I am at a loss to understand the concern on the part of the Senators from the Tennessee Valley area, over the fact that a private group has come along and said, "Because Congress, in its wisdom, has said there will be no more steam plants for the TVA, we will provide the people of that area with the additional power." I should like to remark that I do not feel it is right to criticize the President of the United States on the floor of the Senate for something which has not happened, and, from all indications, is not about to happen.

Mr. KEFAUVER. I hope it will not happen again that the contract under discussion will be signed. But let me say it is not only those but we from the Tennessee Valley area who are criticizing the President; the President's best friends are criticizing him for the deal that is about to be put over. The great Scripps-Howard newspapers, which are published in Tennessee and throughout other sections of the United States, and which have always supported the President, are criticizing him. The New York Times, the Chattanooga Times, the Washington Post, the Milwaukee Journal, and other newspapers all over the Nation, as well as the President's own Atomic Energy Commission, are criticizing him.

Make no mistake about it, the purpose of the proposed contract is to put the TVA at the mercy of private power companies, who have always wanted to chip it off, raise the rates, and obtain business in some of the territory of west Tennessee. The companies are going a long and expensive way around in order to accomplish those purposes. I say it is outrageous. It is not in keeping with

UNIVERSITY OF MICHIGAN LIBRARIES

the President's promise. It is not in keeping with the solemn pledge which he gave to the people of Tennessee. It is a perversion of the Atomic Energy Act to allow the Commission to be used for something for which it was never formed. The Commission was never supposed to go into the business of furnishing power to the Tennessee Valley area and the people of Tennessee, and any amount of strained construction cannot make it that way.

Mr. GORE. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield to my colleague from Tennessee for a question.

Mr. GORE. One of my prospects has departed from the Chamber, but as long as I have one, I wish to point out to him, and also to point out to my friend the Senator from Arizona, whom I do not regard as a prospect for support on this issue, that I have approached this question not only as a Senator from the Tennessee Valley area but I have said that the question of TVA in this matter was secondary. I think there is a broader question involved. There is at stake and at issue the question of the independence and integrity of the whole structure of independent agencies of this Government. Here is the most vital single agency in the entire free world, with the power of the atom, and perhaps our defense, in its hands. This vital agency has been prostituted to a purpose unrelated to its program.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. GORE. I shall in just a moment. I want to be courteous to the Senator from Arizona, even though I do not regard him as a prospect. I hope I have one other Senator under conviction.

The Atomic Energy Commission has not requested this additional power. Who has requested it? The TVA did not request this plant. The people of Memphis did not request the plant. Who did request it? I know of no request of record. However, we are told it was proposed by certain individuals to the Atomic Energy Commission. What did that Commission do? Three out of the five commissioners took the position that the proposal was beyond its legal authority and beyond the scope of its program. I am not sure whether they also said it was against the public interest. Three out of the five commissioners took a position against the proposal. Yet they are ordered—they are directed—to undertake something beyond their program, beyond the needs of the Commission, and beyond any responsibility which the Congress has ever assigned to it. If that can be done to the Atomic Energy Commission, what will prevent a similar thing being done to the Federal Communications Commission, the Federal Trade Commission, and other independent or quasi-judicial bodies?

Mr. CAPEHART. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the senior Senator from Tennessee yield the floor, or does he yield for a question?

Mr. KEFAUVER. I yield for a question.

Mr. GORE. I ask unanimous consent that the Senator from Tennessee may yield in order that I may respond to the questions of the distinguished Senator from Indiana.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. GORE. I made a unanimous-consent request.

Mr. GOLDWATER. I am a little overdue in the chair.

Mr. GORE. Mr. President, I ask unanimous consent that I may yield to the distinguished Senator from Arizona.

The PRESIDING OFFICER. Does the Senator yield for that purpose?

Mr. KEFAUVER. Yes; I yield for the unanimous-consent request.

Mr. GOLDWATER. When the junior Senator from Tennessee was drawing the parallel between the golf ball and the egg, I got the yolk.

Mr. GORE. I hope the Senator benefited from it.

Mr. GOLDWATER. I do not get the yolk for this particular point because I do not see how AEC is any more involved as a power broker when it is acting in this capacity than is REA when it contracts, under the same conditions, to handle power.

Mr. GORE. I should like to point out that the REA is a power agency. Let me point out, on the contrary, to the Senator how nebulous is the color of authority for doing what is being done. Last year the Atomic Energy Commission asked for an amendment to the Atomic Energy Act. The Commission's reason for asking for an amendment was that the private concerns which had joined together to construct a plant near Paducah, Ky., called the Joppa plant, were having difficulty selling their bonds, because there was no specific provision in the act relating to that particular contract and the cancellation clause. When the proposed amendments were submitted to the joint committee, I am told that it read as follows:

> The Commission is authorized, without regard to section 3679 of the Revised Statutes, as amended, to enter into new contracts.

I shall not read the whole section. The committee wanted to pin the authority down. The committee did not think that the authority granted should be too broad. How did the committee make it read? By specifying the AEC facilities by name.

I believe I am correct in saying the following is the procedure, if my colleagues will look at page 79, line 17 of the bill:

> The Commission is authorized in connection with the construction or operation of the Oak Ridge, Paducah, and Portsmouth installations of the Commission—

And, mind you, those were specified by the amendment of the committee.

When the amendment was reported by the committee, the vice chairman of the joint committee, the distinguished Senator from Iowa [Mr. HICKENLOOPER], told the Senate that one of the purposes of the amendment was to keep the Atomic Energy Commission out of the power business. Now this term "in connection with" is so stretched that they propose to make a contract with a concern that has not even been formed, and to put into business more than 200 miles away from the nearest one of these plants, and give it a guaranteed profit and immunity from all taxes for the purpose of producing power for TVA. I say that is the second largest question involved.

The first, I think, is the integrity and independence of not only this independent agency, but all the others.

The second is the stretching of the meaning of an amendment to a provision of law far beyond the intent of the Congress and beyond any reasonable interpretation.

Mr. GOLDWATER. Mr. President, if the Senator from Tennessee will yield for a moment, let me say that, in statements before congressional committees and in statements in public, officials of the TVA have said in complaining tones that the AEC is using up too much of their power, and that it was at the Government's request that the AEC be furnished power. The plant at Paducah—I keep going back to this point—furnishes power for the AEC. If the AEC needs more electricity, it is more economical, in my opinion, to wheel the power from some place near, where there might be an overage, and build a plant at Memphis, where the power is needed at the present time. That is all this amounts to, and I think, under the amendment the Senator from Tennessee read, the authority is there.

Mr. GORE. I know the Senator from Arizona sincerely believes that, but the testimony before the joint committee does not bear it out at all, nor does the Bureau of the Budget statement, nor does the statement of the experts who appeared. The purpose of this contract, as specified, is to furnish power to the Memphis area.

Mr. GOLDWATER. I understand.

Mr. GORE. None of this power is for the Atomic Energy Commission. There is no wheeling, there is no replacement, there is no question of need at Paducah for this additional power. That plant is supplied with a firm contract.

Mr. GOLDWATER. The Senator says this private power will not be put into the wheel, at all——

Mr. GORE. It is so testified.

Mr. GOLDWATER. Does the Senator say it will not be put into the wheel at all?

Mr. GORE. I am not sure I know what the Senator from Arizona means by "wheel."

Mr. GOLDWATER. I mean the power is taken from the plant producing it, and is put into the general pool. In the West we are forced to do that; and we have worked it out on a two-way-street basis, whereby the power from the Government plants is put into the wheel and the power from the private utility plants is, also.

Mr. GORE. I do not have the exact quotation at hand, but I shall cite it to the able Senator from Arizona. Commissioner Smyth testified that, technically, not one kilowatt of this power will ever be used at an atomic facility.

Mr. GOLDWATER. I think the Senator from Tennessee misunderstands the term "wheel." I shall be glad to explain it to him privately, as I use it.

In conclusion, I wish to thank both the Senators from Tennessee.

In view of the fact that the Senator said the big Tennessee newspapers are against this proposal, I wish to say that we in the West find the bigger the calf gets, the harder it is to wean; and they bawl down there, just like a big calf does when we try to take it away from its mother.

Mr. GORE. Which calf is the Senator from Arizona talking about?

Mr. GOLDWATER. The calf's name is Tennessee Valley Authority—a beautiful, big calf that is growing fatter and fatter—at the expense of the taxpayers.

Mr. GORE. But that is not the question involved here.

Mr. GOLDWATER. I agree with the Senator from Tennessee.

Mr. GORE. I have been trying to indicate that this matter involves questions which, in my opinion, are more important than the TVA—important as I regard it.

Mr. GOLDWATER. I agree with the Senator from Tennessee. I could not agree more with him; and I am sorry to hear the TVA keeps creeping into his matter. The whole debate so far has been on the TVA.

Mr. GORE. I think it is a smokescreen.

Mr. GOLDWATER. The whole debate so far has been on the TVA, not on the proposed amendments to the Atomic Energy Act, or even on the contract—which I agree with the Senator from Tennessee might stand some scrutiny.

Mr. GORE. I assure the Senator from Arizona that, in any statement I have made on this matter, I have approached it from the point of view I have just described.

Yesterday almost all the debate seemed to put the TVA on trial. Well, the TVA was acquitted, though not at issue.

The question here at issue is this improvident contract and the subversion of the Atomic Energy Commission to a purpose unrelated to its program. So I am delighted to join the able Senator from Arizona in putting the matter on that basis, and when I address the Senate tomorrow, I shall attempt to confine my remarks to this level.

Mr. GOLDWATER. I shall be here to hear the Senator from Tennessee.

Mr. CAPEHART. Mr. President, I should like to say to the junior Senator from Tennessee [Mr. GORE]——

The PRESIDING OFFICER. Does the senior Senator from Tennessee [Mr. KEFAUVER] yield for that purpose?

Mr. GORE. Mr. President, I obtained unanimous consent for that.

The PRESIDING OFFICER. The Chair will state that if the present occupant of the chair continues to be in the chair much longer, he will insist upon the regular order, and will insist that a Senator having the floor may yield only for questions.

Mr. CAPEHART. Mr. President, I shall ask a question.

First, I am sure the able Senator realizes that all of us are very, very fond of Tennessee; we love the Senator very much.

Mr. GORE. I thank the Senator.

Mr. CAPEHART. I am sure the Senator from Tennessee is aware of that; is he not?

My second question is, "Why do you in Tennessee and in the Tennessee Valley insist on expanding everywhere? Why are you not satisfied with what you have? Why do you wish to take in the entire United States? We are very happy that you have the Tennessee Valley and TVA. Why do you not confine it to Tennessee? Why, whenever the matter of expansion of the TVA comes up, do you go right into action? Are you afraid we are going to take the TVA away from you? We are not going to do that, but we are going to be opposed to this expansion of TVA. Regardless of what the able Senator may have said a moment ago, my best judgment is that this whole fight is over the fact that private industry wishes to put in a plant near Memphis. If that is not true, I wish the able Senators from Tennessee would so state.

Mr. GORE. I thank the Senator from Indiana, for whom I have a high regard.

Mr. CAPEHART. I thank the Senator from Tennessee, and I know that is true.

Mr. GORE. I think he may be surprised at my reply. I am opposed to expansion of the TVA service area. The task of securing sufficient generating capacity for the present service area of the TVA is a man-size job for the representatives of that area, I assure the Senator from Indiana. There is no disposition on my part, nor do I know of a disposition on the part of any Senator from the area or any Representative from the area to expand the service area of the TVA. Many persons misunderstand and believe that we are attempting to expand the service area of the TVA. The other day, when the President of the United States referred to the expansion of the TVA, I fear that many persons thought his reference was to expansion of the service area. There is another type of expansion. It so happens that the same word is used in both instances. I refer to the expansion of generating facilities within the area to meet the growing needs of the area. It is this latter expansion about which I have been concerned. I do not want to see the service area of TVA expanded. In his press statements the President referred to the fact that the proposed TVA plant on the Mississippi River would be on the periphery of the TVA area, and that therefore there was some indication that TVA wanted to push its service area across the Mississippi River. I have never heard any indication that TVA wants to cross the Mississippi River to expand its service area, and I will resist it if that ever happens.

The proposed private steam plant, subsidized and guaranteed a profit, with reimbursement of taxes, is on the periphery of the service area of the Arkansas Power & Light Co. In this instance the proposal is for the private power combine to cross the Mississippi River into the TVA service area. That is important, but I would list it as third in importance among the questions before the United States Senate. Does that answer the Senator's question?

Mr. CAPEHART. Why is the Senator opposed to the private plant?

Mr. GORE. I shall be very glad to relate the reasons briefly. I shall relate them at considerable length, I hope, tomorrow.

First, the Atomic Energy Commission is being ordered, over its objection, to make a contract by which the AEC will become a power broker. I think we ought to keep the Atomic Energy Commission at the job of controlling the atom. I think it has sufficient functions in that regard.

Mr. CAPEHART. What the Senator really thinks is that it ought to buy all its power from TVA. Is not that what the Senator really thinks?

Mr. GORE. I wish I could talk to the Senator at length.

Mr. CAPEHART. I do, too. I have been here for 10 years, now, and have listened to the Senators from Tennessee. Every time any question arises which affects TVA anywhere, they rush into the fray.

My point is that we are delighted that Tennessee has the TVA. We want Tennessee to keep it. But please allow the rest of us in Arkansas, Indiana, Ohio, and other parts of the country to do things the way we like to do them.

We are happy to help Tennessee, and have helped Tennessee in the past. We appropriated millions of dollars to start TVA. We were happy to do it. There are other TVA's in the United States which we might help to get started. Once TVA is started, why are not the Senators from Tennessee happy and satisfied, and willing to leave the rest of us alone to work out our own problems, instead of trying to enforce public ownership of power on all of us? Some of us do not want it.

Mr. GORE. I appreciate the generous attitude of the Senator from Indiana——

Mr. CAPEHART. If I am mistaken, please tell me.

Mr. GORE. I know that the Senator from Indiana would like to be well informed on the subject. He indicated that my concern was that the Atomic Energy Commission buy all its power from the TVA. It so happened that at the time the Paducah plant was under consideration I was serving as acting chairman of an appropriations subcommittee on the other side of the Capitol. I conducted the hearings on the expansion of the atomic energy program, the construction of the plant at Paducah, and also the H-bomb plant at Savannah.

The question of power supply arose. At first the Atomic Energy Commission asked that the TVA furnish all the power. The junior Senator from Tennessee, then a Representative from Tennessee, did not make that suggestion. Later representatives of the Atomic Energy Commission came before my subcommittee and suggested that it might be able to secure one-half the power from a private power combine at rates equal to those available from TVA. I said, "Good."

Mr. CAPEHART. Congratulations. I am for the Senator.

Mr. GORE. I conducted the hearings. I led the debate--at least, I made the

UNIVERSITY OF MICHIGAN LIBRARIES

first speech, if that is leading the debate on the bill. I helped to pilot the bill through the House of Representatives. It then went to conference with the Senate and eventually became law. Through that action the private power Joppa plant was built to furnish one-half the power at Paducah.

Does that indicate to the Senator from Indiana that he was correct in his attitude that I was burning with a desire that the Atomic Energy Commission buy every kilowatt of its power from the TVA?

Mr. CAPEHART. The Senator stated a moment ago that there was a shortage of power in the TVA area. The Senator from Tennessee stated that power expansion was needed within the TVA area. That may well be true.

Mr. GORE. That is correct.

Mr. CAPEHART. The President of the United States wants to see a private powerplant built west of Memphis.

Mr. GORE. The Senator asked me why I opposed it.

Mr. CAPEHART. Yes.

Mr. GORE. I have given the Senator one answer, briefly. He asked me a further question. I now give him the second reason.

I think the Atomic Energy Commission, by complying with the order, would be breaking faith with the Congress and would be entering into a contract beyond the intent of the Congress when we enacted this law and beyond any reasonable legal interpretation of its authority.

The third reason——

Mr. CAPEHART. Does not the Atomic Energy Commission have to buy electricity somewhere?

Mr. GORE. The Atomic Energy Commission has all the electricity it needs at Paducah. This power is not for the Atomic Energy Commission. It is for Memphis.

I come to the third reason. This is an improvident and unwise contract, without competitive bidding. It is tailor-made, whereby 1 concern, and 1 only, can successfully compete.

Mr. CAPEHART. Would the Senator be in favor of it if the contract were thrown open to competitive bidding and half a dozen firms were permitted to bid.

Mr. GORE. If the Government needed the power——

Mr. CAPEHART. The Government, of course, never needs power, but industries need it.

Mr. GORE. If the Atomic Energy Commission needed power——

Mr. CAPEHART. The Atomic Energy Commission happens to be a governmental agency at the moment. It needs power.

Mr. GORE. If the Atomic Energy Commission needed power for its own program, and entered into a contract with due competition, I would support it. But those elements are not present.

Mr. CAPEHART. If the Atomic Energy Commission buys power from the private plant about which we are talking, and which is proposed to be constructed, that will release power which it is getting from some other source, to go in other directions, will it not?

Mr. GORE. That is not true. It was so testified.

Mr. CAPEHART. Is the Senator sure he understands how these powerplants operate, and the method of interchanging power? Perhaps I do not.

Mr. GORE. The able Senator and I have at least one thing in common. Neither of us would claim to be a power expert.

Mr. CAPEHART. That is correct; but I do know how power is exchanged.

Mr. GORE. The experts who testified tell me that there is no problem of wheeling or replacement. As a matter of fact, the statement of the Bureau of the Budget refutes that implication.

Mr. CAPEHART. I rose principally to say that, fond as I am of the two Senators from Tennessee, and of the State of Tennessee and its people, and happy as I am to see the great development in the Tennessee Valley in power, industries, flood control, and all that, I ask the Senators from Tennessee if they will not allow the rest of us in the United States to run our own business. Cannot the Senators from Tennessee and the people of Tennessee be satisfied with what they have? That is what I rose to say.

Mr. GORE. I appreciate the Senator's attitude. I am delighted with the opportunity to disabuse his mind of a few misapprehensions and some misinformation.

Mr. CAPEHART. I have been a Member of this body for 10 years, and that has been my observation, as a result of merely sitting and listening.

Mr. GORE. Have I not disabused the Senator's mind of certain misconceptions?

Mr. CAPEHART. The Senator has been here only a couple of years. I hope he is the exception to the rule.

Mr. GORE. Have not the answers which I have supplied the Senator been convincing?

Mr. CAPEHART. They have been fairly convincing. But here is a private plant going in west of Memphis. Every time the question of additional steam plants arises, the Senators from Tennessee go into action right there. The impression they leave with me is that they are afraid that we are trying to take TVA away from them.

Mr. GORE. I am afraid of that. I would not minimize the importance of this invasion of the TVA service area. I think this is the first step toward the dismemberment of the TVA service area. I think this private power combine is trying to grab the Memphis service area, but I do not list that as of first importance.

Mr. CAPEHART. It would be impossible to destroy all the power and the physical properties in the TVA area. The worst that could happen, which I think might well be a good thing, would be to have it sold to private industry and have private industry operate it and furnish the power, instead of the Government doing it. The people of that region would still have the physical properties and there would still be as much energy and as many lights available. I am happy and delighted that the Senator's State has all of that. However, my philosophy has always been and always will be that there are times for the Federal Government to step in and help get something started, but that when it is started the Government should get out and take the money and start something somewhere else, instead of expanding something all over the United States.

Mr. GORE. The people of Memphis were served some years ago by the private power combine. They put it to referendum and it was voted out 16 to 1. Now by this proposal the Atomic Energy Commission, which is not an electric power agency, is used as a tool to turn the people of Memphis over to the same outfit they had voted out by a vote of 16 to 1.

Mr. CAPEHART. It is really a fight between public power and private power, then.

Mr. GORE. It is not.

Mr. CAPEHART. Of course it is. Why should we try to fool ourselves?

Mr. GORE. That is a part of it, but let us not overlook the more important issues.

Mr. KEFAUVER. Mr. President, I enjoyed the colloquy between the Senator from Indiana and my distinguished colleague, and I believe my distinguished colleague has given very illuminating answers as to the bad points about the proposed contract. There is little I can add. However, I should like to point out to the Senator from Indiana that at an Appropriation Committee hearing, a number of representatives of private power companies operating around the TVA area testified that their relations with TVA have always been very pleasant, and that never once has TVA tried to expand beyond the service limit which Congress had itself fixed for TVA. The Senator from Indiana should bear in mind that Congress itself in 1939 gave TVA the responsibility of serving power in certain areas.

Mr. CAPEHART. Congress could have been wrong about it, of course.

Mr. KEFAUVER. If it is to be changed, let it be done directly, not by a perversion of AEC. Congress gave TVA a responsibility for a certain area, and TVA has never tried to get out of that area. I join my colleague in saying that if TVA ever attempted to do so, I would fight the attempt. However, if TVA has the responsibility of servicing that area, if TVA is to amortize its investment in 40 years, if it is to operate with the maximum efficiency, as the President of the United States promised it would, then I do not want the Atomic Energy Commission running TVA. Any utility ought to be able—and this is all we ask for the Tennessee Valley Authority—to anticipate the increasing demands of its customers, whether it may be gas or electricity, or whatever it may be, and they ought to be able to fill the demands of those customers. That is all we ask.

I believe the Senator from Indiana will agree with me that it is a matter of integrity in Government not to allow an agency, which never was organized to go into the power business, to build a plant for the purpose of furnishing it to TVA, when not one kilowatt of it would go to atomic-energy work. They have their own plant. They do not need the additional electricity in Paducah.

The main purpose of it is to place TVA at the mercy of private power companies in the purchase of power. That is not keeping the bargain. It is not fair for the agency, upon whom we place the responsibility of amortizing its investment in 40 years.

I should like to say something else. The Government has a great investment in TVA. It is a wonderful property. It is well constructed. It has been constructed cheaply. How anyone in Government now can want to destroy the Government's own property, in order to satisfy a few private power utilities I shall never be able to understand. That it would be destructive of the Government's own property, there can be no doubt. That they are trying to satisfy a private power utility is shown by the fact that no competitive bidding was asked for. The private power utility did not even see the specifications when it entered into the contract. The people of the United States, whether they live in the Tennessee Valley or elsewhere, are proud of TVA, and they certainly do not want it destroyed by some Government agency that is not even in the power business.

I do not ask Senators to take my word for it. Let me read from what some of the Commissioners of the Atomic Energy Commission have to say about it. They do not like this either. They do not want to be used in this fashion. I should like to read what two of the members of the Atomic Energy Commission had to say.

I read from the printed hearings at page 958:

DEAR MR. HUGHES: On April 15, 1954, the Chairman of the Atomic Energy Commission, Mr. Strauss, sent you a letter outlining an analysis of the negotiations for certain power to be furnished by Middle South Utilities, Inc., and the Southern Co.

Under this proposal, the Atomic Energy Commission contracting power would be used as a vehicle for the supply of 600,000 kilowatts of power in the Memphis area.

Interpolating, Mr. President: Not at Paducah, but in the Memphis area. To quote further from the letter:

With the knowledge of the other members of the Commission, we are taking this opportunity to bring to your attention our personal view that the proposed action involves the AEC in a matter remote from its responsibilities. In an awkward and unbusinesslike way, an additional Federal agency would be concerned in the power business.

The proposal under discussion is an outgrowth of the responsibility to the President's budget message under your letter of December 24, 1953, requesting the AEC to explore the possibility of reducing existing commitments of the TVA to the Commission. In the course of that exploration, it was determined to be unwise to disturb the AEC arrangements with TVA upon which our production schedules depend. Since that determination, the explorations have taken a different course.

The present proposal would create a situation whereby the AEC would be contracting for power not one kilowatt of which would be used in connection with the Commission production activities. The creation of such a contractual relationship would place upon the Commission a continuing responsibility during the 25-year life of the contract for stewardship in respect to matters irrelevant to the mission of the Commission.

It has been our observation in Government administration that arrangements which are obviously incongruous at the outset tend to become even less clear-cut because no one can foresee what contingencies may arise over a long term of years. In addition the proposed action certainly seems a reversal of the sound philosophy embodied in the community-disposal legislation recently sent forward to Congress. One motivation for that legislation was the desire to eliminate responsibilities not essentially involved in the Commission's sober and exacting principal mission.

Of course, if the President or the Congress directs the Commission to accept such a responsibility we will endeavor to discharge it fully.

The letter is signed by Henry D. Smyth, a member of the Atomic Energy Commission, and by Eugene M. Zuckert, also a member of the Atomic Energy Commission.

Mr. President, a third member of the Commission, Mr. Murray, testified about it a number of times. He is a distinguished engineer in private life. He is the one who worked out the proposal for the Joppa plant at Paducah. Let us see what Mr. Murray testified concerning it. At page 1004 of the hearings he said:

Since our program is not advanced by these negotiations and the subsequent administration of this 25-year contract, I do not believe that it is desirable for the Atomic Energy Commission to perform a function that another agency of Government could perhaps more logically perform.

Mr. President, we are not asking for expansion. We are asking only for Congress to give the Tennessee Valley Authority a chance. We are asking Congress not to allow some other agency to interfere with the business of TVA.

We are joined in that request by the members of the Atomic Energy Commission itself. It is not merely a case of the people and the newspapers of Tennessee hollering about it. The whole Nation is shocked by this misuse of the executive power. Editorials in newspapers all over the Nation are condemning it. If we cannot place responsibility upon an agency for performing its duty, then we are going to tear up the administration of our Government. How are we going to complain about an administrative agency getting into something for which it was never formed when we ourselves sanction it? We cannot blame the agency, because the majority of its members do not want to do it. I hate to see the atomic energy program handled in this kind of fashion.

I read further from an editorial which is published all over the United States:

This proposed contract might set a precedent that could make the AEC a power broker anywhere in the country.

It already has all the power it needs at Paducah from steam plants there. Now, it is proposed to build a steam plant to take over the business. Is it going to Los Angeles or wherever it wants to do some big favor to a private utility? Are we going to say to the Atomic Energy Commission, "You build a steam plant and let a private utility have the contract"?

Mr. KNOWLAND. Mr. President, will the Senator from Tennessee yield?

Mr. KEFAUVER. I am happy to yield to the distinguished majority leader.

Mr. KNOWLAND. I should like to ask the distinguished Senator whether he thinks the Atomic Energy Commission, as a public body with the highest type of priority, would have the right, under the preference provision, to require the supplying of power to the Atomic Energy Commission with an A–1 priority?

Mr. KEFAUVER. Yes, indeed. Whatever power the Atomic Energy Commission needs I want it to have. The Atomic Energy Commission has steam plants at Paducah which will soon be in operation and will furnish ample power there.

Mr. KNOWLAND. Is it not a fact that even at the present time the TVA is having to go outside its area to get power at wholesale rates to retail within the TVA area, because it does not have enough production?

Mr. KEFAUVER. At Paducah the atomic energy work has advanced more rapidly than at either of the steam plants. The TVA has made a schedule with Electric Energy, Inc., which has 4 units out of its 8 in operation. When the Atomic Energy Commission needed more power it has ordered the TVA to buy power to supplement the amount needed until the 4 units are in operation.

Mr. KNOWLAND. Is it not a fact that TVA has customers outside the TVA service area?

Mr. KEFAUVER. TVA has no customers outside the TVA service area except an occasional exchange of power back and forth with other power companies.

Mr. KNOWLAND. Is it or is it not a fact that the TVA has required some of its customers to take all their power from TVA under so-called exclusive contracts when it might be actually easier to get power from a nearby power source?

Mr. KEFAUVER. The contracts which have been entered into with the distribution systems in the city provide for the TVA to furnish all the power to that city. That is the way the cities have wanted it.

In connection with the furnishing of electric power in a city, it is very difficult to have two distribution systems. Anyway, that is the way they have wanted it done. In most cities one utility furnishes all the electric power.

Mr. KNOWLAND. I think it is true that distribution systems for obvious reasons are a monopoly, but where there is a public agency, such as a public utility district, which distributes the power locally, I think it is not unusual that they may have more than one source of wholesale power, so to speak, which they in turn distribute at retail.

Mr. KEFAUVER. That may be. It is my understanding that usually one company furnishes the power for a particular city-distribution system. In any event, under arrangements between the Commonwealth & Southern, with bonds issued under authority of the Congress, TVA brought the transmission lines and undertook the responsibility of being the power furnished for areas inside its service area. It has not gone outside its service area. It has good working relations with other companies. The Arkansas Light Co. is the sole supplier of electricity for its cities, as is the Mississippi Power Co. for cities in Mississippi. That is the custom in the area.

Mr. FERGUSON. Mr. President, will the Senator from Tennessee yield?

Mr. KEFAUVER. I yield.

Mr. FERGUSON. Does the Senator contend that the original idea of the Tennessee Valley Authority was to develop the resources of the Tennessee Valley?

Mr. KEFAUVER. Originally the TVA was created to develop the resources of the Tennessee Valley.

Mr. FERGUSON. The resources in the Tennessee Valley watershed?

Mr. KEFAUVER. Yes.

Mr. FERGUSON. Is it not a fact that the Fulton steam plant would be outside the watershed?

Mr. KEFAUVER. That is correct.

Mr. FERGUSON. How many years has the Senator been advocating the building of a steam plant at Fulton?

Mr. KEFAUVER. For 2 years, ever since the TVA recommended it.

Mr. FERGUSON. Up to this time Congress has not seen fit to appropriate Government funds to build that plant.

Mr. KEFAUVER. Last year the same question was raised about the need for the electricity, the number of hundred thousands of kilowatts needed, and there was more or less an understanding with the Committee on Appropriations that, if the need were shown this year, another look would be taken at the situation and provision might be made for the Fulton steam plant.

Mr. FERGUSON. Does the Senator feel that, if the plant which is being discussed tonight were authorized and built as proposed, it would not be necessary to build the plant at Fulton?

Mr. KEFAUVER. I think, frankly, that if the West Memphis plant ever is built, it would be a chip off that area.

Mr. FERGUSON. Yes; but is it not true that, if the west Memphis plant were built, it would not be necessary to build the Fulton plant outside the watershed?

Mr. KEFAUVER. The Fulton plant ought to be built in any event.

Mr. FERGUSON. That is not my question.

Mr. KEFAUVER. I should say that the TVA should have its own source of supply.

Mr. FERGUSON. That is not my question. I did not ask whether TVA should have its own source of supply. My question was this: If the plant at West Memphis were built, across the river from Memphis, it would then not be necessary, and there would be an inability to show the necessity, to build the Fulton plant, which is outside the area. Is not that true?

Mr. KEFAUVER. To my mind there would still be a necessity for building the Fulton plant, because I do not think the TVA should be ordered to enter into a contract with someone who has no lawful right to get into their business. However, I would not have the TVA sign such a contract; I would have them operate their own plant.

Mr. FERGUSON. The question was, It would not be possible to show the necessity for TVA power at Fulton, if there were a plant across the river, and the power were integrated into the TVA system. Is not that true?

Mr. KEFAUVER. Even if building of the West Memphis plant were the right thing to do, even if it were a good thing to do, and if it were entirely acceptable to the TVA to take electricity from it, that would take care of only one-half of the power needs. Another steam plant would still be required, by reason of the undisputed growth of the area. The increase is substantial. Seven hundred thousand kilowatts have been added a year. Six hundred thousand kilowatts from the West Memphis plant, if it were built, would only take care of the need until 1956.

The Fulton steam plant should have been appropriated for and started last year. The testimony was that for 1957, in addition to the 600,000 kilowatts, 750,000 more kilowatts of installed capacity would be needed, to prevent a power shortage in 1957. So the TVA need has actually been somewhere around 1,300,000 kilowatts.

Mr. FERGUSON. How much power is the TVA buying at present, or how much has it bought in the past year, from sources other than TVA powerplants, whether they be hydroelectric or steam plants?

Mr. KEFAUVER. I cannot answer the question. I understand that, because only four units have gone into operation at Shawnee, a large amount of power for the Atomic Energy Commission has been purchased on their orders. Otherwise, I understand there is exchange, back and forth, in the regular system. I simply do not know the amount.

Mr. FERGUSON. That being true, what would be wrong with getting more power from private sources? What is the evil which the Senator sees?

Mr. KEFAUVER. The evil, first, is with respect to the integrity of the agency involved, the Atomic Energy Commission.

The second evil is that the TVA would be placed at the disadvantage, eventually, of getting its power at high prices, thus making it unable to meet its obligations to the United States Government.

The third point is that the agency which has the responsibility, as a utility, of furnishing electricity in the area should be able to have some control over its own sources of supply.

If the TVA is required to buy power at rates which private utilities on the perimeter would charge, then the TVA as a going concern is finished.

Mr. FERGUSON. Does not the Atomic Energy Commission agree to pay to the TVA the price of the power which would be furnished into the lines of the TVA from the West Memphis plant?

Mr. KEFAUVER. It would be much higher than the TVA cost.

Mr. FERGUSON. But my question is, Do they not agree to pay to the TVA that price?

Mr. KEFAUVER. My understanding is that the TVA would be called upon to make substantial additional power available on its own. It would have to build a transmission line across the river and pay a higher price than that for which they could produce the power themselves.

There is a cancellation clause in the contract. If the contract were canceled, the TVA would be a sitting duck.

Mr. FERGUSON. Does the Senator contend that the United States Government has contracted, through legislation, that power must be furnished to everyone inside the Tennessee Valley watershed and outside that watershed at Government expense?

Mr. KEFAUVER. I only contend that in the act of 1939, as the Senator will recall, an attempt was made to work out an agreement between the TVA and Commonwealth & Southern, which would be satisfactory all around. The House Military Affairs Committee, of which the distinguished Senator from Alabama [Mr. SPARKMAN] was then a member, took the lead in trying to work out an arrangement, so that there would not be competing lines, runing over one another. Each would have its own area in which to operate.

Finally an arrangement was worked out whereby the TVA agreed to buy the transmission lines, and the cities agreed to buy the distribution system, thus completely buying out the Commonwealth & Southern properties in this service area.

Congress passed a law—and in the hearings, and in the maps, the area which was to be served by the TVA was described—which authorized the issuance of $65 million in bonds, so that the TVA could buy the transmission lines in west Tennessee all the way around, whether they were in the TVA river shed or not.

Mr. FERGUSON. Is Paducah in that area?

Mr. KEFAUVER. Paducah is in the Tennessee Valley area.

Mr. FERGUSON. Is it in the watershed?

Mr. KEFAUVER. It is in the watershed.

Mr. FERGUSON. Is Fulton in the watershed?

Mr. KEFAUVER. It is not in the watershed.

Mr. FERGUSON. Is Memphis in the watershed?

Mr. KEFAUVER. It is not in the watershed, but it is in the service area as agreed to by Congress.

Mr. FERGUSON. Is it not a fact that, under the proposal which has been made, the Atomic Energy Commission would pay the price which the new plant would charge for the electricity which went into the lines of the Tennessee Valley Authority?

Mr. KEFAUVER. That is not entirely clear, but I am quite certain it would be expected that the TVA should pay a substantial amount of the additional cost over the price for which it could make electricity itself; in other words, the very heavy cost of putting up cables and building a line to Arkansas, where there would be higher costs for coal, I believe, and higher taxes and other charges, which would go into the rate paid for electricity.

So the TVA would immediately have to increase its rates and would have to pay more. Then, of course, there would always be the prospect that the cancellation clause in the contract might be

invoked or the contract terminated, leaving the TVA without a source of supply.

Mr. FERGUSON. Does the Senator now say that the Atomic Energy Commission cannot cancel its option to take the priority of TVA power?

Mr. KEFAUVER. I take it that the Commission can cancel its option, if it wishes to.

Mr. FERGUSON. Would not the Senator say that, under the law, the Commission could exercise its option and take all the power it needed?

Mr. KEFAUVER. If it wanted to take all the power in the Tennessee Valley that it needed, no one would raise any objection.

Mr. FERGUSON. Does the Senator from Tennessee appreciate the fact that the junior Senator from Arkansas [Mr. FULBRIGHT] has indicated that there is evidence to show that the TVA has charged about $6 million a year in excess of the cost of the power it has furnished from Paducah to the atomic-energy plants?

Mr. KEFAUVER. I happen to know that the junior Senator from Arkansas is in error about that, because I have gone into some of the figures myself. The Senator from Arkansas may honestly believe what he has said, but there is a mistake in his information. None of us are experts on technical, intricate rate structures.

Mr. FERGUSON. But if that is the fact——

Mr. KEFAUVER. That is not the fact.

Mr. FERGUSON. If it is a fact.

Mr. KEFAUVER. I do not believe in proceeding on hypotheses.

Mr. FERGUSON. Let me give the Senator a hypothetical case, then.

Mr. KEFAUVER. Very well.

Mr. FERGUSON. Suppose what I have stated is a fact, and the TVA is repaying to the Federal Government money advanced for capital assets. Then, since the money comes from the Atomic Energy Commission, the Government would be paying itself the money it had loaned to the TVA, would it not?

Mr. KEFAUVER. In the first place, the TVA is charging a very reasonable rate, which is of great benefit to the Government, for the electricity which the Atomic Energy Commission buys from it, and we ought to thank God there is a TVA which has pulled down the rate.

Mr. FERGUSON. Can the Senator from Tennessee answer the question?

Mr. KEFAUVER. I am answering the question. The Senator asked a long question, and it takes a long answer. We ought to be thankful that the TVA has brought about low rates for the Atomic Energy Commission.

The answer is that the rates the TVA has worked out are very reasonable and low, much lower than the rates charged by Electric Energy, Inc., which is operating just across the river in Illinois. Upon the instruction of the Atomic Energy Commission, the TVA bought a great deal of power for which it had to pay a higher price. But when its 8 units are in operation at Shawnee, and its 8 units are in operation at Joppa, TVA's costs will be considerably lower, saving the Government many millions of dollars every year, and it will pay a considerably lower price than what Electric Energy, Inc., will be charging at Joppa.

Mr. FERGUSON. Does the Senator from Tennessee think he has answered the hypothetical question of the Senator from Michigan?

Mr. KEFAUVER. I think I have.

Mr. FERGUSON. The Senator thinks he has?

Mr. KEFAUVER. I think I have.

Mr. FERGUSON. Is it not also true that, as indicated in the hypothetical case, if $5 million to $6 million a year more is being charged than would be charged if the plant across the river from Memphis were built, as the cost is being figured there, if this extra amount is being charged, and is being figured in their profits, it amounts to a subsidy to the other users of electricity in the valley, and the taxpayers of the country are paying it because they are paying more than the cost of the electricity to the Atomic Energy Commission?

Mr. KEFAUVER. I simply cannot answer that question, because the premise of the Senator is incorrect, and the facts are incorrect.

Mr. FERGUSON. Let us suppose the facts are correct.

Mr. KEFAUVER. I am not going to answer a question when I know the facts cited in it are fictitious and not correct. The fact is that the Government would pay between $92 million and $137 million more for the power from the West Memphis, Ark., plant over the period of the proposed contract than it would if it got the power from the TVA. In the latter case, at the end of the contract the Government would own the steam plant and it would be in the hands of the TVA. If the proposed contract is put into effect, the private utilities would own the plant, after the Government had paid between $92 million and $137 million more for the electricity. I know that to be a fact according to the record.

Mr. FERGUSON. Does the Senator know whether the TVA, in figuring the cost at which it would be able to furnish the amount of power contemplated by the new plant, has figured in the same way that it figured with regard to its own plant?

Mr. KEFAUVER. I do not know. The figures are in the RECORD. The TVA might give a figure for what it can build the Fulton steam plant for and what the power would cost, which would be between $92 million and $137 million less than the power would cost if the other plant was built.

Mr. FERGUSON. Is it not true that if the TVA's figures are used, it can be ascertained that it is making $6 million profit on the power it is furnishing now?

Mr. KEFAUVER. It does not at all, and I should like to read an editorial which appeared in the Washington Post of today.

Mr. REYNOLDS. Mr. President, will the Senator yield?

Mr. KEFAUVER. Mr. President, first I ask unanimous consent to have printed in the body of the RECORD at this point in my remarks, a very thoughtful editorial published in the Washington Post of July 15, which I believe will give information which might be helpful, and which I believe specifically answers the questions asked by the Senator from Michigan.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER BY SUBTERFUGE

It is distressing to have Senator FULBRIGHT add to the confusion over the administration plan to reintroduce private power into the Tennessee Valley. Mr. FULBRIGHT's interest in the construction of a new $107-million private powerplant at West Memphis in his home State of Arkansas is, of course, understandable. Moreover, there is a tenable philosophical argument, as this newspaper has previously acknowledged, over the merits of private power versus more Tennessee Valley Authority plants which would add to the Federal budgetary deficit. Unfortunately, this philosophical argument has been tardily presented and it does not, in our view, justify either the administration's course in this particular instance or Senator FULBRIGHT's stand.

Granted, as Senator FULBRIGHT complains, that there may have been some exaggerations by proponents of TVA. The Senator's case still seems to us to fall short on three counts:

1. Senator FULBRIGHT asserts that the private power contract would cost only $282,000 more a year than TVA power from a new Fulton, Tenn., steam plant—rather than the $3,685,000 estimated by the Atomic Energy Commission. Apparently Mr. FULBRIGHT arrived at his figure by assuming a 19-cent-per-million-BTU coal cost for both TVA and the prospective private plant. Actually, TVA has been paying 15.5 cents, and there is no assurance that the private combination could hold to a cost of 19 cents. Whatever figure is taken—the $3,685,000 AEC estimate or Mr. FULBRIGHT's $282,000—the private contract would cost more than service by TVA.

2. The private arrangement would make extraordinary use of the Atomic Energy Commission's authority to let 25-year contracts. AEC would be concerned very indirectly, indeed. Only by stretching interpretations to the limit can it be said that the private West Memphis plant, which would rule out the TVA Fulton steam plant, would replace TVA power furnished to the Atomic Energy Commission 250 miles away.

3. Mr. FULBRIGHT denies that the specifications for the new plant were rigged to favor the private Dixon-Yates group. "Rigged" is of course an ugly word. The fact has been brought out in the hearings, however, that the Dixon-Yates group did not even have the specifications at the time it submitted its proposal in April. The specifications later drawn, which had the effect of discouraging other bidders, conformed to the Dixon-Yates proposal. The result of the contract would be that a private company would end by owning a plant built with substantial Government help, with the Government assuming much of the risk, and that the power rate would be materially in excess of the TVA standard.

These seem to this newspaper matters of substance which Senator FULBRIGHT has not explained and which fully warrant the questions being acked on Capitol Hill.

Mr. KEFAUVER. I now yield to the Senator from Nebraska.

Mr. REYNOLDS. The junior Senator from Nebraska would like to ask the learned Senator from Tennessee a question, and in doing so I assure him that I am sincere in my desire to seek correct information.

Mr. KEFAUVER. I know the Senator is always sincere.

Mr. REYNOLDS. The Senator, coming from Tennessee, may be able to give me the information I desire.

Mr. KEFAUVER. We are very grateful to one of the great Senators from Nebraska for the contribution he made to our welfare, and we are also grateful for the support we have received from other Members of Congress from Nebraska.

Mr. REYNOLDS. I have been informed on many occasions, over a period of years, that at the inception of the TVA there was a well-defined understanding, if not an agreement, that the activities of the Tennessee Valley Authority, so far as they pertained to power, would be confined to hydroelectric generation, and that the Authority would not embark upon steam generation. Is that correct?

Mr. KEFAUVER. No, that is not correct. That question was ruled upon here on the floor of the Senate by the late Senator Vandenberg when a point of order was made by the distinguished Senator from Michigan on an appropriation for the New Johnsonvile steam plant which was built in Tennessee. The President pro tempore, the late Senator Vandenberg, ruled that the TVA was not limited to building merely hydroelectric facilities, but that it could build steam plants, and that such activity was within the purview of the TVA Act.

Mr. REYNOLDS. I referred not to the law, but to a well-defined understanding or agreement.

Mr. KEFAUVER. There was never any agreement. The TVA was given the responsibility, which it assumed, of furnishing electric power in the Tennessee Valley area. I will say to the distinguished Senator that all we are asking is that the TVA have its sources of supply for its own customers. That is all any utility ought to have. A utility which is put at the mercy of its competitors is in a bad way. What is being proposed is that the TVA be put at the mercy of private power companies, with regard to what they will want to charge. That would mean that the TVA would be unable to meet its obligation to the Government of paying back the investment in 40 years, and it would be the beginning of the end of the whole Tennessee Valley Authority. I do not think the distinguished Senator from Nebraska would want that to happen. In fact, I know he does not.

Mr. REYNOLDS. I simply asked whether there was such an understanding. I thank the Senator for his reply.

Mr. KEFAUVER. I thank the Senator for asking me. There was no such understanding.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the entire editorial entitled "Peddling Private Power Is No Job for AEC," published in the Washington Daily News of Tuesday, July 6, 1954.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEDDLING PRIVATE POWER IS NO JOB FOR AEC

The United States Atomic Energy Commission, whose sole job should be to maintain American atomic superiority for the safety of the free world, has been ordered into a ridiculous, costly sideline for the next 25 years.

It has been directed, over its own protest, to contract with private utility companies for a large amount of electric power to be delivered to the Tennessee Valley Authority—200 miles and more away from the closest AEC facility.

President Eisenhower issued the order. Presumably it was to prove what needs no proving: That this administration looks favorably upon private enterprise.

The President has directed that this unnecessary, dangerous and expensive gesture of friendliness to the private power industry shall be accomplished by AEC's signing a contract with Middle South Utilities, Inc., and the Southern Co. These two companies would form a third company to build a big new steam-electric generating plant at West Memphis, Ark., just across the Mississippi from Memphis, Tenn.

AEC told the Budget Bureau "the Commission did not agree on the wisdom of AEC entering into this type of contract." Three of the five atomic Commissioners opposed it. Among this majority was the outstanding exponent of private enterprise in the AEC, Commissioner Thomas E. Murray, of New York.

Although called an independent office of the Government, AEC passed the buck on the final decision to the White House. The President, through his Budget Bureau, decided in favor of the contract.

If this was a delegated decision by Mr. Eisenhower, then some subordinate has put him in an absurd position. If he acted with all the facts before his eyes, then he misinterpreted the facts.

He ordered the contract despite the fact that Budget Bureau and AEC figures showed power from the private concerns would cost the Government at least $3,685,000 more a year than power bought from TVA at Paducah, Ky. The chief difference was in the fact that TVA paid no taxes while the private company did, and TVA got its money at a cheaper interest rate than the private company. So, Mr. Eisenhower ordered AEC to pay all the private company's taxes; and the contract, if signed, would constitute a Government guaranty of the $100 million in 3.5 percent bonds the private company would issue to finance the plant.

The President's decision means that over the minimum period of the contract, the minimum excess cost to the Government of this power from this private source would be $92,125,000.

The basic fault of this proposed contract is that it forces the Atomic Commission into a field where it has no business being. TVA needs more power at Memphis, not the AEC. But AEC is being used as a reluctant power broker.

The next major fault lies in the waste of more than $92 million in Federal funds over the next 25 years. At the end of that time, the private power plant, completely paid for with United States tax dollars, will remain the property of the private companies.

The proposed contract would set a precedent which might be used in later years to make AEC a power broker anywhere in the country.

It would mean construction of a big power plant on a made-land site that could be flooded by the Mississippi River. And it may loose ashes, smoke, and sulfur on the clean city of Memphis.

It would commit the AEC, not the TVA (although TVA gets the power), to pay all the local, State, and Federal taxes of the company that builds and operates the West Memphis plant. This tax bill would make up the bulk of the $92 million excess cost.

AEC has authority to buy power it needs. It should not be forced to prostitute this authority to buy power for TVA.

If TVA is subsidized by the Government, as some claim, then what better beneficiary of this subsidy than our own atomic plants?

If it is decided that TVA shall get no more appropriations from the Treasury to build additional generating plants, then let AEC and TVA each fulfill its own power needs from private power sources at the cheapest possible rate.

The General Accounting Office has suggested that AEC's power needs be met by a contract let on an advertised low bid.

That sounds reasonable to us.

Mr. KEFAUVER. Mr. President, I wish to inform the majority leader that I have about a page and a half more remaining of my manuscript, which I should like to complete.

Mr. KNOWLAND. I shall wait for the Senator to complete his statement.

Mr. KEFAUVER. Mr. President, we cannot emphasize too strongly the absurdity of AEC's new role. It is a responsible agency. It had the authority to contract for power for its own plants; yet it obviously knuckled under to the tremendous pressure brought to bear on it.

Inasmuch as a majority of the Commission was opposed to this adventure, its position would seem to be something like that of an unconvinced groom at a shotgun wedding.

I do not pose as a utility rate expert, Mr. President, but one does not have to have specialized training to see something wrong in the historical progression of events toward this Dixon-Yates contract.

Let me review for a moment the background of the present situation.

Two years ago, the Tennessee Valley Authority proposed to the Bureau of the Budget that funds be recommended for the construction of a steam plant at Fulton, Tenn. That proposal was made after a survey by TVA engineers indicated that the load growth in the Memphis area would require additional power by 1957.

The Bureau of the Budget declined to forward such a recommendation to Congress, questioning the accuracy of the TVA estimate and suggesting further study of the situation.

A year later the Bureau of the Budget was willing to admit that TVA's original estimate was correct, and that more power was, in fact, needed in the Memphis area. It had corroborated the estimate by bringing in consulting engineers from the private utility companies. The information these engineers turned up, after a year of study, was the same information that could have been obtained in 5 minutes, if it had been asked for. There was an obvious power shortage in prospect for the area involved.

As data for the 1955 budget were being assembled the Tennessee Valley Authority again asked that funds for the Fulton steam plant be requested from Congress.

At that juncture the administration proposed that TVA be relieved of certain of its commitments to supply the Atomic Energy Commission's installation at Paducah, Ky. AEC was told to find another supplier for approximately 600,000 kilowatts of power annually, thus releasing that amount back into the TVA system from the Shawnee steam plant, near Paducah.

Testimony and statements given before various congressional committees reveal that an effort was made to obtain the 600,000 kilowatts from non-TVA sources.

The 600,000 kilowatts that was thus proposed to be restored to TVA was used as grounds for not requesting funds for the Fulton steam plant.

How was this power to be obtained for the AEC at Paducah? The plan was for AEC to contract with Dixon-Yates to build a steam plant in Arkansas, with AEC relying on TVA to bring the power up to Paducah over TVA lines. That would be a wheeling contract. That was the first plan.

An analysis of this plan disclosed that it would cost the Atomic Energy Commission an additional $2.9 million a year. AEC then decided it just could not swallow that extra cost.

Obviously, that should have been the time to ask for funds to start the Fulton steam plant. But the foes of TVA were not through yet.

It was at this point that the Dixon-Yates contract, as we now know it, took form. Dixon-Yates would build their plant in the Mississippi River bottoms at West Memphis, Ark.

The Atomic Energy Commission would then enter into 2 contracts—1 with Dixon-Yates, for 600,000 kilowatts, for which it has no use whatever; and another contract with TVA, to supply 600,000 kilowatts to the Paducah plant. What would be done with the spare 600,000 kilowatts? Why, put it into the TVA system at Memphis, where power is needed.

But what authority is there for such an unprecedented arrangement, Mr. President? Section 12 (b) of the act cannot possibly be stretched to cloak such an arrangement in legality. The immutable fact is that AEC is contracting for 600,000 kilowatts it does not need, and has to go into the brokerage business to get rid of it.

By the testimony of its own General Manager, the Atomic Energy Commission is saying that it will cost $3.6 million more a year to operate in the proposed manner than it would cost the Government to provide funds for TVA to produce power from its own facilities.

I submit that the proposed contract is not only illegal, it is wasteful and extravagant. Over its 25-year life it amounts to pouring $100 million down a rathole of favoritism. More than that, the contract denies local initiative and self-determination to the people of Memphis.

Mr. President, I am one who does not believe that even good things should be done by illegal means. But when the end product is bad, too, then the proposition is immoral from top to bottom. That, I think, is an accurate description of the proposed Dixon-Yates contract.

CONFERENCE OF GOVERNORS ON FEDERAL-STATE ROAD PROGRAM

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the body of the RECORD, an editorial entitled, "Ike Proposes a Road Plan," published in the Detroit Free Press of July 14, 1954. I think it is very appropriate that the editorial should be printed in the RECORD, so that all interested may read it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE PROPOSES A ROAD PLAN

President Eisenhower's proposal to the Conference of Governors that a joint Federal-State road program be undertaken, involving expenditures of $5 billion a year for 10 years, may sound startling in consideration of the money involved.

Actually it is not. When $50 billion, spread over a 10-year period, is related to the economic importance of adequate national transportation, the President's plan is not only a realistic one, but is almost a necessity.

It is an elementary fact that America today lives on and by its roads. And when we use the term roads, we mean not only transcontinental and interstate highways, but also the intrastate network; the farm-to-market secondary roads; the urban arteries and all the problems associated with them.

In the main, the Nation's highway system is inadequate. With a few notable exceptions, it was developed to meet the needs of a rural society. It grew as the Nation grew, to fit the pattern of a sparse and widely scattered population.

What improvements and changes have been made came early in the auto age. A generation ago the United States embarked on a road-building program which consisted, very largely, of surfacing and otherwise improving existing highways. It was all done without any definite, integrated plan and was intended to provide facilities for the approximately 10 million cars and trucks then in use.

Now the number of trucks and passenger cars has increased to around 50 million. And all that we have actually done to provide highway space for that greater number is to improvise.

Crowded roads, high incidence of traffic fatalities and damage, mounting costs of motor-vehicle operation, show conclusively that improvisation was not enough.

Today the Nation is spending more than $5 billion a year on its highways, but a major portion of that money is going into maintenance. Capital expenditures are far below that figure.

America prospered greatly as a result of the astronomical sums which we spent in building and modernizing our highways at the beginning of the automobile era.

We have failed to recognize that the money spent was not a permanent investment, but something that has to be renewed periodically as the Nation grows.

Industry does not make a capital investment and expect it to serve indefinitely. It keeps renewing it, replacing that which is worn out.

The United States of 1954 cannot permanently exist on the initial investment in its highways, made a generation ago.

Yet that is what we are attempting to do and we are paying a high price for the mistake. And with each passing year, the cost goes higher.

The President's plan is not a giveaway. It involves Federal participation and local self-help. The general planning would be on a high level—the Federal level. Administration would be more or less local.

This creates problems of its own, as the governors were quick to point out. Some of them renewed the demand that the Federal Government relinquish to the States some of its sources of highway revenues, and let the local groups carry more of the burden.

There is merit to this idea, provided that the States can be relied upon to carry their just share of the load.

When the administration's $966 million highway bill was passed in April, the Free Press challenged the distribution formula as failing to reflect need or to take into account local contribution. It was pointed out then that Michigan, for example, would receive less than one-half of what it paid to the Federal Government in highway taxes.

That suggests that some States are not meeting their responsibilities under the present system. There should be absolute assurance that under the President's program, whether the emphasis is placed on Federal grants or local control of revenues, each State will meet its obligations with due regard to national interest and that the pork-barrel principle is entirely eliminated.

Mr. MALONE. Mr. President, will the Senator yield for an insertion in the RECORD?

Mr. KEFAUVER. I yield provided I do not lose the floor, and the Senator's remarks will follow mine.

ACCESSIBILITY OF CRITICAL MATERIALS—MINERALS, MATERIALS, AND FUELS, SENATE RESOLUTION 143

Mr. MALONE. Mr. President, the U. S. News & World Report of July 9, 1954, carries an article of four pages of extracts from the Minerals, Materials, and Fuels Economic Subcommittee of the Senate Committee on Interior and Insular Affairs. The subcommittee report was authorized by Senate Resolution 143, dated July 29, 1953.

The report was submitted to the Senate by the junior Senator from Nevada, chairman of the subcommittee, on July 9, 1954.

I ask unanimous consent that the article appearing in the U. S. News & World Report be printed in the body of the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL LACK OF MINERALS STRANGLE UNITED STATES IN WAR?

(Is the United States becoming a have-not nation? Must this country depend on Africa for uranium, India for manganese, the Middle East for oil? Or can it develop enough of these and other essential materials in its own backyard? What is the origin of United States minerals policies? Why are they considered risky? What was Harry Dexter White's role in this field? Answers to these and other questions are given in the report that follows. This report is the result of extensive investigations by a subcommittee of the Senate Interior and Insular Affairs Committee, whose chairman is Senator GEORGE W. MALONE, Republican, of Nevada. Following are extracts from the official text of the report on accessibility of strategic and critical materials, issued last week by the Minerals Subcommittee of the Senate Committee on Interior and Insular Affairs.)

For the first time in the history of the United States Senate, a Senate subcommittee was directed to conduct an overall investigation of the accessibility of critical materials to the United States in time of war, particularly as to its effect on the security of the Nation.

The testimony before the committee is alarming: To a very dangerous extent, the vital security of this Nation is in serious jeopardy. For many of our essential raw materials we are dependent on sources in far-off lands, many under the control of possible fickle allies or timid neutrals, some

veritably under the guns of our most probable enemy.

And what is perhaps a more devastating conclusion of this committee: None of this vulnerability need exist today; and long-overdue corrective measures should be undertaken at once.

RECOMMENDATIONS

Critical and strategic minerals and materials are vital to military security and expanding domestic economy. National survival in time of war depends on ample and uninterrupted supplies of * * * 77 * * * such minerals and materials. * * * To assure that imperative needs of the United States be met:

1. We recommend the closest cooperation between the nations of the Western Hemisphere, which is the only dependable source of the necessary critical materials in time of war. This area can be defended and can be made self-sufficient in the production of such materials. That the spirit of the 130-year-old Monroe Doctrine prevail in our relations with the nations of the Western Hemisphere.

2. We recommend that Congress insure that the regulation of foreign trade conforms to the principles of the Constitution laid down in article I, section 8 of the Constitution in assuring the American workers and investors equal access to American markets.

3. We recommend removal of our Nation's present dependency upon remote and possibly unfriendly or neutral areas of the world for the critical materials, without which we cannot conduct a war.

The only tin smelter in the Western Hemisphere is located in Texas City, Tex. The continued operation and maintenance of this smelter is essential to our security. The capacity meets our wartime needs.

4. We recommend increased depletion allowances to producers of critical minerals and materials as a further incentive to production.

Further studies should be made of the Canadian method of delayed taxation in connection with such critical mineral and material development.

5. We recommend acceleration of the Federal program of stockpiling critical and strategic minerals and materials to assure ready supplies in the event of war and coordination of this program with going concern production industries in the Western Hemisphere to assure continuation of necessary supplies under stress of war.

6. We recommend studies with a view to improving regulation of petroleum gas and coal resources and development to assure maximum availability of domestic fuels for both the peacetime economy and national security. Such studies should determine whether present regulations are unduly restrictive of our own resource expansion and reserves, and if so, regulations should be adjusted to maintain our self-sufficiency in these vital fuels.

7. We recommend increasing the new wonder metal titanium production goal to 150,000 tons annual minimum without delay. This is a military must. Contracts should be awarded by the Government to qualified concerns prepared to contribute toward this goal. Civilian demands are tremendous for this high strength-weight ratio, noncorrosive, nonmagnetic metal.

8. We recommend that goals for production of uranium fuel be made adequate to meet both military and civilian requirements. Hemispheric self-sufficiency in uranium fuels can be attained. A liberal, long-range market price must be maintained as long as Government control is necessary for security. A tremendous civilian potential use of uranium is assured, including nuclear power in industry.

9. We recommend a review of the work of the Securities and Exchange Commission by the appropriate committees of Congress to clarify its duties and responsibilities. It is recognized that the Commission should assure full and complete information to potential purchasers of securities, and that its responsibility does not include determination of feasibility. Such committee review should consider the advisability of a requirement that a thorough and confidential inquiry should precede any public announcement of an investigation of offered securities.

10. We recommend determination by the Congress through appropriate committees of the precise duties and relationships between the multiple (approximately 38) agencies and branches of our Government responsible for stockpiling operations of critical materials.

11. We recommend appropriations of $50 million annually to establish and operate a comprehensive 5-year program of laboratory, pilot plant and exploratory research into new uses, synthetics, substitutes, and replacements, and improved methods of beneficiation—preparation for smelting—of critical materials.

We approve the research and studies conducted by the Bureau of Mines on the low-temperature carbonization of coal and we recommend that adequate funds be appropriated to conduct extensive studies and investigations of ways and means to revive the coal industry. These funds should be made available to be used independently or in conjunction with responsible privately operated companies and organizations.

It is recommended that research be continued and that a large-scale oil-shale plant be built by industry in cooperation with the Government to advance the production of petroleum fuel on a commercial basis and which would be available in a war emergency.

12. We recommend rejection of international controls of production, prices, and supplies of critical and strategic materials unless by legislative action by the Congress of the United States.

FINDINGS

1. The Western Hemisphere will be the only dependable source of the critical raw materials in the event of an all-out world war.

The delivery of any such critical materials to this Nation across a major ocean during such a conflict will be highly problematical.

2. It is imperative to the security of this Nation and to the nations of the Western Hemisphere that they foster the greatest measure of self-sufficiency in the production of the critical materials.

It is vital to our domestic welfare, economy, and security that maximum economic production be maintained within our borders.

3. The Western Hemisphere can be defended.

4. The Western Hemisphere can be made self-sufficient in the production of the critical materials which are essential in war and in peace.

5. The economic production of many critical materials in this Nation can be materially increased and often doubled, trebled, or quadrupled under a sound, constitutional, legislative policy.

6. During the last two decades established procurement practices have dangerously increased our dependence upon nations across major oceans for the critical materials without which this Nation cannot survive.

7. Evidence is conclusive that we have become dependent upon overseas suppliers across such major oceans for many of such critical materials. We must avoid dependence upon an overseas supplier to the extent that he could suddenly render us impotent by withdrawing supplies of critical materials during a world conflict, or could use such dependence as a political or economic bargaining lever.

8. There is evidence that foreign nations neither keep the spirit nor the letter of the so-called trade agreements. In general they manipulate the value of their money system for trade advantage, utilize quota systems, trade permits, exchange permits, and export and import fees to vitiate any agreements.

9. To comprehend the economic approach to make us dependent upon foreign nations for our critical materials through the have-not philosophy, we must understand that less than 1 percent of the areas of this Nation has been included in geological investigations, only 12.7 percent has been geologically mapped and 31.1 percent topographically mapped by the United States Geological Survey; and that the Service started its mapping work in 1880.

10. The evidence indicates that Federal tax laws definitely retard the production of the critical materials in this Nation.

The 27.5 percent depletion allowance has materially increased the known reserves of petroleum and natural gas and if extended to other critical materials should increase the incentive to discover and develop additional supplies.

11. Testimony is conclusive that our domestic and foreign policies have been based on the false assumption that the United States is a "have-not" Nation insofar as the supply of critical raw materials necessary to this Nation in wartime is concerned. It has led the United States to become dependent upon foreign sources across major oceans for raw materials which could be produced within the continental limits of the United States and within the Western Hemisphere.

It has led to the expenditure of enormous sums of money and has caused the United States to underwrite foreign fiscal systems and world policies of nations whose friendship is deemed of great importance because of their control and possession of raw materials.

12. This misconception that we are a "have-not" nation has found wide acceptance by the public through confusion between the statistical and engineering terms, "proved commercial reserves" and "potential and latent resources," which include developed ore, probable ore, possible or inferred ore to designate supplies of ore in various states of development.

This confusion has led to predictions over the past two decades that we were exhausting our supplies of petroleum, iron ore, copper, lead, zinc, tungsten, mercury, and other critical materials, while it is well known that we have more proven commercial reserves than ever before in the history of this Nation.

In the meantime we have consumed more than the total quantity of the proven commercial reserves of two decades ago.

The potential latent resources or reserves are more than ever susceptible to discovery today by modern techniques and exploration methods, requiring only a financial incentive to be found.

13. The United States cannot possibly exhaust its present and potential fuels supply including petroleum and coal in the foreseeable future. The absolute necessity of going-concern industries cannot be overemphasized and is more than ever essential where materials cannot be stockpiled as with coal and petroleum. Testimony is conclusive that the petroleum industry is a thriving, going-concern business through the effect of continual increased market and of the tax considerations including the depletion allowance, but emergency dependence must be on the going-concern industry which is being severely curtailed by cheap fuel imports.

There are enormous oil reserves found in the shales of Colorado, Wyoming, Utah, Kentucky, Indiana, and Ohio as well as in Canada. It has been estimated these shales contain over 200 billion barrels of oil. Experimental work done by the Union Oil Co. and Bureau of Mines in pilot-plant opera-

tion shows that petroleum from this source is entirely practicable and that vast amounts of oil may be possible in the foreseeable future. The Green River formation in Colorado alone has been described as an area of 1,000 square miles with an underlay of oil shade 500 feet thick averaging a recovery of 15 gallons of oil per ton.

14. Oil is mineral aggregate that can be extracted at a profit. Through the constitutionally regulated foreign trade the incentive for risk capital necessary to develop additional reserves and establish going-concern critical-material industries will be available.

15. Mines once closed down require years of time and tremendous investments to reopen. With experienced workers and technical staff widely scattered, machinery liquidated, mines flooded and caved, much of our once available reserves destroyed, prospecting for new reserves is discouraged.

If the present policy continues our situation could be desperate in the event of an emergency requiring maximum availability of metals for our industrial plants.

16. An International Materials Conference was established in December 1950, by the State Department without the consent of Congress—in lieu of the International Trade Organization which Congress had already refused to accept. Any such International Trade Organization or International Materials Conference setting up an international organization to control distribution of the production and consumption of the world's goods can only serve to inhibit our own going-concern industries. The testimony showed that it depleted and retarded fulfillment of stockpile objectives.

17. Numerous administrative agencies and departments of the Government are involved in the stockpile program, or are set up to increase production of critical materials. They are largely independent of each other and none are charged with the complete operation. Many are not cognizant of the end objectives of the program or responsible for the end result. Instead, their activities are marked by confusion and delay, frequently defeating the intent of Congress.

18. Responsibility for the pattern of dependence upon foreign nations for certain critical materials and the trend from a civilian to a war economy is a matter of record.

The evidence shows that this country was led into the mistaken conclusion that according to the known reserves of critical materials including petroleum, tungsten, manganese, zinc, lead, and other minerals, "we would exhaust our supplies and they would be virtually depleted" within 2 to 12 years.

It was advised that we conserve our minerals and that we purchase such critical materials from foreign countries, principally Russia. This policy played a large part in our subsequent dependence upon farflung foreign nations for materials which are available to us in this Nation and contiguous and neighboring nations in the Western Hemisphere.

19. The Securities and Exchange Commission's purpose is to provide full and fair disclosure of the character of securities sold and to prevent fraud. Complaints were made that the discovery and development of new minerals was retarded by actions of the Securities and Exchange Commission in that it improperly attempted to determine the feasibility of an enterprise and in that public announcements of investigations of securities sales were made prior to confidential inquiries justifying such announcements.

The Chairman of the Securities and Exchange Commission assured the committee that "the Commission does not pass upon the merits of any security or feasibility of an enterprise offering securities for public sale." The Commissioner also stated that there would be no publicity given to any administrative investigations before the Commission authorized a public hearing or announces a public investigation.

20. Titanium production is a "must."

This Nation needs a minimum production of 150,000 tons of titanium annually. The manufacture of the proper type of military planes without this wonder metal is impossible. We are producing approximately 2,000 tons annually.

21. The industrial use of titanium, in addition to the military needs, could amount to from $5 billion to $10 billion annually in the near future. * * *

22. The commercial use of nuclear power could be the greatest potential source of improvement, starting in the desert and mountainous areas where other fuels and hydroelectric potentials are high cost or nonexistent.

23. A stockpile of each critical material must be maintained which, coupled with going-concern production within the Western Hemisphere, will be ample to meet the military and civilian needs. Such a stockpile can be decreased as the going-concern production is increased.

The availability of tin is a matter of deep concern to this Nation. The far eastern resources may well prove unavailable to the United States in any future war. The Western Hemisphere resources contained in Bolivia are more than adequate to meet the United States requirements. At present the United States Government is operating the only tin smelter in the Western Hemisphere. Recently efforts have been made to dismantle this smelter. Testimony received by the committee proves that this would be foolhardy and shortsighted. It is essential that we have a going-concern tin smelter in the United States capable of supplying the United States in the future and to supplement our stockpile requirements.

24. Laboratory research, pilot-plant experimentation, and exploration are important in the interest of national defense and must be implemented for new and improved methods of beneficiating critical materials and for new uses, substitutes, and replacements, and to facilitate the discovery of new reserves.

25. The evidence shows that there have been numerous approaches to fasten international distribution controls upon the production and consumption of the nations of the world, including this country.

The International Trade Organization offered to Congress was the first approach based upon the General Agreement on Trade and Tariffs. Congress did not accept it. The next approach was the International Materials Conference which was not offered to Congress. The last approach was a resolution by the Economic and Social Council of the United Nations on May 26, 1954.

STRATEGIC AND POLITICAL PROBLEMS AFFECTING THE ACCESSIBILITY OF CRITICAL MATERIALS

The military and political problems affect the accessibility of critical materials to the United States both in wartime and peacetime. These problems are further complicated by the striving by nations for trade advantage.

Military strategists heard by the committee on the areas of transportation available in wartime included Charles E. Wilson, Secretary of Defense; Robert B. Anderson, Deputy Secretary of Defense; Charles S. Thomas, Secretary of the Navy; Gen. Alfred H. Johnson; Gen. Albert Wedemeyer, Gen. Bonner Fellers, Gen. Carl A. Spaatz, and Maj. Alexander de Seversky.

Political experts included the Secretary of State, John Foster Dulles, and industrial operators in foreign areas and nations where political and economic unrest might threaten the availability of the critical materials in time of actual or pending war emergency.

Accessibility of critical materials in wartime includes ability to produce and to deliver such goods in the emergency—when the heat is on—when materiel and manpower is needed in other fields.

All substantially agreed that the Western Hemisphere would be the only dependable source for such critical materials in time of war and that deliveries from offshore areas across major oceans would be problematical, to say the least.

PRESENT SOURCES OF OUR STOCKPILE

It is from areas in Africa, Asia, and South America that this Nation has secured some 77 percent of its present stockpile of critical and strategic minerals and materials.

If ever the United States is to be vigilant, now is the time. We must recognize our greatest weakness is the dependency on very distant countries across the major oceans for the needed raw materials, without which we cannot fight a war or live in peace.

HAVE-NOT POLICY

Much of our present national policy is based on the assumption that the United States is definitely a have-not Nation in respect to a considerable number of vital and strategic raw materials, viz: that we have exhausted our minerals and ores.

This assumption is one of the greatest frauds and hoaxes ever perpetrated on the American people. It has had a sinister origin and has been perpetuated by various commissions, principally manned by economists, who, despite the pretense of detailed study, have failed to examine into the fundamentals.

These so-called experts, not experienced in problems of production, have had no actual production or mining experience but have relied on statistical material wrongly interpreted and consequently misleading.

This false assumption has had a direct bearing on the conduct of our foreign policy. It has led us to underwrite the fiscal systems and the cost policies of various foreign states whose friendship is deemed of the greatest importance due to their possession of raw materials which we are believed to lack.

As the matter now stands there is every possibility that our current dependency on foreign sources of supply may be the weak link in our defense that makes it attractive to the Russians to embark on a war on the simple score of a feasible short war. This strategic motivation could invite an effort to cut off the United States from sources of critical raw materials essential to its industrial plant, and hence to our ability to wage war.

TWO APPROACHES TO DEFEAT THE UNITED STATES—POLITICAL AND ECONOMIC

It is the committee's opinion that the Soviet Government has encouraged two approaches to defeat our Nation. One is political (communism), which is being investigated by several committees in the House and the Senate, starting through the recognition of Communist Russia, without any safeguards at all, in 1933. The second is the economic (free trade, based upon the 1934 Trade Agreements Act) approach, starting with the passage of the 1934 Trade Agreements Act.

The committee studied the stockpile program of the Government very carefully, including its historical background, sources, prices paid for the material, and present status.

Security reasons prevent publishing most of the material. It suffices to say that the findings relative to the status of the stockpiles were in the main not satisfactory in many of the critical items.

Eighty and one-tenth percent of the present stockpile was secured from, and depends upon, foreign sources, largely at the expense of domestic producers.

These policies of saving our domestic resources and becoming dependent upon foreign materials evidently emanated from and is carried on through the lower echelons of

the State and other departments who have controlled our foreign-trade policies under the 1934 Trade Agreements Act.

It was found too that generally foreign low-wage-area producers were paid as much and often more per unit for such critical materials than was paid or offered domestic producers paying several times the wages.

HARRY DEXTER WHITE WAS FATHER OF ERRONEOUS AND FALSE HAVE-NOT CONCEPT

Evidence submitted to the committee from the files of one of the libraries of Princeton University indicates that known subversive elements in the Government such as Harry Dexter White, who held high places in the Treasury Department and other agencies, assisted in establishing the false and erroneous theory that the United States is a have-not nation, that our ore bodies are being completely depleted.

It was evidently their plan and project to make the United States dependent upon foreign sources of supply, which in time of war would be unavailable to us and leave us vulnerable and defenseless.

The State Department, to which the responsibility to formulate trade agreements was assigned, has had a life-and-death power over our domestic mining and critical-materials industry for two decades.

This power is exercised by a group of little-known persons of the second and third echelon in the State Department who really formulate our foreign policy and who for the most part have served under three Presidents. Practically none of these persons has had any experience in the mining industry or in the production of strategic raw materials or in fact any business experience. They deal in theory and not in facts.

Through education, environment, and background they are trained to placate foreign powers and try to build up friendship with foreign powers. They hope to accomplish this by entering into trade agreements with foreign powers, giving them benefits and advantages through division of our markets, encouraging these powers to build up their production of strategic and critical raw materials which work to a disadvantage and at the expense and destruction of our domestic industries and thus weaken the security of the Nation. Their equality of sacrifice concept has led to an almost complete closing of hundreds of our small lead, zinc mines, and almost complete closing of our mercury and antimony mines, and is leading rapidly to the closing down of our fluorspar mines, and more recently is seriously affecting the output of our copper mines.

Had it not been for a recent act of Congress under Public Law 206 the exploration and development of several other minerals would have been abandoned, namely, tungsten, manganese, chromite, asbestos, mica, columbite-tantalite and beryl. It seems to be impossible for our theorists to learn that a mine cannot be turned on and off like a spigot. The mines of this country have been turned off after World Wars I and II and reopened when emergencies arose at very great cost to the taxpayers and with loss of valuable time.

It is imperative, in order to create a healthy going concern mining industry in this country, that this power be taken away from these uninformed men in the State Department and placed in the hands of men who have an intimate knowledge of our strategic and critical raw-material needs, resources and ability to produce. Until this is done, this Nation will remain in a state of peril.

WORK OF COMMITTEE CONTINUED

Mr. MALONE. Mr. President, the Committee on Interior and Insular Affairs has requested a continuation of the work of the committee, through Senate Resolution 271.

The resolution has been approved by the Senate Committee on Rules and Administration.

The report of the committee submitted to the Senate on July 9 included 12 recommendations, supported by the findings of the committee, together with a summary or digest of the 10 volumes of testimony, which includes 58 hearings held in Seattle, Wash.; Los Angeles, Calif.; Henderson, Nev.; Salt Lake City, Utah, and Washington, D. C.

The published hearings include:

Part 1, Bureau of Mines.

Part 2, Stockpile.

Part 3, Titanium.

Part 4, International Materials Conference.

Part 5, Commodity Trade Agreements.

Part 6, Fuels.

Part 7, Tariffs and Taxes.

Part 8, Paley Commission, Staff Study.

Part 9, Uranium, Columbium, Cobalt, Rutile, and Strategic Agriculture Products.

Part 10. Industry.

BASIC WORK—WESTERN HEMISPHERE CAN BE DEFENDED

This is a basic work which shows that the Western Hemisphere can be protected in the first go-around of an all-out world war.

It shows that the Western Hemisphere can become self-sufficient in the production of such critical minerals, materials, and fuels necessary for us to live in peace and to conduct an all-out war.

It shows that our only dependable supply of such critical materials in any emergency must come from the Western Hemisphere.

DEFENSE-OFFENSE BASED IN NORTH AMERICA

The study also shows that any offshore areas across major oceans important to us must be protected by long-range sonic-speed bombers, fighter planes, guided missiles, and radar control, based in the Western Hemisphere.

THE NEW WORLD—STILL ROOM FOR GROWTH

The study also shows that the Western Hemisphere is still the New World—with approximately one-third of the world's land area with about one-seventh of the world's population; whereas the Eastern Hemisphere, not including Africa, includes approximately 40 percent of the world's land area and nearly three-fourths of the world's population.

OVERPOPULATION—THE CURSE OF OLD EUROPE AND ASIA

Overpopulation is the real problem of old Europe and of Asia, with a near billion people in China and India alone, while opportunities still abound in the New World, the Western Hemisphere.

Old Europe, with approximately one-half the land area of the United States, contains about twice our population.

OLD EUROPE VERSUS THE UNITED STATES OF AMERICA

David Lawrence said in an editorial in his U. S. News & World Report on July 2, 1954, that: "So the British Secretary comes forth with a speech recommending a nonaggression pact with Soviet Russia such as was adopted at Locarno in 1925 and was torn into shreds later by Hitler, when it suited his purpose."

Britain has no other recourse, no resources and no future—as indicated she will sell herself and the United States to Russia in a worse than useless nonaggression pact with that country to keep Hong Kong and the Malayan States 1 more year—she cannot plan a long-range strategy—she is like a man who slept in the alley—he must find breakfast before he can plan for the afternoon.

Mr. Lawrence further rightly says in his July 2 editorial:

America alone stands unconvinced that surrender and appeasement are necessary. There are, to be sure, even some Americans who call their own Government a warmonger and who exert the pressures of criticism upon those of us who plead for old-fashioned American courage. But, fortunately, their cringing philosophy is not dominant. The true warmongers today are the appeasers who unwittingly encourage the same miscalculation by the enemy as has twice before brought on world wars.

Our allies are privileged, of course, to assume the calculated risks of a policy of pacifism and appeasement. They could be right. But the risks of such a policy being wrong are too great for America to take.

What then should America do? We should firmly stand our ground, even if we are the last citadel in the world—the nation that refuses to be beguiled by the wiles of the Communist aggressor.

Mr. President, Mr. Lawrence is correct in his analysis—it only remains for the military strategists of this Nation to decide how, not if, we are to do it.

COLONIAL EMPIRE NATIONS LOST THEIR TOUCH

The colonial-empire-minded nations of old Europe—England, France, the Netherlands, and Belgium—have lost their colonial areas. Colonialism is dead in the world, therefore they are desperate and are reaching for new markets.

Those markets are in the Western Hemisphere—mostly at the moment in the United States.

We were the first nation—175 years ago—to break the bonds of colonial slavery with a nation of old Europe. We declared our complete independence of England and her colonial system.

One hundred and thirty years ago we declared what has since been known as the Monroe Doctrine.

President Monroe declared, in essence, that any nation that sought to extend its form of government into the Western Hemisphere would be considered an overt act against the United States.

It is time that we clarified and emphasized the Monroe Doctrine principle—call it the Eisenhower doctrine if we choose—and simply name the areas that we consider important to the peace and safety of this Nation and reaffirm the Monroe Doctrine principle that any nation that seeks to extend its political, economic, or military control into that area we will destroy their war-making capacity in the heartland of that nation, with planes, guided missiles, and submarines—not with foot soldiers fighting on the periphery three to ten thousand miles removed from the heartland of this Nation.

No nation need be named.

PROPOSED PRESENTATION OF CERTAIN SCROLLS TO HAILE SELASSIE

Mr. CAPEHART, by unanimous consent, submitted the following concurrent resolution (S. Con. Res. 95), which was referred to the Committee on Rules and Administration:

Resolved by the Senate (the House of Representatives concurring)—

Whereas the title of Protector has been proffered to His Imperial Majesty Haile Selassie I, the Emperor of Ethiopia, by the regents and the president of the Polycultural University of America on May 27, 1954; and

Whereas the Polycultural University of America has enacted a charter of profferment signed by 13 Senators and 29 Representatives of the United States, and presented it to His Imperial Majesty on the same date; and

Whereas the Senate and the House of Representatives consider the courteous act of the Polycultural University of America in the spirit of American democracy, expressing the good will, respect, and admiration of our guest, the Emperor of Ethiopia, by American people; and

Whereas the Polycultural University of America, a nonprofit institution of higher learning incorporated under the laws of the District of Columbia, is rendering a great service to the Nation by (1) educating Americans in the civilizations and languages of other peoples of the world; (2) educating students, scholars, and investigators of other nationalities in the civilization and language of the United States and of other peoples; and (3) educating Americans and other peoples in the art of discovering and realizing their own potentialities and abilities for contributing to the good will and welfare of their respective nations and of the world, and for promoting intercultural and international understanding, justice, decency, friendship, and lasting peace; and

Whereas the present leadership of the United States in world affairs increasingly involves contact between citizens of the United States and citizens of other nations; and

Whereas a fuller knowledge of world civilizations and languages by Americans, and a fuller knowledge of the American civilization and language by the people of other nations, will facilitate the success of American peacetime policy; and

Whereas in the event of hostilities, broader knowledge of cultural patterns and languages on the part of both military and civilian personnel will be of great value to the United States; and

Whereas the efforts of the Polycultural University of America in the field of polycultural and adult education will lead to the establishment of national polycultural institutions in other countries; and

Whereas the assistance and support given by the Congress to the polycultural movement will demonstrate anew to the world the desire of the United States for peaceful cooperation with all nations and peoples; and

Whereas the advancement of this new cultural development originating in the United States, and the propagation of the polycultural idea among other nations and peoples, will counteract the vicious propaganda which contends that the people of the United States seek war: Therefore be it

Resolved by the Senate (the House of Representatives concurring), That the board of regents, the president of the Polycultural University of America, Anatol J. Shneiderov, and the chancellor of the said university, the Reverend John F. B. Carruthers, are hereby commended for their efforts in establishing such university, and for the devoted contributions they have made in maintaining, encouraging, and promoting international and intercultural understanding, justice, decency, friendship, universal good will, and lasting peace among all nations and people by means of polycultural education and adult education.

SEC. 2. The Board of regents of the Polycultural University of America is hereby requested to prepare for His Imperial Majesty Haile Selassie I a farewell gift consisting of scrolls signed by the Senators and Representatives of the Congress of the United States of America, by officials of the judicial and executive branches of the United States Government, by officials in the governments of the States, Territories, and the District of Columbia of the United States of America, and by officials of other agencies, institutions, and organizations which adhere to the principles of the Constitution of the United States of America and which desire to join the regents of the Polycultural University of America in the felicitations expressed in the charter presented by the said university to His Imperial Majesty Haile Selassie I on May 27, 1954.

SEC. 3. It is the sense of the Congress that the appropriate officers in the legislative, judicial, and executive branches of the Government, and in the independent offices, agencies, and establishments of the Government should purchase from the Polycultural University of America appropriate numbers of copies of the scrolls presented to His Imperial Majesty Haile Selassie I by (or in concurrency with) the Polycultural University of America, and to display the said copies of the scrolls at appropriate public places until July 15, 1955, as a farewell salutation to our guest, the Emperor of Ethiopia.

ADDITIONAL BILL INTRODUCED

Mr. KEFAUVER, by unanimous consent, introduced a bill (S. 3760) to amend the Veterans' Preference Act of 1944 in order to give preference in promotions and transfers to preference eligibles under the provisions of such act, which was read twice by its title, and referred to the Committee on Post Office and Civil Service.

FLOYD C. BARBER—ORDER TO INCLUDE BILL IN CALL OF THE CALENDAR

Mr. KNOWLAND. Mr. President, I wish to ask unanimous consent that Calendar 1576, House bill 2815, for the relief of Floyd C. Barber, be included in the next call of the calendar, for the consideration of bills and other measures to which there is no objection.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

PIONEER DAY

Mr. DWORSHAK. Mr. President, on the 24th of July, in Idaho and in the adjoining State of Utah many of our citizens will observe Pioneer Day, a day significant in both States, in that it observes the arrival in 1847 of pioneers of the Church of Jesus Christ of Latter-day Saints. More commonly known as Mormons, the members of this church through industry, integrity, and perseverance have established high spiritual, moral, and ethical standards.

Concerning the long-established program designed to encourage thrift, President J. Reuben Clark, Jr., made to the church membership the following comments which, I believe, reflect the thinking of many Americans:

Let us avoid debt as we would avoid a plague; where we are in debt, let us get out of debt; if not today, then tomorrow.

Let us straightly and strictly live within our incomes, and save a little.

Let every head of every household see to it that he has on hand enough food and clothing and, where possible, fuel also, for at least a year ahead. You of small means put your money in foodstuffs and wearing apparel, not in stocks and bonds; you of large means will think you know how to care for yourselves, but I may venture to suggest that you do not speculate. Let every head of every household aim to own his own home, free from mortgage. Let every man who has a garden spot, garden it; every man who owns a farm, farm it.

Let us again clothe ourselves with these proved and sterling virtues—honesty, truthfulness, chastity, sobriety, temperance, industry, and thrift; let us discard all covetousness and greed.

RECESS TO 10 A. M. TOMORROW

Mr. KNOWLAND. Mr. President, I am about to move that the Senate stand in recess until 10 o'clock tomorrow morning. I ask that all Senators come to the Senate Chamber at 10 o'clock, so we may have a quorum. Even if committee meetings are scheduled at 10 o'clock, Senators will be able to leave the Chamber following the quorum call to attend the necessary committee meetings.

Mr. President, if there is no further business to come before the Senate this evening, I now move that the Senate stand in recess until tomorrow morning, at 10 o'clock.

The motion was agreed to; and (at 10 o'clock and 14 minutes p. m.) the Senate took a recess until tomorrow, Friday, July 16, 1954, at 10 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate July 15 (legislative day of July 2), 1954:

IN THE NAVY

The following-named women officers of the Navy for permanent promotion to the grade of lieutenant commander in the line and staff corps indicated, subject to qualification therefor as provided by law:

LINE

Mary T. Baker	Rita Lenihan
Catherine D. Callahan	Jane S. Misenhelter
Eleanor M. Casey	Dorothea Ritchie
Florence L. Erickson	Viola B. Sanders
Dorothy M. Hagen	Beatrice M. Truitt
Mary W. Horton	Geraldine F. Twining
Mary C. Houck	Dorothy J. Williams
Clara A. Kuehn	

The following-named officer of the Navy for temporary promotion to the grade of commander:

Joseph M. Parsons

The following-named line officer for permanent appointment in the Supply Corps of the Navy with the grade of lieutenant (junior grade):

John A. Murphy

The following-named officers of the Navy for permanent promotion to the grade of lieutenant (junior grade) in the line and staff corps indicated, subject to qualification therefor as prescribed by law:

LINE

Robert J. Allen	James M. Austin
Edward M. Armstrong	Thomas R. Averett, Jr.

Gerald P. Barnett	Theodore J. Lange
Donald P. Bartz	Elbert D. Lighter
Thomas Bingham, Jr.	Paul L. Milius
Elizabeth Black	Robert "A" Miller
Felix E. Blum	Charles H. Monroe, Jr.
Robert J. Bova	Larry E. Moore
Robert L. Brown	Ray B. Murphy
Jerald W. Bucklin	Carroll E. Myers
John W. Buffkin, Jr.	William S. Myers
Patricia E. Byrne	Robert F. McBain
Howard L. Carlson	Harold A. McGrath
John G. Cave	Anthony Nesky, Jr.
Durward C. Cecil	Thane N. Olson
James H. Cochrane	Shirley M. O'Neil
William A. Cody	Peter H. Orvis
Charles L. Coffman	Trent R. Powers
Eugene T. Connors	William B. Regan
James W. Cornwell	Donald D. Ritchey
James W. David	Robert W. Ritz
Ralph O. Davis	Charles T. Roberts
Duane D. DeWitt	Robert "E" Roberts
Charles A. Duffy	Donald D. Rzewnicki
Alan R. Cunningham	Eva W. Schekorra
Joseph F. Dunn	Bonnie J. Schuler
Alfred C. Eastman III	Sheldon O. Schwartz
Hugo L. Ecklund, Jr.	Patrick J. Sciarretta
Richard E. Engel	Robert C. Sherar
Edward J. Fagan	James G. Simcox
Claud B. Fallis, Jr.	Edmund A. Smith, Jr.
Donald P. Frei	Stanford A. Smith
Francis C. Gehres	William F. Span
John E. Gilbertson	Robert W. Spencer
Forrest D. Goetschius	Dean Stocklmeir
Robert L. Grappi	Walter W. Stovall
William R. Grayson	Leo A. Thibault
Wilbur E. Greenleaf	Faris A. Tomlinson
William A. Gureck	Billie C. Tyson
Lloyd W. Hodges	Don L. Upton
Neil G. Holt	Dale R. Vandermolen
Robert E. Holt	Max W. Wakeland
Frank J. Horstmann	Carl B. Ward
James R. Hughes	Allan P. Weintraub
Edmund W. Ingley	Robert E. Wickham
Maurice M. Johnston, Jr.	Quentin E. Wilhelmi
	Beverly R. Williford
John E. Jones	Raymond N. Winkel
Willie M. Jones, Jr.	Bobbie D. Williard
James T. Kearns	Gerald J. Witvoet
Allan Kvello	

SUPPLY CORPS

Donald D. Burbank	Richard F. Reynolds
William E. Nast	Frank C. Skiles, Jr.

CIVIL ENGINEER CORPS

Archer E. Church, Jr.

MEDICAL SERVICE CORPS

Milton T. VanMetre

NURSE CORPS

Elizabeth T. McDonald

The following-named line officer for permanent appointment in the Civil Engineer Corps of the Navy with the grade of ensign and for permanent promotion to the grade of lieutenant (junior grade) in the Civil Engineer Corps, subject to qualification therefor provided by law:

Louis Huszar, Jr.

CONFIRMATIONS

Executive nominations received by the Senate July 15 (legislative day of July 2), 1954:

DEPARTMENT OF COMMERCE

James C. Worthy, of Illinois, to be Assistant Secretary of Commerce.

COAST AND GEODETIC SURVEY

The following to be commissioned for permanent appointment to the grade indicated, subject to qualifications provided by law:

To be captain

John C. Bose
Samuel B. Grenell

To be lieutenant commanders

Allen L. Powell
Norman E. Taylor

To be lieutenant

Omar H. Quade, Jr.

To be lieutenants (junior grade)

Donald L. Campbell	Robert M. Borst
Albert J. Ramey	John F. Vance, Jr.

HOUSE OF REPRESENTATIVES

THURSDAY, JULY 15, 1954

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Almighty God, in the quietness of this moment of worship, may we become more keenly aware of the divine strength which surrounds us and the divine wisdom which Thou hast placed at our disposal.

We penitently acknowledge that we so frequently allow ourselves to become bewildered by things that do not matter, bewildered by problems of our own imagination, and worried by that which does not exist.

Pardon all our fickleness and foolishness, our doubt and distrust. May no willfulness of temper, no rebellion of mind, no perversity of spirit cloud our vision of Thyself, who art our life, our strength, our hope.

Grant that we may be inspired to do Thy will more perfectly, for in the doing of Thy will is our peace.

Show us today what kind of legislation will be most helpful as we seek to minister to the welfare and happiness of the poor, the sick, the aged, the lonely and discouraged, and the needy members of the human family.

Hear us in the name of our beloved Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 250. Concurrent resolution authorizing the printing of additional copies of the slip law for the Internal Revenue Code of 1954.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 1276. An act to amend the Bankhead-Jones Farm Tenant Act in order to increase the interest rate on loans made under title I of such act.

The message also announced that the Senate insists upon its amendment to the bill (H. J. Res. 534) entitled "Joint resolution to authorize the Secretary of Commerce to sell certain war-built passenger-cargo vessels, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. BUTLER, Mr. POTTER, and Mr. MAGNUSON to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9242) entitled "An act to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes."

ADJOURNMENT OVER

Mr. HALLECK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at noon on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

PERSONAL EXPLANATION

Mrs. FRANCES P. BOLTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mrs. FRANCES P. BOLTON. Mr. Speaker, today a resolution is being brought to the floor from the Committee on Foreign Affairs which I am sure every Member of the House will be in accord with and for which we all will want to vote. Unfortunately it will be necessary for me to attend a luncheon at the White House today being given for the Prime Minister and other dignitaries from Libya. I appreciate this opportunity to express my complete agreement with the resolution and to say that I hope I shall be back when the roll is called. But, should I miss it, I want to register the fact that I am in accord with the resolution and would vote for it were I here.

MERCHANT MARINE ACADEMY AT KINGS POINT, N. Y., SHOULD BE ON PERMANENT STATUS

Mr. WAINWRIGHT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WAINWRIGHT. Mr. Speaker, pending before the Merchant Marine Committee at this time is H. R. 9434, introduced by my colleague the gentleman from Wisconsin [Mr. VAN PELT]. This bill should be passed at this session of Congress.

This bill would place the Merchant Marine Academy at Kings Point, N. Y., on a permanent status. Since the Academy's inception, it has had to come, hat in hand, before the Congress each year for funds in which to maintain itself. The time has come for the Congress to recognize the importance of the Academy and its graduates. Outside of the Naval Academy, Kings Point is the only source of trained naval personnel

wherein a 4-year course is devoted to the training of a man for life at sea. The Congress should act now. It should not duck this important issue. I would like to include an editorial from a Long Island daily newpaper, Newsday, emphasizing the gravity of the situation. Those trying to torpedo Kings Point have no conception of the harm they will do to national defense:

PATRONAGE VERSUS THE POINT

Once again the issue of State patronage is taking precedence over the national good in the Senate. Maine's two lawmakers, Senators PAYNE and SMITH, have asked the Senate to postpone action on giving Kings Point Merchant Marine Academy permanent status.

The Maine delegation fears that such status for Kings Point may mean the end of their State academy, which is subsidized by the Federal Government. The bill might also mean the end of State academies in Massachusetts, New York, and California, the four of which cost the United States $787,000 a year.

The fears of the Maine Senators, we hope, are justified. There is no reason why the Government should support State academies when it has the facilities at Kings Point to do the job.

We see no point in holding up the bill. Though funds for the next year are already assured, morale is endangered by maintaining the Academy on what Representative BECKER called a crisis-to-crisis existence. As the Van Pelt subcommittee of the House has decided, and as Senator IRVING IVES asks, the school should be given permanent status and equality with the other service Academies.

SPECIAL ORDER GRANTED

Mr. VURSELL asked and was given permission to address the House for 15 minutes on Tuesday next, after the conclusion of the legislative program and any special orders heretofore entered.

COMMITTEE ON HOUSE ADMINISTRATION

Mr. LECOMPTE. Mr. Speaker, I ask unanimous consent that the Committee on House Administration have until midnight tomorrow night to file a report on H. R. 9413, the Capitol Police Force bill.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

THE FIGHT FOR INDIAN HOSPITALS

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, if you are a Member of Congress who is just as concerned about the health and well-being of America's native Indian population as you are about the natives of India, Pakistan, and the Far East—and I believe all United States Representatives have a greater concern about our own people—then I earnestly appeal to you to examine most carefully the conference report on H. R. 303 when it comes before this body.

In the very near future we should have before us the work of our conference committee on this bill, which has been presented as a simple transfer of responsibility for American Indian health—from the Bureau of Indian Affairs to the United States Public Health Service. Some proponents of the measure have told the Indians that this bill is designed to provide better staffed and equipped hospitals for American Indians, and that it would not have the effect of closing any badly needed Indian hospitals in our country.

Those of us who oppose this bill are convinced that it is in reality a master plan for closing all Indian hospitals in this country, and for shifting all responsibility for Indian health to local and State shoulders. Such a purpose would be in violation of many statutory and treaty obligations of our Government in the field of American Indian health, and some advocates of H. R. 303 have denied any such purpose.

The simple fact is that Indian health conditions in our country require additional Indian hospitals, rather than their closing. When we consider that the tuberculosis rate among Oklahoma Indians is 7 times as high as among non-Indians, and the infant mortality rate is 10 times as high, it should be readily apparent that now is not the time to reduce our hospital effort.

H. R. 303 passed the House on the Consent Calendar, in the absence of some of its opponents from Washington, and through the belief of other opponents of the bill that open hearings on the Senate side would be helpful.

As a result of those open hearings—in which practically every Indian who testified gave testimony against the bill—the Senate added an amendment designed to reassure the Indian people and secure their cooperation in any substitute health program.

The Senate amendment provided that no hospital operated for a specific tribe of Indians could be closed without the consent of the tribal council. Since many tribes had invested heavily from tribal funds in these hospitals, and since they had become an integral part of Indian health programs in the States, this did not appear to be an unreasonable requirement. The Senate voted this amendment and returned the bill to the House.

But leading House conferees have announced their opposition to this amendment. One has been quoted as saying that such an amendment would make H. R. 303 unworkable.

If the real object of H. R. 303 is to provide better staffing and equipment for Indian hospitals, and a better health program, it is difficult to see how the protective amendment would harm the bill.

Of course, if the object of H. R. 303 is to close Indian hospitals, I will agree that the Senate amendment will make the bill unworkable.

There are many more reasons why our Indian hospitals should be kept in operation, and under the administration of the Bureau of Indian Affairs, and when the conference report reaches us I hope to have the opportunity to discuss this important question on the floor at greater length.

It could mean life or death for thousands of our first Americans.

I trust the House will give any further action on H. R. 303 its most careful consideration.

UNEMPLOYMENT COMPENSATION INSURANCE LEGISLATION

Mr. ADDONIZIO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. ADDONIZIO. Mr. Speaker, I deeply regret that the Senate in considering the Employment Security Administrative Act of 1954 on July 13 followed the example of the House in rejecting the principles of H. R. 9430 of which I have the honor to be a sponsor. H. R. 9430 was introduced in the House on June 3, 1954, and moves forward on the highest level of business statesmanship the accepted philosophy of the widely approved and entirely workable principle of Federal-State unemployment insurance.

Unemployment compensation insurance legislation is a problem of national policy that I believe to be of the first order of importance to the domestic economy of our country. It directly affects the Nation's business interests in a most sensitive area—the human area. And it reached to the very heart of the stability, the morale, and the character of the American worker. Yet, the legislation on the subject, H. R. 9709, as passed by the House on July 8, fails to achieve the elementary ends to which this type of legislation is directed. It falls short of dealing with the issue with the necessary boldness and completeness.

I submit respectfully that H. R. 9709 is weighed down by its own timidity. It is a cautious half-way attempt to do what needs to be done with a firm hand and a sure hold on the problem. This lack of forthrightness seems to me to be especially avoidable in face of the fact that we are dealing with a principle of Federal law and administration which has through the years demonstrated itself so successful that both H. R. 9430 and H. R. 9709, propose to extend the principle of Federal-State unemployment insurance. It happens that H. R. 9709 was introduced 25 days after the bill I favor. Of one thing I am certain: It is not the intent of this bill to suck the blood and eat the heart out of the unemployment insurance program. I am sure there is sincerity on the side of the opposition. And yet their set of fainthearted amendments in H. R. 9709, it seems to me, vitiates the whole unemployment insurance program, however good the intention. It is for this reason that I cannot help warning the proponents of H. R. 9709 that American labor has both the education and the experience, the tough and hard-earned knowledge that will enable it to see at a glance

that labor's interest, in time of crisis, is not genuinely nor adequately served by H. R. 9709. I commend the good intention but the technique is demonstrably faulty. Against this bill, which I hold to be a mere substitute in flimsy and superficial form for a needed sound measure, I commend the strength and the boldness of H. R. 9430.

Let us examine our problem more closely:

Both bills by their very appearance proclaim that the existing unemployment compensation insurance program has been rendered legislatively obsolete by two decades of change—since 1935. I will not dwell upon the depth and scope of this change except to point out that involved in it is the overwhelming impact of World War II. Thus the proponents of both bills are agreed upon the need for revision and advance. Under the basic or 1935 legislation an employer was required to have eight employees to come within the terms of the act. The States have, within the terms of the Federal law, individually legislated their own definitions of how many employees an employer is required to have in order to come within the meaning of the law. Under H. R. 9709 the employer must have four employees to come within the act. But under H. R. 9430, which I sponsored, it is sufficient that the employer have one or more employees to come within the coverage of the Federal Unemployment Tax Act. Again without condemning the motives of the opposition to the measure for which I stand, I submit that it is just as impractical, just as inherently unsound, to fail to cover the smallest employer of labor and his employee or employees, as the largest. How possibly can this insurance program do itself justice if it leaves out of its protection whole segments of the employer and employee population? Hunger, deprivation, and humiliation hits the employee out of work and his family just as hard if his employer employs only him or a thousand others as well.

If the bill of which I am cosponsor had no further advantage over the inadequate measure than this matter of 1 employee as against 4, this alone would be sufficient to commend it to our sense of fairness and to the overall aims for which all this legislation was enacted in the first place. For it represents the greatest enlightenment in the relations of Government, management, and the toiler since the Nation's evolution to its presently highly industrialized state from the agrarian economy of our early past.

The advocates of both bills seek to have the Government employees included under the benefits of unemployment insurance. But while the advocates of H. R. 9709 include the Government workers in their legislation, my fellow sponsors and I recognizing the complexities of the situation, planned separate legislation for the Government worker. Surely this intelligent separation, tailoring each of two measures to meet specific differences, must win the approval of those who wish to avoid confusion and who look for the highest degree of simplicity and efficiency in the programs enacted by the Congress.

The bill I urged is a scientifically devised measure that has the fullest and the wisest grasp of the technicalities of the problem. It has made itself cognizant of the human weaknesses that, in less thoughtfully designed measures, would lead to a maudlin kind of do-goodism. Thus, for example, it would permit a State to disqualify an individual who has left suitable work or refused to accept suitable work without good cause or who is discharged for misconduct in connection with his work. It would permit a State to disqualify an individual in the case of strikes if he is a participant or has a direct interest in the strike for any week in which his unemployment is due to the strike. Disqualification may be extended to 12 weeks in the event of fraud or willful misrepresentation.

This statesmanlike H. R. 9430 legislation takes into consideration standard of living variations in the several States. It provides that the maximum benefit under the State law be not less than an amount equal to two-thirds of the average weekly wage within that State. And then it requires that the individual subject to this maximum receive unemployment insurance compensation equal to at least one-half of his average weekly wage. And those who are eligible are to receive at least 39 weeks of unemployment benefits a year.

The States under the bill I endorsed have an increased latitude in the matter of determining the methods of reducing employers' taxes under the State law below 2.7 percent. That bill protects the unemployment fund, requiring that all collections under the Federal Unemployment Tax Act in the Federal unemployment account be earmarked to the unemployment trust fund. A State whose accumulated funds for unemployment compensation get precariously low may receive a reinsurance grant from the Federal unemployment account under the bill I hope becomes law. It also imposes a minimum rate of contribution of at least 1.2 percent whenever a State's fund drops below 6 percent.

There are many other improvements in detail and in technique in the bill which I hoped the House would adopt. It stands head and shoulders over the bill passed by the House from whatever avenue of approach you propose to consider the two measures. It is not a radical change in the principle of unemployment insurance, but it is a distinct advance consonant with the change and expansion of the American economy. H. R. 9430 would meet the problem head-on and would solve it, I believe conservatively and soundly for the good of business, for the good of the employee, and eminently for the strengthening and the health of the American people and their economy.

INCREASE IN VETERANS' SERVICE-CONNECTED COMPENSATION

Mr. PRICE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PRICE. Mr. Speaker, the Radwan discharge petition was placed on the desk yesterday. I am happy to announce that I have signed this petition, designed to bring up H. R. 9020, a bill which provides a 10-percent increase in pensions for service-connected veterans, and smaller increases for non-service-connected cases. I urge my colleagues to put their names to this petition, so that we may act on this moderate legislation.

This House has recognized the need to increase pensions for other persons—social-security beneficiaries, among others. It is just as difficult for a disabled veteran to meet the rising cost of living on a fixed pension as it is for any other citizen, so we are obligated to adjust the compensation of our veterans.

According to the Veterans of Foreign Wars, the Disabled American Veterans, and the American Legion, Department of Illinois, we have in our State alone some 115,000 disabled veterans who are now drawing compensation or pension, and some 40,000 cases to which the Veterans' Administration is paying entirely inadequate benefits to widows, children, and dependent parents.

H. R. 9020 was reported by the Committee on Veterans Affairs after extensive hearings. It has been well established that veterans should be given moderate cost-of-living increases in compensation. The committee, in its unanimous action, also cut the cost of the increase by $58 million in an effort to meet the administration's desire for economy. I believe the committee should be complimented in its effort to provide the veterans with a needed increase, to enable the administration to carry out its pledges, and at the same time to put a minimum burden on the budget.

SENATOR DAVID I. WALSH MEMORIAL

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to insert in the RECORD my remarks in part at the recent dedicatory exercises of the Senator David I. Walsh memorial statue at the Esplanade, Boston, Mass., on June 6, 1954.

The occasion was most impressive. It was attended by members of the clergy, Senator SALTONSTALL, Governor Herter, Members of Congress, and the general court, and other prominent public officials, Judge Connelly and other distinguished members of the judiciary, as well as a large group of distinguished guests, relatives, and friends of one of Massachusetts greatest sons in the public service.

The invocation was given by the Very Reverend Oscar R. O'Gorman, pastor of St. Agnes Church, Arlington, Mass. The

unveiling was conducted by Senator Walsh's dear and loyal friend of almost 40 years, a native of the Philippines, and a member of his immediate household, Isidro Carino.

The memorial, which was authorized by the Massachusetts General Court, upon the petition of Judge Connelly, representing close friends of Senator Walsh and members of the Walsh Memorial Association, was presented in behalf of the Commonwealth by the distinguished commissioner of the metropolitan district commission, the Honorable Charles W. Greenough. It was accepted for the Commonwealth by His Excellency, Gov. Christian A. Herter. Senator SALTONSTALL delivered an eloquent dedicatory address.

The United States Navy Band of the First Naval District was in attendance and rendered touching musical selections. Because of Senator Walsh's great and magnificent contributions to the Navy, as chairman of the Senate Naval Affairs Committee, it was most fitting that the Navy should be represented at the exercises.

My remarks as presiding chairman of the occasion follow in part:

My friends, we proudly and gratefully gather here today to unveil and dedicate this beautiful statue of our beloved friend and benefactor, Senator Walsh.

This magnificent sculpture has been wrought by the hand of a talented and distinguished artist.

For years to come, it will stand here on this lovely spot, within the great historic city of Boston, where American liberty was fostered.

Generations of Americans yet unborn will pass by this spot and observe this impressive memorial, which the vision and loyalty of friends like Judge Connelly, the distinguished leader of the Walsh Memorial Association, and the generosity and consideration of our great general court, have made possible.

His noble countenance lifted to the heavens, just as it was during his long, fruitful life of illustrious service to the cause of the common people, beaming constant inspiration and hope to all those who love and cherish the cause of human liberty, freedom, and democracy, to which our great, honored, and lamented friend, Senator Walsh, so completely and courageously devoted his life.

For his was a career of devoted service to the people and to the Nation he loved so well. His was a lifetime of loyalty and sacrifice to preserve our liberties, to promote social justice, and to keep this Nation strong and impregnable against foreign enemies and the insidious ravages of domestic subversion.

In the ranks of great American patriots and statesmen, the name of David I. Walsh is indelibly emblazoned upon the history of the era in which he lived. His rugged integrity, his indomitable courage, his great eloquence, his unswerving loyalty to God and to country, his unsurpassed vision in charting a safe course for our beloved country, his unyding allegiance to the cause of the common people from whom he sprung, all these marked him with the unforgettable insignia of greatness.

His mortal self has departed from our midst, from the company of those of us who loved him for the warmth and nobility of his friendship, and for his endearing personal qualities, as well as from the people who found in his stalwart, inspiring leadership superiative example of Americanism. But his memory is forever enshrined in our hearts. The memory of his devout life, his exalted principles, his noble deeds, his sympathetic understanding, his vivid patriotism, his profound devotion to God, to country, and to every righteous cause, will live imperishably to inspire hope in the struggling and the oppressed, and to keep the fires of patriotism burning in the hearts and minds of our people. David I. Walsh—great soul, great statesman, great American—we hail your hallowed memory today. In this great crisis, may Almighty God give us the high purpose, the strength, and the wisdom to cling tenaciously to your lofty ideals, your loyalty, and your love of our native land.

SPECIAL ORDERS GRANTED

Mr. JAVITS asked and was given permission to address the House for 20 minutes on Monday next, following the legislative program and any special orders heretofore entered.

Mrs. FRANCES P. BOLTON asked and was given permission to address the House for 20 minutes on Monday next, following any special orders heretofore entered.

RESOLUTION OF GREETING TO PEOPLES AND LEGISLATIVE BODIES OF THE GOLD COAST AND NIGERIA

Mr. JAVITS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. JAVITS. Mr. Speaker, I am today introducing a resolution extending on behalf of the House of Representatives the most cordial greetings to the legislative bodies of the Gold Coast and Nigeria on the occasion of the first meeting of their legislatures, and in addition authorizing the Secretary of State to appoint a United States delegation at the appropriate time to represent the United States at ceremonies marking the achievement of complete self-government for these territories.

On April 29, 1954, a new constitution was approved for the Gold Coast which brings it to the threshold of sovereign independence. Under it an all-African Government with almost complete responsibility for the country's internal affairs has been established. After an election with universal adult suffrage, Kwame Nkrumah has been chosen Prime Minister. Nkrumah, educated at Lincoln University in Pennsylvania, was the first African ever to hold such office in any British territory. His leadership is, indeed, a great source of hope for the 4 million people of the Gold Coast.

Similarly in Nigeria, the largest of the United Kingdom territories with a population of 31.5 million, a new federal constitution representing the will of the people as expressed through their leaders is expected to be approved next month. The new constitution will give the 3 regions of Nigeria greater autonomy and will carry 2 of the 3 regions a considerable way toward self-government. Supplementing these moves toward independence, the United Kingdom has declared that in 1956 they will be prepared to grant full self-government to any region that may wish it in respect to those subjects that are a regional responsibility. Nnamdi Azikwe, who recently visited the United States, will become Prime Minister of the eastern region. Like his Gold Coast counterpart, he, too, is an alumnus of Lincoln University and a respected leader of nationalist movements throughout western Africa.

Our Nation's policy encourages legitimate efforts toward independence and self-government among those peoples who demonstrate a desire and capacity to establish and protect free institutions. This must be the strength of our position in former colonial and underdeveloped areas. Accordingly, Congress should take official cognizance of the momentous events that are now happening in western Africa. At a time when man's natural will to be free is thwarted in many parts of the world by the subversion practiced by Communists under the leadership of the Soviet Union and the Chinese Communist regime, the significance of recent developments in the Gold Coast and Nigeria looms very large for the free world's success. We should be sure not to repeat the mistakes in Africa which are costing the free world so dearly in southeast Asia.

Since the British acquisition of the territories now comprising the Gold Coast and Nigeria during the 19th century, vast changes have been wrought there. From primitive tribal cultures these territories have now advanced to a degree of social and political maturity that should soon allow them to assume their rightful places among the free nations of the world. We must make it unmistakably clear that it is our purpose to aid the practical efforts of these people to achieve independence and self-government. I therefore urge that Congress extend its most cordial greetings to the first meetings of the Gold Coast and Nigerian Legislatures which are expected to be held in July and September respectively and that the Secretary of State appoint a delegation at the appropriate time to represent the United States at ceremonies marking the achievement of complete independence for these territories. Such acts would be fitting recognition of the democratic ideals shared by the United States and these countries and would be a reaffirmation of the friendship of the United States for the peoples of Africa.

MILITARY AND NAVAL CONSTRUCTION ACT

Mr. ARENDS. Mr. Speaker, I call up the conference report on the bill (H. R. 9242) to authorize certain construction at military and naval installations and for the Alaska communications system, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read the statement.

The conference report and statement are as follows:

CONFERENCE REPORT (H. REPT. No. 2237)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9242) to authorize certain construction at military and naval installations and for the Alaska Communications System, and for other purposes, having met after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 14, 20, 24, 25, and 28.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, 15, 16, 17, 18, 19, 21, 22, 23, 26, 27, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 51, 52, 53, 54, 58, 60, 61, 62, 63, and 64, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: ": *Provided*, That the Secretary of the Army, in exercising the authority granted herein, shall, whenever practicable and in the best interests of the United States, provide for the rehabilitation of existing barracks and officer quarters in lieu of new construction"; and the Senate agree to the same.

Amendment numbered 5: That the House recede from its disagreement to the amendment of the Senate numbered 5, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "$2,787,000"; and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "$10,994,000"; and the Senate agree to the same.

Amendment numbered 50: That the House recede from its disagreement to the amendment of the Senate numbered 50, and agree to the same with an amendment, as follows: In the matter proposed to be inserted by amendment strike out "$1,007,963,000" and insert in lieu thereof "$1,034,906,000"; and the Senate agree to the same.

Amendment numbered 55: That the House recede from its disagreement to the amendment of the Senate numbered 55, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "$129,096,000"; and the Senate agree to the same.

Amendment numbered 56: That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "$236,060,000"; and the Senate agree to the same.

Amendment numbered 57: That the House recede from its disagreement to the amendment of the Senate numbered 57, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: "$102,042,000"; and the Senate agree to the same.

Amendment numbered 59: That the House recede from its disagreement to the amendment of the Senate numbered 59, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following: $201,893,000"; and the Senate agree to the same.

Amendment numbered 65: That the House recede from its disagreement to the amendment of the Senate numbered 65, and agree to the same with an amendment, as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

"SEC. 510. All contracts entered into by the United States pursuant to the authorization contained in this Act shall be awarded, so far as practicable, if the interest of the national security shall not be impaired thereby and if such award is consistent with the provisions of the Armed Services Procurement Act of 1947, on a competitive basis to the lowest responsible bidder."

And the Senate agree to the same.

JOHN C. STENNIS,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 9242) to authorize certain construction at military and naval installations, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

LEGISLATION IN CONFERENCE

On May 26, 1954 the House of Representatives passed H. R. 9242 which was the fiscal year 1955 military construction authorization for the three military departments and the Alaska Communication System. On July 9, 1954 the Senate considered the House bill and amended it in several respects.

The major differences and the action agreed upon by the conferees are as follows:

The amendment requiring that the authorizations for construction provided for in Title I would be administered in accordance with a building program that would expend for rehabilitation at least $5,000,000 of the total $45,000,000 authorized for barracks and bachelor officer quarters in lieu of that amount for new construction, was modified so as to permit a discretionary approach by the Secretary of the Army in such fashion as to utilize the rehabilitation authority where such would be in the best interests of the United States. The Senate amendment with respect to Fort Belvoir was modified by the addition of one barracks over those allowed by the Senate at this installation. The Senate receded with respect to Fort Bliss to the extent that five additional barracks were authorized and all of the bachelor officer quarters re-inserted. The Senate receded entirely with respect to the troop housing and other facilities at Fort Hood, Tex.

In the Navy portion, the Senate receded with respect to the four barracks which had been deferred at the Marine Corps Auxiliary Air Station at Beaufort, S. C. The Senate further receded with respect to the reinsertion of the land item at the Naval Magazine, Port Chicago, Calif. The pipeline at Elk Hills, Calif., which had been stricken by the House and reinserted by the Senate was again stricken by the conferees and the Senate further receded with respect to its reinsertion of the facilities at the Navy Ammunition Depot, Fallbrook, Calif.

The Air Force section remained unchanged with the exception of a remedial amendment to section 302 (b) which was added by the Senate for the purpose of rescinding an unused authorization that would otherwise have remained in that section.

The new section 510, which would have required that all contracts entered into by the United States, pursuant to the authorization contained in H. R. 9242, should be awarded, so far as practicable, and where the interest of the national security would not be impaired, on a competitive basis to the lowest responsible bidder. This new section was modified by the addition of a provision that this limitation would obtain only so far as such would not be in conflict with the Armed Services Procurement Act.

Otherwise the House receded with respect to the Senate amendments.

LES C. ARENDS,
PAUL W. SHAFER,
LEROY JOHNSON,
JAMES VAN ZANDT,
CARL VINSON,
PAUL J. KILDAY,
L. MENDEL RIVERS,
Managers on the Part of the House.

The conference report was agreed to, and a motion to reconsider was laid on the table.

AUSTRALIAN WAR MEMORIAL

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 9006) to amend the act of May 22, 1896, as amended, concerning the loan or gift of works of art and other material, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Strike out all after the enacting clause and insert "That (a) the Secretary of the Army is authorized to transfer to the Australian War Memorial in Canberra, Australia, without compensation, 28 German war paintings depicting Australian troops which are now the property of the United States in the custody of the Secretary of the Army.

"(b) Nothing contained in this act shall authorize the expenditure of any funds of the United States to defray any cost of transportation or handling incident to such transfer."

Amend the title so as to read: "An act to authorize the Secretary of the Army to donate 28 paintings to the Australian War Memorial."

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Senate amendments were concurred in, and a motion to reconsider was laid on the table.

CONFERENCE REPORT ON HOUSING BILL

Mr. ARENDS. Mr. Speaker, I ask unanimous consent that the conferees on H. R. 7839, the so-called housing bill, may have until midnight Sunday to file a conference report.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

HARDING LAKE CAMP, FAIRBANKS, ALASKA

Mr. MILLER of Nebraska. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 2900) to authorize the sale of certain land in Alaska to the Harding Lake Camp, Inc., of Fairbanks, Alaska, for use as a youth camp and related purposes, with a House amendment thereto, insist on the House amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska? [After a pause.] The Chair hears none, and appoints the following conferees: Messrs. SAYLOR, D'EWART, DAWSON of Utah, ENGLE, and ASPINALL.

COMMITTEE ON RULES

Mr. ALLEN of Illinois. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file reports.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

SEATING OF COMMUNIST REGIME IN CHINA IN THE UNITED NATIONS

Mr. ALLEN of Illinois. Mr. Speaker, I call up the resolution (H. Res. 634) providing for the consideration of House Resolution 627, a resolution reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of House Resolution 627, reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations. After general debate, which shall be confined to the resolution and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the resolution shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the resolution for amendment, the Committee shall rise and report the same to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. ALLEN of Illinois. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi [Mr. COLMER], and I now yield myself such time as I may require.

Mr. Speaker, this resolution makes in order the consideration of House Resolution 627.

CALL OF THE HOUSE

Mrs. ROGERS of Massachusetts. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. The Chair will count.

Mr. HOFFMAN of Michigan. Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. HOFFMAN of Michigan. Mr. Speaker, I make the point of order that the Member who made the point of order of no quorum is not present on the floor.

The SPEAKER. The gentleman does not state a point of order.

One hundred and forty Members are present, not a quorum.

Mr. HALLECK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 104]

Barden	Heller	Perkins
Barrett	Hillings	Powell
Bonin	Holifield	Regan
Brooks, La.	Horan	Rivers
Buckley	Keating	Roosevelt
Camp	Kersten, Wis.	Scott
Cotton	Long	Shafer
Coudert	Lucas	Shelley
Curtis, Mo.	Lyle	Short
Curtis, Nebr.	McGregor	Sikes
Dingell	Mailliard	Sutton
Dodd	Martin, Iowa	Thompson, La.
Durham	Miller, Calif.	Thompson, Tex.
Fallon	Miller, Kans.	Utt
Feighan	Morrison	Weichel
Fisher	Norblad	Wheeler
Fogarty	O'Brien, Mich.	Willis
Harris	Ostertag	
Harrison, Wyo.	Patman, Tex.	

The SPEAKER. On this rollcall 373 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

HUCKSTERISM

Mr. KELLEY of Pennsylvania. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. KELLEY of Pennsylvania. Mr. Speaker, the Congress is tentatively scheduled to adjourn at the end of this month, and there is no doubt that it can do so if the leadership is determined to push through on that timetable. But whether it can do so and still enact into law sizable portions of the legislative program remains to be seen. Many of the top issues are still tied up in Senate committees or in conference committees composed of representatives of both Houses.

As usual, the House is far ahead of the Senate in the passage of important bills. With its privilege of unlimited debate, the Senate can spend days and even weeks on an issue that the House might pass inside of 3 or 4 hours. And when the Senate does complete action on a bill, it frequently does not look anything like the bill the House passed, because any Senator can submit unlimited amendments to it while we in the House are sometimes restricted under our rules from even trying to amend a bill.

Then it is up to conference committees to iron out the differences and agree on a final version of the measure. If the disagreements are deep-seated enough—as they frequently are—the conferees may argue for weeks, and then come through with a compromise bill at the very last minute.

So we face an adjournment rush of conference bills in the next few weeks which will be almost overwhelming. Issues which were fought out once in House debate will come up all over again in perhaps different form, and the Congress—as always—will resemble nothing so much as chaos in the dying days of the session.

Among big issues still hanging and still unresolved are: Housing, foreign aid, the agriculture bill, tax revision, unemployment compensation, the issue of raising the ceiling on the national debt from the present maximum of $275 billion, postal pay, social security, and a controversial atomic energy control bill.

HUCKSTERISM

The word "hucksterism"—overselling some product by extravagant and misleading claims—was coined to describe the excesses of some of the big high-powered advertising agencies. In the past year and a half, it has sometimes been applied to statements put out by the Eisenhower administration, which has a lot of top advertising men in its councils. You might be interested in a recent example of this hucksterism which I came across in reading a new Labor Department publication.

In urging the extension of unemployment compensation to government employees who lose their jobs, Under Secretary of Labor Arthur Larson, formerly of the faculty of the University of Pittsburgh, recently gave the House Ways and Means Committee a graphic picture of the experience of recently laid-off Labor Department employees. He said that 3 to 4 months after losing their jobs:

> Three out of ten were still out of work; more than 3 out of 10 had been jobless for 3 months or more; and 4 out of 10 for 1 to 3 months; most of those finding new jobs had to take a pay cut—a third took a cut of more than $1,000 a year; close to one-half of the reemployed took temporary jobs; women found it more difficult than men, and those 45 years and over found it more difficult than younger employees to locate new jobs; and accrued annual leave was adequate to cover the duration of unemployment of only a third of the separated Federal workers.

That is the way the Under Secretary described the situation to Congress. But a few weeks later, when the Labor Department's monthly magazine came out with a report on the same issue, this is the way it had been huckstered up by one of the administration publicists:

> Nearly two-thirds of the employees involuntarily separated • • • found jobs within 3 months. Salaries for well over two-fifths of those who found new positions were higher than or at least as high as (their Labor Department pay) • • • and more than half of the reemployed regarded their new positions as permanent.

In other words, instead of putting the grim facts in their true perspective as the Undersecretary had done, the administration had to pretty up the disturbing figures to make them look good. A typical example of hucksterism.

COMMITTEE ON BANKING AND CURRENCY

Mr. WOLCOTT. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have until midnight Sunday night to file reports on S. 3589, the Export-Import Bank bill; and, if reported out, as we hope it may be, the bill H. R. 9756, to increase the borrowing authority of the Commodity Credit Corporation.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

COMMITTEE ON WAYS AND MEANS

Mr. REED of New York. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means have until midnight tonight to file reports on H. R. 9666 and H. R. 8932.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

SEATING OF COMMUNIST REGIME IN CHINA IN THE UNITED NATIONS

The SPEAKER. The Chair recognizes the gentleman from Massachusetts [Mr. NICHOLSON].

Mr. NICHOLSON. Mr. Speaker, I rise to urge the adoption of House Resolution 634, which will make in order the consideration of the House Resolution 627, reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations.

House Resolution 634 provides for an open rule with 1 hour of general debate on House Resolution 627 itself.

The resolution which has been reported from the Committee on Foreign Affairs is a simple one and one that is entirely consistent with the past action of the Congress of the United States on this point.

Specifically House Resolution 627 states that the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

According to the report on this resolution the fact that Congress will shortly adjourn and that the General Assembly of the United Nations is scheduled to meet in September of 1954 made it desirable that Congress again give voice to its opinion on the subject.

As far as I can see there can be no opposition to the resolution itself. The Congress of the United States by passing this resolution will again go on record before the world as definitely opposed to the admission of Communist China to the United Nations and it seems to me that just the plain defining of our position once more will serve to bolster our case and our cause on this subject with our allies throughout the world.

Mr. Speaker, I call for the adoption of the rule which will make possible the consideration of House Resolution 627.

Mr. SMITH of Virginia. Mr. Speaker, I have no requests for time. I think we are all against sin; and I yield back the balance of my time.

Mr. NICHOLSON. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the adoption of the resolution.

The resolution was agreed to.

Mr. JUDD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the resolution (H. Res. 627) reiterating the opposition of the House of Representatives to the seating of the Communist regime in China in the United Nations.

The SPEAKER. The question is on the motion offered by the gentleman from Minnesota.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of House Resolution 627, with Mr. ELLSWORTH in the chair.

The Clerk read the resolution, as follows:

Resolved, That the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

Mr. JUDD. Mr. Chairman, I think the reasons why this resolution has been brought out unanimously by the Committee on Foreign Affairs at this time are well known to everybody.

The House of Representatives took action along the same lines on January 19, 1951, after the Chinese Communists had intervened in the aggression against South Korea and were beginning the push for admission to the United Nations. The House took similar action in May, 1951, and again in July, 1953. But developments in the world today, the renewed aggression of the Communists in the Far East and the apparent disposition of some of the nations that are our allies around the world to reconsider their previous opposition, in view of the increased strength of the Communists, made our committee feel that it is important that nobody in the world have any misunderstanding as to the feeling of the Congress, representing the people of the United States, on this issue. So it was unanimously voted to bring a resolution reiterating our position before the Congress. There were several resolutions on the subject before the committee—the first one introduced more than a year ago by the gentleman from Michigan [Mr. BENTLEY] and others recently by the gentleman from Michigan [Mr. CLARDY] and the gentleman from California [Mr. HOSMER]. Hearings were held on the resolutions last week by the subcommittee on the Far East and the Pacific, of which I am the chairman. The original Bently resolution was amended to take cognizance of the present situation, reintroduced by him as House Resolution 627 and voted out unanimously by the full committee. At this time I yield 5 minutes to the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Chairman, House Resolution 627, as reported unanimously 2 days ago by the House Foreign Affairs Committee, states that the House of Representatives reiterates its opposition to the seating of the Communist regime in China as the representative of China in the United Nations or any of its specialized agencies and supports the President in his expressed determination to use all means to prevent such representation.

Over a year ago I introduced House Joint Resolution 286, which would automatically provide for a reexamination of our policy toward the United Nations if the Red Chinese should be seated therein. The Department of State felt, however, that, while such a reexamination would be axiomatic in this event, it should not be assumed that the admission of Red China was to be expected.

I have recently reviewed all courses of action available to us for the purpose of preventing the seating of Communist China with high officials of the administration. While I do not believe that we should expose all possible tactics at this time, I do think that they are sufficient to keep Communist China out of the United Nations as long as the administration is resolved upon the firm stand in that respect which it has already announced. As proof of this firm stand, I will ask unanimous consent in the House to insert among my remarks at this point excerpts from the texts of the press conferences of President Eisenhower on July 7 and Secretary Dulles on July 8 as reported in the July 16 issue of U. S. News & World Report.

HOW IKE FEELS ABOUT RED CHINA

Here's what the President said about Red China at his press conference on July 7, 1954. The following answers by Mr. Eisenhower were released for direct quotation:

Question: "I wonder if you could give us today, sir, your own feelings on the admission of the present Communist Government of China to the United Nations."

The President: "I would be glad to. As you know, and I have said before this particular group, I am completely and unalterably opposed, under the present situation, to the admission of Red China into the United Nations. I personally think that 95 percent of the population of the United States would take the same stand.

"Now, let's take a look at this thing for a minute, if you will bear with me:

"There is a moral question, first of all, that is involved. The United Nations was not established primarily as a supergovernment, clothed with all of the authority of supergovernment and of great power to do things.

"It was, among other things, an attempt to marshal the moral strength of the world in order to preserve peace, to make certain that quarrels were composed through a decent respect for justice and fairness and right, and to see whether we couldn't avoid resort to force.

"Now, today we have Red China going to Geneva, and instead of taking a conciliatory attitude toward anything, it excoriated the United Nations.

"As a matter of fact, in Geneva, it demanded repudiation of the United Nations position. On top of that, Red China is today

at war with the United Nations. They were declared an aggressor by the United Nations, in the Assembly. That situation has never been changed.

"They are occupying North Korea; they have supported this great effort at further enslavement of the peoples in Indochina; they have held certain of our prisoners unjustifiably, and they have been guilty of the employment of the worst possible diplomatic deportment in the international affairs of the world.

"Now, how can the United States, as a self-respecting nation, doing its best and in conformity with the moral standards as we understand them, how can we possibly say this Government should be admitted to the United Nations?

"That is the way the case stands now, and that is my position."

Question: "Mr. President, to carry that a little bit further, sir, there have been some suggestions on the Hill [Capitol Hill] that if Red China is admitted over our protest, that the United States should then withdraw from the U. N. Would you comment on that, sir?"

The President: "Well, yes, I would.

"We went into the United Nations under treaty forms. Now, I must say, first, if the United States ever reaches the point that it wants to repudiate solemn treaty obligations, it must do so after the most careful deliberation and study of all of the consequences that could be involved.

"Secondly, I repeat, the establishment of the United Nations was an effort to rally the moral forces of the world. I don't see how, in all conscience, the United Nations—I don't see how any state, impartial state, can vote for their acceptance under present conditions—I just don't understand it.

"But if they should, if these people, mistakenly, as we believe, could override us—and I don't know that they can—I would fight to the last minute to prove they can't. But if they should, the question of whether we would accomplish more good in the world, whether we could advance the cause of peace and decency better by going out than by staying in, that is something that would have to be decided.

"My own feeling is this: I never give up a battle until I am licked completely, utterly, and destroyed, and I don't believe in giving up any battle as long as I have got a chance to win."

In what follows, the President's answers are paraphrased, in accordance with White House custom:

Question: "Sir, is it a fair inference from your remarks, then, that you oppose any amendment to the foreign-aid bill, or any current legislation, which would automatically take us out if Red China is admitted?"

The President: Mr. Eisenhower said he didn't believe an amendment was up officially, but he did not think cases should be prejudged. He believes such problems should be taken as they arise, and he doubts that any such amendment will be seriously considered.

Question: "Sir, could you tell us if what you have told us here is approximately what you told Senator KNOWLAND yesterday? [WILLIAM F. KNOWLAND, Republican, of California, had stated earlier that, if Red China were admitted to the United Nations, he would resign his Senate majority leadership and work to end United States membership in the U. N.]

The President: Mr. Eisenhower said that he and Senator KNOWLAND had conversed about many things and were, he thought, in conformity on most of their ideas.

On this one, the President added, Senator KNOWLAND had said he himself would begin the fight for withdrawing the United States from the United Nations.

The President had not reached any such decision, he said.

Question: "Mr. President, can you think of any circumstances under which you would favor admission of Red China into the U. N.?"

The President: Mr. Eisenhower said Red China would have to show a record of deeds that would prove really good faith and a readiness and a capacity on Red China's part to discharge its obligations in the international field properly and decently.

MR. DULLES: RED CHINA IS "DISQUALIFIED" FOR U. N. SEAT

Following in full text are Secretary Dulles' answers to questions dealing with Red China's admission to the United Nations, from his press conference of July 8, 1954. The questions and replies are as released by the State Department:

At his news conference today, Secretary of State John Foster Dulles was asked whether he favored United States withdrawal from the United Nations if Red China is admitted to that organization. Secretary Dulles made the following reply:

"I am so confident that the Communist regime will not be seated in any of the principal organs of the United Nations that I do not care to proceed on the assumption that they will be seated. I think that weakens our case and strikes a note of defeatism which I think is entirely unjustified.

"The United States has a powerful case in this respect and it is a viewpoint which is shared by many other members of the United Nations. The record of the Chinese Communist regime is such that it is, in my opinion, clearly not qualified to be seated in the United Nations.

"Let me, if I may, elaborate that a bit. I recall from the days at San Francisco in 1945, when the charter was drawn, that there was at that time a very considerable argument on whether the United Nations should be a universal body which would represent all the governments of the world, good, bad, or indifferent, or whether membership should be on a selective basis. That was strongly argued at San Francisco and the proponents of selectivity won. That is reflected by the provision in the charter that members should be peace-loving and able and willing to discharge their obligations under the Charter. That is strengthened furthermore by the provision that any nation against which enforcement action was taken should be liable to suspension from membership in the United Nations. In other words, the United Nations was not set up to be a reformatory. It was assumed that you would be good before you got in and not that being in would make you good.

"The United States, basing itself on the principles of the charter, which are clear, takes the position that the Communist regime is disqualified by its consistent record of opposition to the principles of the United Nations. In Korea it carried on war against the United Nations. At the Geneva Conference it continuously denounced the United Nations. It has been the subject of enforcement action recommended by the United Nations. In southeast Asia it promoted aggression. All of these facts combine to make a case such that we do not believe that the requisite vote can be found to admit the Communist regime to represent China in the United Nations. Because we believe that, we do not think that it is wise to proceed on the assumption that we are going to be defeated. I do not believe Communist China in fact is going to be seated.

"So far there are over 150 test cases which have come up in one or the other of the organs of the United Nations and in every one of those cases the position has been taken that the Communist regime should not be seated. In view of the strength of our case, the fact that we know many other countries share it with us, and in view of the past record, I see no reason whatever to assume that we are going to be defeated on this issue at the present time."

Mr. Dulles was asked what he considered the requisite vote to defeat Red China's being seated to be. He replied:

"I believe that as far as the General Assembly is concerned this certainly is an important matter which would require a two-thirds vote. Anybody that says this is not an important matter is certainly not facing up to the realities of the situation. I believe that in the Security Council it is a matter which is properly subject to veto."

Mr. Dulles was asked whether that meant that the United States would use the veto if necessary. He replied:

"It means that we would invoke the veto if necessary, yes."

Mr. Dulles was asked whether that meant that the United States does not consider it a question of credentials. He replied:

"It means that we consider it what the charter calls an important matter. The charter says that important matters shall require a two-thirds vote, and, as I say, anybody that does not think this is an important matter is exercising a curious judgment."

The Secretary was asked whether, in the event that there would have to be a veto to determine whether this was or was not an important matter that would be by majority vote. He replied:

"That would be by a majority vote. The charter contains, in relation to the General Assembly, the basic provision that important matters shall require a two-thirds vote. It then goes on by way of illustration to indicate certain matters which are by definition important matters. Then it goes on to say that the creation of an additional category of important matters should be by a majority vote."

Mr. Dulles was asked who would be hurt the most by American withdrawal from the U. N. He replied:

"I don't think there is going to be any American withdrawal from the U. N. or any occasion for it."

A correspondent raised the point that Mr. Dulles' predecessor (Dean Acheson) took the position that a vote on Chinese Communist membership in the Security Council was not a vetoable question. Mr. Dulles was asked why his thinking differed on this point. The Secretary replied:

"The view is clearly accepted that the admission of a new member is subject to veto. And then the question arises as to whether the admission of a new government is subject to veto.

"In view of the fact that the charter tests as to eligibility obviously relate to governments, or can only be applied in terms of governments, it seems to me that if you look at the substance of the matter rather than the form, the question of the eligibility of a new government should be subject to the same voting tests as the admission of a new state.

"The charter says that a state shall not be eligible for membership unless it is able and willing to carry out its obligations under the charter. Now, the question as to whether a state is able and willing to carry out its obligations under the charter clearly depends upon its government. There is no way in the world of determining ability and willingness to carry out obligations except in terms of what is the attitude of the government, just as in the case of Guatemala, which has been referred to. In that case we are withholding recognition until we are satisfied that the government will be able and willing to carry out its international obligations.

"The test that the charter applies is a test which can only be applied in terms of

governments. You cannot apply the test to an amorphous body, such as a state, without regard to its government. Therefore, as far as the substance of the matter is concerned, it seems to us that it is a substantive and not a procedural matter to determine whether or not the Communist regime shall be seated. That is the reality of the situation.

"The Soviet Union by veto prevents the admission of Japan, of Italy, and of many states who are qualified because of their peace-loving and law-abiding governments to membership. To say that the Soviet Union can exercise that right in that respect, but that in this respect the right cannot be exercised, seems to me to put the letter above the spirit of the charter."

Mr. Dulles was asked how he accounted for the fact that some of the governments whose representatives at Geneva only a few weeks ago signed the 16-power declaration, which, in effect, terminated the Korean talks, can now so materially alter the view that they expressed in that declaration. He replied:

"Well, I was reading that just before I came down here. It says: 'The Communists repudiated and rejected the authority and competence of the United Nations in Korea and have labeled the United Nations itself as a tool of aggression. Were we to accept this position of the Communists, it would mean the death of the principle of collective security and of the United Nations itself.'

"Sixteen nations signed that declaration, and one of the reasons why I am confident that the Communist Chinese regime will not be seated in the United Nations is because of the fact that the principle to which they subscribed at that time leads irrefutably to the conclusion that that regime should not be brought into the United Nations. As, indeed, is said there, the position which Communist China represents, if it were accepted, would mean the death of the principle of collective security and of the United Nations itself."

Mr. Dulles was asked whether his views on the admission of Communist China to the U. N. have been modified since writing his book, War or Peace, in 1950, since, the reporter said, the book stated that the only test should be whether they govern the country or not, and it argued in favor of the universal theme rather than the selectivity theme. The Secretary replied:

"In the first place, I was arguing for an amendment of the Charter of the United Nations which would adopt the principle of universality. The other theory was adopted and is in the charter, and that is what we are bound by at the present time. Furthermore, since that was written, there has been the aggression of the North Koreans in Korea. There has been the condemnation of Communist China as an aggressor. There has been the support by Communist China of aggression in Indochina.

"These are all events which in the winter of 1949 to 1950 were not predictable. We were entitled to believe at that time that there was a general acceptance of the principles of the United Nations. Since that time there has been a very marked change in the situation. There has been a series of actions which indicate that the hopes which were legitimately entertained, I think at that time perhaps cannot be entertained with the same confidence at the present time."

The Secretary was asked whether that is not also true of the Soviet Union. What distinctions, he was asked, do you draw between your argument on the selectivity of the Soviet Union and Red China? Mr. Dulles replied:

"The Soviet Union is at the present time seated in the United Nations. It cannot be put out of the United Nations because it would be able to veto that action. In the case of the Soviet Union the matter is academic even if we assume, which is not necessarily to be assumed, that the record of the Soviet Union if comparable to that of Communist China. The Soviet Union has never been declared an aggressor by the United Nations nor have enforcement measures been taken against it such as would justify suspension under the United Nations Charter."

Mr. Dulles was asked whether the position of Communist China in relation to the principles of the U. N. is a worse record than that of the Soviet Union. He replied:

"Yes, because Communist China has been found by the United Nations to be an aggressor, and the United Nations has called for enforcement measures against Communist China. There is nothing comparable in that respect, as far as the record of the Soviet Union is concerned. Whether that should be the case or not is another question. But the fact is that the Soviet Union has not been found by the United Nations to be an aggressor. Therefore it is not a question of inviting into the United Nations a government which is itself at war with the United Nations and is today subject to sanctions which have been called for by the United Nations."

The Secretary was asked whether we are prepared to have this issue come to a vote in September when the next Assembly meets, or whether we would seek to postpone a vote on the Chinese admission. Mr. Dulles replied:

"I would not want to predict at this time what the particular techniques will be. Last year the matter came up in the form of a resolution, which I think I moved, that the question of the admission of Communist China be postponed for the period of the Eighth Assembly. That resolution prevailed. I remember I handled it myself personally on the floor at the opening day of the General Assembly."

He was asked whether or not he was ruling out the possibility that that move might be made again. Mr. Dulles replied:

"No; that might very well be the procedure that would be followed."

He was asked whether in such a case the vote required would be two-thirds or a majority. Mr. Dulles replied:

"My recollection is that the resolution was adopted by a two-thirds vote so that it became academic."

There have been various expressions here and in the other body which would favor an announced declaration by the Congress as to what our course of action should be in case of Red Chinese seating. I feel it would be unwise to thus commit ourselves in advance. There is no question but that, should the administration be unsuccessful in its opposition which does not appear likely, our entire policy toward the United Nations would undergo a most thorough review by both the administration and the Congress. I am in sympathy with many of the proposed further courses of action that have been expressed, but I would not like to see us committed to any of them at this time.

Mr. Chairman, the overwhelming desire of the Congress at this point should be to lend all possible support to the administration in its efforts to keep Red China out of the United Nations. I can think of no better way to express this support than the meaning of House Resolution 627 which I hope will pass the House by unanimous rollcall.

The Charter of the United Nations was intended to make that organization the focal point for the mobilization of moral force throughout the world. If Red China were admitted to the United Nations that moral force would not only be weakened but would be thoroughly dissipated and torn asunder. It is not a question of whether Red China is legally entitled to a seat, it is a question of whether that regime is morally entitled. Certainly, as long as the United Nations has declared the Chinese Communists to be an aggressor group, there should be no talk or thought of their seating. That is why I say that if the Red Chinese were to be admitted in view of all the circumstances, the question of our future membership in the United Nations or our financial support of that organization would be academic. If such an event came to pass, it would hardly be necessary for this Government to walk out of the United Nations because that organization would be so discredited that it would fall apart through a dissolution of the moral strength which now binds its members together.

Mr. Chairman, it is with conviction as to the obligation of the Congress to express itself in this sense prior to adjournment and before the September meeting of the General Assembly that I offered House Resolution 627. I feel that our members would be derelict in their duty if they did not again place themselves on record in this respect, both for the sake of the people whose representatives we are and also as a warning to the other member nations of the United Nations throughout the world. Given the unequivocal promises of the President and the Secretary to do all in their power to continue to bar Red China, our proper function at this moment is to pledge them our wholehearted and enthusiastic support. I hope the resolution will be adopted unanimously.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield.

Mr. GROSS. The gentleman has gone into this thoroughly. I am sure the gentleman can tell me whether the veto applies to the seating of a country in the United Nations General Assembly.

Mr. BENTLEY. I understand that the veto does not apply to a seat in the General Assembly, but the seating of Red China would be a so-called important question which would require a two-thirds vote of the General Assembly, and I do not think the Chinese can get a two-thirds vote.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. CARNAHAN. Mr. Chairman, I yield 2 minutes to the gentleman from Massachusetts [Mr. O'NEILL].

Mr. O'NEILL. Mr. Chairman, I rise to support the resolution opposing the admission of Communist China to the United Nations. I have also presented my own resolution, House Concurrent Resolution 255, which has the same objective.

I realize that the President of the United States has already assured the people that he will advise our United Nations trustees to vote against Red China, and Secretary Dulles has done the same. However, I feel that the American people, who are so bitterly opposed to Red China, want, and should have, an affirmative stand on this matter by their Congress.

When the General Assembly of the United Nations convenes for its ninth

session in September, undoubtedly an attempt will be made to seat a representative of the Chinese Communist regime as the spokesman for China. This is a step which the United States has vigorously opposed in the past. It is a step which Republicans and Democrats alike believe we must continue to oppose as long as that government persists in violating the very principles upon which the United Nations is founded. These principles are international cooperation to develop friendly relations and maintain peace, and respect for and encouragement of human rights.

As the time draws nearer for the showdown on this issue, the question of Communist China in the United Nations will dominate the news and increasingly occupy the attention of our foreign policymakers. For this reason I would like to discuss with you the China which we are talking about when we speak of Communist China. It is the duty of each of us to decide whether that government yet lives up to the principles of the United Nations and make our views known.

As you know, the vast Chinese mainland is no longer the China which has traditionally been our friend. The Chinese people are under the yoke of a Communist dictatorship as harsh and bitter as any in Eastern Europe. We can imagine the full meaning of this when we realize that literally thousands of Chinese prisoners of war in Korea, 75 percent of the total, in fact, refused to return to their native land when given the opportunity, knowing that it meant they might never see their families and homes again. What has the Communist regime done to instill such intense hatred among the Chinese people?

For one thing, under Communist leadership China has become a nation of slave labor. It has been reliably stated that at the end of 1952 the number of slave laborers in Communist China was well over a million. China at that time, placed second only to the Soviet Union in the extensiveness of its slave-labor system. If the regime continues in power, the tragic conclusion must be reached that soon the number of forced laborers in China would even surpass that in the Soviet Union. Already some estimates of the number go as high as 5 or even 15 million.

The Communist regime does not attempt to hide the fact that it uses slave labor. On the contrary, it boasts that forced labor is a vital part of the country's economic and political structure. After a day of hard work, in which the laborer must produce a fixed quota of work of a fixed quality in a fixed amount of time, he is then subjected to political reform, in reality mental torture through which all ideas of opposition are washed away and replaced by the Communist line. That is why slave labor is an important part of the political system.

Forced labor is not the only method the Chinese Communists use to stifle political independence. Millions of Chinese who were thought to oppose the new regime have been murdered. Purges of landlords, anti-Communists, and resistant farmers have been carried out with ruthless efficiency. Mass participation in the executions is demanded so that the crime will appear to be the result of popular demand. Even the school children are forced to attend the mock trials and cruel shootings so that they will learn the penalty of nonconformity.

Those who escape extinction or slavery are by no means free, however. They are closely watched. Their property is likely to be seized at any time. Mass propaganda is conducted continuously, and the response must be enthusiastic, vigorous, and vocal. If one member of the family is silent on the merits of communism, or expresses doubt about the validity of its teachings, another member may inform on him. It is a symbol of the degree to which the Comunists are willing to undermine traditional Chinese society when children are trained to spy and report on their parents even if it means death to the parents. This violates the ties of loyalty on which the Chinese family unit is based.

The purging of the opposition is equaled only by the purging of learning. Thousands of books are forbidden because they are classed as "feudal" or "bourgeois" or "imperialistic." One source estimated that 86 percent of all books published in the 50 years prior to the Communist seizure of power have been burned. Distinguished scholars and educators have been "brainwashed" and forced to parrot the Communist teachings.

The international behavior of the Chinese Communist regime matches the terror of their domestic conduct. The most rudimentary principles of international law have been violated. The duty of protection of aliens has been grossly defied. Some hundred Americans are being held in Communist China against their will. Thirty-two of these are now in jail being held incommunicado, without trial and without knowledge of the reason for their imprisonment. Often they are subjected to physical or mental torture. Missionaries and nuns have been subjected to the same gross treatment. The aim of this shocking conduct is to secure false confessions to be used against us. As in the Soviet Union, every effort is being made to drown in a sea of "hate America" propaganda the respect and good feelings which the Chinese people themselves have had for us for over a century.

This flagrant abuse of international decency extend beyond a nonfulfillment of international obligations. It extends even beyond disgraceful participation in crimes such as promoting the narcotics trade and blackmailing overseas Chinese to gain foreign currency. Chinese Communist activities include support of outright international aggression. This, more than anything else, is likely to ignite a third world war.

As soon as they completed the conquest of the Chinese mainland, Mao Tse-tung and his underlings began an unceasing attempt to expand the scope of their influence throughout Asia. By propaganda, training leaders, and supplying money, advice, and guidance they have contributed to the development of other Asian Communist parties.
